DELSU JOURNAL OF MANAGEMENT SCIENCES (DELJOMS)

ISSN: 2756-3731

About the Journal

The Delta Journal of Management Sciences (DELJOMS) is an academic, peer-reviewed journal focused on the dissemination of articles on all aspects of Management and Social Sciences. DELJOMS is published annually. The Journal provides a forum for the exchange of state-of-the-art ideas and information among scholars in Management and Social Sciences and related disciplines. DELJOMS is committed to publishing scholarly empirical and theoretical research articles that have a high impact. More often than not, they shed light on successful Management and Social Sciences strategies and analyze the failures to increase the chances of success in the current organizations nationally and globally because management is a highly intricate art which applies to any given domain such as finance, natural resources, human resources, or technological resources and the scope of journal is very vast.

The mission of DELJOMS is to publish empirical research that tests, extends, or builds on theories and contributes to the advancement of Management practice in our world today. All empirical methods including, but not limited to, qualitative, quantitative, meta-analytic, and mixed methods are welcome. To be published in DELJOMS, the research must make strong empirical and theoretical contributions and the manuscript should highlight the relevance of those contributions to management practice. Authors should strive to produce original, insightful, interesting, important, and theoretically bold research that demonstrates a significant "value-added" contribution to the fields in the understanding of an issue or topic.

The Journal faced some challenges associated with producing quality and standards while ensuring the best global practices with high impact empirical research-based studies. However, we are willing to publish as many articles received that meets standards and quality with cutting edge research gap output. It's also imperative that our reputation is hinged on a resolute commitment to maintaining high academic excellence which is our premium goal. In this edition, we have carefully selected articles to provide the reader with an analytical mind in discerning management issues of relevance. As a journal, we, therefore, advice researchers whose articles could not be published for some structural or procedural defects to revise their work for re-submission because DELJOMS is willing to reassess for future publication were applicable.

Call for Papers

The Editorial Board of Delsu Journal of Management Sciences (DELJOMS) welcomes scholarly well-researched articles for consideration on any aspect of Management and Social Sciences and allied disciplines. DELJOMS which is a publication of Faculty of Management Sciences (FMS), Delta State University, Abraka, publishes original and cutting edge articles with relevant and significant contributions to the Management, Social Sciences' and allied disciplines.

DELJOMS provides a forum for discussion and analysis of issues in Management and Social Sciences with the exchange of information between professionals, academics and the global business world. The Journal is committed to the research of the highest quality in adopting the best global practices.

Guide to Contributors

Format for Typed Manuscripts: All typed scripts are required to be formatted as follows:

Cover Page: It should include the title of the article, name(s) of the authors as they want them to appear, the highest educational qualification(s) of the author(s) excluding honorary degrees and the institutional affiliation of the author(s).

Second Page: The page should repeat the title of the articles but should not in any way disclose the names and addresses of the author. It should include the abstract which should not exceed two hundred and fifty words (typed single –spacing in 12 Times New Roman font) and a list of not more than five keywords. The 12 point font size requirement applies to all the headings, subheadings and all other contents.

Main Body: Articles are normally not expected to exceed 20 pages of A4 paper, typewritten in double –line spacing. Sub-headings sections should not be numbered. However, tables, figures, maps and other illustrations should each be numbered and given a title which must be centred. All sub-headings should be justified.

Cited works/References: The prescribed references style is the American Psychological Association (APA) style.

Submission of Manuscripts: Authors who want to submit their articles considered for the bi-annual publication should send three hard copies of the manuscript to the Managing Editor and one virus-free soft copy in Microsoft word format by email to the DELJOMS email: deljoms@deljoms.com.ng, deljoms@gmail.com

Process of Manuscript Review Editorial Check: The Editorial Team of the DELJOMS Journals will make a basic check to ensure that the submitted manuscript falls under the scope of the Journal. If the manuscript is out of the Journal's scope, it will instantly be rejected.

Delsu Journal of Management Sciences (DELJOMS).....

Plagiarism Check: All manuscripts will be checked for plagiarism. DELJOMS Journals will crosscheck to ensure the originality of the paper submitted. Manuscripts containing substantives of plagiarism, dishonesty, or self-plagiarism, will instantly be rejected.

Peer and Blind Review: We use the peer review system. In this process, the author's identification (name, affiliations, email) will remain anonymous. DELJOMS journals adopted this policy to ensure the objectivity of the peer review. The process may take two to four weeks (depending on the editorial board) and will determine the status of the manuscript. If needed, a revision of the submitted paper may be needed, and it is the obligation of the author(s) to revise in accordance.

Acceptance/Rejection: Reviewers will determine whether the quality of the submitted manuscripts exceeds the threshold of publication.

Publication Date: 2025/11/28

Abstract

This study investigates how rural small business entrepreneurs in Abraka rural settlement in Ethiopia-East local government Area, Delta State, adopt separate legal entity (SLE) principles, their socio-cultural engagement (SCE) and influence on small business growth (SBG). Using a survey of 150 purposively selected entrepreneurs, the study adopted descriptive survey design using a 32-item questionnaire. Three research questions were raised and three hypotheses were formulated to guide the study. Cronbach alpha reliability test of the instrument established consistency of $\alpha=78$, $\alpha=81$ and $\alpha=83$ across all three variables used in the instrument. Correlational statistics using PPMC established $r = 0.85$ at 0.05 significance between SCE and SBG. Regression test of hypotheses indicates that SLE directly and partially mediate the relationship between SCE and SBG with Sobel test at $z = 10.006$, $p < .001$ and bootstrap of 95% (confidence interval of 0.639 and 1.164). SLE was also found to moderate the relationship between SCE and SBG. The findings indicate that the rural small business owners have moderate knowledge of separate legal entity in running their business and at the same time reported considerable Socio-cultural engagements even as they are optimistic of future business growth. It was recommended among others, the need for targeted grassroots' education and policies that integrate legal understanding of financial management principles with socio-cultural realities to promote sustainable development of rural small enterprises.

Keywords: rural, growth, legal, principles, socio-cultural, entrepreneurs

Introduction

Micro and small enterprises occupy the largest proportion of the Medium, Small and Micro Enterprises (MSMEs) industries providing goods and services in Nigeria. Presently, the increasing number of unemployed youths in Nigeria and the "refugee effect" of unemployment (Audretsch, 2002), has resulted in creation of numerous micro and small businesses driven by survival instinct (Welter and Smallbone, 2011). Most of these businesses are owned by educated and uneducated individuals with considerable number of them lacking leadership and managerial skills necessary for survival of such businesses (Dzomonda and Fatoki, 2018). However, the failure rate of micro and small businesses generally in Nigeria is of worrisome magnitude which various researchers estimate at over 80 percent (Dzomonda & Fatoki, 2018).

Vast literature has explored mix of financial management skills and practices that variously impact working capital and financial operations of SMEs. However, it has been established that inadequate financial management skill has been one of the most critical factors contributing to micro and small business failure in Nigeria particularly, among the neophytes or nascent entrepreneurs in rural and sub-urban areas.

One critical factor often trivialized by researchers into causes of failure of micro and small businesses is that of conflict of interest between the proprietor and the venture

entity (ownership vs Control controversy). At the same time, while many small business owners, particularly young and inexperienced entrepreneurs grapple with finding equilibrium for managing known constraints in finance management, they often seem to be unaware or play down the entity or personality status of businesses. The problem is that many small business owners seem not to see the difference between personal money and business's money. This confusion often leads to poor financial decisions, reckless spending, or neglect of proper record-keeping. Conventionally, a business should be treated as a separate legal entity (SLE) personalised, having assets and liabilities. This doctrine was established in a famous court case of *Salomon v. Salomon* in 1897. However, in practice, especially in rural areas, many owners seem to be unaware, ignore or do not fully understand this principle as applicable even to the minutest businesses. As a result, small businesses in developing countries face many challenges because of the social, cultural, and institutional environment in which they operate.

To understand how these factors, affect business success, theories of Institutional Theory gives credence to the study. The Institutional Theory (Scott, 2014) explains that a business's behaviour does not anchor solely on making money but shaped by social norms, cultural habits, and government rules. For instance, in many small businesses,

social pressures like family responsibilities, community affiliation, and informal ways of funding influence how owners manage resources. In many rural settings, family and traditional obligations significantly influence business operations. These commitments can affect entrepreneurs' resource allocation pattern and decision-making involving financial priorities (Ojo & Akinrinade, 2018), which in some cases, often lead owners to mix personal money with business funds or lend money informally, which negates financial management principles proper financial record keeping. Economic hardships and socio-economic pressures compel entrepreneurs to focus on immediate survival rather than formal business considerations thereby side-tracking SLE doctrine (Adegbite & Akinboade, 2017) decreasing the chances of business growth or stability over time (Williams & Kadir, 2017).

From the foregoing, it becomes explicit that social and cultural pressures often push owners to blend personal and business finances, which can limit growth. Such cultural factors may either facilitate or hinder the application of formal financial management principles (Akinrinade & Ojo, 2019).

Considering the trio variables of the study, it is possible that keeping adopting SLE may mediate and/or moderate the effect of socio-cultural commitment on business growth pattern over time. Entrepreneurs that lack this knowledge might be more vulnerable to these pressures, which can hinder growth and sustainability; as evidenced in low and middle income countries such as Nigeria, where weak enforcement of rules coupled with strong family or religious obligations are common (Ogunleye & Akinyele, 2020).

Research indicates that formal education and targeted training significantly enhance entrepreneurs' understanding of legal concepts such as the Separate Legal Entity doctrine (Akinboade & Kinfack, 2017). Informally, entrepreneurs who participate in workshops or training programmes by observing peers, market interactions, and community practices may tend to demonstrate higher awareness, facilitating better compliance and application in financial management practices. This observational learning can also influence perception of relating to legal entity, although it may lead to misconceptions if not augmented with formal education (Ogunleye & Akinyele, 2020).

In addition, hands-on apprenticeship or internship experiences provide practical insights into legal and financial management practices; and are expected to exhibit a better grasp of the legal separation between personal and business assets, which can impact financial practices positively (Eze & Ifeanyi, 2021). However, most existing research has focused on how social and cultural influences lead to informal financial practices.

In all, the success of small businesses in developing countries depends not just on access to finance or markets. It relies heavily on how well owners understand and apply good financial practices while weaving through socio-cultural behaviours.

Measuring small business growth

Understanding and measuring how small businesses grow involves looking at different signs of progress. Many

entrepreneurs including those in rural areas, see growth mainly through financial success, such as increased sales and profits. When a business makes more money and becomes more profitable, it feels like it is thriving. One important sign of growth is size of customer base. When a business attracts and retains more customers, it shows that it is expanding and gaining acceptance in the market. Entrepreneurs who know the importance of keeping personal and business affairs separate tend to manage customer relationships better. This understanding builds trust and loyalty, which can lead to more repeat business and referrals (Olawale & Ojo, 2020). Asset growth, which includes physical items like equipment and inventory as well as working capital management, is also a clear indicator of business growth. Entrepreneurs who are aware of basic financial principles are more likely to protect their assets and make smart investments thereby shielding their assets from liabilities and this helps in future expansion (Eze & Ifeanyi, 2021). Expansion that may also include increase in number of workers (Akinboade & Kinfack, 2017).

Most importantly are market expansion and competitiveness advantage which are signs that a business is succeeding. Proper financial management anchored on principles can improve their reputation and open doors to partnerships and new opportunities (Ogunleye & Akinyele, 2020) which makes it easier to grow beyond its initial market. Overall, having strong legal knowledge helps entrepreneurs not only grow their business but also feel good about the progress they are making.

Statement of Problem

Despite the extensive literature on financial management among small and medium enterprise (SME) failure in Nigeria, there remains a significant gap in understanding how rural small scale entrepreneurs perceive and apply doctrine of a separate legal entity; which allows a business to be viewed as a distinct entity from its owner, can significantly impact financial decision-making and overall business sustainability (Akenova & Akinbami, 2018). However, most existing studies tend to focus on urban settings or larger firms, leaving rural entrepreneurs underexplored.

In rural areas, entrepreneurs often operate within strong cultural beliefs that influence their business practices (Ogunnaike, 2019). These cultural norms such as family exigencies, religious obligations, donations, personal lifestyle, and festivities can shape their understanding and application of legal frameworks. The level of awareness about the legal status of their businesses may determine how effectively they manage finances and sustain their operations (Ojo & Olayinka, 2020). Yet, little research has examined how these cultural and demographic variables interact with legal awareness in rural contexts, especially in Nigeria's diverse cultural landscape.

Addressing this gap is crucial because improving legal awareness and its integration into financial practices can lead to better business outcomes for rural entrepreneurs. Understanding the socio-cultural dynamics at play can help design targeted interventions that promote sustainable growth, reduce failure rates, and enhance economic development in rural communities.

Research Question

1. To what extent are small business entrepreneurs adopt financial management practices that conform with doctrine of separate legal entity in their business operations
2. To what extent do small business entrepreneurs in rural area engage in socio-cultural commitments in the course of running their businesses.
3. How do small business entrepreneurs in rural area perceive growth of their businesses since start-up?

Hypotheses

- H01:* There is no relationship between Socio-Cultural Engagements (SCE) of small business entrepreneurs and Small Business Growth (SBG). (SBG)
- H02:* Adopting Separate Legal Entity practices (SLE) does not mediate the relationship between Socio-Cultural Engagements (SCE) and Small Business Growth (SBG).
- H03:* Adopting Separate Legal Entity practices (SLE) does not moderate the relationship between Socio-Cultural Engagements (SCE) and Small Business Growth (SBG).

Research Method

The study is undertaken in Ethiopie-East Local Government Council Area of Delta State specifically in Abraka, a fast growing rural settlement. Abraka the main campus the Delta State University. Ethiopie-East has a population of 200,792 (Census, 2006). Abraka town has a mixed population estimated at 79,963 (Census, 2006). and projected annual growth of 2.41% (SMEDAN, 2013). As University town having a population of indigenous and non-indigenous business owners attracted by the over 30,000 students and 5000 staff population of these

institutions that patronizes these diverse micro businesses. Small business units are categorized as commercial holdings (60%) service providers (25%, commercial agricultural farms (10%) and manufacturing enterprises (1%) others (4%). Abraka town has 82 small companies (SMEDAN, 2013) with larger number of informal micro businesses of various types including food, professional services. These characteristics informed the choice of this area for the study.

The population of the study comprised 150 small business owners purposively selected. The instrument was a survey-designed questionnaire constructed using 5-point Likert scale type, made up of four sessions. The validity was established by three resource persons in Measurement, Business Administration and Business Education. Four research assistants were trained and used in administering the instrument for a period of six weeks including period of informed consent and confidentiality allowed prior to administration of the instrument. Cronbach alpha coefficients for Independent Variable: Adoption of Separate Legal Entity principles – SLE, $n=12$, $\alpha=.78$; dependent variable 1: SCE, $n=10$, $\alpha=.81$ and dependent variable 2 - SBG ($n=10$, $\alpha=.83$) reliability was achieved. Regression statistic involving Baron and Kenny's (1986) 4 step statistics criteria and Sobel's (1982) test /bootstrap were used to test SLE mediation and moderation effects between SCE and SBG.

Interpretation of results

RQ1: To what extent do small business entrepreneurs in rural areas adopt financial management practices that conform with doctrine of separate legal entity in their business operations

Table 1: Mean and Standard Deviation of small business entrepreneurs' responses to adoption financial management practices that conform with doctrine of separate legal entity in their business operations

Question/Statement	$\bar{x}$	σ	Interpretation
RQ1: Awareness of Separate Legal Entity			
1. I understand the difference between owning a business and managing it.	3.64	1.19	Moderate awareness; many understand the difference between owning and managing a business.
2. I know that the business assets are not my personal property.	3.30	1.37	Fairly high awareness that business assets are separate; some uncertainty remains.
3. I know that my personal debt is not the responsibility of the business.	3.30	1.35	Similar to above; many recognize personal debt isn't business responsibility.
4. I maintain a separate bank account for my business transactions.	2.46	1.31	Lower awareness; fewer maintain separate bank accounts consistently.
5. I keep proper business records that are different from my personal records.	2.83	1.34	Moderate; some keep proper business records separately.
6. I avoid using business income directly for personal or family needs.	2.50	1.33	Slightly lower; some tend to mix personal and business income.
7. I know that mixing personal and business finances violates sound financial principles.	2.83	1.34	Moderate; awareness that mixing finances violates principles is mixed.
8. I understand that every asset of the business does not belong to me personally.	3.10	1.33	Fairly good understanding that assets don't all belong personally.
9. I became aware of the importance of the legal separation of business and owner through my education.	3.10	1.33	Moderate; education influences awareness but not uniformly.
10. My understanding of business management came from working with experienced business owners.	2.82	1.19	Slightly lower; experience helps, but gaps remain.
11. I learned to separate business and personal roles by observing business owners when I was sales assistant	2.79	1.36	Lower; observing owners contributes but isn't universal.

12. I seek legal advice when making important decisions about my business.	3.10	1.34	Moderate; legal advice-seeking is somewhat common.
	35.77		

Source: Adoption of SLE survey, 2025.

The data indicates that while some owners have a good understanding of the legal separation between their personal and business affairs, there are notable gaps, especially in maintaining separate financial records and accounts. Items related to education and experience (items 9 and 10) show moderate awareness, suggesting that further education could improve understanding. The relatively lower mean scores on items like maintaining separate bank accounts (item 4) and observing business owners (item 11) suggest areas where awareness and

practices could be enhanced through targeted training or awareness campaigns.

RQ2: To what extent do small business entrepreneurs in rural area engage in socio-cultural commitments in the course of running their businesses.

Table 2: Mean and Standard Deviation of small business entrepreneurs' responses to extent of engagement in socio-cultural engagements in the course of running their businesses.

RQ2	$\bar{x}$	σ	comment
1. Sometimes I use my business money to meet personal survival when my profit is not enough.	3.2	1.3	Respondents moderately agree that personal survival influences business money use.
2. I often use business funds to meet family needs (e.g., school fees, hospital bills).	2.8	1.4	Many often use business funds for family needs, indicating strong socio-cultural ties.
3. Family members expect me to use business resources for their personal issues.	2.8	1.4	Family expectations impact business resource allocation; moderate agreement.
4. My business performance is sometimes affected by pressure from relatives.	3.3	1.2	Pressure from relatives sometimes affects business performance.
5. Supporting family obligations is very important to me, and I can't avoid taking from my business fund.	3.4	1.3	Supporting family obligations is a significant aspect of their socio-cultural commitments.
6. Most times, I use business funds to sponsor traditional ceremonies, weddings, funerals, etc based on my family/social position	3.2	1.3	Business funds are frequently used for traditional and social ceremonies.
7. Community members, friends, and relatives expect credit transactions from me, and I do provide them.	3.0	1.4	Providing credit to community members is common, reflecting social expectations.
8. Religious obligations influence me most time to spend business income on tithes, offerings, and donations	3.1	1.4	Religious obligations influence spending, but less strongly than family needs.
9. Sometimes, in emergency, lack of access to other funds makes me use my business money for personal expenses.	3.2	1.3	Emergencies often lead to using business funds for personal expenses.
10. I regard my business money as my personal money.	3.0	1.3	Viewing business money as personal funds is common among respondents.
Average response (approx.)	3.2	1.3	Overall, respondents tend to agree that socio-cultural commitments influence their business activities.

Source: Adoption of SCE survey, 2025.

The average mean of around 3.20 indicates a tendency towards agreement, suggesting that socio-cultural obligations are a significant factor in small business entrepreneurs' decision-making. The standard deviations around 1.30 to 1.40 reflect variability in responses, with some entrepreneurs more strongly influenced than others. Items related to family and traditional obligations tend to have slightly higher means, emphasizing their importance.

The results suggest that small business entrepreneurs are substantially influenced by socio-cultural commitments,

often prioritizing family, community, and religious obligations over purely business considerations. This indicates that socio-cultural factors are integral to their operational decisions and financial management, which could impact business growth and sustainability.

RQ3: How do small business entrepreneurs in rural area perceive growth of their businesses since start-up?

Table 3: Mean and Standard Deviation of small business entrepreneurs' responses to perceive growth/progress of their business

Perceived business growth since start-up	$\bar{x}$	σ	comment
1. My business was financially stable from the beginning.	3.84	1.07	Many respondents agree that their business had early financial stability.
2. My profit margin increases every year compared to the early years of the business.	2.66	1.11	Moderate agreement; profit growth is perceived but not universal.
3. I have been able to expand my business size over time.	3.07	1.20	Slightly above the neutral point, indicating moderate perceived expansion.
4. The number of regular customers has grown.	3.05	1.04	Perception of customer base growth is moderate among respondents.
5. My business now attracts customers outside the community.	3.08	1.07	Slightly positive perception of broader customer reach.
6. I have increased my business shops, goods, and equipment.	2.96	1.07	Moderate growth in assets is perceived.
7. I now stock different kinds of products in my shops.	2.84	1.00	Respondents somewhat agree that product variety has increased.
8. I now have more sales assistants (apprentices) compared to when I started.	2.66	1.00	Slightly positive perception of employing more staff.
9. I am satisfied with the progress my business has made since start-up.	3.02	1.20	Moderate satisfaction with business progress.
10. I am confident my business will continue to grow.	3.10	1.00	Respondents generally have confidence in future growth.

Source: Adoption of SBG survey, 2025.

The responses indicate that small business entrepreneurs in rural areas generally perceive their business growth and progress as moderate. Many agree that they experienced initial financial stability and see signs of ongoing expansion, including increased customer base, assets, and product variety. Confidence in future growth is also relatively high. However, perceptions are not overwhelmingly strong, suggesting room for further development and support to enhance business growth perceptions.

Discussion of findings

Analysing these responses reveals both strengths and gaps in their understanding and behaviour, which have important implications for policy and support programs aimed at fostering sustainable growth among rural entrepreneurs. Starting with financial management practices, the data shows that many entrepreneurs have some awareness of the importance of separating personal and business finances, but significant gaps remain. For instance, respondents generally understand the difference between owning and managing a business and recognize that business assets are not personal property. This aligns with earlier research by Nwankwo and Adebisi (2019), who emphasized that financial literacy is crucial for business sustainability. However, the lower average score on maintaining a separate bank account suggests that many entrepreneurs still mix personal and business funds, which can lead to financial confusion and increased risks. This finding supports the argument by Olawale and Ojo (2020), who noted that financial discipline and proper record-keeping are often lacking among small-scale entrepreneurs in developing countries. The moderate awareness about the legal aspects of business management indicates that while some education exists, there remains a need for targeted training programs to improve legal and financial literacy.

Furthermore, the responses related to awareness of legal separation through education and observing experienced

business owners suggest that practical exposure and formal education influence understanding but are not sufficient on their own. This gap identified in maintaining proper financial records and accounts highlight the importance of continuous training and mentorship, as suggested by Eze and Ifeanyi (2021). These authors argue that improving financial management practices among rural entrepreneurs can significantly enhance business performance and growth prospects.

Moving to socio-cultural commitments, the responses demonstrate that entrepreneurs in rural areas are deeply influenced by cultural and social obligations. The data shows that many entrepreneurs frequently use their business funds to meet family needs, support traditional ceremonies, and provide credit to community members. Items such as using business funds for family and community obligations scored high, indicating that socio-cultural ties heavily influence business decision-making. This aligns with earlier studies by Akinboade and Kinfack (2017), which found that in many rural communities, cultural and social obligations often take precedence over pure business considerations. These commitments can serve as both a source of social capital and a challenge, as they may divert resources away from business investment and growth. For example, supporting family and community obligations, though vital for social cohesion, may limit the capital available for reinvestment in the business, potentially constraining growth.

Religious obligations also play a role, with some entrepreneurs spending part of their income on religious activities. This finding supports the work of Ogunleye and Akinyele (2020), who highlighted how religious and cultural factors shape financial priorities in rural settings. The tendency of entrepreneurs to regard their business money as personal funds further underscores the influence of socio-cultural norms, which often blur the lines between personal and business finances.

Regarding perceptions of business growth, respondents generally view their progress as moderate. They report that their businesses were financially stable early on, and many have observed some expansion in customer base, assets, and product variety. The response patterns reveal that while entrepreneurs recognize signs of growth, their confidence remains cautious, with average scores around the mid-3s on a 5-point scale. This moderate perception aligns with earlier findings by Nwankwo and Adebisi (2019), who found that small business owners often perceive incremental progress rather than rapid growth, especially in rural contexts where challenges such as limited access to finance, markets, and skills persist.

Despite these moderate perceptions, the high confidence in future growth suggests optimism among entrepreneurs, which is a positive sign. However, the variability in responses indicates that many entrepreneurs might benefit from additional support, such as access to markets, financial services, and capacity building, to realize their growth potential fully. The findings support the idea that rural

entrepreneurs are resilient and optimistic but need targeted interventions to translate perceptions into tangible growth.

The study therefore, reveals a complex picture: entrepreneurs have a reasonable understanding of legal and financial principles, but practical gaps remain, especially in maintaining proper financial separation. Socio-cultural commitments significantly influence their business decisions, often to the detriment or benefit of growth, depending on how these obligations are managed. Their perceptions of progress are cautious but optimistic, emphasizing the need for supportive policies and training to bridge gaps in knowledge and practice. Future research could explore how specific interventions, such as financial literacy programs or cultural awareness campaigns, impact these entrepreneurs' practices and perceptions, ultimately enhancing their capacity for sustainable growth.

HO1: Socio-cultural engagements of small scale business entrepreneurs have no significant relationship with growth of the business

Table 4: Summary of PPMC between SCE and SBG

N	DF	r-calculated	r-critical (p=0.05)	p-value	Decision
150	148	0.85	0.196	< 0.05	Reject HO1: Significant relationship

The correlation coefficient (r-calculated) is approximately 0.85, indicating a strong

positive relationship. The r-calculated > r-critical (0.196), reject the null hypothesis at 0.05 significance level. The p-value would be less than 0.05, confirming this decision.

HO2: Adopting SLE practices relating to doctrine of separate legal entity does not mediate the relationship between socio-cultural commitment and perceived business growth.

Figure 1: Mediation effect of SLE between SCE and SBG

The mediation analysis conducted in this study indicates that the adoption of the Separate Legal Entity (SLE) doctrine partially mediates the relationship between socio-cultural engagement and business growth. Initially, regression results demonstrated that socio-cultural engagement significantly predicts SLE adoption (Path a: $b = 1.007$, $SE = 0.013$, $t(148) = 76.50$, $p < .001$). This strong positive association suggests that entrepreneurs actively engaged in their social and cultural networks are more likely to adopt SLE principles.

Subsequently, when predicting business growth, SLE adoption also emerged as a significant predictor (Path b: $b = 0.867$, $SE = 0.086$, $t(147) = 10.09$, $p < .001$). At the same time, the direct effect of socio-cultural engagement on business growth remained significant but was reduced in magnitude ($b = 0.227$, $SE = 0.088$, $t(147) = 2.59$, $p = .011$). This reduction indicates that SLE adoption partially mediates the relationship between socio-cultural engagement and business growth. The total effect of socio-cultural engagement on business growth was significant ($b = 1.100$, $SE = 0.018$, $t(148) = 61.65$, $p < .001$).

The indirect effect, calculated as the product of paths a and b, was 0.873. Its significance was confirmed through the Sobel test ($z = 10.006$, $p < .001$) and bootstrap analysis with 5,000 resamples yielded a 95% confidence interval of 0.639 and 1.164, which does not include zero. These results robustly support the presence of mediation (Hayes, 2013).

One implication of the findings is that higher socio-cultural engagement enhances the likelihood of adopting SLE principles, which in turn promotes business growth; emphasizing the importance of social capital and entrepreneurial behaviour. Furthermore, the raw data indicated high correlations $r = 0.95$ between socio-cultural engagement and SLE adoption, and $r = 0.85$ between socio-cultural engagement and small business growth suggest strong relationships among these variables. Given these correlations, SLE adoption appears to be a significant mediator of the effect of socio-cultural engagement on business growth. Using Baron and Kenny's (1986) criteria and Sobel's (1982) test, the data indicates that including SLE in the regression model

substantially diminishes the direct effect of socio-cultural engagement on business growth, supporting the mediation hypothesis.

Specifically, the high correlation coefficients and the significant Sobel Z-value (7.89) that is well above the critical value of 1.96 at the 0.05 significance level, provide strong evidence that SLE adoption mediates the relationship between socio-cultural engagement and business growth. Consequently, the null hypothesis (H_0) that SLE adoption does not mediate this relationship is rejected.

HO3: Adopting Separate Legal Entity practices does not moderate the relationship between socio-cultural commitment and perceived business growth.

Regression Results: Moderation Analysis

Model: $Y_2 = b_0 + b_1(Y_{1c}) + b_2(X_c) + b_3(Y_{1c} \times X_c) + e$

Moderator: X = Separate Legal Entity Adoption (SLE)

Independent: Y_1 = Socio-Cultural Engagement (SCE)

Dependent: Y_2 = Small Business Growth (SBG)

Table 5: Regression Coefficients

Predictor	B	SE	t	p	95% CI
Const	3.102	0.005	658.74	0.0000	[3.093, 3.112]
Y_{1c}	0.556	0.078	7.09	0.0000	[0.401, 0.711]
X_c	0.410	0.099	4.16	0.0001	[0.215, 0.605]
Int	-1.006	0.763	-1.32	0.1896	[-2.513, 0.502]

Model Fit: $R^2 = 0.6605$, Adjusted $R^2 = 0.6535$

Figure 2: Moderation effect of SLE between SCE and SBG

The results of the moderation analysis indicate that both socio-cultural engagement and the adoption of a Separate Legal Entity (SLE) significantly influence business growth among rural small-scale entrepreneurs. Specifically, socio-cultural engagement exhibits a strong positive relationship with business growth, aligning with findings by Gichuru (2019), who highlighted that active participation in socio-cultural activities enhances social networks and cultural capital, thereby supporting entrepreneurial success. Similarly, the independent effect of SLE adoption is also

positive and statistically significant, consistent with Kauffmann (2010), who emphasized that

formal legal structures reduce transaction costs and improve access to finance, thereby fostering business growth.

However, the interaction term between socio-cultural engagement and SLE adoption was found to be negative and not statistically significant, indicating that SLE does not significantly modify the relationship between socio-

cultural engagement and business growth. This suggests that, while both factors independently promote growth, the presence of SLE does not amplify or diminish the positive impact of socio-cultural engagement within this context. These findings agree with Agyapong and Boateng (2019), who noted that social capital can moderate the relationship between legal formalization and growth, but the effects can vary depending on the context. Overall, the model explains approximately 66% of the variance in business growth, demonstrating a good fit and underscoring the importance of both socio-cultural practices and legal entity practices in fostering entrepreneurial development in rural settings. These findings suggest that strategies aimed at encouraging socio-cultural participation and promoting legal formalization can independently contribute to business growth, even if their interaction does not have a significant effect.

Conclusion

This study has shown that rural small business entrepreneurs in Ethiopia-East Local Government actively engage in socio-cultural commitments that influence their business practices and growth. While they demonstrate a moderate understanding of the importance of treating their businesses as separate legal entities, significant gaps remain in their financial management practices, particularly in maintaining financial separation and proper record-keeping. The findings also reveal that socio-cultural obligations, such as supporting family and community events, strongly shape their business decisions and resource allocation. Importantly, the research confirms a positive relationship between socio-cultural engagement and business growth, with the adoption of the Separate Legal Entity principles partially mediating this relationship. Both socio-cultural participation and legal awareness independently contribute to business development. However, the legal entity practice of formalizing the business does not significantly alter the influence of socio-cultural commitments on growth. Overall, the results suggest that improving legal entity awareness and balancing socio-cultural obligations could further support the sustainable growth of rural micro and small enterprises.

Recommendations

1. Government and stakeholders involved in Small and Medium Scale business development should target training programme to improve rural entrepreneurs' understanding of the importance of the Separate Legal Entity doctrine and proper financial management practices.
2. A training also targeted at educating rural entrepreneurs at helping entrepreneurs balance traditional obligations with sustainable business practices.
3. Foster community and peer learning networks and mentorship schemes where experienced entrepreneurs can share best practices, especially regarding practices that leads to business growth.
4. Governments and development agencies should create policies that recognize the unique socio-cultural

context of rural entrepreneurs and provide incentives for formalization and financial literacy.

Aircraft Maintenance Policies and Offshore Project Performance: Insights from the Nigerian Oil and Gas Sector.

IKEME, Chukwudi ¹ & ECHEME, Ibeawuchi I².

Department of Project Management Technology,
Federal University of Technology, Owerri, Nigeria.

Publication Date: 2025/11/28

Abstract

This study analyses the effects of aircraft maintenance policies on the performance of offshore projects, focusing on personnel deployment, site surveillance, and material supply.

Extended delays in these processes frequently lead to schedule and cost overruns, thus underscores the necessity for efficient maintenance systems. The study assessed four critical factors: poor aircraft maintenance procedures, the qualifications of maintenance personnel, the costs associated with aircraft maintenance, and political instability affecting decision-making. Data was acquired from both primary and secondary sources. SPSS was employed to analyse the data from stakeholders' surveys through descriptive statistics, regression analysis, and ANOVA. The model produced a R^2 value of 0.882 at a 95% confidence level and a 0.05 significance level, signifying a robust correlation between these variables and offshore project performance. The results demonstrate that insufficient maintenance, unskilled labour, rising maintenance costs, and political uncertainties during decision making substantially hamper offshore project completion. The calibre of maintenance and the proficiency of the maintenance crew exert the most significant influence. It is noted that implementation of robust aircraft maintenance policy will improve offshore projects performance. Based on findings of the study, it is recommended that maintenance should always be prioritized, more investments should be made in personnel qualification and training; cost management practices must be optimized, and political uncertainties should be mitigated. The recommendations offer critical insights for project managers, policymakers, and industry stakeholders aiming to improve offshore project delivery by enhancing the reliability of aviation support systems.

Keywords: Offshore Projects, Aircraft Maintenance, Maintenance Policies, Project Performance, Maintenance Costs, Personnel Qualifications

Introduction

In today's dynamic industrial landscape, maintenance management plays a pivotal role in ensuring the reliability, efficiency, and longevity of assets and infrastructure across various sectors, especially in intricate settings like offshore projects. Maintenance methodologies have transitioned from reactive 'breakdown' strategies to more preventative and proactive approaches aimed at minimising downtime, controlling expenses, and enhancing asset availability (Varela & Kobbacy, 2014; Rausand & Vatn, 2019). Effective maintenance management is essential in the aviation industry, where safety and reliability are of utmost importance. Helicopters are essential for offshore oil and gas operations and necessitate rigorous maintenance to ensure safety and the efficient execution of projects (Bailey & Swann, 2013).

Research indicates that proactive maintenance procedures and personnel qualifications are significantly correlated with enhanced performance and diminished hazards in aviation (Garcia-Garcia & Garcia-Sabater, 2013). Offshore regions have unique problems that hinder operations, such as their isolation, harsh weather, restricted access, and the requirement to comply with

complex rules (Van der Made & Dijkman, 2014; IOGP, 2017).

Prior research has investigated the intricacies of offshore projects, encompassing knowledge transfer, coordination, and outsourcing (Sultan, 2010); nonetheless, there is a lack of conclusive evidence concerning the particular influence of aircraft maintenance policies on the performance of offshore projects.

The shortfall is particularly evident in Nigeria's South-South oil and gas area, where helicopters are crucial for personnel deployment, surveillance, and logistical support. Neglecting maintenance leads to costly delays and compromises safety, as demonstrated by prior incidents (ICAO, 2017).

The study seeks to: (i) evaluate the effects of inadequate aircraft maintenance on offshore project execution; (ii) analyse the influence of maintenance personnel qualifications on project performance; (iii) investigate the correlation between maintenance expenditures and offshore project outcomes; and (iv) assess the effect of political uncertainties on offshore project delivery. The research aims to ascertain the effectiveness of the afore aircraft maintenance management variables on offshore project delivery. Recommendations from this study will

address issues related to maintenance strategies, personnel training, cost management, and decision-making processes.

Review of Literature

The efficacy of aircraft maintenance management significantly affects offshore project performance, as air transport enhances logistics, safety, and timely execution. Diverse theoretical frameworks can clarify the influence of maintenance strategies on operational efficiency in offshore settings.

Lean Maintenance Theory

Lean Maintenance Theory underscores the eradication of waste and non-value-adding activities in maintenance processes. Lean concepts improve turnaround times, decrease unexpected downtime, and optimise resource utilisation in offshore aviation operations. Predictive scheduling, optimised inventory management, and heightened accountability for frontline personnel can enhance asset availability while reducing costs. Lean techniques promote ongoing improvement while emphasising safety and compliance in operating procedures (Al-Najjar, & Alsyounf, 2013; Kumar & Pant, 2015; Rother & Shook, 2018).

Human Factors in Maintenance Theory

The theory focuses on understanding the impact of human factors, such as cognitive processes, decision-making, and communication, on maintenance activities and safety. The notion of human factors redirects the focus of maintenance performance towards persons, decision-making, and communication. In offshore settings, human elements are essential due to heightened hazards and limited resources. To reduce human error, it is imperative to implement comprehensive training, design ergonomically viable positions, ensure clear communication, and foster efficient collaboration. Moreover, error reporting methods, fatigue management strategies, and a culture of transparency improve safety and diminish the probability of expensive errors. Alleviating human performance constraints can reduce errors and improve safety and efficiency (Absher, & Bucaro, 2016; Reason, 2018).

Condition-based maintenance (CBM)

Condition-based maintenance (CBM) utilises real-time monitoring and predictive analytics to enhance maintenance decision-making. CBM does not follow strict schedules; instead, it allows interventions only when indicators demonstrate genuine wear or failure problems. This method decreases downtime, minimises superfluous service, and enables the detection of problems before they arise, hence improving the cost-efficiency and dependability of offshore aviation maintenance. Advancements in vibration analysis, prognostics, and health management systems are enhancing the relevance of condition-based maintenance (CBM) for offshore aviation projects (Asgarpoor, & Shahri, 2017; Jardine, Lin, & Banjevic, 2016; Galar, Kumar, & He, 2019).

Total Productive Maintenance (TPM)

TPM is a holistic approach to maintenance management that focuses on maximizing equipment effectiveness through the active participation of all employees. It aims to eliminate losses and improve overall equipment efficiency. TPM emerged in response to the need for improving equipment reliability and productivity in Japanese manufacturing industries (Gupta, & Jain, 2018). Implementing TPM practices can help enhance the reliability of aircraft by conducting regular inspections, preventive maintenance, and addressing potential issues before they escalate. This ensures that aircraft are readily available for operations, minimizing downtime and disruptions to offshore activities (Gijo, & Anthony, 2018).

Empirical Review

An empirical study underscores the necessity of proficient aircraft maintenance in offshore and associated businesses. Lade and Oyewobi (2019) discovered that inadequate maintenance methods in Nigeria's offshore oil and gas sector jeopardised flight safety and project timelines. Li et al. (2018) discussed how delays in aircraft repairs disrupted the logistics of constructing offshore wind farms. Additional research indicates that using skilled personnel can reduce maintenance errors and enhance safety (Olugu et al., 2017; Kim, Kim, & Park, 2018). Financial factors are crucial: Daştan, Koyuncu, and Hepsag (2019) illustrated the detrimental effect of excessive maintenance costs on airline profitability, whereas Radziwill and Kaczor (2017) emphasised the economic benefits of improving maintenance procedures. Analytical studies concentrate on issues such as negligence, human errors, and strategies for improvement. Grover (2017) assert that insufficient training, poor communication, and negligence remain the primary contributors to safety concerns. Concurrently, researchers such as Ren et al. (2017) and Zhang and Li (2020) demonstrate the effectiveness of optimisation models and data analytics in improving decision-making, resource allocation, and predictive maintenance. Recent research indicates that digitisation, including IoT, AI, and augmented reality, is utilised to enhance aircraft maintenance processes (Fojcik et al., 2021).

Research Gap

Notwithstanding these findings, substantial deficiencies persist. Contemporary research recognises the significance of maintenance in offshore projects; nonetheless, there is a dearth of studies that specifically investigate the effects of inadequate aircraft maintenance on project performance indicators, including safety, operational efficiency, and stakeholder satisfaction in Nigeria's South-South region. Secondly, there is a lack of empirical knowledge concerning the repercussions of utilising unqualified maintenance people in offshore settings, where risks are amplified. Third, while cost concerns are extensively recorded, there is insufficient analysis about individual cost drivers and their impact on project success. The influence of political concerns, such as regulatory alterations and policy volatility, on decision-making concerning maintenance and project implementation is still insufficiently understood.

Rectifying these inadequacies is crucial for the progression of both research and practice in offshore project management. This study provides context-specific insights by examining the cumulative effects of insufficient maintenance, human qualities, cost factors, and political issues, which are essential for improving project performance and sustainability in South-South Nigeria.

Methodology

This research utilised a case study methodology to examine the effects of aircrafts maintenance requirements on the performance of offshore projects. The case study examined Caverton Helicopters, a premier provider of aviation assistance for offshore operations in Nigeria, facilitating an in-depth review of maintenance protocols. A descriptive methodology was utilised to discern trends in maintenance management, while diagnostic components facilitated the investigation of potential causative linkages.

The study population consisted of about 250 employees from Caverton's Warri and Port Harcourt locations. A

sample size of 154 was calculated using Yamane's 1967 formula, with a 95% confidence level and a 5% margin of error. Stratified sampling guaranteed fair representation of all occupational roles, encompassing maintenance managers, technicians, project managers, engineers, and auditors.

Instrument Development and Pilot Study

The principal method of data gathering was structured surveys (questionnaire), augmented by secondary data from organisational records. The poll investigated demographics and viewpoints on four critical issues: inadequate maintenance methods, staff qualifications, maintenance costs, and political instability in offshore projects. A 5point Likert scale was utilised to assess the items, and a pilot test with eight employees confirmed their validity. The reliability evaluation revealed that Cronbach's alpha values varied from 0.72 to 0.88, exceeding the 0.70 threshold for internal consistency (Table 1).

Construct	Cronbach's Alpha	Interpretation
Offshore Project Performance (OPP)	0.88	Reliable
Poor Aircraft Maintenance (PAM)	0.85	Reliable
Personnel Qualification (UUP)	0.72	Reliable
Maintenance Cost (HCM)	0.73	Reliable
Political Uncertainty in Decision-Making (PUDM)	0.74	Reliable

Source: Field Survey, 2024

Data Collection and Analysis

Of the 200 questionnaires provided, 156 were completed and returned, demonstrating an exceptional response rate. SPSS was utilised to encode and evaluate the data. Descriptive statistics encapsulated the characteristics and perceptions of respondents. The research utilised t-tests, ANOVA, and multiple regression analysis to assess the hypotheses. The regression model was organised as follows:

$$Y = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \dots + \beta_k X_k + \epsilon$$

Where:

Y is the dependent variable, indicating the performance of the offshore project.

X₁, X₂, ..., X_k represent the independent variables.

β₀ is the intercept, which is the value of Y when all the independent variables are zero.

β₁, β₂, ..., β_k represent the coefficients of the independent variables. They illustrate the extent to which Y varies when one independent variable is altered by one unit, while maintaining constancy in all other variables.

ε denotes a term for error.

Results

The study examined a total of 156 valid responses. Table 2 presents the demographic data of the respondents. The bulk of participants were male (83.3%), with the primary age groups being 31–40 years (41.7%) and 41–50 years (33.3%). Fifty percent of the participants possessed a degree, with the majority of the sample (46.2%) comprising technicians and engineers. 41.7% of individuals possessed 1 to 5 years of job experience, while another 41.7% had over 10 years of experience.

Table 2. Respondents' Demographics (n = 156)

Variable	Category	%
Gender	Male (83.3%), Female (16.7%)	
Age	20–30 (8.3%), 31–40 (41.7%), 41–50 (33.3%), 50+ (16.7%)	
Education	Diploma (33.3%), Degree (50.0%), Masters (16.7%)	
Role	Managerial (33.3%), Technician/Engineer (61.6%), Auditor (5.1%)	
Work Experience	1–5 yrs (41.7%), 6–10 yrs (16.7%), >10 yrs (41.7%)	

Source: Field Survey, 2024.

The regression analysis demonstrated a strong model fit ($R^2 = 0.882$; Adj. $R^2 = 0.879$; $F(4,151) = 281.71$, $p < 0.001$). The independent variables collectively accounted for 88.2% of the variance in offshore project performance.

Table 3. Regression Coefficients

Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.	Collinearity Statistics	
	B	Std. Error	Beta			Tolerance	VIF
1 (Constant)	.041	.173		.238	.812		
PAMCom	.561	.033	.767	16.845	.000	.378	2.648
UUPCom	.364	.062	.278	5.860	.000	.347	2.882
HCMCom	.227	.041	.229	5.493	.000	.451	2.218
PUDMCom	-.158	.044	-.188	-3.618	.000	.290	3.446

Dependent Variable: OPSCom

Source: Field Survey, 2024.

All four predictors exhibited statistical significance ($p < 0.05$). The primary factors influencing project performance were inadequate maintenance, subsequently followed by personnel qualifications and maintenance costs. The political instability adversely affected project outcomes.

Table 4: Analysis of Variance (ANOVA):

Model	Sum of Squares	df	Mean Square	F	Sig.
1 Regression	46.276	4	11.569	281.709	.000 ^b
Residual	6.201	151	.041		
Total	52.477	155			

a. Dependent Variable: OPPCom

Predictors: (Constant), PUDMCom, HCMCom, PAMCom, UUPCom

Source: Field Survey, 2024.

The ANOVA indicated that the overall model was significant ($p < 0.001$). The multicollinearity diagnostics indicated tolerance values over 0.2 and acceptable VIF values (< 5), hence confirming the robustness of the regression model.

The outcomes of hypothesis testing demonstrate that insufficient maintenance substantially impacts the performance of offshore projects (H1 supported). The qualifications of workers substantially affect the results of offshore projects (H2 validated).

Increased maintenance costs substantially hinder project completion (H3 validated).

Political uncertainty greatly affects maintenance decisions (H4 supported).

These findings validate that all four criteria substantially influence offshore project performance. Insufficient maintenance and unqualified people were recognised as the principal causes, highlighting the importance of technical proficiency and operational rigour. The maintenance costs were vital, as rising expenses reduced the project's efficacy. External political risks induced volatility that hindered planning and implementation. The results validate previous research connecting human qualifications and maintenance standards to safety and efficiency in aircraft operations (Billings, 2019; Cabezas et al., 2017).

Discussion

The regression analysis demonstrates that the model is statistically sound, with the independent variables collectively exerting a considerable influence on offshore project performance. Inadequate aircraft maintenance was the primary issue ($\beta = 0.767$) that directly influenced the reliability of transporting individuals, delivering materials, and monitoring locations. This finding aligns with Lade and Oyewobi (2019), who emphasised that effective maintenance strategies are essential for safe and timely project completion.

The study further indicated that the attributes of maintenance personnel and the costs related to maintenance significantly affect project success. Both criteria remained pertinent, however their effects were inferior to those of maintenance quality. Cabezas et al. (2017) emphasised the necessity of adequate training, certification, and professional standards to ensure the safety and efficiency of aviation-supported projects. These results align with that.

In contrast, political uncertainty negatively affected performance ($\beta = -0.188$). This analysis supports the claims of Ochieng and Price (2018), demonstrating that political risks can negatively impact infrastructure and project success unless addressed by diligent risk management and stakeholder involvement. In offshore contexts, these risks may be exacerbated, particularly when decision-making is disjointed or precarious.

The model's explanatory power ($R^2 = 0.882$; Adjusted $R^2 = 0.879$) demonstrates that these four parameters significantly contribute to the variance in offshore project performance. The findings demonstrate that optimised aircraft maintenance protocols, augmented crew training, efficient cost management, and mitigation of political uncertainty are essential for the success of offshore projects. These insights furnish decision-makers with clear priorities for resource allocation and strategic planning to reduce risks and improve operational efficiencies of offshore projects.

Conclusions and Recommendations

This study analysed the influence of aircraft maintenance policies on offshore project performance, highlighting insufficient maintenance, personnel qualifications, maintenance costs, and political instability. The regression

analysis confirmed that all four factors significantly affect project outcomes, with insufficient aircraft maintenance recognised as the most prominent predictor ($= 0.767$). Personnel qualifications and maintenance costs exerted positive influences, whereas political uncertainty produced adverse effects ($\beta = -0.188$). These variables collectively accounted for 88.2% of the variance in the performance of offshore projects, demonstrating their significant impact on outcomes.

The findings indicate that prioritising aircraft maintenance is essential to reduce downtime, ensure safety, and enhance operational efficiency. Training, certification, and competency assessments can enhance project delivery by ensuring staff qualifications. It is equally essential to manage expenditures, such as utilising predictive maintenance or lifetime cost analysis to achieve a balance between reliability and budgetary constraints. To mitigate the likelihood of issues, political uncertainties must be managed by closely monitoring regulations, involving stakeholders, and devising contingency plans for potential failures.

This study augments existing knowledge by demonstrating the relative importance of each factor, so aiding decision-makers in resource allocation to areas of greatest impact. It also corroborates prior studies on maintenance, personnel, and risk management, while providing empirical data pertinent to offshore environments, where complexities and hazards are heightened. The findings offer pragmatic insights for project managers, policymakers, and industry stakeholders seeking to enhance operational reliability and project execution, alongside their academic contributions. The findings indicate potential avenues for future investigation, such as examining the underlying causes, moderating variables, and specific hazards pertinent to offshore industries. To ensure the seamless and effective operation of offshore projects, it remains essential to enhance aircraft maintenance policies, augment crew capabilities, minimise expenses, and mitigate political risks.

anastasiaonuorah1@gmail.com*

Abstract

This study examined the impact of financial literacy on economic empowerment in rural communities in Nigeria from 2000–2024, anchoring in human capital and economic empowerment. The research employed an explanatory design using Ordinary Least Squares (OLS) regression in EViews 9.0. Secondary data were obtained from EFInA A2F surveys for financial literacy indicators. The dependent variable was Employment Rate (ER), representing economic empowerment, while financial literacy was proxied by Insurance Awareness Rate (IAR), Formal Account Ownership (FAO), Loan Comprehension Rate (LCR), and Participation in Financial Education Programs (PFEP). Results showed that IAR had a positive but statistically insignificant effect on ER ($\beta = 0.0509$; $p = 0.7422$), underscoring the limited role of insurance in rural Nigeria where informal coping mechanisms dominated. FAO was positive and statistically significant at the 5% level ($\beta = 0.0209$; $p = 0.0396$), confirming that account ownership enhanced employability by enabling savings, credit access, and participation in formal programs. LCR emerged as the strongest and significant predictor at the 5% threshold ($\beta = 0.0444$; $p = 0.0211$), indicating that loan comprehension improved credit use, reduced default risks, and fostered enterprise growth. PFEP also exhibited a positive and significant effect at the 5% level ($\beta = 0.0218$; $p = 0.0403$), highlighting the value of structured education in strengthening financial skills and decision-making. The overall model explained 58.7% of variations in ER, with an F-statistic significant at the 1% level, confirming the joint explanatory power of the financial literacy indicators. The study concluded that while insurance awareness alone was insufficient, account ownership, loan comprehension, and financial education significantly fostered empowerment in rural Nigeria at the 5% significance level. It recommended expanding micro-insurance, reducing barriers to account ownership, embedding loan literacy into rural programs, and scaling financial education linked to practical financial products.

Key Words: *Financial Literacy, Insurance Awareness, Loan Comprehension Rate, Participation in Financial Education Programs and Employment Rate.*

Introduction

Rural Nigeria still faces chronic deficiencies in financial literacy, despite the fact that it is a crucial factor in determining economic inclusion and empowerment. Outside of metropolitan areas, there is still a lack of awareness and use of financial products, despite legislative efforts to increase financial inclusion, with more than 40% of adults still not participating in the formal financial system, Wezel and Ree (2023) highlight in their IMF country paper that low literacy and digital awareness contribute to rural financial exclusion. Similar to this, Onyenemezu and Udegbum (2021) contend that pervasive financial literacy gaps are the root cause of ingrained poverty because households are unable to properly assess and utilise credit, insurance, and savings options. Nigeria's demographic makeup and strong reliance on rural livelihoods make these disparities particularly

significant. The Insurance Awareness Rate (IAR), Formal Account Ownership (FAO), Loan Comprehension Rate (LCR), and Participation in Financial Education Programs (PFEP) are quantifiable proxies that can be used to examine financial literacy in this context. This allows for a more thorough understanding of the obstacles to inclusion. According to research by Imhanrenialena and Nwobodo-Anyadiiegwu (2025), literacy is positively correlated with the adoption of financial services and sustainable farming methods, indicating that literacy helps households access and use financial tools effectively. Similarly, Hassan and Utulu (2022) point out how rural communities in Bauchi State's lack of knowledge and technological obstacles limit their ability to participate financially and their faith in official institutions. The economic agency of rural Nigerians can be directly shaped by certain knowledge gaps, such as inadequate

understanding of loan terms or low insurance uptake, by concentrating on these proxies.

There are significant ramifications for economic empowerment, which is represented here by the employment rate (ER). By empowering people to manage risks, diversify their sources of income, and pursue entrepreneurial endeavours, financial literacy lowers vulnerability and makes it easier for people to transition from unstable self-employment to more stable employment. Even though informality continues to limit employment outcomes in rural areas, there is empirical evidence that literacy-driven gains in loan comprehension, insurance participation, and account ownership can broaden opportunity structures. Low levels of insurance awareness, limited formal account ownership, poor loan term comprehension, and low participation in financial education programs continue to plague Nigerian rural communities, undermining their capacity to use financial systems for long-term employment and livelihood. The lack of sufficient literacy remains a significant barrier, despite the fact that financial inclusion policies have increased access (Wezel & Ree, 2023). Nonetheless, current research

Literature Review

Conceptual Review

Financial Literacy

The awareness, information, abilities, and attitudes people need to make wise financial decisions and improve their financial well-being are collectively referred to as financial literacy. It includes understanding concepts like borrowing, saving, risk management, and long-term planning in addition to reading and writing about finance. Financial literacy is especially important in rural areas because it determines how well people can interact with financial institutions, understand information, and use financial services to improve their quality of life (Wezel & Ree, 2023). Financial literacy is the cornerstone of long-term involvement in both conventional and contemporary financial systems by influencing decision-making. From a conceptual standpoint, inclusion, resilience, and empowerment are all strongly related to financial literacy. It serves as a tool to lessen the information asymmetry that exists between users and financial service providers, empowering people to make decisions that suit their needs and objectives. The purpose of financial literacy is to foster confidence, trust, and reason when navigating formal financial environments in rural Nigeria, where households frequently rely on unofficial means (Onyenemezu & Udegbum, 2021). It also represents the more general notion that in order to convert access into efficient use of financial products and services, knowledge and skills are necessary (Imhanrenialena & Nwobodo-Anyadiiegwu, 2025). In rural contexts, financial literacy

identifies significant gaps: Although Benedict (2024) demonstrates that financial literacy improves rural producers' access to credit, the study makes no connections between these results and employment or more general economic empowerment. Similarly, Imhanrenialena and Nwobodo-Anyadiiegwu (2025) show that literacy increases the uptake of sustainable agricultural practices and financial services, but their analysis does not look at how such adoption affects employment. Effiong et al. (2025) offer proof that awareness affects health insurance scheme enrolment, but they do not extrapolate their results to labour market outcomes. Furthermore, employment disparities in rural areas are documented by national labour statistics; however, these trends have rarely been analysed in conjunction with multidimensional literacy indicators (NBS, 2024). The need for this study was driven by the body of evidence that shows how little integrated research has been done to directly link various proxies of financial literacy; insurance awareness, account ownership, loan comprehension, and financial education participation to employment outcomes.

can be viewed as a vital tool for promoting inclusive development, enabling informed participation in economic activities, and bridging systemic inequalities. IAR, or insurance awareness rate is a measure of how well people know and comprehend insurance products, their advantages, and the ways in which they offer risk-averse financial protection. It shows that people understand the importance of insurance in protecting their livelihoods, assets, and health in addition to knowing that it exists. IAR plays a critical role in shaping attitudes towards risk management and involvement in formal insurance schemes in rural communities, which are particularly vulnerable to shocks (Effiong et al., 2025; Osunde et al., 2023). Therefore, IAR is a crucial measure of resilience and financial literacy.

Owning a transaction account with a licensed financial institution that acts as a conduit to additional financial services like credit, savings, and payments is known as formal account ownership, or FAO. Since it gives people the ability to safely manage resources, participate in economic activities, and accumulate financial security, it is commonly recognised as a crucial indicator of financial inclusion. FAO encourages financial stability, decreases reliance on informal systems, and increases formal economy participation in rural areas (Demirgüç-Kunt et al., 2022; Allen et al., 2023). As such, FAO is a key metric for financial empowerment and literacy.

The Loan Comprehension Rate (LCR) measures how well people comprehend the terms, conditions, expenses, and commitments involved in borrowing

money from official financial institutions. In order to make wise credit decisions, it includes understanding interest rates, repayment plans, collateral requirements, and penalties. Because poor understanding frequently results in loan avoidance, excessive debt, or mistrust of financial providers, LCR is crucial in rural communities as it limits access to productive financing. Households can better utilise credit for investment and livelihood enhancement by bolstering LCR (Adeniran & Obembe, 2022; Ojong & Effiom, 2024).

Engaging in Financial Education Programs (PFEP), the active participation of individuals in organised programs intended to improve the financial knowledge, abilities, and attitudes required for sound financial decision-making is known as PFEP. These initiatives could take the form of workshops, community-based training, school curricula, or online learning environments designed to enhance responsible borrowing, money management, and a culture of saving. Because it bridges capability gaps, increases self-assurance when engaging with formal institutions, and promotes long-term financial resilience, PFEP is especially important in rural areas. Theoretically, PFEP supports economic empowerment by converting access to financial services into meaningful use (Sajuyigbe et al., 2024).

Employment Rate in Rural Communities in Nigeria

The percentage of working-age individuals in Nigerian rural communities who are employed in the formal or informal sector is known as the employment rate. It is a vital sign of economic health since it shows how well people can support themselves and engage in the economy. The majority of jobs in rural Nigeria are in informal manual labour, petty trading, and subsistence farming, all of which are frequently characterised by low productivity and shock susceptibility (Adepoju & Oni, 2023; NBS, 2024). Because of this, the employment rate in these areas reflects both the structural issues that rural economies face, such as poor market connections, limited access to financing, and inadequate infrastructure, in addition to being a gauge of labour participation. Reducing poverty, halting rural-urban migration, and fostering inclusive growth all depend on a high employment rate in rural areas. Rural residents are more likely to become financially independent, enhance household welfare, and support community development when they have access to steady and fruitful employment opportunities. The transformative potential of employment is, however, limited in rural Nigeria by the prevalence of precarious informal jobs and ongoing underemployment (Okafor & Anyanwu, 2022; Usman & Yusuf, 2025). Investments in education, vocational training, agricultural modernisation, and the growth of rural enterprises are necessary to meet these challenges.

Therefore, the employment rate is a crucial indicator of economic empowerment and the general development of Nigerian rural communities in addition to being a statistical indicator of labour utilisation.

Theoretical Review

Human Capital Theory

According to human capital theory, a person's abilities, competencies, and knowledge are important factors that influence economic growth and productivity. The idea contends that investments in education, training, and other capacity-building initiatives increase people's ability to make meaningful contributions to the economy (Becker, 1993). Given that participation in financial education programs, account ownership, loan comprehension, and knowledge of financial services all enhance decision-making and financial behaviour, financial literacy can be seen as a type of human capital in rural Nigeria. Financial literacy improves employability and supports stable livelihoods by giving rural residents the skills they need to manage resources, assess risks, and interact with formal institutions with confidence. Because it highlights the importance of knowledge-based investments in improving employment outcomes and lowering poverty in rural communities, Human Capital Theory offers a helpful framework for tying financial literacy to economic empowerment.

Empowerment Theory

The process of improving people's control over opportunities, resources, and decision-making that impact their lives is emphasised by empowerment theory. Zimmerman (2000) asserts that empowerment encompasses behavioural, emotional, and cognitive aspects that increase people's ability to affect their surroundings and become more independent. By helping people to get past obstacles to inclusion, interact with financial systems efficiently, and increase their economic opportunities, financial literacy serves as an empowerment tool in rural Nigerian communities. Participation in financial education programs and increased financial literacy give people the confidence they need to use formal financial services, obtain credit, and engage in revenue-generating endeavours that lead to employment. Because it links financial literacy to broader socio-economic transformation and emphasises how increased awareness and capacity can result in employment, resilience, and better welfare in rural areas, empowerment theory is pertinent to this study. It presents financial literacy as a prerequisite for economic empowerment as well as a means of achieving it.

Empirical Review

Adepoju et al. (2025) used household survey data from 2020 to 2024 to conduct a nationwide time-series study

in Nigeria that included Lagos, Kano, and rural states. Fixed-effects regression using DHS financial literacy proxies and employment records showed that rural employment rates rose by 0.8 percentage points for every unit increase in the literacy index. In order to promote sustainable economic empowerment, the study suggested incorporating financial literacy into rural livelihood programs and came to the conclusion that literacy has macro-level employment effects.

Among 460 farmers registered in Edo State, Imhanrenialena et al. (2025) examined the relationships between financial literacy, funding access, adoption of innovative financial services, and sustainable food production. Regression analysis using a cross-sectional design with S&P financial literacy items revealed that literacy significantly improved funding and fintech use. The study came to the conclusion that literacy increases productivity and suggested campaigns to boost rural economic participation by combining financial education with digital payments onboarding.

A multi-site cross-sectional survey with 3,732 respondents was used by Effiong et al. (2025) to evaluate enrolment in six state-sponsored health insurance programs throughout Nigeria. Descriptive, bivariate, and logistic regression analysis showed extremely low enrolment and found that the primary obstacle was a lack of awareness. The study came to the conclusion that a lack of insurance knowledge limits risk protection and suggested unified education campaigns, broader scheme consolidation, and streamlined procedures to increase public confidence and boost rural communities' adoption.

Under the Central Bank's Anchored Borrowers Program in Nigeria, Benedict (2024) investigated how smallholder farmers' economic decisions were impacted by their level of financial literacy. The study used PLS-SEM and a cross-sectional survey with S&P literacy items to find that literacy was a significant predictor of digital payment preferences, credit access, and agribusiness performance. It found that comprehension of compound interest and numeracy were weak areas and suggested focused financial education programs to improve these abilities for better financial outcomes and decision-making in rural areas.

Alqam and Hamshari (2024) used a multifaceted literacy tool that covered decision-making, consumer rights, and product knowledge to survey 440 Jordanian youth. PLS-SEM analysis revealed that literacy dimensions significantly improved well-being and financial inclusion. The study came to the conclusion that comprehensive literacy improves youth empowerment and suggested incorporating consumer rights and financial product knowledge into curricula to promote inclusion and long-term involvement in formal financial systems, especially among underprivileged youth populations in developing nations.

Lang (2024) used data from more than 100 countries' Gallup Polls, S&P FinLit, and Global Findex to examine poverty and financial literacy worldwide. Probit models using Gaussian copulas showed that literacy, through account ownership and formal savings, lowers poverty, particularly in low-income and rural areas. In order to achieve inclusive financial and social development globally, the paper suggested concentrating interventions on vulnerable groups and concluded that expanding literacy programs strengthens poverty reduction, especially where formal account use is weak.

Using multistage sampling and questionnaires analysed with regression and Garrett ranking, Falola, Adeniyi, and Alao (2023) investigated the financial literacy of rural households in Kwara State. The findings revealed that literacy levels were moderate, and that higher literacy scores were significantly correlated with education and extension services. In order to improve the results of financial inclusion, the study suggested that banks, cooperatives, and government organisations expand their rural financial outreach programs. It also found that community-based and extension-driven training can greatly increase literacy in rural households.

Research Methodology

This study examines the relationship between financial literacy and economic empowerment in Nigeria between 2000 and 2024 using an explanatory design and Ordinary Least Squares (OLS) regression. For estimation and diagnostic testing, EViews 9.0 is used, guaranteeing reliable, accurate findings regarding the influence of financial literacy proxies on employment outcomes. Nigeria's more than 200 million citizens in six geopolitical zones make up the study population (NBS, 2023). Because of their greater vulnerability, limited work options, and higher rates of financial exclusion, rural communities, which make up more than half of the population are the focus of this analysis of literacy and empowerment dynamics.

Nigerian rural communities were chosen for the study sample using purposive sampling from the NBS Labour Force Survey and the EFINA A2F (2000–2024). This method focusses on the groups most impacted by marginalisation and a lack of opportunities for empowerment, guarantees consistent data on literacy and employment, and records regional variations over time. The study uses secondary data (2000–2024) from NBS labour force surveys for employment rate and EFINA A2F surveys for financial literacy indicators. To ensure reliable, high-quality evidence for examining long-term financial literacy and empowerment in rural Nigeria, these standardised datasets are cleaned and harmonised into a format that is ready for regression analysis.

The association between financial literacy proxies and employment rate will be examined using Ordinary Least Squares (OLS) regression in EViews 9.0. Variance Inflation Factor (VIF) for multicollinearity, Breusch-Pagan-Godfrey for heteroscedasticity, Durbin-Watson and Breusch-Godfrey LM for autocorrelation, and the Johansen Cointegration Test are among the diagnostic tests that will be used. The significance level

for testing hypotheses will be set at 5%. These diagnostics improve the accuracy and dependability of the results by confirming that the OLS assumptions are true. The results will demonstrate how financial literacy affects economic empowerment on an individual and collective level.

The regression model is specified as:

$$ER_t = \alpha + \beta_1 IAR_t + \beta_2 FAO_t + \beta_3 LCR_t + \beta_4 PFEP_t + \epsilon_t$$

Where:

ER = Employment Rate (dependent variable, NBS labor force survey).

IAR = Insurance Awareness Rate (EFInA A2F survey).

FAO = Formal Account Ownership (EFInA A2F survey).

LCR = Loan Comprehension Rate (EFInA A2F survey).

PFEP = Participation in Financial Education Programs (EFInA A2F survey).

Results and Discussion

A systematic series of econometric techniques is used to investigate the connection between financial literacy and economic empowerment in rural Nigeria between 2000 and 2024. Indicators from EFInA A2F surveys and NBS labour force surveys; Insurance Awareness Rate (IAR), Formal Account Ownership (FAO), Loan Comprehension Rate (LCR), Participation in Financial Education Programs (PFEP), and Employment Rate (ER) are used in the analysis. To ensure robust estimation, these tests evaluate the variables' relationships, stability, and dependability. The methodology offers a strong foundation for analysing

how financial literacy affects empowerment in rural communities by verifying the model assumptions and data quality.

Descriptive statistics

The mean, minimum, maximum, and standard deviation are highlighted in descriptive statistics, which provide an overview of the variables. This offers a first understanding of the financial inclusion and employment dynamics of rural households by shedding light on the distribution and dissemination of literacy proxies and empowerment measures. Table 1 below displays this:

Table 1: Descriptive Statistics

	ER	IAR	FAO	LCR	PFEP
Mean	90.47600	32.92800	33.36400	43.85600	17.08000
Median	90.20000	32.10000	29.70000	44.70000	17.10000
Maximum	93.60000	53.90000	61.60000	69.50000	32.90000
Minimum	88.10000	11.50000	5.800000	19.60000	0.000000

Sum Sq. Dev.	60.22560	4145.830	7394.958	6080.962	2213.800
Observations	25	25	25	25	25

Source: E-VIEW 9.0 (2025).

Table 1 indicates that ER is stable with a mean of 90.48 and little fluctuation, but FAO (33.36) and IAR (32.93) show significant differences, suggesting unequal access to accounts and knowledge of insurance. The PFEP is the lowest (17.08), with some communities exhibiting

zero participation, and the LCR averages 43.86, indicating moderate loan understanding. The data is suitable for additional regression analysis on rural financial literacy and empowerment because skewness

and kurtosis indicate near-normal distributions, and Jarque-Bera probabilities above 0.46 validate normality.

Correlation Analysis

Correlation analysis identifies relationships among study variables. It reveals whether literacy indicators

move positively or negatively with empowerment, providing initial evidence of possible associations. This step guides the interpretation of regression outcomes and signals potential interdependencies among explanatory variables.

Table 2: Correlation Matrix for the Independent and Dependent Variables

	ER	IAR	FAO	LCR	PFEP
ER	1.000000				
IAR	0.462594	1.000000			
FAO	0.756264	0.691296	1.000000		
LCR	0.763743	0.688815	0.888815	1.000000	
PFEP	0.757457	0.679629	0.774842	0.781975	1.000000

Source: E-VIEW 9.0 (2025).

Table 2 reveals strong positive relationships among the variables. ER correlates highly with FAO (0.76), LCR (0.76), and PFEP (0.76), highlighting their strong influence on rural employment. IAR shows a weaker link with ER (0.46) but stronger connections with FAO (0.69) and LCR (0.69). The strongest relationship is between FAO and LCR (0.89), suggesting that account ownership improves loan comprehension. Overall, the correlations confirm that financial literacy dimensions

are closely tied to economic empowerment in rural Nigeria.

Variance Inflation Factors

Variance inflation factors test for multicollinearity among predictors. Since literacy indicators may overlap in influence, this ensures no variable excessively inflates variance in the model. A low VIF confirms predictor independence and enhances the reliability of the regression analysis.

Table 3: Variance Inflation Factors Multicollinearity Test

Variance Inflation Factors			
Date: 08/17/25 Time: 19:59			
Sample: 2000 2024			
Included observations: 25			
	Coefficient	Uncentered	Centered
Variable	Variance	VIF	VIF
C	3.652719	73.45684	NA
IAR	0.023295	85.6195	2.68677
FAO	0.012059	41.6780	1.73244
LCR	0.013949	67.7679	2.23290
PFEP	0.017423	33.2414	1.02673

Source: E-VIEW 9.0 (2025).

Table 3 shows that all explanatory variables fall within acceptable centered VIF thresholds, confirming absence of harmful multicollinearity. IAR has the highest centered VIF (2.69), followed by LCR (2.23) and FAO (1.73), while PFEP records the lowest (1.03). These values, all below the critical level of 10, indicate that the independent variables are sufficiently distinct and reliable for regression analysis, ensuring that their effects on ER can be estimated without distortion from multicollinearity concerns.

Model Validity Tests

Model validity is ensured through diagnostic tests. The Breusch-Godfrey LM test checks serial correlation, the Breusch-Pagan-Godfrey test verifies heteroskedasticity, and the Ramsey RESET test examines specification errors. Together, these confirm the adequacy of the regression model for robust inference. This is presented in Table 4 below:

Table 4: Model Validity Test

Breusch-Godfrey Serial Correlation LM Test:				
F-statistic	0.434828	Prob. F(2,18)		0.6540
Obs*R-squared	1.152189	Prob. Chi-Square(2)		0.5621
		Durbin-Watson stat		1.860212
Heteroskedasticity Test: Breusch-Pagan-Godfrey				
F-statistic	0.726404	Prob. F(4,20)		0.5843
Obs*R-squared	3.171292	Prob. Chi-Square(4)		0.5296
Scaled explained SS	3.643194	Prob. Chi-Square(4)		0.4564
		Durbin-Watson stat		1.894828
Ramsey RESET Test				
Equation: UNTITLED				
Specification: LOGGDP C LOGDD LOGED LOGDSC LOGTD				
Omitted Variables: Squares of fitted values				
	Value	Df	Probability	Value
t-statistic	1.280231	19	0.2159	1.280231
F-statistic	1.638993	(1, 19)	0.2159	1.638993
Likelihood ratio	2.068579	1	0.1504	2.068579
Durbin-Watson stat		1.736977		

Source: E-VIEW 9.0 (2025).

Table 4 results show that the Breusch-Godfrey test confirms no serial correlation (Prob. Chi-Square = 0.5621; DW = 1.86). The Breusch-Pagan-Godfrey test indicates no heteroskedasticity as all probabilities exceed 0.05. Similarly, the Ramsey RESET test is non-significant ($p = 0.2159$), confirming correct model specification. Together, these diagnostics validate that the OLS model is well-specified, stable, and free from serial correlation and heteroskedasticity, ensuring

reliability of the estimated relationships between IAR, FAO, LCR, PFEP, and ER.

Group Unit Root Test

The group unit root test examines stationarity of time-series data. Establishing whether variables are stable over time prevents spurious regression outcomes. Stationary data ensures that identified relationships between literacy and empowerment reflect genuine long-run dynamics.

Table 5: Unit Root Test

Group unit root test at Level: Summary				
Series: ER, IAR, FAO, LCR, PFEP				
Date: 08/17/25 Time: 20:12

** Probabilities for Fisher tests are computed using an asymptotic Chi-square distribution. All other tests assume asymptotic normality.				

Source: E-VIEW 9.0 (2025).

The unit root tests at level indicate non-stationarity of ER, IAR, FAO, LCR, and PFEP as probabilities exceed 0.05. However, at first difference, all methods (LLC, IPS, ADF, PP) reject the null of unit root with p-values of 0.0000. This confirms that the variables achieve stationarity after first differencing, making them suitable for regression analysis. The results validate that long-run relationships can be analyzed between financial literacy proxies and ER in rural Nigeria within the study period.

Johansen Cointegration Test

This test examines whether a long-run equilibrium relationship exists among ER, IAR, FAO, LCR, and PFEP in rural Nigeria. If financial literacy indicators and economic empowerment align over time, the test confirms their co-movement, indicating that short-term fluctuations still adjust toward a stable long-run equilibrium. This is presented in Table 6 below.

Table 6: Johansen Cointegration Test

Date: 08/18/25 Time: 08:33				
Sample (adjusted): 2002 2024				
Included observations: 23 after adjustments				
Trend assumption: Linear deterministic trend				
Series: ER IAR FAO LCR PFEP				
Lags interval (in first differences): 1 to 1				
Unrestricted Cointegration Rank Test (Trace)				
Hypothesized		Trace	0.05	
No. of CE(s)	Eigenvalue	Statistic	Critical Value	Prob.**
None	0.763165	67.37962	69.81889	0.0000
At most 1	0.533182	34.25062	47.85613	0.0005
At most 2	0.398599	16.72884	29.79707	0.0679
At most 3	0.196357	5.033479	15.49471	0.1207
At most 4	0.000246	0.005662	3.841466	0.1193
Trace test indicates no cointegration at the 0.05 level				
* denotes rejection of the hypothesis at the 0.05 level				
**MacKinnon-Haug-Michelis (1999) p-values				
Unrestricted Cointegration Rank Test (Maximum Eigenvalue)				
Hypothesized		Max-Eigen	0.05	
No. of CE(s)	Eigenvalue	Statistic	Critical Value	Prob.**
None	0.763165	33.12900	33.87687	0.0001
At most 1	0.533182	17.52178	27.58434	0.0024
At most 2	0.398599	11.69536	21.13162	0.2383
At most 3	0.196357	5.027817	14.26460	0.1859
At most 4	0.000246	0.005662	3.841466	0.1193

Source: E-VIEW 9.0 (2025).

The Johansen cointegration results show that ER, IAR, FAO, LCR, and PFEP exhibit evidence of long-run relationships. The trace test rejects the null at None, At most 1, and At most 2, indicating at least two cointegrating equations. Similarly, the maximum eigenvalue test confirms significance at None and At most 1. This implies that exchange rate (ER), interest rate (IAR), financial access opportunities (FAO), loan-to-credit ratio (LCR), and public finance for empowerment programs (PFEP) move together in the

long run, suggesting stable equilibrium interactions among them.

OLS Multiple Regression Analysis

OLS regression quantifies the effect of literacy proxies on empowerment outcomes. By estimating coefficients, it reveals the direction, magnitude, and significance of relationships, forming the empirical basis for policy recommendations targeting rural Nigeria's financial literacy and employment growth. The OLS Analysis result is presented in Table 7 below:

Table 7: Regression Result

Dependent Variable: ER				
Method: Least Squares				
Date: 08/17/25 Time: 19:47				
Sample: 2000 2024

Source: E-VIEW 9.0 (2025).

IAR has a positive but insignificant effect on ER ($\beta = 0.0509$; $p = 0.7422$), showing that awareness alone does not improve rural employment. Human Capital Theory stresses that knowledge must be actionable, while Empowerment Theory highlights the need for supportive structures. Limited insurance access and reliance on informal coping reduce impact. Consistent with Effiong et al. (2025), awareness without uptake is ineffective. Policies should link awareness with affordable micro-insurance, simplified claims, and community outreach to enhance employment benefits. FAO is positive and significant ($\beta = 0.0209$; $p = 0.0396$), showing that formal account ownership boosts ER by enabling saving, payments, and access to programs. Human Capital Theory links this to applied financial skills, while Empowerment Theory highlights expanded resource control. Similar to Lang (2024) and Alqam&Hamshari (2024), FAO fosters inclusion and well-being, aligning with Adepoju et al. (2025) on literacy-driven employment. Expanding agent banking, easing KYC, and digitizing transfers can strengthen FAO's role in rural empowerment. LCR is positive and significant ($\beta = 0.0444$; $p = 0.0211$), making it the strongest literacy predictor of ER. Human Capital Theory links this to improved credit evaluation and repayment skills, while Empowerment Theory highlights greater control over financing choices. This aligns with Benedict (2024) on credit behavior, Imhanrenialena et al. (2025) on funding access, and Falola et al. (2023) on education-driven literacy. Policies should integrate loan-term

training, plain-language contracts, and credit counseling to maximize employment gains in rural communities.

PFEP is positive and significant ($\beta = 0.0218$; $p = 0.0403$), showing structured education enhances ER. Human Capital Theory sees it as skill investment, while Empowerment Theory highlights confidence and agency gains. Alqam&Hamshari (2024) link literacy training to inclusion, Falola et al. (2023) confirm rural education boosts scores, and Adepoju et al. (2025) suggest scalability to employment. Effective practice ties PFEP to real products, uses local channels, and embeds practical modules to translate knowledge into improved labor-market outcomes.

Overall, the model ($R^2 = 0.587$; $F\text{-stat } p < 0.01$) shows financial literacy matters for rural employment, with FAO, LCR, and PFEP driving gains while IAR alone is insufficient without product uptake. The pattern fits Human Capital Theory's emphasis on usable skills and Empowerment Theory's focus on access plus agency, and it coheres with the empirical record (Adepoju, et al 2025). Policies that simultaneously expand account ownership, strengthen loan comprehension, and scale education programs while pairing insurance awareness with accessible micro-insurance are most likely to translate literacy into sustained rural employment.

Conclusion

The findings establish financial literacy as a vital tool for enhancing employment and empowerment in rural communities. While awareness of insurance alone

shows little impact, active financial engagement through account ownership, credit comprehension, and educational programs significantly fosters empowerment. The results align with Human Capital and Empowerment theories, which posit that both knowledge and enabling structures are critical to translating financial literacy into economic benefits. Thus, rural economic empowerment is best achieved when literacy is paired with accessible financial products and supportive institutional frameworks.

Recommendations

Based on the findings, the following recommendations are made;

- i. Policies should focus on expanding rural insurance penetration through micro-insurance, community-based distribution, and simplified claims processes to make awareness more impactful.
- ii. Expand agent banking, digitize government transfers, and simplify KYC requirements to make accounts more accessible in underserved areas.
- iii. Integrate loan literacy into rural training programs, standardize plain-language contracts, and provide borrower counseling to enhance responsible credit use.
- iv. Scale up grassroots financial literacy interventions linked to real products (savings, loans, insurance) with practical modules on budgeting, repayment, and investment.

Effect of Profitability Metrics on Sustainability Reporting: A Sectorial Analysis in Emerging Market Industries

FASUA, Kayode O.

ANAN University, Kwall, Plateau State

Kalovick1@gmail.com

Abstract

This study investigated the relationship between profitability metrics and sustainability reporting in emerging market industries, focusing on environmental, social, and governance disclosures. With growing pressure for companies to improve their sustainability practices, understanding the impact of financial performance on these disclosures is critical. The study used a panel dataset of 33 firms from emerging markets to analyze the effects of key profitability metrics, Return on Assets, Return on Equity, Earnings Before Interest and Taxes, and Earnings per Share, on three types of sustainability disclosures: environmental sustainability disclosure, social responsibility disclosure sustainability index, and governance sustainability disclosure index. The results revealed that profitability metrics do not significantly affect: environmental sustainability disclosure, social responsibility disclosure sustainability index, and governance sustainability disclosure index. The findings highlight the complexity of sustainability reporting, where financial outcomes may not always directly correlate with disclosure practices. For policymakers, businesses, and investors, the study provides important insights into the dynamics of sustainability reporting in emerging markets, emphasizing the need for broader regulatory frameworks that encourage comprehensive disclosure practices.

Key Words: Profitability Metrics, Sustainability Reporting, Environmental Disclosures, Social Disclosures, Governance Disclosures.

Introduction

Sustainability reporting has become an essential practice for companies globally, especially in emerging markets, as it provides transparency on a firm's environmental, social, and governance (ESG) activities. With growing attention on sustainability, companies are expected to report on their environmental impacts, social responsibility, and corporate governance structures to maintain legitimacy, attract investment, and ensure long-term profitability (Olatunde, et al. 2021). In emerging markets, where corporate transparency and sustainable practices are evolving, understanding the impact of sustainability reporting on profitability is crucial.

Emerging market industries face unique challenges in balancing profitability with sustainability. Companies in these regions often grapple with resource constraints, regulatory complexities, and heightened pressure to meet both national and international sustainability standards (Khan, et al. 2021). Environmental sustainability reporting, for instance, addresses the need for companies to disclose their energy consumption, carbon emissions, and waste

management practices. Studies show that such disclosures can influence consumer perception, regulatory compliance, and operational efficiency, all of which may positively affect profitability (Ali, et al. 2018; Al-Waeli et al., 2021). However, the relationship between these disclosures and financial performance remains complex and industry-specific.

Similarly, social sustainability disclosures (SDI), including reporting on corporate social responsibility (CSR) initiatives, employee welfare, and community development, have been found to impact a company's public image and customer loyalty, which may, in turn, affect profitability (Emeke, et al. 2021; Busru, 2021). Governance sustainability disclosures (SDI), which cover corporate governance practices, risk management, and ethical standards, are also believed to influence profitability by enhancing transparency, reducing risks, and building trust with investors (Moses, 2021; Erin, et al. 2022).

Given these dynamics, this study seeks to investigate the effects of profitability metrics on sustainability reporting practices, specifically focusing on environmental, social, and governance disclosures in

emerging market industries. The study aims to assess how these reporting practices influence company profitability, providing insights into the broader relationship between sustainable business practices and financial performance in emerging markets.

Problem of the Study

In recent years, the importance of sustainability reporting has grown significantly, especially within emerging markets. These markets are characterized by rapid industrialization, resource constraints, and an increasing need for firms to balance financial performance with environmental and social responsibilities (Khan, et al. 2021). Despite the growing interest in sustainability, the relationship between sustainability reporting and profitability remains underexplored in these regions. While existing literature highlights the positive correlation between sustainability practices and corporate financial performance in developed markets (Ikumapayi, et al. 2018), studies focusing on emerging markets are scarce and often yield mixed results. This creates a critical gap in understanding how environmental, social, and governance (ESG) disclosures influence firm profitability in these regions.

Emerging markets are often grappling with weaker regulatory frameworks, which results in inconsistencies in the implementation and quality of sustainability reporting. As a result, it becomes essential to understand how environmental sustainability reporting, social sustainability disclosures (SDI), and governance sustainability disclosures (SDI) contribute to profitability metrics like Return on Assets (ROA), Return on Equity (ROE), Earnings Before Interest and Taxes (EBIT), and Earnings per Share (EPS) in these regions. Companies in emerging markets may face higher challenges in reporting sustainability factors due to resource limitations and lack of structured frameworks (Kundayo, et al.2020).

While sustainability reporting has been shown to improve stakeholder trust and brand image in developed economies, the extent to which these benefits translate into financial gains in emerging markets is still uncertain (Freeman, 1984; Ndanafu & Ojodi, 2023). This study, therefore, seeks to explore the relationship between sustainability reporting and profitability in emerging market industries, providing insights into the broader implications of sustainability practices for financial performance. Particularly, the following the null hypotheses will be used for the Study:

- i. **H₀₁:** There is no significant effect of profitability metrics on environmental sustainability reporting in emerging market industries.

- ii. **H₀₂:** There is no significant effect of the profitability metrics on the social sustainability disclosures (SDI) of companies in emerging markets.
- iii. **H₀₃:** There is no significant effect of the profitability metrics on Governance sustainability disclosures (SDI) of companies in emerging markets.

Conceptual Review

Sustainability Reporting in Emerging Markets

Emerging markets are characterized by rapid industrialization, resource scarcity, and underdeveloped regulatory frameworks (Nuhu & Alam, 2024). These markets face unique challenges, such as limited access to sustainable technologies, lack of standardized reporting practices, and inconsistent enforcement of environmental regulations. Despite these challenges, the importance of sustainability reporting in emerging markets has risen, as companies seek to attract international investment, improve their environmental practices, and align with global sustainability goals (Nzekwe, et al. 2021). The growth of global supply chains and increasing consumer demand for ethical practices has placed additional pressure on companies in these regions to report on their sustainability efforts (Bose & Khan, 2022).

The evolution of sustainability reporting standards has been pivotal in shaping the practices of companies worldwide. The Global Reporting Initiative (GRI) and the Sustainability Accounting Standards Board (SASB) have developed frameworks that provide guidelines for companies to disclose their sustainability performance in a structured manner (A Practical Guide to Sustainability Reporting, 2013). These standards have facilitated greater consistency in reporting and have enabled companies to communicate their ESG performance effectively. In emerging markets, however, the adoption of these standards is often slow due to regulatory and infrastructure challenges (Adegboyegun, et al. 2020).

Environmental Sustainability Reporting and Profitability

Environmental sustainability reporting plays a critical role in shaping a company's financial performance. Companies that disclose their environmental impacts, such as carbon emissions, waste management, and resource usage, often experience improved financial performance due to enhanced stakeholder trust, regulatory compliance, and operational efficiency (Bose, et al. 2022; Al-Waeli, et al. 2021). Voluntary environmental disclosures can act as a signal to investors, signaling that the company is forward-thinking and prepared to manage environmental risks effectively (Friske, et al. 2023). Research indicates that firms that adopt comprehensive environmental

reporting practices often see better financial outcomes, such as improved stock performance and profitability, due to reduced operational costs and improved risk management (Igbinovia & Agbadua, 2023).

The impact of environmental disclosures on profitability is often industry-specific. For example, industries such as manufacturing and energy face higher scrutiny regarding their environmental practices due to their substantial ecological footprints (Emeke, et al, 2021). These industries are under significant pressure to report on their environmental practices and reduce their impact, which can present both challenges and opportunities. On the one hand, the need for regulatory compliance can drive up costs, but on the other hand, it creates opportunities for cost savings through efficiency improvements, innovative technologies, and access to green financing (Ali, et al. 2018; Nmer & Hass, 2021).

Exploring the Components of Social Sustainability Reporting

Social sustainability disclosures (SDI) encompass corporate social responsibility (CSR) initiatives, employee welfare programs, community engagement, and stakeholder relations (Emeke, et al. 2021; Sani, 2025). CSR reporting highlights how organizations contribute to societal development through charitable contributions, health and safety programs, and education support, while employee welfare disclosures communicate policies on training, fair wages, and work-life balance. These components provide a transparent framework for stakeholders to evaluate a company's commitment to social responsibility (Adegboyegun et al., 2020).

Transparent reporting of social sustainability activities strengthens stakeholder trust by demonstrating accountability and ethical business conduct (Whitt & Bournier, 2018). Firms that actively communicate social initiatives foster stronger brand loyalty, as customers, investors, and employees perceive them as socially responsible and ethical (Wilky & Cole, 2020). Studies show that positive stakeholder perceptions of social responsibility can translate into increased customer retention, higher employee engagement, and improved investor confidence (Suchman, 1995; Ali, et al. 2018; Omotola & Lambo, 2024).

Governance Sustainability Disclosures and Their Influence on Profitability

Governance sustainability disclosures encompass corporate governance structures, anti-corruption policies, and risk management practices that organizations communicate to stakeholders (Mohammed, 2018). These disclosures provide insight into board composition, internal control mechanisms, compliance frameworks, and ethical guidelines that

ensure accountability and mitigate operational and financial risks. Effective governance reporting reflects a company's commitment to regulatory compliance and sustainable business practices, which are particularly critical in emerging markets where institutional weaknesses and corruption risks are prevalent (Jyoti & Khanna, 2021; Nuhu, et al. 2024).

Transparent governance practices enhance operational efficiency and protect organizations from financial mismanagement and reputational damage (Friske, et al. 2023), while ethical governance also fosters internal trust among employees, reduces agency costs, and strengthens long-term strategic decision-making, which collectively contributes to sustained profitability (Omotola et al. 2024) as investors are more likely to commit capital to firms that provide clear, comprehensive governance reports, perceiving them as lower-risk and more likely to generate consistent returns. Consequently, robust governance sustainability disclosures play a critical role in enhancing both financial performance and market valuation in emerging economies.

Profitability Metrics in Emerging Market Industries

Profitability metrics such as Return on Assets (ROA), Return on Equity (ROE), Earnings Before Interest and Taxes (EBIT), and Earnings per Share (EPS) are critical indicators used to evaluate a company's financial health. ROA measures how efficiently a company uses its assets to generate profit, with higher values indicating better asset utilization (Freeman, 1984). ROE, on the other hand, gauges the profitability relative to shareholders' equity, signaling how effectively a company utilizes its equity base to generate earnings (Ali, et al. 2018). EBIT focuses on operational efficiency by excluding interest and taxes, providing a clearer view of a company's core profitability (Friske, et al. 2023). EPS, often a favorite among investors, measures the profit attributable to each share, offering insights into company performance from a shareholder's perspective (Al-Waeli, et al. 2021).

Profitability metrics are essential in assessing the financial health of a company, especially in emerging markets where companies face unique challenges such as fluctuating economic conditions and regulatory uncertainty (Bose, et al. 2022). These metrics help stakeholders, including investors and analysts, determine the sustainability and risk profile of a company. Strong profitability ratios can indicate a company's ability to weather economic volatility and sustain growth, which is crucial for long-term financial stability (Khan, et al. 2021; Ukaru & Onmani, 2024).

In emerging economies, there is a growing recognition of the relationship between profitability and

sustainability. Companies that effectively integrate sustainability practices into their operations may experience enhanced profitability through improved efficiency, brand loyalty, and investor trust (Ali, et al., 2018; Kolawole, et al. 2023; Obinna & Onwe, 2024). Moreover, companies in these regions are increasingly using sustainability reporting to attract investors and comply with global standards, thus improving their financial outcomes (Nazim, et al. 2017; Oluwagbade, et al. 2023).

Theoretical Review

This study is grounded in several key theories that explain the relationship between sustainability reporting and profitability in emerging markets. The Stakeholder Theory (Freeman, 1984) posits that companies must consider the interests of all stakeholders, not just shareholders, and sustainability reporting helps build trust with various stakeholders, leading to improved financial performance. Signaling Theory (Spence, 1973) suggests that voluntary sustainability disclosures act as signals to the market, enhancing a company's reputation and investor confidence, which in turn influences profitability (Friske, et al. 2023). Resource-Based View (RBV) (Barney, 1991) also informs the study by highlighting how a company's internal resources, such as transparent governance and ethical practices, can provide a competitive advantage. Finally, Legitimacy Theory (Suchman, 1995) argues that companies disclose sustainability practices to gain legitimacy in society, which can enhance their market position and long-term profitability.

Empirical Review

Nzekwe et al. (2021) examined the impact of sustainability reporting on the financial performance of industrial goods companies in Nigeria from 2008 to 2019. Focusing on environmental, social, and economic reporting, the study analyzed data from eleven firms using purposive sampling. The results showed that each type of sustainability reporting positively influenced cash value added. The study recommended the adoption of stronger environmental policies and innovations to enhance financial performance. Panel data analysis methods, including regression and Granger causality tests, were used. Erin et al. (2022) explored the relationship between corporate governance and sustainability reporting quality among 120 listed firms in Nigeria. Governance was assessed using board variables (size, independence, gender diversity, expertise) and audit committee attributes (size, expertise, meeting frequency). Sustainability reporting quality was scored from 0 to 4, with independent assurance receiving the highest score. The study, using ordered logistic regression, found

significant links between governance variables and reporting quality, with external assurance enhancing this relationship. It highlighted implications for policymakers and managers, suggesting scope for cross-country research.

Friske et al. (2023) investigated the impact of voluntary sustainability reporting on firm value, using Tobin's Q as a measure. Analyzing panel data from reporting and non-reporting firms between 2011 and 2020, the study found that sustainability reporting initially had a negative relationship with Tobin's Q but became positive over time. The study, grounded in signaling theory, concluded that sustainability reporting, once seen as costly, enhanced firm value as investor understanding improved. External assurance was also found to positively impact Tobin's Q by increasing credibility.

Ferreira and Martins (2024) explored the relationship between integrated reporting and shareholder value creation in public companies across 39 countries between 2011 and 2018. Using propensity score matching, multilevel regressions, and difference-in-differences models, the study found that adopting integrated reporting enhanced shareholder value by reducing information asymmetry, improving stock price synchronicity, and increasing earnings predictability, especially in developed countries. The study concluded that the reporting process itself, rather than specific frameworks, drives value creation, positioning integrated reporting as a key tool for shareholder value.

Omotola et al. (2024) investigated the relationship between sustainability accounting, reporting, and public value creation in Nigeria's public sector. Data were collected via questionnaires from 2,730 respondents, including managers and senior personnel across Nigeria's six geo-political zones. Using Partial Least Squares Structural Equation Modeling (PLS-SEM), the study found a negative relationship between sustainability accounting and public value creation, highlighting the absence of mandatory sustainability reporting requirements. The study emphasized the need for stronger regulatory frameworks to foster sustainability practices in Nigeria's public sector.

Sani (2025) investigated the challenges and prospects of public value creation, sustainability accounting, and reporting in Nigeria's public sector. Through exploratory research, the study reviewed literature and published articles. Findings revealed key issues such as lack of political will, minimal citizen involvement, and insufficient skilled personnel, all of which hinder effective value creation and sustainability reporting. The study recommended stronger political commitment, increased citizen and stakeholder participation, capacity building for public sector staff, and awareness

campaigns on the benefits of sustainability practices and reporting.

Research Gaps

Despite increasing attention to sustainability reporting in emerging markets, several gaps persist in the literature. First, most studies emphasize environmental and social disclosures, with limited focus on governance sustainability disclosures and their direct effect on profitability in Nigerian firms. Second, while research links sustainability reporting to financial performance, empirical evidence on the interaction between governance practices, investor confidence, and long-term profitability in emerging economies remains sparse. Finally, the role of transparency and ethical practices as mediators between governance disclosures and firm performance has not been sufficiently explored, creating a need for context-specific studies in Nigerian listed companies to fill these gaps.

Research Methodology

Research Design and sample size

The study employed an ex-post facto research design to investigate sample units over a defined period, enabling the examination of changes, effects, and behavioral patterns over time. The population included 46 listed manufacturing companies on the Nigerian Exchange Group (NGX) as of December 2024, with a sample of 33 firms selected from sectors including Natural Resources, Industrial Goods, Consumer Goods, Conglomerates, Healthcare, and Agriculture. Secondary data, validated by external auditors, was used, and the pooled panel technique was applied to manage missing data and analyze relationships effectively.

Model Specifications

The model for this study will be stated in econometrics terms below as;

$$ESGSDI_{it} = \alpha_0 + \beta_1 ROA_{it} + \beta_2 ROE_{it} + \beta_3 EBIT_{it} + \beta_4 EPS_{it} + \beta_5 FSIZE_{it} + \varepsilon_t \quad \text{eq. I}$$

$$SRDSDI_{it} = \alpha_0 + \beta_1 ROA_{it} + \beta_2 ROE_{it} + \beta_3 EBIT_{it} + \beta_4 EPS_{it} + \beta_5 FSIZE_{it} + \varepsilon_t \quad \text{eq. II}$$

$$GOVSDI_{it} = \alpha_0 + \beta_1 ROA_{it} + \beta_2 ROE_{it} + \beta_3 EBIT_{it} + \beta_4 EPS_{it} + \beta_5 FSIZE_{it} + \varepsilon_t \quad \text{eq. III}$$

Where;

ESGSDI = Environmentally Sustainable Disclosure index (measured as Index score generated from the score of 1 or 0 for disclosures or otherwise on material, energy, water, biodiversity, emission/greenhouse gas, waste management, product services and compliance to laws.

SRDSDI = Social Sustainable Disclosure index (measured as Index score generated from the score of 1 or 0 for disclosures or otherwise on community, donation, employee, health and safety and customer/complaints.

GOVSDI = Governance Sustainable Disclosure index (measured as measures the extent of corporate Governance, Social, and Environmental (GSE) information disclosure by companies related to their GSE performance.

ROA = Return on Asset: measured as profit after tax divided by total asset (%)

ROE = Return on Equity: measured as profit after tax divided by total equity (%)

EBIT = Ebit Margin: measured as earnings before interest and taxes divided by sales (%)

EPS = Earnings Per Share: measured as net profit after tax divided by number of ordinary shares

FS = Firm Size (Measured as the natural logarithm of total assets of firm i in year t)

f = functional relationship between dependent and independent variables

ε_t = error term

i = firm identifier

t = time variable (10 Years)

α_0 is the intercept of the regression.

$\beta_1 - \beta_5$ are the co-efficient of the regression equation.

The Apriori expectation: $\beta_1 - \beta_5$ is lesser or greater than 0.

Analysis and Discussion of Results

Descriptive Statistics Analysis and Discussion

Table 1: Summary of Descriptive for ESGSDI SRDSDI GOVSDI ROA ROE EBIT EPS and FSIZE

VARIABLES	OBS	MEAN	STD. DEV	MIN	MAX
ESGSDI	330	.5404361	.5249065	-.9811688	3.484753
SRDSDI	330	.3212424	.1661745	0	.79
GOVSDI	330	.4002121	.1922217	0	.83
ROA	330	4.45339	15.88686	-71.3574	176.2669
ROE	330	5.906927	106.0372	-989.3803	905.423
EBIT	330	23.93526	315.4186	-624.4804	5655.464
EPS	330	4.141648	18.67017	-100.2626	202.5645
FSIZE	330	16.93317	2.079749	12.83807	22.09412

Source: Regression Output, 2025.

The descriptive statistics for the variables in the study provide an overview of the distribution and variability of the data. ESGSDI (Environmental, Social, and Governance Sustainability Disclosure Index) has a mean of 0.54 with a high standard deviation of 0.52, suggesting significant variability in the level of sustainability disclosures across the sample. The minimum and maximum values of -0.98 and 3.48 indicate a wide range in the degree of ESG reporting among firms. SRDSDI (Social Responsibility Disclosure Sustainability Index) shows a mean of 0.32, with a standard deviation of 0.17, implying moderate

variation in social responsibility disclosures, and the maximum value of 0.79 suggests a limited number of firms reporting extensively on social sustainability.

ROA, ROE, EBIT, and EPS display considerable variability, particularly ROE, which has a large standard deviation of 106.04, indicating significant profit fluctuations among firms. FSIZE (Firm Size) has a mean of 16.93 and a standard deviation of 2.08, suggesting moderate variation in firm sizes across the sample. Overall, these descriptive statistics indicate a diverse sample with substantial variation in both sustainability reporting and financial performance.

Normality Test

Table 2: Shapiro-Wilk W test for normal data for ESGSDI SRDSDI GOVSDI ROA ROE EBIT EPS and FSIZE

VARIABLES	OBS	W	V	Z	PROB>Z
ESGSDI	330	0.86244	31.896	8.165	0.00000
SRDSDI	330	0.99305	1.610	1.124	0.13057
GOVSDI	330	0.96681	7.697	4.812	0.00000
ROA	330	0.64588	82.108	10.394	0.00000
ROE	330	0.30626	160.855	11.980	0.00000
EBIT	330	0.07159	215.266	12.667	0.00000
EPS	330	0.39663	139.899	11.651	0.00000
FSIZE	330	0.97773	5.163	3.871	0.00005

Source: Regression Output, 2025.

The Shapiro-Wilk W test results for normality indicate that most of the variables, including ESGSDI, GOVSDI, ROA, ROE, EBIT, and EPS, significantly deviate from normality, as their p-values are below 0.05 ($p < 0.00000$). This suggests that these variables are not normally distributed. However, SRDSDI and FSIZE show p-values greater than 0.05 (0.13057 and

0.00005, respectively), with SRDSDI not significantly deviating from normality, while FSIZE also fails to meet the assumption of normality. The non-normality in many financial and sustainability variables may warrant transformations or the use of non-parametric tests in subsequent analyses.

Correlation Analysis

Levin-Lin-Chu Panel Unit Root Test

Table 6: Diagnostic Tests Results for all the variables at First Differencing

Test	Variable	Level/1st Diff. [1(1)]	Unadjusted t	Adjusted t	p-Value	Stationarity Conclusion
ESGSDI	DESGSDI	First Difference	-12.6223	-3.9027	0.0000	Stationary
SRDSDI	DSRDSDI	First Difference	-12.1416	-4.0228	0.0000	Stationary
GOVSDI	DGOVSDI	First Difference	-14.1230	-6.6017	0.0000	Stationary
ROA	DROA	First Difference	-19.4847	-10.4046	0.0000	Stationary
ROE	DROE	First Difference	-17.3456	-8.6270	0.0000	Stationary
EBIT	DEBIT	First Difference	-17.6658	-9.0103	0.0000	Stationary
EPS	DEPS	First Difference	-16.3616	-6.7525	0.0000	Stationary
FSIZE	DFSIZE	First Difference	-13.6143	-6.6386	0.0000	Stationary

Source: Regression Output, 2025

The Levin-Lin-Chu (LLC) panel unit root test results indicate that ESGSDI, GOVSDI, ROA, ROE, EBIT, and EPS are stationary at level, as their p-values are below 0.05 (0.0000), suggesting they do not contain a unit root and are suitable for further analysis without differencing. However, SRDSDI, FSIZE, and EPS are non-stationary at level, with p-values of 0.3131 and

0.5110, indicating the need for first differencing to achieve stationarity. However, after first differencing, all variables, including SRDSDI, FSIZE, GOVSDI, ROA, ROE, EBIT, EPS, and FSIZE, become stationary with p-values of 0.0000, confirming that they are free from unit roots and can be used for further regression analysis.

Hypotheses Testing for the Model I

Table 7a: Summary PCSE for DESGSDI DROA DROE DEBIT DEPS and DFSIZE

DESGSDI	COEF.	Panel-Corrected STD. ERR.	z	P> z
DROA	-.0010466	.0008741	-1.20	0.231
DROE	.0000578	.000068	0.85	0.396
DEBIT	-.0000244	.0000263	-0.93	0.354
DEPS	.0001007	.0013209	0.08	0.939
DFSIZE	.1757749	.0724723	2.43	0.015
_CONS	-.012005	.023353	-0.51	0.607
N				297
R-squared				0.0147
Wald chi2(5)				9.24
Prob > chi2				0.0998

Source: Regression Output, 2025

The results from the panel-corrected standard errors (PCSE) for Model I indicate that the variables DROA, DROE, DEBIT, and DEPS do not significantly influence DESGSDI (Environmental Sustainability Disclosure Index) as their p-values are greater than 0.05 (0.231, 0.396, 0.354, and 0.939, respectively). This suggests that changes in profitability metrics such as ROA, ROE, and EBIT, along with EPS, do not have a strong relationship with environmental disclosures.

However, DFSIZE (Firm Size) has a statistically significant positive effect on DESGSDI with a coefficient of 0.1757 and p-value of 0.015, indicating that larger firms are more likely to report environmental sustainability disclosures. The R-squared value of 0.0147 suggests that the model explains a small portion of the variation in DESGSDI. The Wald chi-squared test ($p = 0.0998$) indicates that, collectively, the variables are not highly significant.

Hypotheses Testing for the Model II

Table 7b: Summary PCSE for DSRDSI DROA DROE DEBIT DEPS and DFSIZE

DSRDSI	COEF.	Panel-Corrected		
		STD. ERR.	z	P> z
DROA	.0001547	.0002616	0.59	0.554
DROE	.0000305	.0000224	1.36	0.175
DEBIT	3.90e-07	7.08e-06	0.06	0.956
DEPS	-.0001336	.0004612	-0.29	0.772
DFSIZE	.0347136	.0232946	1.49	0.136
_CONS	-.0006151	.0060337	-0.10	0.919
N				297
R-squared				0.0068
Wald chi2(5)				5.49
Prob > chi2				0.3592

Source: Regression Output, 2025

The results from the panel-corrected standard errors (PCSE) for Model II indicate that none of the profitability metrics (DROA, DROE, DEBIT, DEPS) significantly affect DSRDSI (Social Responsibility Disclosure Sustainability Index), as all p-values exceed 0.05 (0.554, 0.175, 0.956, and 0.772, respectively).

This suggests that changes in profitability do not strongly influence social sustainability disclosures. The R-squared value of 0.0068 suggests that the model explains very little variation in social sustainability disclosures.

Hypotheses Testing for the Model III

Table 7c: Summary PCSE for DGOVSDI DROA DROE DEBIT DEPS and DFSIZE

DGOVSDI	COEF.	Panel-Corrected		
		STD. ERR.	z	P> z
DROA	.0006196	.0006985	0.89	0.375
DROE	-.0000533	.0000377	-1.41	0.157
DEBIT	9.53e-06	.0000331	0.29	0.773
DEPS	.0004599	.0003977	1.16	0.247
DFSIZE	.0225629	.0299752	0.75	0.452
_CONS	-.0042591	.0104903	-0.41	0.685
N				297
R-squared				0.0142
Wald chi2(5)				9.10
Prob > chi2				0.1050

Source: Regression Output, 2025

The results from the panel-corrected standard errors (PCSE) for Model III show that none of the profitability metrics

(DROA, DROE, DEBIT, DEPS) significantly influence DGOVSDI (Governance Sustainability Disclosure Index), as all p-values are above 0.05 (0.375, 0.157, 0.773, and 0.247, respectively). This indicates that profitability metrics do not have a strong impact on governance sustainability disclosures. DFSIZE (Firm Size) also does not have a statistically significant effect on DGOVSDI ($p = 0.452$). The R-squared value of 0.0142 suggests that the model explains a very small proportion of the

variation in governance disclosures. The Wald chi-squared statistic of 9.10 ($p = 0.1050$) further indicates that the model is not statistically significant, and the explanatory variables do not collectively influence governance sustainability disclosures in the sample.

Discussion of Findings

The results of the hypotheses testing across the three models indicate varied impacts of profitability metrics on sustainability disclosures. In Model I (environmental sustainability disclosure index, DESGSDI), profitability metrics such as ROA, ROE, EBIT, and EPS show no significant relationship with environmental disclosures, as indicated by their high

p-values (0.231, 0.396, 0.354, and 0.939, respectively). However, DFSIZE (firm size) has a significant positive effect on DESGSDI ($p = 0.015$), suggesting that larger firms tend to report more on environmental sustainability, possibly due to better resources and regulatory pressure (Khan, et al. 2021; Ali, et al. 2018). The R-squared value of 0.0147 suggests that the model explains only a small portion of the variation in environmental sustainability disclosures.

In Model II (social responsibility disclosure sustainability index, DSRDSI), none of the profitability metrics or firm size show a significant relationship with social disclosures, as all p-values exceed 0.05. The R-squared value of 0.0068 and the Wald chi-squared result of 5.49 ($p = 0.3592$) indicate that the model is not significant in explaining social sustainability disclosures.

In Model III (governance sustainability disclosure index, DGOVSDI), similar results are found, with no significant effects from ROA, ROE, EBIT, EPS, or DFSIZE on governance disclosures. The R-squared value of 0.0142 and the Wald chi-squared statistic of 9.10 ($p = 0.1050$) indicate that governance disclosures are not strongly influenced by profitability metrics in this study.

These findings align with previous research, which suggests that in emerging markets, profitability may not always correlate directly with sustainability reporting due to varying regulatory environments and organizational priorities (Bose, et al. 2022; Nmer, et al. 2021).

Summary, Conclusion and Recommendations

Summary of Findings

- i. For Environmental Sustainability Reporting, the analysis shows no significant effect of profitability metrics (ROA, ROE, EBIT, EPS) on DESGSDI (environmental sustainability disclosure). Therefore, the null hypothesis is accepted.
- ii. For Social Sustainability Disclosures, Profitability metrics and firm size have no significant impact on DSRDSI (social sustainability disclosure). The null hypothesis is accepted.
- iii. H_{03} (Governance Sustainability Disclosures): Profitability metrics and firm size do not significantly affect DGOVSDI

(governance sustainability disclosure). The null hypothesis is accepted.

Conclusion

This study concludes that profitability metrics for the study which includes ROA, ROE, EBIT, and EPS, do not significantly impact environmental, social, or governance sustainability disclosures (DESGSDI, DSRDSI, DGOVSDI) in emerging market industries. The findings suggest that in emerging markets, sustainability disclosures are influenced by factors other than profitability, particularly organizational size. These results highlight the complexity of sustainability reporting and the need for further investigation into other potential drivers within these markets.

Recommendations

- i. Policy-makers should develop clearer sustainability reporting standards to encourage greater transparency and uniformity in disclosures across industries.
- ii. Companies in emerging markets should invest in improving their sustainability reporting practices, particularly in the environmental sector, to align with global standards and attract investors.
- iii. Future research should explore other factors, such as regulatory pressures and corporate culture, that may influence sustainability disclosures in emerging market industries.
- iv. Investors should consider firm size and governance practices when assessing sustainability performance, as these factors appear more impactful than profitability metrics.

Publication Date: 2025/11/28

Abstract

The study examined the effect of emotional branding on consumer purchase decision of Indomie Nigeria. The specific objectives are to: ascertain the effects of storytelling on consumer purchase decision assess the effect of customer centrisism on consumer purchase decision and determine the effect of service personalization on consumer purchase decision. The study adopted the descriptive survey research design method specifically, a cross sectional survey design. The population of the study consists of 551 persons to whom the research was generalized. From the population, a workable sample size of 231 was derived. The study adopted the simple random sampling technique. The study used structured questionnaire as instrument of data collection. To establish the reliability of the instrument, a test-retest method was used. The descriptive statistics, correlation and multiple regression analysis were used to analyze the data collected. The data collected was analyzed by using the statistical package for social sciences (SPSS) software version 25.0. Finding showed that story telling ($\beta = 0.134$, $p = 0.005 < 0.05$), customer centrisism ($\beta = 0.198$, $p = 0.002 < 0.05$), and service personalization ($\beta = 0.143$, $p = 0.004 < 0.05$), have significant positive effect consumer purchase decision. Findings showed that emotional branding practices were responsible for 53% of the changes in consumer purchase decision. The study concluded that emotional branding has significant and positive effects on consumer purchase decision. The study recommended amongst others that when making decisions on brand selection, marketers should take into account multiple data factors. These include the manager's area of expertise within the sector, the extent of their audience engagement, the platform they operate on, and the overall reach they possess. The study demonstrated that how the emotional brand is mentioned verbally by reputable personality creates brand image.

Keywords: Emotional Branding, Consumer Purchase Decision, Storytelling, Customer Centrisism, Service Personalization

Introduction

In today's world of competition, competitors spend a lot of money on branding. Emotional branding often aims to get the customer's attention, and it also uses branding to outperform competitors by gaining a competitive advantage. There are various methods that marketers can use in their branding to achieve brand objectives. In addition to these tricks, embracing emotion in branding has always been an indispensable tool for building

and maintaining strong brand equality (Kamran & Siddiqui, 2019). Brands that have emotional values & messages are more likely to associate the consumer with branding. Normally, when consumers are exposed to branding, a portion of their long-term memory is activated, thereby stimulating their buying behavior (Ramsaran, Hanuman, & Sathan, 2022). Marketers use emotional branding elements such as love, humor, happiness and excitement in advertisements. These feelings have the potential to

attract customer attention and retain them connected with the brand. As people grow, they devote more assets and make more dynamic contributions to managing and managing their emotions (Shahid, Bilal, & Majid, 2023).

Emotional branding is a compelling strategy harnessing human emotions to forge robust connections between consumers and brands or products. Its multifaceted influence on consumer behaviour (Kshitiz Sharma, Pratyusha Kodhati, Suma Sukhavasi, 2022) unveils the profound impact emotions wield on purchase decisions. Research reveals the intricate interplay between rationality and emotions, notably in social settings, where choices are influenced. Emotions are pivotal in consumers' decision-making processes (Vishal Soodan, Akhilesh Chandra Pandey, 2021) emphasizing the need to comprehend audience emotions for effective branding.

Brand storytelling aims to create empathy between a brand and its audience by connecting the company's values with those of its customers. Establishing an emotional connection with the audience is crucial for effectively conveying compelling brand narratives and reinforcing customer retention. This particular advertising approach has a tendency to elicit emotional responses from consumers, particularly when integrated into narratives that aim to enhance the customer experience, so fostering brand recognition and establishing a robust brand value (Teraiya, Namboodiri, & Jayswal, 2023).

Statement of the Problem

In current competitive and complex marketing situations in the consumer goods sector, many firms are facing severe challenges in motivating and retaining its customers. Many of these brand features an emotional expression that attracts the consumer because of their liking for a particular product or service. If a brand contains an emotional expression, it will succeed in trying to attract the customer. The diversified population in Delta state and her rich cultural background create a unique setting for the intersection of storytelling and fast moving consumer goods companies. The distinctive traits of the region provide marketers with a chance to fulfil both the physical and emotional needs of consumers. Brand storytelling is

becoming crucial in a saturated market, enabling organizations to differentiate themselves by creating storylines that connect with local beliefs and values. The ideas, vision statement, history, or origin of a brand are all parts of its story. Companies can illustrate to customers how their offerings can make a difference by telling tales about and customers are able to form an emotional connection with brands through stories because they provide a framework for integrating brand identification.

Consequently, increasing competition along with the relative similarity of fast moving consumer products and services has changed customers' behaviour. In this way firms can avoid the harmful consequences of turning away customers and improve their long-term relationships with them. Especially in competitive market space, the importance of service personalization is due to the nature of customer perceptions about a particular brand. Despite the importance of this issue, there is little research on its impact on decision-making processes in the field of service personalization. Since emotions change people's decisions, it is important to discuss how branding changes consumers' purchasing behaviour. Therefore, present study aims to study the impact of emotional branding on consumers purchase intention of Indomie brands. Hence, the study could fill the empirical gap in literature and there is an emerging need to conduct the study.

Research Objectives

This main objective of this study to examine the effect of emotional branding on consumer purchase decision of Indomie Nigeria. The specific objectives are to:

- i. examine the effect of storytelling on consumer purchase decision of Indomie Nigeria
- ii. determine the effect of customer centricism on consumer purchase decision of Indomie Nigeria
- iii. ascertain the effect of service personalization on consumer purchase decision of Indomie Nigeria

The research questions and hypotheses are in line with the research objective

This study will provide a better understanding of the nuanced ways in which emotional branding appeals can be harnessed to build brand loyalty, engage consumers, and drive business success within this specific sector, it will be useful to future researchers and the government. The study was carried out in Abraka Delta State and the unit of analysis were the consumers of Indomie brands residing in Abraka.

Review of Related Literature

Emotional Branding

Branding is just an example of how to reach the consumer by generating emotional relationships, however, the concept of emotional branding not only involves branding through emotions, but also generating feelings in products or making the brand visible (Titz, 2019). Brand awareness is the essential component of brand equity. Brand awareness describes people's perception and cognitive reaction to a circumstance or event Eboh & Edeme (2024). Emotional branding was defined by Consoli (2019) as the ability to communicate and deliver specific messages through various techniques that evoke feelings and emotions.

On the other hand, Deshwal (2022) defined the concept of emotional branding and advertising efforts that use emotion in moving customers 'feelings and memories when purchasing, meaning that it indulges in influencing customers' emotions such as stirring up happiness, sadness, anger and fear in order to obtain the customer's response and interaction. From another perspective, Drugău-Constantin (2018) defined the concept of emotional branding as the ability to communicate powerfully through the use of different techniques that evoke feelings by adopting an emotional branding strategy that focuses on diverse issues to convey an emotional branding message. Babaei, Casalo and Flavian (2017) saw that emotional branding messages aim to satisfy the psychological desires of customers, such as making them feel smart, beautiful, and elegant, or any feeling that touches self-esteem and self-confidence, in addition to other passions that may be negative, such as fear, sadness and panic that in turn affect the purchase decision. And repeat purchases. Emotional branding is an example of how to reach the consumer through creating emotional relationships, but the concept of emotional branding

not only includes promoting a brand and reaching customers through emotions, but also generating feelings in products in order to make the brand visible.

Storytelling

Storytelling can be regarded as a transformative experience for the recipient, wherein the act of embarking on this experiential journey evokes novel emotions and ultimately leads to the phenomenon of persuasion or even behavioural change (Aaker, Gerbinsky & Vohs, 2012). The utilization of narratives and the act of narrating are crucial in attaining a comprehensive comprehension of consumer psychology (Escalas, 2024). The impact of storytelling marketing on consumer purchase behaviour; the act of storytelling elicits a sense of consumer participation in the experiential aspects associated with the utilized product. Story telling is a tool to promote a product by relying more on the power of the story behind the process of making a product until the product is finished and ready to be marketed by prioritizing feelings to involve the emotions of potential buyers in making a product purchase decision, with the hope that from the story experience, consumers are able to market by word of mouth, (Kaufman, 2023). Perceived quality enables a business to generate purchasing reasons for their customers and build a strong component to differentiate and position its product or service Eboh and Edeme (2024). In building the image of a brand and its philosophy, story-telling is considered capable of translating what a product hopes to bridge the technical aspects of the production process until it becomes a product that is ready to be launched to the market, storytelling has become a good medium to translate all the manufacturer's longings. Building emotions and feelings from potential buyers, towards a product and its attached brand, so it can be concluded that through story telling a product can have a soul and life. In the end, storytelling has become part of today's marketing strategy because it is considered capable of building prospective buyers' emotions in determining purchasing decisions, (Fongo, Fanggidae & Fanggidae, 2019).

Customer Centric

The literature on customer-centric strategies within the realm of marketing management is extensive and multifaceted, reflecting the growing recognition of the pivotal role that customers play in shaping business outcomes. Recent research by Rust et al. (2020) has emphasized the evolving nature of customer expectations, driven by advancements in technology and shifts in societal values. In today's hyperconnected world, consumers demand seamless and personalized experiences across all touchpoints, from initial awareness to post-purchase support. As such, organizations must adopt agile and responsive strategies that prioritize flexibility, adaptability, and continuous innovation (Grewal, Roggeveen & Norlfalt, 2021). The proliferation of digital platforms and social media has empowered consumers with unprecedented access to information, amplifying their voices and influence in the marketplace (Hollebeek, Voorhees & Vannieuwenhuyze, 2019).

Service Personalization

Service personalization is identified as providing the appropriate item and consumer service to the appropriate consumer at the correct time (Sunikka & Bragge 2022). It was commonly used to refer to segmentation, targeting, and profitability, while some studies use it to refer to one-on-one marketing. Businesses utilize service personalization as a way to save costs, increase accessibility, and adjust products (McCarthy, 2021). Service personalization is a component of a firm's customer relationship management whereby the company receives consumer data from a process of interaction between consumers and brands, and the process of gathering data involves learning relationships (Peppers, 2019). Therefore, according to Murthi and Sarkar (2023), service personalization is a way of gaining knowledge regarding consumers' requirements, correlating products to those preferences, and analyzing businesses' attempts to meet those needs. Service personalization could be used online and is built into the system to make website layouts more attractive (Peppers, 2019).

According to Adomavicius and Tuzhilin (2015), service personalization is a cycle of Understanding-Delivering-Measuring that correlates with three-

phase personalization conceptualization: understand what consumers need, match what consumers require with available options, and assess the results of prior phases (Murthi & Sarkar, 2023). Also, personalization is considered as an effective marketing communication system formed from a two-way system, the ability to regulate answers from each part in the process of communication, a data application, and an individualized communication connection (Peltier, 2023). The service personalized experience in online shopping can be made more personalized, which has the potential to improve consumer satisfaction and the effectiveness of consumer interactions. Trade effectiveness and tailored product suggestions for suitable consumers are both believed to have substantial potential (Shaw, 2023).

Consumer Purchase Decision

Consumer buying interest is related to the desire to choose and consumer products or services where interest arises because it is influenced by the quality and strength of the product and even the information obtained by consumers. Usually this interest is influenced by transactional, referential and exploratory (Algiffary, Wahab, Shihab & Widiyanti, 2020; Mustika, 2023). In buying interest there are decisions that must be made by potential consumers. This decision can be continued to buy or cancel. Consumer decisions are also related to the choices that potential consumers have to make regarding the products and services offered, where this is influenced by the period, place, product choice, brand, supplier, quantity and method of payment (Peter, & Olson, 1990; Kotler and Keller, 2016). Connected to the focus of story-telling marketing products that explain a manufacturing process, methods, time and ongoing issues from the basic ingredients of mocktail products, namely from salak seeds, affect consumers in determining attitudes, deciding to buy and at the same time recommending this product to others.

Theoretical Review

This work is anchored on the Aristotle's rhetorical theory.

Aristotle's Rhetorical Theory

Aristotle defined rhetoric as the ability to discern the persuasive techniques applicable in a given context, which he classified into logos (logical argument), ethos (ethical proof), and pathos (emotional proof) (Borchers, 2015). Logos emphasizes the utilisation of logical reasoning in the statements made by speakers. Logos is an essential tool that enables buyers to make an objective assessment by examining the textual elements in a green brand narrative, demonstrating the credibility of a green brand. The use of pathos appeals to the target consumers by aligning with their ideas and wants, thereby producing a sense of cheerfulness. Ethos refers to the linguistic choices made by speakers to showcase their credibility, goodwill, or behaviour. Pathos is a rhetorical strategy that aims to evoke strong emotions or sensations in the listener (Bonet & Sauquet, 2010).

In order to persuade two parties with differing perspectives to reach common ground, it is essential to utilise the principles of logos, ethos, and pathos (Panigyrakis, Panopoulos, & Koronaki, 2020). Ethos pertains to the trustworthiness, dependability, and assurance that buyers derive from a green brand's professional knowledge and green business certifications as presented in the brand's narrative (Higgins & Walker, 2012; Chu, Deng, & Chuang, 2014). Essentially, ethos is essential for ensuring the genuineness of a green brand. The concurrent usage of the three methods of persuasion improves the effectiveness of communication (Yang, Lee, Lee, & Koo, 2018). Aristotle's rhetorical theory has been utilised in many fields such as advertising, industrial communication, and e-commerce marketing (Murthy & Gosal, 2016; Yang et al. 2018). Contemporary rhetorical analysis primarily examines and assesses modern marketing strategies, rather than engaging in the criticism of old marketing controversies. Employing the three techniques of persuasion in brand storytelling aids in effectively captivating consumers and addressing their concerns (Huang, Zhuang, Li, & Gao, 2022). Brand sincerity is said to arise from the value-expressive attributes of a brand.

Empirical Review

Akbar (2024) examined the significance of customer-centric strategies in marketing management and their implications for

organizational success. Adopting a literature review approach, this research synthesizes insights from various disciplines to elucidate the multifaceted nature of customer centricity. The research design employs a qualitative approach, drawing on existing scholarship to elucidate key concepts and frameworks in customer centricity. The findings highlight the paramount importance of prioritizing customer needs and preferences, aligning organizational culture and processes with customer goals, and leveraging technological innovations to enhance customer experiences. The discussion underscores the challenges and opportunities presented by the digitalization of commerce, emphasizing the need for organizations to adapt and innovate in response to changing consumer behaviors and market dynamics. The implications of this study extend to both theory and practice, offering valuable insights for academics, practitioners, and policymakers alike. By embracing a customer-centric mindset and integrating interdisciplinary perspectives, organizations can develop robust strategies that drive sustainable competitive advantage in today's dynamic markets. Onobrakpeya and Onyenanu (2024) explored the effect of brand storytelling on customer retention in non-alcoholic beverage industry in Delta state, Nigeria. This study used a cross-sectional survey research approach. The study focused on customers of non-alcoholic beverage companies in Delta state. The Cochran formula was used to calculate the sample size of 384. The study used the judgmental sampling technique. The researchers designed a structured questionnaire to collect data directly from customers. The test-retest reliability method was employed to determine the instrument's reliability. The data collected for the study were analysed using frequencies, percentages, correlation and multiple regression analysis to arrive at a conclusion. Findings showed that the dimensions of brand storytelling explained 46% of the variations in customer retention. Genuine brand stories, brand emotional connection and consistent brand narrative has significant positive effect on customer retention. The study concluded that brand storytelling has a significant positive effect on customer retention in Delta state non-alcoholic beverage industry. The study recommended amongst others that firms

should regularly review and update their narrative to align with evolving consumer preferences and market trends while maintaining the core essence of the brand. This consistency not only reinforces the brand identity but also helps consumers easily recognize and remember the non-alcoholic beverages in a competitive market

Yuang and Abhijit (2023) examined the influence of personalized search engine (SE) advertising on consumers' trust and purchase intentions in the context of Hong Kong. With the growing emphasis on personalized advertising strategies, understanding their impact on consumer behavior is crucial for marketers and advertisers. The study will adopt a quantitative research approach, using an online survey to collect data from a sample of Hong Kong consumers. The survey will measure participants' exposure to personalized SE advertising, their levels of trust in the advertisements, and their purchase intentions. Data analysis will involve statistical techniques, such as regression analysis, to identify the relationship between personalized SE advertising, trust, and purchase intentions. The findings of this study will contribute to the existing literature on personalized advertising and consumer behavior, providing insights into the effectiveness of personalized SE advertising in influencing trust and purchase intentions among Hong Kong consumers.

Methodology

Research Design

The study employed cross sectional survey research design method which is descriptive in nature and Descriptive survey research design method was preferred for this study because it facilitated the collection for a considerable amount of data quickly, efficiently and accurately.

Population of the Study

The target population comprised of 574 (purposive) consumers of Indomie. The procedure of drawing samples from the population is known as sampling. To be precise, the sample size of this study consists of two hundred and thirty one (231) members

(consumers) of the organization under study operating in Abraka, Delta State

Sample Size Determination

The formula developed by Taro Yamane offers a streamlined approach for determining the appropriate sample size. Additionally, it was employed for the aim of determining an optimal sample size based on the size of the population and a predetermined desired margin of error. It is given as:

$$n = \frac{N}{1 + N(e^2)}$$

Where n = sample size.

N = population.

e = level of significance.

Therefore the sample size of 231 was derived thus: $n = 547 / 1 + 547(0.05)^2$

$$n = 547 / 1 + 1.3675$$

$$n = 547 / 2.3675$$

$$n = 231.$$

A sample size of 231 was obtained from the population using Taro Yamane's formula.

Sampling Technique

The study adopted stratified sampling techniques to minimize the degree of bias of the respondents' opinion.

A five likert questionnaire was used to collect quantitative data from the respondents. The questionnaire had closed-ended questions divided into sections that represent the different variables of the study.

The researcher adopted a questionnaire survey method to collect primary data from consumers of Indomie, located in Abraka, Delta State. The questionnaire was given to Marketing professionals and other field experts, to enhance the instrument's validity, the researcher sought expert opinion by consulting other experts in respect to content validity. The study data underwent analysis using the statistical package for social sciences (SPSS) software, specifically version 25.

Results and Discussion

Table 1 Response Rate

Pattern focused	Number administered	Number returned	Unused copies	Number used	Response rate
Employees	231	227	5	222	96%

Source: Distributed Questionnaire

Among the total of 231 distributed copies of questionnaire, a substantial majority of 227 copies of questionnaire were successfully retrieved. However, a small fraction of 5 copies of questionnaire were found to be incomplete, leaving a final count of 222

fully completed and usable copies of questionnaire. Consequently, the analysis conducted in this chapter was based on the 96% response rate of the data collected.

Table 2 Analysis of Respondents Profile

S/N	Event	Frequency	Percentage (%)
1	Gender:		
	Male	110	50
	Female	112	50
	Total	222	100
2	Age Range:		
	Below 30 years	85	38
	31-40 years	76	34
	41 years and above	61	28
	Total	222	100
3	Marital Status:		
	Single	107	48
	Married	115	52
	Total	222	100
4	Educational Qualification		
	OND/NCE		
	HND/B.Sc	86	39
	Master	123	55
	Total	13	6
		222	100

Source: Field Survey, 2025.

The table above presents the background characteristics of the diverse respondents. The data revealed that the respondents were evenly distributed in terms of gender, with 50% of the sample being male and the remaining 50% being female. The data on the age distribution of the respondents indicates that 38% of the participants were below the age of 34. Additionally, 34% of the respondents fell within the age range of 31-40 years,

while 28% of the participants were above the age of 41. The analysis of the respondents' marital composition revealed that 48% of the participants were categorised as single, and the remaining 52% were classified as married. Regarding the educational background of the sample, it was observed that 39% of the respondents possessed OND/NCE qualifications. Additionally, the findings revealed that 55% of the respondents held

HND/B.Sc. degrees, whereas 6% of the remaining respondents possessed master's degrees.

In this section, analysis was conducted on the data collected to draw a conclusion and create generalizations. Additionally, the hypotheses proposed in the previous chapter were tested.

Analysis of other Research Data

Table 3 Inter-Correlations and Descriptive Statistics for Study Variables

Variable	1	2	3	4	N
1. Storytelling	1				222
2. Customer Centrism	0.160*	1			222
3. Service Personalization	0.018	0.303**	1		222
4. Customer Purchase Decision	0.133*	0.569**	0.131	1	222

** . Correlation is significant at the 0.01 level (2-tailed).

Table 4 The guideline for Pearson correlation coefficients

S/N	Coefficient value	Strength of association
1	$< r < 0.3$	Small correlation
2	$0.3 < r < 0.5$	Medium/moderate correlation
3	$r > 0.5$	Large/strong correlation

Source: Based on Cohen (1988)

Table 4.3 showed the inter-correlations and descriptive statistics for study variables. The correlation model exhibited the extent of valuable relationship that exists among the variables in this study. Story telling showed a positive correlation coefficient with consumer purchase decision (0.286**) which means that influencer reach is a good measure of emotional branding practices. Customer centrism showed a moderate positive correlation coefficient with consumer purchase

decision (0.460**) which implies that customer centrism is a moderate and good measure of emotional branding practices.

Service personalization showed a positive correlation coefficient with consumer purchase decision (0.112*) but extant literature showed that service personalization effect is a strong and good measure of emotional branding practices.

Table 5 Regression Analysis of Emotional Branding and Consumer Purchase Decision Coefficients^a

Model	Unstandardized Coefficients		Standardized Coefficients			Collinearity Statistics	
	B	Std. Error	Beta	T	Sig.	Tolerance	VIF
1 (Constant)	.995	2.300		.433	.666		
Story Telling	.228	.080	.134	2.842	.005	.952	1.051
Customer Centrism	.195	.061	.198	3.187	.002	.544	1.839
Service Personalization	.118	.041	.143	2.889	.004	.855	1.170

a. Dependent Variable: **Consumer Purchase Intention**

The model below shows the study hypotheses formulation:

$$Y = \beta_0 + \beta_1 ST + \beta_2 CE + \beta_3 BA + e \dots \dots \dots (iii)$$

$$BP = .995 + (0.228 \times ST) + (0.195 \times CC) + (0.118 \times SP)$$

Table 5 showed that story telling has significant and positive effect on consumer purchase decision (β

=0.134, $p=0.005 < 0.05$), customer centrisim has significant and positive effect on consumer purchase decision ($\beta = 0.198$, $p=0.002 < 0.05$), service

personalization has significant effect on consumer purchase decision ($\beta = 0.143$, $p=0.004 < 0.05$).

Table 6 Fitness of the Model (Analysis of Variance)

ANOVA ^a						
Model		Sum of Squares	Df	Mean Square	F	Sig.
1	Regression	374.676	5	74.935	51.888	.000 ^b
	Residual	311.941	216	1.444		
	Total	686.617	221			

a. Dependent Variable: Brand performance

b. Predictors: (Constant), Story Telling, Customer Centrisim, Service personalization

In table 6 the *F*-ratio measures how well the total regression model fits the data. According to the table, $F= 51.888$, $0.000 < 0.05$, the elements of emotional branding practices strongly predict consumer

purchase decision. This has the consequence that the regression model fits the data well and is extremely significant for the research.

Table7 Model Summary

Model Summary				
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.739 ^a	.546	.535	1.202

a. Predictors: (Constant), Story Telling, Customer Centrisim, Service personalization

The R Square value in Table 4.6 indicates how much the emotional branding components contributed to changes in consumer purchase decision. According to this value, emotional branding practices are responsible for 55% of these changes. The R Square calculates the percentage of the dependent variable's variance that can be accounted for by changes in the predictor variable.

Test of Research Hypotheses

Since the *p*-value critical is at 0.05 (5%) i.e. the level of significance is lesser than the calculated level of significance ($0.005 < 0.05$) in table 4.4, the null hypothesis was rejected while the alternate hypothesis was accepted. This implies that adoption of storytelling does have significant effect on consumer purchase decision of Indomie customer centrisim does not have significant effect on consumer purchase decision of Indomie Table 4.4 showed that the calculated level of significance, which is ($0.002 < 0.05$), is less than the *p*-value of 5%.Based on this result, the null hypothesis was rejected and the alternate hypothesis

was accepted implying that customer centrisim does have significant effect on consumer purchase decision of Indomie

The level of significance that was calculated in table 4.4 is lesser than the established *p*-value ($0.004 < 0.05$), therefore the null hypothesis was rejected while the alternate hypothesis was accepted which states that there is significant effect between service personalization and consumer purchase decision of Indomie

Discussion of findings

In accordance with the data analysis done in chapter four and the review of the related literature in chapter two, the discussion of findings of this study is presented below.

Table 4 showed that story telling has significant and positive effect on consumer purchase decision ($\beta = 0.134$, $p=0.005 < 0.05$).Test of H1 showed that story telling has significant and positive effects on consumer purchase decision ($0.005 < 0.05$). Table 4 showed that customer centrisim has significant and positive effect on consumer purchase decision (β

=0.198, $p=0.002 < 0.05$). Test of H2 showed that customer engagement has significant positive effects on consumer purchase decision ($0.002 < 0.05$). The attitudes, information adoption, and behavioural intents of customers can be influenced by the quality of information (Hussain, Song, & Niu, 2020). The impact of low-quality information, characterised by its inaccuracy, incompleteness, and lack of realism, can significantly influence consumers' perception outcomes and subsequent behavioural choices, thereby leading to detrimental consequences.

Table 4 showed that customer centricism has significant and positive effect on consumer purchase decision ($\beta = 0.143$, $p=0.004 < 0.05$). Test of H2 showed that customer centricism has significant positive effects on consumer purchase decision ($0.004 < 0.05$). This findings agrees with Akbar (2024) examined the significance of customer-centric strategies in marketing management and their implications for organizational success. Adopting a literature review approach, this research synthesizes insights from various disciplines to elucidate the multifaceted nature of customer centricity.

Service personalization was found to have significant effect in consumer purchase decision ($\beta = 0.252$, $p=0.000 < 0.05$). Test of H3 showed that service personalization has significant positive effects on consumer purchase decision ($0.006 < 0.05$). This discovery aligns with Catbagan, Torres and Castaño (2022) provided information to financial institutions, particularly the banking sector that nowadays is going through a diverse change in strategic approach.

- Conclusion**
- The main objective of the study examined emotional branding and consumer purchase decision of Indomie Nigeria using data obtained through structured questionnaire distributed to the customers of Indomie Nigeria. After analyzing the collected data from 231 respondents, the study concluded that the dimensions of emotional branding had significant effects on consumer purchase decision. The study further concluded that emotional branding practices have significant and positive effects on consumer purchase decision, the results of the regression analysis shows that the dimension of emotional branding practices identified in this study contributes significantly to consumer purchase decision.
- Recommendations**
- After close examination and analysis of the research findings, the following recommendations are suggested:
- i. Managers of fast moving consumer goods firms should continue to encourage competencies to promote emotional branding campaign and assigning tasks to the right individuals and to monitor the brand management process of their products and support services.
 - ii. Firms should try to exercise discernment when selecting their collaboration partners, taking into account their personal brand and the expectations of their audience. It is crucial for them to align themselves with brands that they can genuinely promote.

Publication Date: 2025/11/28

Abstract

This study critically examines the understanding of digital inclusion and its implication to public service delivery in Nigeria. The study adopted an historical design and made use of thematic analysis for the rich empirical qualitative data from several literature. The research was underpinned on e-governance, digital divide and public value theory respectively as a lens of digital innovation and inclusion and they impact public service delivery in Nigeria. The study finds that digital inclusion has significantly transformed public service delivery in Nigeria, particularly through platforms such as NIMC, JAMB, FIRS, and NIS. These innovations have improved efficiency, reduced bureaucratic bottlenecks, enhanced transparency, and broadened access to government services. However, the uneven distribution of ICT infrastructure, persistent digital illiteracy, and affordability barriers reveal that the benefits of digital inclusion are not evenly felt across Nigeria. While urban populations benefit more, rural and disadvantaged citizens remain at risk of exclusion, raising equity and inclusiveness concerns. The therefore, recommended that Digital Infrastructure should be Expand, Digital Policy Implementation should be sstrengthenens and there should be Public-Private Partnerships in areas of digital innovations to increase accessibility.

Key words: Digital Inclusion, Digital Innovations, Digital Public Service Delivery

Introduction

One of the core responsibilities of a government and its institution is to provide effective and high-quality services to its citizens, regardless of their status, age, religion, residential location, or other factors. Nigeria, as a state situated in the West African zone, is the most populous state in Africa with over 200million citizens. By this implication, the government is expected to provide quality and effective services to the vast universe. It becomes more cumbersome to rely on traditional methods of service delivery, such as physical office space, letter writing, physical filling of forms, and dissemination of vital information through newspapers, making applications through physical office space, because such an act has led to slow and ineffective service delivery to Nigerians and most especially the rural populace. Public service is the apparatus of government that is deployed to transcend governmental policies, programmes and responsibilities to the populace. At the same time, the delivery is a conveyor belt through which all citizens feel the government's presence, responsibilities, policies, and programmes. This state cuts across the board in terms of urban and rural dwellers.

To achieve a widespread quality, effective and timely government service delivery to its citizens,

there was a need for a paradigm shift from traditional mechanisms of rendering services to a digital perspective. This paradigm shift will bring holistic inclusion in areas of public service delivery in the Nigerian populace. Digital inclusion in public service delivery is viewed as a government service that is delivered to citizens through innovative technologies, such as governmental e-portals, mobile apps, or SMS, aimed at spreading effective and timely service delivery to both urban and rural populations. Digital technologies aim to enhance efficiency and service quality by reducing time wastage, reaching a wider number of citizens at a reduced cost, and can lead to increased transparency, enabling seamless organisational cross-service delivery, such as from NIMC to JAMB to higher institutions and to NYSC in Nigeria. Digital inclusion breaks the barriers of accessibility. Nigerians have experienced poor service delivery in the past, for instance, the registration and correction of national identification cards at physically designated centres, adolescents staying late in JAMB registration centres to obtain their JAMB registration, and individuals queuing to sort out tax-related issues. This phenomenon has led to loss of valuable lives, properties, time and resources. Therefore, it is essential to comprehend digital inclusion and its implications for public

service delivery in Nigeria, in order to determine whether it has a positive or negative impact.

Statement of the Problem

Digital inclusion has become a cornerstone of modern governance, enabling states to improve efficiency, transparency, and citizen engagement in public service delivery to the majority of their universe. The Nigerian state is aggressively pursuing a digital innovation and inclusive future to deliver public services to its vast population by launching a suite of e-government platforms, mobile apps, and SMS/USSD platforms designed to streamline services, enhance transparency, and curb corruption. In recent years, Nigeria has made notable strides in deploying digital technologies across public service institutions, including the Federal Inland Revenue Service (FIRS), the Nigeria Immigration Service (NIS), and the National Identity Management Commission (NIMC). These agencies have introduced e-tax platforms, online passport applications, and the National Identification Number (NIN) registration system as part of the federal government's digital transformation agenda for public service delivery. However, the realities of digital inclusion in Nigeria reveal a complex and uneven landscape where structural, infrastructural, and socio-economic barriers continue to impede effective service delivery. A key challenge is the persistent digital divide. Despite government investments, a significant proportion of citizens, particularly in rural and underserved communities, lack reliable internet connectivity, digital literacy, or access to affordable ICT infrastructure. This results in exclusion from critical services, such as e-filing tax returns, registering for the NIN, or e-passport registration, thereby undermining the principle of equal access to public services.

Moreover, the limited capacity among citizens to navigate digital platforms often leads to reliance on intermediaries, which reintroduces corruption, delays, and inefficiencies that digital reforms were meant to eliminate, thereby demonstrating a lack of understanding of the role of digital inclusion and quality service delivery in Nigeria. Equally troubling is the trust deficit between citizens and public institutions. Many Nigerians perceive digital platforms as unreliable due to recurring system breakdowns, lengthy downtimes, and bureaucratic bottlenecks. For example, the frequent collapse of the NIMC portal has frustrated citizens seeking identity registration. At the same time, inconsistent online tax payment systems in FIRS have discouraged compliance, and incomplete USSD transactions by JAMB users. These challenges erode public confidence in the government's ability to deliver inclusive, citizen-centered services, contradicting the goals of e-governance and public value creation. Furthermore, while digital transformation initiatives are often celebrated at the policy level, their actual impact on service quality, accountability, and citizen satisfaction remains under-researched. There is

insufficient empirical evidence on how digital inclusion or the lack thereof shapes citizens' access to efficient public services in Nigeria. This gap is significant, given that digital innovations are only meaningful when they generate equitable public value, empower citizens, and reinforce legitimacy in governance. Thus, the central problem is that although Nigeria has embraced digital innovations in public administration, structural inequalities, infrastructural gaps, low digital literacy, and weak institutional frameworks continue to hinder inclusive service delivery. Unless these challenges are critically examined, digital governance risks reinforcing exclusion, widening inequalities, and weakening citizens' trust in public institutions rather than fulfilling its promise of efficient, transparent, and equitable governance.

Research Objective

The broad objective of this study is to examine the understanding of digital inclusion and its implications on public service delivery in Nigeria.

The specific objectives are to:

1. Examine the extent to which digital portals (NIMC and JAMB) have enhanced accessibility and efficiency of public service delivery by the Nigerian populace.
2. Analyse the role of mobile tools (USSD codes and SMS platforms) in promoting Inclusive Public service delivery.
3. Investigate the impact of the FIRS digital tax payment system on public service delivery.
4. Evaluate the contribution of the Nigeria Immigration Service (NIS) online service platforms in improving efficiency, responsiveness, and citizen satisfaction with public services.

Research Question

1. To what extent does the adoption of e-government portals (such as NIMC and JAMB platforms) enhance accessibility and efficiency in public service delivery in Nigeria?
2. How do mobile governance tools (USSD codes and SMS platforms) promote inclusiveness and extend public services to rural and underserved populations?
3. In what ways do digital payment systems introduced by the Federal Inland Revenue Service (FIRS) influence transparency and accountability in public service delivery?
4. How does the online service platform of the Nigeria Immigration Service (NIS) contribute to efficiency, responsiveness, and citizen satisfaction with government services?

Conceptual Review

Digital Inclusion

Digital inclusion is born out of Digital innovation, which involves the systematic application of scientific knowledge to create new or improved products, processes, or services. This process

focuses on practical implementation and problem-solving to meet specific technical challenges or enhance existing systems. It comprises several stages, each critical to ensuring that the innovation is effective and valuable (Adeyemi, 2023). The innovation process begins with identifying specific technical challenges or phenomena within a society, as well as possible areas of improvement. This involves analysing current systems, understanding their limitations, and pinpointing opportunities where scientific advancements can make a significant impact. Most of the debate on digitalisation and inclusiveness has centred on the degree to which countries worldwide have affordable access to various digital tools and their usage (UNCTAD, 2020). Digitalisation is a complex socio-technical apparatus and set of procedures for adopting and utilising digital technologies and innovations by individuals, organisations, and society as a whole. Digital inclusion is a set of public policies that relate to the installation, administration, expansion, and utilisation of innovative technology that cuts across a country's geographical area. Digital inclusion helps to create an informed society and seamless service delivery to citizens of a given country. GOV. The UK opined that digital inclusion is a facet of social inclusion, and it provides the proper access to the digital world for intellectual development and promotes spaces for significant cultural practice that allows individuals to be digitally literate. It further stated that digital inclusion does not only imply being technically capable of acting in cyberspace, but also being capable of creating and producing meanings and feelings within it. Therefore, digital inclusion refers to the ability to access, adapt, and create new knowledge using innovative technology deployment for customer satisfaction. The expansion of digital applications and platforms can be utilised for development purposes and in addressing societal problems, including those related to achieving the Sustainable Development Goals. It can improve economic and social outcomes and be a force for quality service delivery. The infrastructure provided by platforms can enable more effective connections, transactions, exchanges of information and networking and ease of doing business (UNCTD, 2020).

Digital inclusion refers to the use of information and communication technology to facilitate transparency, efficiency, accountability, and effectiveness in the infrastructural and collaborative exchanges within state, municipal, and local governments, thereby empowering citizens through access to and application of information (Bansal, Sharma, & Sood, 2012). Bansal et al. (2012) state that "Agencies of government adopt digital inclusion for communication and information technologies with the ability to transform the relations between businesses, citizens and different bodies of government." Digital inclusion refers to the process of ensuring that individuals and communities,

particularly those who are marginalised or disadvantaged, have access to and can effectively use information and communication technologies (ICTs). It goes beyond the mere provision of devices and internet connectivity; it also encompasses the development of digital literacy skills, affordability of services, accessibility for people with disabilities, and the creation of relevant content that meets the needs of diverse populations (van Dijk, 2020). By addressing these dimensions, digital inclusion seeks to bridge the digital divide and create equal opportunities for participation in the digital economy and society (Warschauer, 2004). At its core, digital inclusion is both a developmental and a social justice issue. In today's knowledge-driven world, access to digital tools is critical for education, healthcare, financial inclusion, governance, and economic empowerment (World Bank, 2021). When certain groups are excluded—whether due to poverty, geography, gender, age, or disability—the gap in opportunities widens, reinforcing inequality. Therefore, promoting digital inclusion is essential for fostering inclusive growth, enhancing service delivery, and ensuring that no one is left behind in the rapidly evolving digital era.

Media of digital inclusion

There are various media of digital inclusion in Nigeria that ensure services are digitally transmitted to the populace. They include:

1. **Mobile Telephony and Internet Services:** The spread of mobile phones, exceptionally affordable smartphones, has become the most significant medium for digital inclusion in Nigeria. With over 220 million active mobile subscribers and increasing 4G and 5G penetration, mobile connectivity remains the primary channel through which Nigerians access the internet, e-governance services, banking, and social platforms.
2. **National Identification and E-Government Platforms:** Platforms such as the National Identity Number (NIN) system, Bank Verification Number (BVN), and government portals like the Corporate Affairs Commission (CAC) online registration platform are mediums that enable digital identity, access to services, and inclusion in the formal economy.
3. **Digital Financial Services:** tax profiling platform, Mobile banking, Point of Sale (PoS) terminals, and fintech applications have become central to financial inclusion. They provide millions of unbanked and underbanked Nigerians with access to digital payments, savings, and credit.
4. **Educational Platforms and E-Learning Tools:** Digital inclusion is also promoted through online learning platforms (such as Edmodo, Google Classroom, and Nigerian-specific platforms like uLesson). These media enhance access to education for students in urban and rural areas, especially after the COVID-19 pandemic highlighted the role of ICT in education.

5. Community ICT Centres and Public Access Points: Government and NGOs have established ICT hubs, innovation centres, and community internet access points to promote skills training and digital literacy. Initiatives such as NITDA's ICT innovation hubs and state-sponsored technology villages (e.g., Lagos' Eko Innovation Centre) fall within this category.

6. Broadcast and Social Media Platforms: While traditional broadcast media remain influential, social media platforms like WhatsApp, Facebook, Twitter (X), and TikTok serve as powerful mediums of digital inclusion, enabling communication, business promotion, civic engagement, and citizen mobilisation across Nigeria.

In summary, these various mediums of digital inclusion in Nigeria are designed to deliver services to the entire population in both urban and rural settlements.

Public Service Delivery

It is essential to have an understanding of the term 'service delivery' before examining public service delivery. Service Delivery, therefore, according to Kpolovie (2003), is a unique system that enables business success and supports the development of business strategy for achieving different levels of performance, including customer retention, customer satisfaction, and overall profitability. The central notion for a target market is to address the question of "who" the main customers or intended beneficiaries are, and "what" customers can achieve. Service delivery refers to the process of delivering services to consumers or customers within a specific area. Public service delivery refers to the services rendered to citizens by government institutions, ministries, departments, and agencies. Public service delivery is the fundamental reason for the existence of government, and its primary role is to deliver effective and efficient services which the private sector may not have the capacity to offer or offer them at very high prices to the citizens (Egugbo, 2020). Public service delivery is sacrosanct as it is a representation of the basic structure of nation-building. It serves as a nexus and bond between the government and citizens, promoting the values of the nation among its citizens (Walle and Scott, cited in Shittu, 2020). According to Ogunna, cited in Shittu (2020), the desire to satisfy the public through the implementation of public policies, enforcement of laws, and realisation of public welfare culminates in effective public service delivery. Service delivery in the public sector in Nigeria is used as machinery for the implementation of government programmes and policies to the populace, which may include health, education, citizenship registration, security, and other social amenities. The concept presupposes that, in public service, there is a contractual relationship between the customer (the public) and the service provider (government agency) which obliges the latter to render service to the former in the most satisfactory way, be it in terms of utility, quality,

convenience, timelines, cost, courtesy, communication or otherwise.

Brief History of the National Identity Management Commission (NIMC)

The National Identity Management Commission (NIMC) was established by the NIMC Act No. 23 of 2007, replacing the earlier Directorate of National Civic Registration (DNCR) that operated a flawed national ID scheme from the late 1970s (Wikipedia, 2025). NIMC's mandate, as outlined in the Act, includes creating and managing a secure national identity database, integrating existing identity systems, issuing unique National Identification Numbers (NIN), and subsequently issuing the chip-based General Multipurpose Card (GMPC).

Since its inception, NIMC has implemented a series of digital innovations to enhance identity management and service delivery (NIMC.gov.ng). These include the launch of the NIN enrollment exercise in 2010, the issuance of the multipurpose e-ID card in 2013, and a pilot e-ID scheme in 2014, in partnership with Mastercard and Cryptovision, to enable identification and payment functionalities (Techpoint, 2020). More recently, NIMC has introduced digital tools such as the NIMC mobile app for NIN verification and SIM linkage, contactless enrolment solutions, and tokenisation of identity data—advances that have strengthened Nigeria's digital identity ecosystem. These efforts form part of a broader shift toward creating a modern, interoperable identity infrastructure, including partnerships with the Secure Identity Alliance and overseeing the OSIA initiative to promote open identity standards and Secure Identity Alliance. NIMC's ongoing drive to expand enrolment, decentralise services, and integrate its system with other national databases underscores its evolving role in driving e-governance, security, and service inclusion in Nigeria.

Brief History of the Federal Inland Revenue Service (FIRS)

The Federal Inland Revenue Service (FIRS) originated from the colonial Inland Revenue Department of Anglophone West Africa, which was later localised into the Nigerian Inland Revenue Department in 1943. In 1958, the Federal Board of Inland Revenue (FBIR) was established under the Income Tax Ordinance, and in 1993, the FIRS became its operational arm. The FIRS Establishment Act of 2007 gave it autonomy, while the 2025 Nigeria Revenue Service Act further rebranded and strengthened its powers (Wikipedia, 2025).

Over time, FIRS introduced digital innovations to enhance efficiency and compliance. These include Tax Identification Numbers (TINs), the Integrated Tax Administration System (ITAS), and e-TaxPay platforms, which allow taxpayers to file returns and make payments online. More recently, the service has deployed automation tools and data analytics for

monitoring compliance, aiming to expand Nigeria's tax base and improve transparency (Eze, 2020). Thus, FIRS has evolved from a manual colonial-era tax unit into a digitally driven revenue agency at the heart of Nigeria's fiscal sustainability. Its adoption of ICT reflects both the global shift toward e-governance and Nigeria's domestic demand for accountability in taxation (Odukoya, Adekeye, & Okunlola, 2018).

Brief History of the Nigeria Immigration Service (NIS)

The Nigeria Immigration Service (NIS) was established in 1958, following its separation from the Nigeria Police Force. It became a statutory department under the Ministry of Internal Affairs in 1963, and in 1992, it attained para-military status with its head redesignated as the Comptroller General of Immigration. The Immigration Act of 2015 later strengthened its legal framework and expanded its mandate in migration management. NIS has pioneered several digital innovations in Africa. It introduced the Machine Readable Passport (MRP) in 1998, launched the Combined Expatriate Residence Permit and Aliens Card (CERPAC) in 2001, and became the first country in Africa to issue e-Passports in 2007, aligned with ICAO standards. It has also implemented online application and e-payment systems for visas and passports, mobile passport intervention units, and biometric verification for enhanced border security (Immigration.gov.ng). Today, NIS plays a central role in Nigeria's digital identity and migration management, symbolising the country's effort to integrate technology into governance while ensuring national security and global compliance in travel documentation (UNDP, 2023).

The History of JAMB:

The Joint Admissions and Matriculation Board (JAMB) was established in 1978 by the Federal Military Government of Nigeria through Decree No. 2 of 1978 (later amended by Decree No. 33 of 1989). Its creation responded to the inefficiencies of the admission process in Nigeria's higher institutions, which had become fragmented and burdensome (Owolabi, 2014). The Joint Admissions and Matriculation Board (JAMB) occupies a central place in Nigeria's educational landscape as the institution responsible for regulating entry into higher institutions. Its history is not only the story of an administrative body, but also a reflection of Nigeria's attempt to manage equity, standardisation, and efficiency in a diverse and competitive society. The vision of JAMB was to create a fair, transparent, and standardised system for allocating spaces in Nigerian universities. The board's mandate included conducting entrance examinations, collating results, and placing qualified candidates into tertiary institutions based on merit, catchment area, and federal character principles (Adeyemi, 2019).

Over time, JAMB's role expanded. Initially focused on universities, it was later mandated to oversee admissions into polytechnics, monotechnics, and colleges of education. This expansion reinforced its centrality in Nigeria's educational system and broadened its impact on human capital development. However, its journey has not been without challenges. Issues such as examination malpractice, technical failures, and criticisms over fairness and transparency have often tested the credibility of the board. Still, JAMB has shown resilience by adopting reforms, including biometric registration, computer-based testing (CBT), and digital verification systems. These innovations reflect its ongoing commitment to modernisation in line with global standards (Eze, 2020). Today, JAMB is more than an examination board; it represents a rite of passage for millions of Nigerian youths. For many families, preparing for and writing the JAMB examination has become a shared cultural experience, filled with anxiety, hope, and aspirations. In this way, the history of JAMB is deeply human: it is about the dreams of young Nigerians striving for opportunity, the efforts of parents making sacrifices, and the state's role in ensuring that access to education remains structured and equitable.

Examination of Digitalisation in Nigeria's Public Service Delivery

Before the introduction of digital innovations in the Nigerian public service delivery system, there was terrible service delivery characterised by ineffectiveness, corruption, delays, partial service rendering and excessive human interface. According to Magbadelo (2020), there is service delivery failure in the Nigerian public service, which is an indication of bureaucratic delays in processing requisite approval. Public service in Nigeria is akin to inefficiency, corruption and poor service delivery from the educational, health, finance, and security institutions, respectively. The ineptitude and delay have their root in bureaucratic management dimensions. Ajibade and Ibieta (2016) observed that the introduction of reforms in the public service by the administrations of Olusegun Obasanjo (1999-2007) and Yaradua/Goodluck Jonathan failed to achieve the objective of quality service delivery. In the words of Ajibade and Ibieta (2016), the efficiency of the Nigerian public service has been put to the test, and it has experienced a series of economic, political and structural transformations by various regimes and administrations in the country at one time or another. The Nigerian public has faced numerous challenges in service delivery since the country's independence in 1960. Nigeria, like any other developing nation, has reviewed its service delivery procedures and processes to enhance performance and productivity in the public sector. The Federal Ministry of Communications and Digital Economy developed four (4) key goals to drive the adoption of e-government across all Ministries, Departments and Agencies, which in turn enhance

service delivery, transparency, accountability and good governance. Consequently, the E-Government Department began the implementation of the following initiatives: - National E-Government Master Plan: This is a roadmap for the adoption of e-government best practices, by all Federal Government Ministries, Departments and Agencies (MDAs) developed in collaboration with the Government of Korea to further promote the fundamentality of e-governance to the nation which aligns with the government's direction of leveraging technology for public service delivery. - Government Service Portal (GSP): This is a platform (services.gov.ng) developed for the provision of easy access to government services. This has enabled the citizens, businesses and foreigners to access public services through a one-stop government portal easily. Also, it has led to a significant improvement in the government processes and effective and efficient service delivery. - Government Contact Centre (GCC): The Centre provides access for citizens, notwithstanding their location, level of literacy or language, to get government services/information through calls. The aim is to provide citizen orientation and simplicity, enabling them to communicate with the government in a convenient, straightforward, electronic, and barrier-free manner. This has resulted in the employment of a good number of citizens, as well as enhanced their participation in public service. - Open Data Portal: This is an online platform (data.gov.ng) where government MDAs' data/information that is not sensitive is made available for public consumption. This enhances transparency and guarantees inclusiveness in service delivery. - Electronic Document Management System (EDMS): This is one of the ways the government has demonstrated its commitment to digitalisation. The Electronic Document Management System was developed with a view to moving all government documents online. In other words, it was an effort to deepen the application of ICT in all public endeavours. Consequently, there is increased information security, cost reduction and improved access to information among others.

The NIMC Digital innovations have streamlined the identity registration and verification processes. This has led to increased efficiency and speed in providing identity 135 services. Citizens can obtain their National Identification Numbers (NIN) and National ID cards more quickly, enhancing their overall experience. Innovations such as biometric data collection (fingerprint and facial recognition) have significantly improved the accuracy and security of identity data. Biometric technology reduces the risk of fraudulent identity registrations and identity theft, safeguarding citizens' personal information. (Oyedemi, 2018). Biometric technology has significantly simplified and expedited the process of identity registration and verification. Traditional methods, often reliant on paper documentation and manual checks, are time-consuming and prone to errors.

In contrast, biometrics uses unique physical characteristics such as fingerprints, facial features, and iris patterns to quickly and accurately identify individuals (Theophilus, 2023). The Nigerian government introduced several reforms and strategies to mitigate ineffective service delivery in the public bureaucracy. Service delivery assumes a contractual relationship between citizens and the public service, obliging the latter to deliver services to the former in the most satisfactory manner, in terms of utility, quality, convenience, timeliness, and communication (Ahmed in Egugbo, 2020). Therefore, most government institutions are transitioning from traditional methods of service delivery to digital innovations as observed by JAMB, FIRS, NIS and NIMC. The above, therefore, brings into focus the need to investigate the understanding of various digital innovations in Nigeria's public service aimed at delivering quality services.

Opportunities of Digital Inclusion on Public Service Delivery in Nigeria

Digital inclusion offers transformative opportunities for enhancing public service delivery in Nigeria, enabling greater efficiency, accessibility, and accountability. One significant opportunity is to improve efficiency and transparency in governance. With digital tools, public institutions such as the Federal Inland Revenue Service (FIRS) and the National Identity Management Commission (NIMC) have automated service processes, reducing bureaucratic delays and opportunities for corruption (Ndubuaku & Eze, 2020). E-filing of taxes and electronic identification systems provide faster service delivery while building public trust. Digital inclusion enhances citizen access to government services. Platforms such as online portals for passport applications at the Nigeria Immigration Service (NIS), eNaira for digital payments, and digital health services extend government programs to wider populations, including those in rural and underserved areas. By breaking geographical barriers, digital tools ensure more inclusive governance.

Digital inclusion provides opportunities for data-driven decision-making in public service delivery. With digital records, biometric systems, and big data analytics, agencies can plan more effectively, allocate resources efficiently, and tailor services to meet citizens' needs. For instance, the integration of National Identification Numbers (NIN) with banking and telecom databases has improved planning for social intervention programs (Adeleke & Yusuf, 2022). It can also create room for participatory governance and citizen engagement. Social media platforms, e-participation tools, and mobile feedback apps enable citizens to interact directly with government institutions, lodge complaints, and demand accountability. This two-way communication strengthens democracy and ensures services are more citizen-centred. Ultimately, digital inclusion facilitates inter-agency collaboration and the integration of services. Digital identity

frameworks, electronic payment systems, and centralised platforms reduce duplication of efforts across ministries, departments, and agencies. This fosters “whole-of-government” service delivery, ensuring citizens interact with government more seamlessly.

Challenges of Digital Inclusion in Nigeria

The ability of individuals and communities to access and effectively use information and communication technologies (ICTs) faces significant hurdles in Nigeria despite the growing adoption of digital tools. One key challenge is the infrastructure deficit. Rural and underserved areas still lack adequate broadband connectivity, reliable electricity, and affordable internet access. According to the Nigerian Communications Commission (NCC), broadband penetration was only about 45% as of early 2023, far below the government's target of 70% by 2025 (NCC, 2023; World Bank, 2021). This digital divide limits rural populations from fully benefiting from e-governance, online education, and financial inclusion services (Adeleke & Yusuf, 2022). Another major challenge is affordability and cost barriers. Although Nigeria has one of the largest telecom markets in Africa, the cost of internet data, smart devices, and ICT services remains high relative to average income levels. Many citizens still find smartphones and laptops unaffordable, while data costs exceed the UN Broadband Commission's recommendation of 2% of monthly income (GSMA, 2022). This economic barrier notably excludes low-income households, women, and persons with disabilities, perpetuating inequalities (Oladipo & Isola, 2021).

Digital literacy and skills gaps also hinder inclusion. While younger Nigerians are more tech-savvy, large segments of the population lack the basic digital skills needed to use ICT tools effectively. This affects job opportunities, financial transactions, and access to government e-services (Adeleke & Yusuf, 2022). Schools and training institutions often lack resources to integrate digital literacy into curricula, thereby reinforcing generational and regional gaps (Okunola, Rowley, & Johnson, 2017). Institutional and policy challenges further exacerbate the problem. However, the National Digital Economy Policy (2020–2030) aims to promote digital inclusion, but implementation gaps, corruption, and fragmented ICT initiatives hinder progress. Inconsistent regulations, weak data protection frameworks, and limited public-private collaboration undermine trust and efficiency in the digital ecosystem (Ndubuaku & Eze, 2020). Finally, social and cultural barriers persist. Gender inequality means that women in rural areas are less likely to own mobile phones or access the internet compared to men. Persons with disabilities also face exclusion due to limited accessibility features in ICT infrastructure and platforms (GSMA, 2022). Such exclusion deepens socio-economic inequalities and limits national development outcomes.

Impact of Digital Inclusion JAMB Services in Nigeria (SMS/USSD)

The adoption of digital innovation at various levels of JAMB's primary responsibility, ranging from candidates' registrations and profiling, examinations, results checking and admission into the higher institutions, has seamlessly shown a level of inclusiveness of the general populace irrespective of geographical location. Digitalisation increased the speed of JAMB operations and enabled solutions that facilitate the processing and maintenance of large volumes of information, including student, management, facility management, library, staff details, and examination organisation. According to Sudip and Angshu (2013), the adoption of digitalisation in the educational system incorporates data and processes of an educational Institution into a unified system, making the process uncomplicated, well-organised and error-proof. This is designed to make the system user-friendly, time-saving, and cost-saving as well. Most of the software providers enable their clients to choose from the available modules to meet their needs (Kpolivie, 2014). The Joint Admission and Matriculation Board (JAMB) in recent times has been known for its outstanding role and also adopting digital operations in achieving its goals, and this has been of great benefit to the body, but with a few challenges standing as hindrances to the realisation of its full goals. One primary aim of JAMB is to promote autonomy, innovation, and academic reforms in institutions of higher learning, and also to undertake institutional restructuring to improve efficiency, relevance, and creativity in examinations and higher education (Kular, Gatenby Rees, Soane, and Truss, 2008). The JAMB digitalisation was created to facilitate the various activities between management and candidates. The adoption of digital innovations in JAMB makes it easy for people, both in urban and rural areas, to secure online payment, check results, assess new policies, etc. It is now possible for all students to view their Unified Tertiary Matriculation Examination (UTME) results within a few hours after taking their respective examinations. All these were impossible in the past when their operations were manually operated. The adoption of e-governance by JAMB has gradually reduced information asymmetry that most fraudsters often capitalise on to defraud candidates. It has prevented age falsification because it synchronises with NIMC, prevents delays in registration centres and banks, and brings transparency and accountability.

NICM Digital Inclusiveness and Public Service Delivery

Digital innovation and inclusion significantly impacted the performance of the National Identity Management Commission (NIMC) in its pursuit of service delivery and objectives in Nigeria. Digital innovations and inclusion, such as biometric identification systems, digital registration, profile correction, and digital generation of identity cards,

have streamlined the enrollment processes in both urban and rural communities. This reduces the time and resources required for capturing and verifying identity information, resulting in the faster issuance of national identification numbers (NINs) and cards. **Enhanced Accuracy and Security:** The advanced technologies improve the accuracy and security of identity data managed by NIMC. Biometric authentication methods reduce the likelihood of identity fraud and duplication. Secure databases and encryption technologies protect personal information, ensuring compliance with data protection regulations and enhancing public trust.

It also increased coverage and accessibility: the digital innovations and inclusion enable NIMC to extend its services to remote and underserved areas. Mobile registration units equipped with biometric devices reach populations that previously had limited access to identity services. Digital platforms for registration and verification facilitate easier interaction with citizens, including online and mobile channels. **Improved Service Delivery:** By leveraging technology, NIMC can improve overall service delivery to citizens. Automated processes reduce administrative bottlenecks, allowing staff to focus on higher-value tasks such as customer support and quality assurance. Integration with other government agencies and service providers enables seamless verification of identities for various purposes, such as voting, healthcare access, and financial services.

Impact of Digital Innovation and Inclusion in Public Service Delivery of the Nigeria Immigration Service (NIS)

Digital innovation and inclusion have significantly transformed the operations of the Nigeria Immigration Service (NIS), improving how citizens access essential services. One notable impact is the streamlining of passport application and processing systems. The introduction of the online passport application portal has reduced the burden of physical visits, minimised bureaucratic bottlenecks, and cut down waiting time for citizens. This has not only improved service efficiency but also reduced opportunities for corruption often associated with manual processing (Adebayo & Ojo, 2021; NIS, 2023). Another important impact is the enhancement of border management and security. The adoption of biometric technologies and e-passports has strengthened identity verification processes, making it more difficult for fraudulent activities such as identity theft or illegal migration to thrive. Through digital inclusion, Nigerian citizens benefit from greater protection and credibility of their travel documents, aligning with international standards set by the International Civil Aviation Organisation (ICAO) (World Bank, 2021; Okunola, Rowley, & Johnson, 2017).

Digital innovations have also promoted greater accessibility to NIS services across Nigeria and the diaspora. Citizens in remote areas can now initiate applications and track progress online without

frequent travel to NIS offices. Similarly, Nigerians abroad can apply for passport renewal through Nigerian missions, enabled by integrated digital platforms. This inclusivity helps reduce geographical inequalities in service delivery (Oladipo & Isola, 2021).

Furthermore, digitalisation has improved transparency and accountability in the NIS. Online payment systems for passports and permits ensure more secure transactions, reducing cash handling and the risks of exploitation by intermediaries. This shift fosters citizen trust in the institution and aligns with broader government reforms in e-governance (Ndubuaku & Eze, 2020). Finally, the digital transformation of NIS supports better inter-agency collaboration and data-driven governance. The integration of the National Identity Management Commission's (NIMC) National Identification Number (NIN) with passport applications allows for more accurate citizen records, which aids in national planning, security, and social service delivery. Citizens ultimately benefit from more seamless, efficient, and reliable public services (GSMA, 2022).

Impact of Digital Innovation and Inclusion in Public Service Delivery of the Federal Inland Revenue Service (FIRS)

Digital innovation has profoundly transformed the Federal Inland Revenue Service (FIRS), reshaping how Nigerian citizens and businesses interact with the tax system. One significant impact is the automation of tax administration through the Integrated Tax Administration System (ITAS). This digital platform enables taxpayers to register, file returns, and make payments electronically, reducing the inefficiencies of manual processes and minimising human contact that often creates opportunities for corruption (Adeleke & Yusuf, 2022; FIRS, 2023). By leveraging digital inclusion, citizens now experience more transparent, timely, and user-friendly tax services. Another important impact of digitalisation in FIRS is the expansion of the tax net and promotion of financial inclusion. Digital platforms allow more citizens and businesses—particularly in the informal sector—to be captured in the tax system through online identification and e-filing. This has helped broaden the tax base while giving citizens access to a more equitable and accountable tax regime (Ndubuaku & Eze, 2020). Through innovations like the e-TaxPay system, even small and medium enterprises (SMEs) can now meet their tax obligations seamlessly (World Bank, 2021). Digital inclusion also strengthens revenue mobilisation and national development. With real-time monitoring of tax payments and compliance, FIRS has increased efficiency in revenue collection, thereby providing the government with more resources to fund public infrastructure, education, and health services. Citizens benefit indirectly through the improved fiscal capacity of the state to meet developmental obligations. Additionally, digital platforms have enhanced accountability and trust

between citizens and the government. Online tax payment systems reduce the need for direct cash handling, thereby curbing corruption and enhancing accountability in the management of tax revenues. This transparency fosters greater taxpayer confidence, which is critical for voluntary compliance (Oladipo & Isola, 2021). Finally, digital inclusion in FIRS has facilitated better inter-agency collaboration. For instance, the integration of taxpayer data with the National Identity Management Commission (NIMC) and financial institutions has enabled more accurate verification, thereby reducing cases of tax evasion. This integration ensures that citizens experience a more streamlined and coordinated approach to public service delivery (GSMA, 2022).

Implications of Digital Inclusion for Citizens in Nigeria

Digital inclusion carries broad implications for Nigerian citizens in the context of public service delivery. These implications can be viewed from both positive and cautionary perspectives. One key implication is improved accessibility of government services. Digital platforms such as the Federal Inland Revenue Service's (FIRS) e-filing system and the Nigeria Immigration Service's (NIS) online passport application portal have reduced geographical and bureaucratic barriers. Citizens in rural areas and Nigerians in the diaspora can now access services without frequent physical visits to offices, thereby saving cost and time.

The promotion of transparency and accountability in governance is another implication. By digitising payments and applications, agencies reduce opportunities for cash handling and corruption. Citizens experience greater trust in government when transactions are traceable, receipts are digitalised, and service standards are clearer (Ndubuaku & Eze, 2020). This fosters a more accountable governance system and increases voluntary compliance, particularly in areas like taxation.

Digital inclusion also contributes to citizen empowerment through participation. Platforms for feedback, digital surveys, and social media engagement allow citizens to demand better services and hold leaders accountable. This interactive communication reshapes the relationship between the state and its people, making governance more citizen-centred (Oladipo & Isola, 2021). Furthermore, digital innovation supports the economic empowerment of citizens. As more individuals are brought into the digital tax net, or registered with a National Identification Number (NIN), they gain formal recognition that enables access to financial services, social benefits, and government programs. This strengthens the social contract by linking digital identity to social protection schemes (World Bank, 2021). However, there are also cautionary implications. Digital exclusion of marginalised groups—such as the poor, elderly, and those in rural areas with low literacy—could deepen social inequality. Citizens without access to digital tools

risk being excluded from critical services, thereby reinforcing existing structural disparities (Okunola, Rowley, & Johnson, 2017). Similarly, concerns about data privacy and cybercrime mean that while services are more accessible, citizens may face risks of identity theft or financial fraud if digital platforms are not adequately secured (GSMA, 2022). Overall, the implications of digital inclusion for Nigerian citizens are dual: it can foster empowerment, accessibility, and trust in governance, while also creating new risks of exclusion and insecurity. Addressing these risks through inclusive policies and strong data protection frameworks will determine whether digital innovations truly translate into improved service delivery for all.

Citizens' Thrust in Digital Inclusion and Public Service Delivery in Nigeria

Digital inclusion has become a central demand of Nigerian citizens in their quest for improved public service delivery. With the growing adoption of ICTs in government institutions such as the Federal Inland Revenue Service (FIRS), the Nigeria Immigration Service (NIS), and the National Identity Management Commission (NIMC), citizens are increasingly aware that efficient, transparent, and inclusive digital systems can significantly enhance their access to essential services. Their thrust, therefore, revolves around ensuring that these digital platforms truly empower rather than marginalise citizens, by breaking down barriers to service accessibility (Ndubuaku & Eze, 2020). One of the foremost expectations of citizens is the removal of bureaucratic bottlenecks through digital reforms. Nigerians have long struggled with slow, manual, and often corrupt service processes in public agencies. For example, passport applications previously required long queues and multiple visits to NIS offices. With the introduction of online application portals, citizens now expect shorter processing times and reduced physical contact with officials. This reflects a strong citizen thrust for greater efficiency, where technology eliminates unnecessary delays and improves convenience (Olatunji, 2019). Another thrust lies in equitable access to digital services. Citizens are aware that digital platforms can exacerbate inequality if they are designed without considering Nigeria's infrastructural disparities. Rural populations often lack stable electricity, internet coverage, or digital literacy, which hinders their participation in digital governance. Citizens, therefore, demand inclusive policies that extend affordable internet, establish service centres in underserved areas, and provide literacy programs to ensure that all Nigerians can benefit equally from digital initiatives (Okunola, Rowley, & Johnson, 2017).

Citizens also emphasise the need for user-friendly platforms that reflect their realities. Many online systems introduced by government agencies are often complex, slow, and prone to errors, making them difficult for average Nigerians to navigate. As such,

citizens expect platforms to be simplified, mobile-friendly, and designed in local languages to accommodate diverse literacy levels. This thrust reflects a growing recognition that technology should serve citizens rather than complicate their experiences (Adeleke & Yusuf, 2022). In addition to accessibility, citizens' trust firmly centres on the trust and reliability of digital systems. Nigerians have experienced repeated breakdowns of online platforms, such as the NIMC registration portal or FIRS tax payment systems, which undermine confidence in digital reforms. For citizens, digital inclusion must guarantee consistency, functionality, and security. They expect that government agencies will invest in infrastructure that minimises system failures, protects data privacy, and delivers services seamlessly without disruption (Ndubuaku & Eze, 2020). Citizens also perceive digital inclusion as a tool for enhancing accountability and reducing corruption. Manual processes in Nigeria's public institutions have historically been plagued by bribery and rent-seeking behaviours. For instance, passport applicants often reported being asked for unofficial payments to speed up processing. By digitising these processes, citizens expect technology to limit human interference, thereby reducing corruption. Their thrust is that e-platforms must provide transparent tracking mechanisms and automated workflows that minimise opportunities for manipulation (Olatunji, 2019). Another key aspect of citizens' thrust is value for money. Citizens often complain that public services, even when digitalised, still come at a high cost compared to the quality delivered. For example, fees for passports, tax filings, or NIN registration are seen as burdensome, especially when platforms fail to function effectively. Therefore, citizens expect that digital inclusion will deliver not only efficiency but also quality and fairness, aligning with the Public Value Theory, which emphasises that public services should improve societal well-being (Moore, 1995). Citizens also demand responsiveness from public institutions. For many, the essence of digital inclusion is not merely the presence of online portals but the extent to which these platforms respond to their needs. Citizens demand responsive feedback mechanisms, customer support services, and grievance redress systems that ensure digital platforms are not static but interactive and adaptive. This expectation reflects the citizen-centred philosophy of e-governance (Heeks, 2006). Beyond efficiency, equity, and trust, citizens aspire for digital inclusion to strengthen legitimacy and social contract obligations between government and governed. When digital platforms succeed in simplifying access, ensuring fairness, and improving transparency, they reinforce citizens' trust in government institutions. Conversely, when platforms collapse or exclude marginalised groups, citizens perceive the government as failing in its duty to serve. Thus, citizens strive for digital inclusion to embody a genuine commitment to governance that is inclusive, transparent, and accountable (Adeleke & Yusuf,

2022). Furthermore, citizens increasingly link digital inclusion to global competitiveness. Nigerians recognise that efficient digital governance is a hallmark of modern states, enabling smoother trade, mobility, and international credibility. Citizens, therefore, expect that reforms in agencies like NIS and FIRS will not only improve domestic service delivery but also align Nigeria with global standards of digital governance, where citizens can seamlessly access documents and transact internationally (Okunola et al., 2017). An often-overlooked thrust of citizens is the desire for inclusivity in policy design and implementation. Many digital initiatives in Nigeria are top-down, with little citizen input. Citizens now demand participatory governance where their voices inform the design of digital platforms to ensure relevance, inclusiveness, and sustainability. This expectation aligns with the democratic ideal that public value is maximised when citizens are active participants in governance innovations (Moore, 1995).

Conclusively, Nigerian citizens' expectations of digital inclusion and public service delivery are multifaceted, encompassing efficiency, equity, accountability, reliability, and legitimacy. Citizens want digital platforms to simplify processes, reduce corruption, bridge inequalities, and deliver genuine public value. They demand not just technological change but institutional reforms that prioritise citizen needs and reinforce trust in government. Meeting these thrusts is essential if Nigeria is to harness digital inclusion as a valid driver of good governance and inclusive development.

Theoretical Framework

The study adopts the e-governance, digital divide and public value theory respectively as a lens of the research. These three theories provide a robust lens for analysing digital inclusion in Nigeria's public service delivery. E-Governance Theory emphasises efficiency and transparency, Digital Divide Theory warns of inequalities and exclusion, and Public Value Theory ensures that reforms ultimately benefit citizens and strengthen legitimacy. The combined framework allows this study to critically examine not only the efficiency gains of digital inclusion but also its equity and social implications for Nigerian citizens.

E-Governance Theory

E-Governance Theory emerged from the works of Richard Heeks (2006), who conceptualised e-governance as the use of ICTs to improve governance processes, efficiency, and service delivery. The theory is built on three central principles:

1. Efficiency – ICT improves administrative processes by reducing cost, time, and redundancy.
2. Transparency and Accountability – digitisation reduces human interference, making transactions more open and less prone to corruption.

3. Citizen-Centred Service Delivery – ICT tools create more accessible platforms that empower citizens to interact with government services more conveniently (Heeks, 2006). This theory applies directly to digital inclusion in Nigeria because initiatives like the Federal Inland Revenue Service's (FIRS) Integrated Tax Administration System (ITAS) and the Nigeria Immigration Service's (NIS) online passport system demonstrate how ICT can enhance efficiency and transparency. Through digital inclusion, citizens can access government services more easily, regardless of their location, aligning with the citizen-centred focus of e-governance.

Digital Divide Theory

The concept of the digital divide was popularised by Jan van Dijk (2006), who highlighted structural inequalities in access to and use of digital technologies. The theory argues that social and economic inequalities shape digital access. It identifies four key divides:

1. Motivational Access – willingness of individuals to use ICT.
2. Material Access – availability of devices and connectivity.
3. Skills Access – the capacity to effectively use digital tools.
4. Usage Access – the actual benefits derived from ICT engagement.

This theory is vital for understanding the uneven impact of digital inclusion in Nigeria. While urban elites may benefit from FIRS e-filing systems or NIS biometric passports, citizens in rural areas often lack internet access or digital literacy, leaving them excluded. The theory highlights that without addressing infrastructural gaps and literacy barriers, digital innovations may reinforce inequality rather than solve it.

Public Value Theory

Public Value Theory was proposed by Mark H. Moore (1995) in his seminal work *Creating Public Value*. The theory posits that public institutions must go beyond efficiency and legality to create value for citizens. Its core principles include:

1. Service Quality and Equity – public services should be fair, inclusive, and beneficial to all.
2. Legitimacy and Trust – public organisations must secure citizen trust by being accountable and transparent.
3. Citizen-Centred Outcomes – services should improve the lives of citizens, not just internal administrative performance.

Public Value Theory explains the normative dimension of digital inclusion in Nigeria. While digital innovation increases efficiency, its accurate measure is whether citizens find value in the services. For instance, FIRS's ITAS system must not only raise revenue but also create trust among taxpayers; NIS's digital passports should not only modernise

travel documents but also enhance fairness and accessibility for all Nigerians. This theory stresses that digital inclusion should empower citizens and strengthen their trust in public institutions.

Research Methodology

This study adopts a historical research design grounded exclusively in documentary analysis. The purpose is to critically investigate the understanding of digital innovation and inclusion, as well as the extent of its implications on service delivery to Nigerians. The study draws its data from secondary data, which includes: scholarly literature, newspapers, Policy and Administrative Reports. The study employs a qualitative content analysis approach, utilising thematic analysis.

Conclusion

The research conducted a qualitative study to understand digital inclusion and its implications for public service delivery in Nigeria, examining key government institutions such as JAMB, NIMC, NIS, and FIRS, as well as their digital innovations and inclusion, and the implications for service delivery to Nigerians. The study establishes that digital inclusion has significantly transformed public service delivery in Nigeria, particularly through platforms such as NIMC, JAMB, FIRS, and NIS. These innovations have improved efficiency, reduced bureaucratic bottlenecks, enhanced transparency, and broadened access to government services. Citizens now enjoy faster processes in areas such as tax filing, passport applications, and educational admissions, reflecting a shift from traditional, paper-based models to more technology-driven systems. However, the uneven distribution of ICT infrastructure, persistent digital illiteracy, and affordability barriers reveal that the benefits of digital inclusion are not evenly felt across Nigeria. While urban populations benefit more, rural and disadvantaged citizens remain at risk of exclusion, raising equity and inclusiveness concerns. Thus, digital inclusion has created both opportunities for empowerment and risks of deepening inequality, underscoring the need for deliberate policies that strike a balance between efficiency and social justice.

Recommendations

1. **Expand Digital Infrastructure:** The Government should invest in nationwide broadband penetration, stable electricity supply, and affordable internet to bridge the rural-urban digital divide.
2. **Promote Digital Literacy:** Tailored programs should be developed to improve ICT skills among marginalised groups such as women, the elderly, and rural dwellers to ensure equitable participation.
3. **Strengthen Digital Policy Implementation:** Agencies must ensure that digital policies are harmonised across MDAs, with stronger regulatory frameworks to prevent duplication and fragmentation.

4. **Enhance Inclusiveness:** Platforms must be designed with accessibility features to accommodate persons with disabilities and those with low literacy levels.
5. **Safeguard Data Privacy and Security:** Stronger cybersecurity measures and data protection frameworks are crucial for protecting citizens against identity theft and fraud.
6. **Public-Private Partnerships:** Collaboration with private ICT companies, telecom operators, and fintechs can accelerate the growth and innovation of digital infrastructure.
7. **Citizen-Centred Reforms:** Digital initiatives should prioritise citizen satisfaction, trust, and inclusiveness, aligning with the principles of public value theory.

Publication Date: 2025/11/28

Abstract

This study investigates the role of the Central Bank of Nigeria (CBN) in maintaining economic stability through the use of monetary policy instruments, with a specific focus on their impact on inflation. The monetary policy variables examined include the Monetary Policy Rate (MP), Money Supply (MS), Exchange Rate (ER), and Credit to the Private Sector (CP), while inflation (IF) serves as the dependent variable. The study adopted an ex post facto research design, which is suitable for analyzing existing phenomena by using historical data to examine causal relationships. Secondary annual time series data spanning from 2001 to 2023 were obtained from the Central Bank of Nigeria Statistical Bulletin and other documented sources. The econometric analysis employed descriptive statistics, correlation, multicollinearity testing, Johansen cointegration test, and Ordinary Least Squares (OLS) regression. Results from the cointegration test revealed a long-term equilibrium relationship among the variables. In the short run, however, only the exchange rate had a statistically significant and positive impact on inflation, suggesting the dominance of external factors in driving domestic price levels. The monetary policy rate, money supply, and credit to the private sector showed no significant short-run effects. The findings partially align with the Cost-Push and Quantity Theories of inflation but challenge the traditional Monetarist and Interest Rate theories within Nigeria's context. The study recommends strengthening monetary transmission mechanisms, enhancing exchange rate stability, and improving the efficiency of credit allocation. Contributions to knowledge and suggestions for further studies are also discussed.

Key words: Central Banks, Monetary, Policy

Introduction

The Central Bank of Nigeria (CBN) plays a pivotal role in ensuring economic stability through the implementation of monetary policies. As the apex financial institution, the CBN is responsible for formulating and executing policies aimed at stabilizing the economy, controlling inflation, ensuring exchange rate stability, and fostering economic growth. The monetary policy objectives of the CBN are guided by the need to achieve macroeconomic stability (Akpan, 2020). The CBN employs several monetary policy instruments to regulate the economy, categorized into direct and indirect tools. Direct instruments which include: credit ceiling, selective credit control and moral suasion. Indirect instruments consist of: open market operations (OMO), monetary policy rate (MPR), cash reserve ratio (CRR), liquidity ratio and foreign exchange policy.

Inflation management is a key responsibility of the CBN. Through monetary policy, the CBN adjusts the MPR to either encourage or discourage borrowing. OMO is another tool used to mop up excess liquidity or inject funds into the economy. The CRR and liquidity

ratio are also used to control money supply and implements foreign exchange interventions to prevent imported inflation (Adeyemi & Ibrahim, 2020). Likewise, the CBN employs various mechanisms to stabilize the Naira including: managing the Foreign Exchange Market (FXM) to ensure smooth supply and demand balance, implementing exchange rate policies, such as devaluation or revaluation when necessary and using forex reserves to intervene in the market to curb excessive depreciation.

A stable banking system is crucial for economic stability. The CBN ensures this through setting regulations to ensure financial institutions maintain sound risk management, conducting periodic inspections of banks to prevent financial crises and providing liquidity support to distressed banks to prevent systemic collapse (Okolie et al., 2025). The CBN supports economic growth and job creation by: implementing intervention programs such as the Agricultural Credit Guarantee Scheme and Small and Medium Enterprises Development Fund, encouraging credit availability to the private sector through policies that lower interest rates and supporting financial

inclusion initiatives to expand access to banking services (Amadi & Okeke, 2019).

Despite its efforts, the CBN faces several challenges, including: Weak infrastructure and policy inconsistencies which hinder monetary transmission. A significant portion of the economy operates outside formal financial channels, limiting policy effectiveness. Pressure from the government can affect policy independence, fluctuations in global oil prices impact Nigeria's forex reserves and exchange rate stability (Aroghene & Obiekea, 2025). Persistent inflation, partly due to fiscal indiscipline, poses challenges for monetary control.

The interplay between monetary policy rate, money supply, exchange rate, and credit to the private sector is crucial in determining economic stability. If mismanaged, they can result in inflation, exchange rate crises, credit booms and busts, and overall macroeconomic instability. In order to examine the role of the Central Bank of Nigeria in Maintaining Economic Stability through monetary policies, the study made use of monetary policy rate, money supply, exchange rate, and credit to the private sector as independent variables while inflation rate was used to gauge the level of economic stability in Nigeria.

Conceptual Review

Monetary Policy Rate (MPR) and Inflation

The Monetary Policy Rate (MPR) is the benchmark interest rate set by a country's Central Bank, such as the Central Bank of Nigeria (CBN). It influences the cost of borrowing and the return on savings. Changes in the MPR affect Inflation (Olowookere et al., 2019). A high MPR discourages borrowing, reducing money supply and curbing inflation. If the MPR is higher than those of other countries, it may attract foreign investments in financial assets, increasing foreign currency inflows and stabilizing the exchange rate. Conversely, a low MPR encourages borrowing, increasing spending and potential inflation. A lower MPR promotes investment and expansion of businesses by making credit cheaper. Companies and individuals borrow more to finance investments, consumption and aggregate Demand (Daramola et al., 2021; Imene, 2023). when demand rises faster than supply, prices increase, leading to demand-pull inflation.

Money supply and Inflation

Money supply refers to the total amount of money circulating in an economy. It includes: M1 (Narrow Money), Physical cash and demand deposits. M2 (Broad Money): Includes M1 plus savings and time deposits. M3 refers to M2 plus large-scale financial instruments. A rapid increase in the money supply, if not matched by economic productivity, can lead to inflation due to excess liquidity chasing fewer goods

(Ehiedu & Chime, 2021). Central Banks regulate money supply through tools such as: Open Market Operations (OMO): Buying and selling government securities. Reserve Requirements: The proportion of deposits banks must keep without lending. Monetary Policy Rate (MPR): Adjusting interest rates to influence borrowing and spending. If the Central Bank increases money supply without corresponding economic output, Currency Depreciates. More money in circulation leads to reduced currency value and imported Inflation. A weak currency makes imports more expensive, raising production costs and consumer prices and capital flight as Foreign investors may withdraw capital due to exchange rate instability, leading to financial instability (Imene & Ikenga, 2023).

Exchange Rate and Inflation

The exchange rate is the price of one currency in terms of another. It affects economic stability in form of Depreciation of Currency. If the local currency depreciates, imported goods become more expensive, leading to imported inflation (Eggon & Ajidani, 2020). If banks extend too much credit without proper risk assessment, it can lead to asset bubbles (e.g., in real estate or stock markets) and A sudden correction in asset prices can result in financial instability and economic downturns.

Credit to the Private Sector and Inflation

Credit to the Private Sector refers to the total amount of credit provided to businesses and individuals by financial institutions. It influences Economic Growth. More credit availability leads to increased investment, job creation, and economic expansion (Bello & Yusuf (2020). Excess credit can result in excessive spending, pushing demand beyond supply capacity and lead to inflation. When credit are given excessively without strict regulations, it can result in bad loans, leading to financial crises.

Theoretical Framework

Cost-Push Inflation Theory

John Maynard Keynes (1936) explained inflation as resulting from rising production costs particularly wages, raw materials, and import prices which are passed on to consumers in the form of higher prices. A key driver of cost-push inflation in open economies like Nigeria is exchange rate depreciation, which increases the cost of imported goods and inputs. The theory, confirmed that a depreciating naira raises import costs, thereby contributing to domestic inflation. This supports the notion that exchange rate instability is a major source of inflationary pressure in Nigeria.

Demand-Pull Inflation Theory

John Maynard Keynes argues that inflation arises when aggregate demand in an economy exceeds aggregate

supply. Increased consumer spending, investment, or government expenditure, especially when financed through increased credit or money creation, puts upward pressure on prices. Credit to the Private Sector (CP) and Money Supply (MS) are linked to this theory. They reflect liquidity and purchasing power in the economy. According to the theory, both should have a positive and significant effect on inflation. Demand-pull pressures may be less influential in Nigeria's inflation dynamics over short periods, possibly due to supply-side constraints or inefficiencies in credit utilization. This would be verified by the results of the research.

Monetarist Theory

The Monetarist Theory of developed by economists Friedman (1963), emphasizes that inflation is always and everywhere a monetary phenomenon. The theory asserts that sustained inflation is caused by a persistent increase in the money supply beyond the rate of real economic growth. It advocates for strict control of money supply as the primary means to achieve price stability. However, Nigeria's inflation may be driven by other factors in the immediate term, such as exchange rate volatility or structural inefficiencies. This partially supports the monetarist theory but also indicates limitations in its short-run applicability.

Empirical Review

Erediauwa & Olawoye (2024) assessed the effectiveness of Nigeria's monetary policy post-COVID-19. Their study focused on Nigeria's post-pandemic monetary policy and its impact on inflation. They analyzed monetary policy variables and inflation rates using empirical analysis. The findings suggest that Nigeria's monetary policy faces challenges in effectively controlling inflation in the post-COVID-19 era. Ozili (2024) identified success factors for an effective inflation-targeting monetary policy regime in Nigeria. The study explored Nigeria's inflation-targeting framework, considering inflation rates and monetary policy strategies. Through an analytical study, the author concluded that effective inflation targeting in Nigeria requires specific success factors. Eggon & Ajidani (2020) investigated the impact of monetary policy on inflation in Nigeria from 1985 to 2019. The study analyzed Nigeria's historical monetary policy impact using variables such as the monetary policy rate, foreign exchange rate, and inflation. Applying Vector Autoregressive Analysis, the authors found that both the monetary policy rate and foreign exchange rate negatively impact inflation. Galadima et al. (2020) examined the impact of monetary policy variables on core inflation in Nigeria from 2007 to 2019. The study focused on Nigeria's core inflation analysis and considered variables like liquidity ratio, monetary

policy rate, broad money supply, treasury bill rate, and core inflation rate. Using econometric analysis, the findings revealed that monetary policy variables significantly impact core inflation. Spring-Ragain (2024) explored how emerging economies use counter cyclical monetary policies to manage economic crises and fluctuations in dominant currencies. The study analyzed interest rates, foreign exchange interventions, capital controls, GDP, inflation, and exchange rates. Through theoretical and econometric analysis, the study concluded that countercyclical monetary policies are essential for stabilizing emerging economies during crises. Ajayi & Olayemi (2020) examined the effect of monetary policy on inflation in Nigeria. Context and Scope were monetary policy and inflation dynamics. Variables used include Interest rate, inflation. The econometric analysis found a significant negative impact of interest rates on inflation. Aroghene And Agbamu (2024) in the research evaluation of factors influencing industrial production using OLS show that inflation and VATAX had insignificant influence but exchange rate had a positive significant influence on MAPROD. They recommended that economic policies aimed at controlling inflation, as lower and stable inflation is generally favorable for economic stability and growth. Olowookere et al. (2019) analyzed the relationship between money supply and inflation, concluding that excessive money supply growth contributes to inflationary pressures. Money supply, inflation were used as variables. Time series regression shows that Excessive money supply growth contributes to inflationary pressures. When Erhijakpor and Aroghene (2023) evaluated what determines economic resilience in Nigeria they found that FDI and TROP both have positive influence on growth. They further recommend enforcement of policies that allow for trade openness. Ehiedu (2022) in his work of deficit financing and sustainable growth in a small open economy using fully modified least square shows exchange rate has substantial effect on deficient financing and growth.

Gap in Literature

While Erediauwa & Olawoye, (2024) assessed post-pandemic monetary policy effectiveness, there is still limited research on how inflation drivers have shifted in response to global supply chain disruptions, fiscal stimulus measures, and changing consumption patterns post-COVID-19. Balogun et al. (2018) investigated fiscal and monetary policy coordination, but there is still a need for more research on how government monetary policies through (monetary policy rate, money supply, exchange rate, and credit to the private sector) interact to shape economic stability in Nigeria.

Research Design

The ex post facto research design was used. The economy of Nigeria is the geographical scope of the study. Base on availability, uniformity and timeframe, the aggregate time series data obtain from Central Bank of Nigeria was used. The published annual reports and accounts of Central Bank of Nigeria Statistical Bulletin for the financial period of spanning through 2001 through 2023 were used to measure the dependent variable and the independent variables. Similarly, the library, the review of different articles, papers and relevant previous studies was consulted. The data used for this study is already existing. They were sought electronic from official CBN website. The econometric views version 9.0. was the statistical package used for the study. It is one among the statistical packages used in quantitative research in the social sciences. The different estimations method used for the study are: descriptive statistics, correlation analysis, multicollinearity, Johansen cointegration test and normality test. While ordinary least square was used to

test the hypotheses raised in the study. The regression model is stated as:

$$IF = f(MP, MS, ER, CP) \quad \text{equation}$$

(1)

$$IF = \beta_0 + \beta_1 MP + \beta_2 MS + \beta_3 ER + \beta_4 CP + \varepsilon \quad \text{equation}$$

(2)

Where:

β_0 = Intercept

IF = Inflation Rate

MP = Monetary Policy Rate,

MS = Money Supply

ER = Exchange Rate

CP = Credit to the Private Sector

$\beta_1 - \beta_4$ = Coefficient of the Independent Variables.

ε = Error Term

A Priori Expectations

MP: Negative relationship with inflation.

MS, ER, CP: Positive relationship with inflation.

Results and Discussion

Table 1: Descriptive Statistics

	IF	MP	MS	ER	CP
Mean	13.73205	12.83333	22.19708	217.8057	24.19208
Median	12.00000	13.00000	17.34500	155.5864	19.46500
Maximum	28.92000	20.50000	60.84000	647.2670	90.76000
Minimum	6.600000	6.000000	-2.010000	102.1052	-3.810000
Std. Dev.	5.300973	3.333514	17.30664	133.9999	21.53794
Skewness	1.201656	-0.007685	0.831009	1.654649	1.313077
Kurtosis	4.235748	3.481654	2.820038	5.413671	4.924819
Jarque-Bera	7.302979	0.232227	2.794687	16.77726	10.60162
Probability	0.025952	0.890374	0.247253	0.000227	0.004988
Observations	24	24	24	24	24

Source: Authors' computation, 2025.

The descriptive statistics in Table 1, provide an overview of the distribution and characteristics of the dataset. Inflation (IF) has a mean of 13.73%, a maximum of 28.92%, and a minimum of 6.60%, with positive skewness (1.20) and leptokurtic distribution (kurtosis = 4.23), indicating occasional high inflation spikes. Also, Monetary Policy Rate (MP) shows relative stability with a mean of 12.83%, a narrow range (6.00% to 20.50%), and near symmetry in distribution. Money Supply (MS) has a wide dispersion

(std. dev. = 17.31) and values ranging from -2.01 to 60.84, implying high variability in liquidity conditions. Correspondingly Exchange Rate (ER) also shows high volatility (std. dev. = 134.00), indicating significant fluctuations in Nigeria's foreign exchange regime. Credit to the Private Sector (CP) ranges from -3.81 to 90.76 with a positive skew, suggesting growth in credit provision over time.

Table 2: Correlation Analysis

	IF	MP	MS	ER	CP
IF	1.000000				
MP	0.458000	1.000000			
MS	0.380584	0.233671	1.000000		
ER	0.638043	0.259500	0.123222	1.000000	
CP	0.066000	0.037806	0.726463	-0.120583	1.000000

Source: Authors' computation, 2025.

The correlation matrix in Table 2 shows: Inflation (IF) is positively correlated with MP (0.458), MS (0.381), and ER (0.638), consistent with a priori expectations. CP shows a very weak positive correlation with IF

(0.066), suggesting minimal linear association. Notably, MS and CP are strongly correlated (0.726), raising concerns for potential multicollinearity.

Table 3: Multicollinearity Test

Variance Inflation Factors

Date: 05/18/25 Time: 14:30

Sample: 2001 2023

Included observations: 24

Variable	Coefficient Variance	Uncentered VIF	Centered VIF
C	11.38794	18.63261	NA
MP	0.065565	18.81015	1.142413
MS	0.005284	6.740894	2.481441
ER	4.14E-05	4.374632	1.164441
CP	0.003275	5.518752	2.382365

Source: Authors' computation, 2025.

Variance Inflation Factor (VIF) values in Table 3 indicate all centered VIFs are below 5, suggesting no severe multicollinearity. The highest centered VIF is

for MS (2.48) and CP (2.38), both below the critical threshold of 10, so the regression results are reliable in this regard.

Figure 1: Normality Test

Source: Author' Computation, 2025.

Figure 1 normality test shows data are not normality distributed. We will considered another test like the Johansen test before the least square estimation.

**MacKinnon-Haug-Michelis (1999) p-values

Unrestricted Cointegration Rank Test (Maximum Eigenvalue)

Hypothesized No. of CE(s)	Eigenvalue	Max-Eigen Statistic	0.05 Critical Value	Prob.**
None *	0.786163	33.93590	33.87687	0.0492
At most 1 *	0.760744	31.46485	27.58434	0.0150
At most 2	0.369201	10.13688	21.13162	0.7317
At most 3	0.269012	6.893873	14.26460	0.5018
At most 4 *	0.214998	5.325514	3.841466	0.0210

Max-eigenvalue test indicates 2 cointegrating eqn(s) at the 0.05 level

* denotes rejection of the hypothesis at the 0.05 level

The Johansen cointegration test in Table 4 was conducted to determine the existence of long-run equilibrium relationships among the study variables. The results from both the Trace and Maximum Eigenvalue statistics provide consistent evidence of cointegration among the variables. Specifically, the Trace statistic indicates the rejection of the null hypothesis of no cointegrating equations at the 5% level, up to the case of two cointegrating relationships. The test reveals that the calculated Trace values (87.75702 and 53.82111) exceed their corresponding critical values (69.81889 and 47.85613) at the 5% significance level. Similarly, the Maximum Eigenvalue statistic confirms this finding by rejecting the null hypothesis of no cointegration up to the second equation, as the calculated statistics (33.93590 and 31.46485) are greater than their critical values (33.87687 and 27.58434) respectively. These results imply that there exist two cointegrating vectors among

the variables under consideration. Although short-run fluctuations may occur due to policy changes or external shocks, the existence of cointegration indicates that deviations from the long-run equilibrium are temporary and that the variables tend to adjust towards equilibrium over time.

Table 5: Regression Result

Dependent Variable: IF

Method: Least Squares

Date: 05/18/25 Time: 14:22

Sample: 2001 2023

Included observations: 24

R-squared	0.568781	Mean dependent var		13.73205
Adjusted R-squared	0.477999	S.D. dependent var		5.300973
S.E. of regression	3.829935	Akaike info criterion		5.706625
Sum squared resid	278.6997	Schwarz criterion		5.952053
Log likelihood	-63.47950	Hannan-Quinn criter.		5.771737
F-statistic	6.265295	Durbin-Watson stat		1.856784
Prob(F-statistic)	0.002168			

Source: Author' Computation, 2025.

The results from table 4.6 shows that $IF_t = 2.716 + 0.389MP_t + 0.113MS_t + 0.020ER_t - 0.037CP_t + \epsilon_t$

Where:

Exchange Rate (ER) is statistically significant ($p = 0.0054$) and has a positive coefficient (0.020), confirming that exchange rate depreciation raises inflation in the short run. Monetary Policy Rate (MP) and Money Supply (MS) have positive but statistically insignificant effects, implying their influence on inflation is weak. Credit to Private Sector (CP) has a negative but insignificant coefficient (-0.037), contrary to expectations, suggesting that credit expansion may not immediately translate to inflationary pressure, possibly due to structural inefficiencies or absorptive capacity constraints. The R-squared value of 0.5688 implies that about 57% of the variation in inflation is explained by the model, and the F-statistic is significant ($p = 0.0022$), validating the joint significance of the explanatory variables. The Durbin-Watson statistic (1.86) indicates no serious autocorrelation.

Conclusion

The study concludes that while the Central Bank of Nigeria plays a critical role in economic stability, the effectiveness of its monetary policy tools is limited in the short run, except for the exchange rate which significantly impacts inflation. The weak transmission of monetary policy rate and money supply effects suggests that structural and institutional bottlenecks may be impeding the efficacy of traditional monetary tools. A stable

exchange rate mechanism emerges as the most impactful variable in achieving inflation control, underlining the importance of foreign exchange management in Nigeria's monetary policy framework.

Forensic Accounting Mechanisms as Determinants of Financial Fraud Control in Nigeria.

OKORO, Godsdai Edesiri

Department of Accounting,
Delta State University Abraka
egokoro@delsu.edu.ng

Publication Date: 2025/11/28

Abstract

This study investigates whether forensic accounting mechanisms serve as major determinants of financial fraud control in Nigeria. Survey research design involving two hundred and twenty(220) respondents, who are professional accountants, management staff, and practicing auditors of commercial banks in Warri metropolis, Delta State, Nigeria was used. The main data collection instrument is the questionnaire and data obtained were analyzed using both descriptive (mean, standard deviation, minimum value, maximum value, kurtosis, skewness and Pearson correlation), and inferential statistics (multiple regression). The dependent variable is fraud control while the independent variable is forensic accounting mechanisms (proxied by forensic litigation support and expert testimony). The regression model offers strong evidence that forensic accounting services, especially litigation support and expert testimony play significant roles in enhancing financial fraud control. With a high R^2 and statistically significant coefficients, the model is both reliable and informative for decision-making in corporate governance, compliance, and risk management contexts. The study recommends that commercial banks can enhance their control over financial fraud by investing more in forensic litigation support services, possibly followed by strengthening their use of expert testimony. The study contributes to the existing body of knowledge by reinforcing the significance of forensic accounting mechanism (forensic litigation support and expert testimony) in financial fraud control in the Nigerian context, particularly for commercial banks in Nigeria.

Keywords: Forensic accounting; Fraud control; Litigation support; Expert testimony; Nigeria

JEL Classification: M41; M42

Introduction

The economic stability of the majority of emerging countries, including Nigeria, has been severely impacted by the surge in financial fraud. Fraudulent activities have infiltrated the banking industry, government, and private sectors in Nigeria, for example. In order to combat financial fraud, forensic accounting - an investigative method that blends accounting, auditing, and legal knowledge has become essential. Since traditional auditing techniques are frequently inadequate in addressing the increasing sophistication of fraudulent operations, research emphasises the urgent need for efficient fraud detection and prevention tools (Anthony & Gavine, 2022).

Although forensic accounting is still relatively new in Nigeria, its use is becoming more and more well-known because of how well it reduces fraud and improves financial reporting. Research shows that by using analytical methods beyond routine audits, forensic accounting greatly enhances the detection of fraudulent activity (Fatoki, 2023). This strategy is especially helpful in the fight against economic crimes and corruption, which continue to be

problems even with anti-graft organisations in place. The use of forensic accounting techniques has helped the Nigerian banking industry, which is frequently the focus of fraudulent schemes. According to this field's research, forensic accounting improves fraud detection, control, prevention, and management, which benefits financial institutions' integrity and performance (Agboare, 2021). More so, the integration of forensic expertise with the use of advanced technologies such as biometric authentication has further strengthened forensic accounting as a mechanism in controlling financial fraud.

According to Akande, Benjamin, and Umukoro (2024), forensic accounting is a crucial tool in the public sector, especially in regions with high rates of financial mismanagement and corruption. The relevance of forensic accounting in strengthening internal controls, identifying fraud in public organisations, and aiding in the prosecution of financial crimes is highlighted by studies (Abeki, 2023; Agboare, 2021; Adesina et al., 2020). It has been demonstrated that using forensic accounting procedures in government operations improves

financial transparency and lowers fraudulent activity (Amahi, 2023). Despite its potential, Nigerian forensic accounting confronts a number of obstacles, such as a lack of specialised training, low awareness, and an insufficient regulatory framework. According to Adam, Zakari, and Bello (2023), forensic accounting offers a strong method for preventing financial crime by providing notable enhancements in internal controls, financial reporting, and fraud detection. But in order to realise its potential to revolutionise the financial landscape, the government, trade associations, and educational institutions must work together to remove current obstacles and encourage its application in a variety of industries.

Anthony and Gavine (2022) observed that financial fraud is still a major problem in Nigeria, eroding both public confidence and economic growth. Systemic inefficiencies, corruption, and a lack of technical expertise have limited the effectiveness of anti-corruption organisations like the Independent Corrupt Practices Commission (ICPC) and the Economic and Financial Crimes Commission (EFCC), despite their creation. More advanced mechanisms, such as forensic accounting, are required since traditional auditing methods frequently fall short in identifying and stopping complex financial crimes. Therefore, by combining accounting, auditing, and investigative abilities, forensic accounting has been recognised as a vital instrument for thwarting financial fraud (Obafemi, 2021). Its acceptance in Nigeria is still in its early stages, though, and there are still a lot of knowledge, training, and institutional support deficiencies.

The issue is made worse by the fact that many public and commercial organisations are unable to successfully apply forensic accounting techniques, as Olaoye (2020) correctly noted. Therefore, the difficulties also exist in the public sector, where pervasive corruption and lax internal controls foster an atmosphere that encourages fraud. Research has shown that although forensic accounting can enhance fraud detection and control and strengthen internal controls, its use is constrained by a shortage of qualified forensic accountants and inadequate legal frameworks to facilitate its incorporation into public institutions (Amahi, 2023). Financial crimes like insider trading, fund embezzlement, and cyber fraud are still common in Nigeria's banking industry and result in significant financial losses.

Insufficient investments in technology and human capital development have impeded the use of forensic accounting procedures, such as expert testimony and litigation support, which have demonstrated efficacy in identifying and addressing financial fraud (Micah, Adinnu & Ibitomi, 2023). Additionally, Nigeria lacks established forensic accounting education and training programs, which hinders the ability to efficiently investigate and prosecute financial crimes and permits fraudulent activities to continue. Furthermore, a major obstacle

is the lack of strong regulatory standard and guidance for forensic accounting procedures. Organisations find it difficult to apply forensic accounting successfully in the absence of clear policies, which leaves financial systems open to abuse (Ubesie, Ibezim & Cyriacus, 2023). Policymakers, professional associations, academic institutions, and researchers must work together to address these problems and create a framework that encourages the broad application of forensic accounting techniques as instruments for financial fraud controls in Nigeria. Because of this, this study was conducted to find out how much forensic accounting influences financial fraud controls in Nigeria.

Review of Related Literature

Conceptualization of Forensic Accounting

Globally, forensic accounting has become a vital weapon in the fight against financial fraud and corruption. In order to evaluate financial data for use in court cases and fraud detection, it integrates accounting, auditing, and investigative methods (Madu-Chima, Egbunike & Okoro, 2020). Many nations have adopted forensic accounting procedures to improve financial accountability and transparency as a result of the growth in financial crises like Enron and WorldCom (Okoye, Okoro & Salubi, 2017). Globally, forensic accounting has been included into anti-fraud policies and corporate governance frameworks in a number of industries, such as public administration, banking, and insurance. According to studies (Ogwiji, 2023; Victory, Promise & Mike, 2022), forensic accounting is essential for enhancing financial reporting and fortifying internal controls, especially in developed nations where technological tools like artificial intelligence (AI) and data mining have been used to identify irregularities in financial transactions.

Although forensic accounting is still in its infancy in Nigeria, its ability to combat financial crimes and systemic corruption is becoming more widely acknowledged. Robust fraud detection measures are necessary since the nation has long grappled with financial irregularities, mismanagement, and embezzlement. One practical way to lessen these difficulties, especially in the public sector, is through forensic accounting (Olaoye, 2020). Its efficacy in identifying and stopping fraud in Nigerian banks and government entities has been demonstrated by empirical research. For example, forensic accounting procedures greatly lower fraud and improve operational efficiency, according to a study by Agboare (2021); yet, their widespread usage in Nigeria is hindered by a lack of qualified personnel and insufficient legal frameworks.

Due to a lack of formalised forensic accounting education, low funding, and low awareness, the Nigerian government has made a concerted effort to integrate forensic accounting into its anti-corruption agencies, including the Economic and Financial

Crimes Commission (EFCC). Nevertheless, the practice is still underutilised (Anthony & Gavine, 2022). Furthermore, in order to address the lack of qualified experts, Nigerian colleges are increasingly calling for forensic accounting training and curriculum development. In order to standardise forensic accounting procedures in Nigeria, academics have underlined the necessity of statutory recognitions and a regulatory framework (Ogwiji, 2023). Fighting financial crimes has benefited greatly from forensic accounting, especially in Nigeria's public sector where corruption and fraud are pervasive.

Research indicates that forensic accounting mechanisms such as litigation support and expert testimony significantly improve fraud detection, control and prevention in public institutions (Amahi, 2023; Aminat, Ezekiel & Obafemi, 2023). Even while forensic accounting is now widely acknowledged as a crucial instrument for financial responsibility, fraud management, and prevention, its application in Nigeria is still in its infancy. Leveraging its full potential requires addressing obstacles such as a lack of legal assistance, a lack of knowledge, and a lack of integration into governance institutions. Nigeria may use forensic accounting to fight financial crimes and advance economic stability by raising awareness and developing its competence.

Financial Fraud Control

In Nigeria, financial fraud is still a major problem that affects a number of industries, such as public administration, banking, and insurance. Because of the liquid nature of its assets, fraudulent activities pose a constant threat to the Nigerian banking industry in particular. Effective internal control systems are essential for lowering financial fraud, according to studies. Fraudulent activities in Nigerian banks have been shown to be considerably reduced by internal controls like strict risk management guidelines, segregation of duties, and deterrent mechanisms (Abeki, 2023). Because of poor regulatory monitoring and internal controls, fraud still affects financial institutions in spite of these measures (Adebayo & Ilesanmi, 2020). According to research, banks frequently struggle to put strong fraud prevention frameworks into place, which has caused the public's faith in them to decline. To bridge these gaps, actions including forensic audits and the creation of forensic accounting departments within businesses have been suggested (Adesina et al., 2020).

Corruption, embezzlement, and financial mismanagement are still common in the public sector. Although there are financial control measures in place, systemic inefficiencies and inadequate monitoring limit their efficacy, according to a study conducted on local governments in Nigeria. Therefore, improving financial accountability requires bolstering these controls and implementing

frequent audits (Adebayo & Ilesanmi, 2020). According to a study by Anthony and Gavine (2022), forensic accounting greatly strengthens internal controls, raises the calibre of financial reporting, and helps detect fraud. Nevertheless, the implementation and use of forensic accounting in Nigeria's public and private sectors are severely hampered by a shortage of qualified forensic accountants and a lack of understanding of its significance.

The banking sector in Nigeria is also becoming increasingly concerned about cyber fraud, which is made worse by the expanding use of e-payment platforms. According to A by Fatoki (2023), insufficient supervision of electronic transactions, staff collaboration, and weak security frameworks are the main causes of cyber fraud. Cybercrime in Nigeria can be considerably decreased by putting policies like multi-factor authentication, cybersecurity audits, and staff training into place. Nigeria has made progress in combating financial fraud by implementing internal controls and legal frameworks, but there are still many obstacles to overcome. Long-term fraud management requires bolstering forensic accounting, improving cybersecurity, and making sure anti-fraud regulations are strictly monitored and enforced.

Litigation Support and Expert Testimony

Litigation support and expert testimony are to vital mechanism of forensic accounting. In order to effectively combat financial fraud, forensic accounting relies heavily on expert witness and litigation support. Particularly in a nation where financial crimes are widespread, these forensic accounting techniques are crucial to the discovery, management, resolution, and legal prosecution of fraud. Litigation support according to Madu-Chima et al. (2020), include offering thorough financial assessments and supporting documentation to facilitate court processes. To identify intricate fraud schemes, track down financial transactions, and communicate results in a way that juries and judges can comprehend, forensic accountants collaborate closely with legal teams. Research has demonstrated that litigation support services greatly improve the capacity to identify and prosecute financial crimes (Madu-Chima et al., 2020; Akande et al., 2024).

By offering unbiased and reliable financial evidence, forensic accountants' expert testimony supports court proceedings. According to research, expert witnesses are essential for proving the scope of fraud, tracing the sources and destinations of embezzled money, and teaching judges about forensic accounting principles. Their testimony frequently results in asset recoveries and convictions, which greatly discourages similar fraud in the future (Amahi, 2023). Litigation support has been shown to be successful in lowering financial crimes. Additionally, litigation support facilitates the prosecution of financial fraud cases. According to research, forensic accounting

services are essential for resolving cases of fraud that remain unresolved since they offer investigation skills and actionable proof (Aminat et al., 2023; Fatoki, 2023). This method encourages accountability in public organisations and financial organisations while also speeding up legal proceedings.

Even though expert testimony and litigation support have greatly enhanced Nigeria's ability to combat fraud, issues like forensic accountants' insufficient training and lack of knowledge about their role in litigation still exist. Studies suggest creating specialised forensic accounting departments inside governmental organisations and financial organisations, as well as incorporating forensic accounting into legal and financial education programs, to address these problems (Obafemi, 2021). Expert testimony and litigation support have been crucial in Nigeria's fight against financial fraud, helping to identify, prosecute, and stop intricate fraud schemes (Micah et al., 2023). These forensic accounting techniques will be even more helpful in bolstering financial accountability and transparency if their reach and scope are increased.

Theoretical Framework

The stakeholders hypothesis, which highlights the significance of balancing the interests of all parties impacted by an organization's activities, including shareholders, employees, consumers, and the larger community, served as the foundation for this study. Stakeholder participation is essential for enhancing accountability, transparency, and fraud management in the context of forensic accounting and financial fraud control. According to Ogwiji (2023), there is broad agreement among stakeholders—including accountants, auditors, and business managers—about how well forensic accounting works to identify and prevent financial crime.

According to Ubesie et al. (2023), stakeholders believe that forensic accounting plays a crucial role in improving the calibre of internal control systems, fraud detection techniques, and financial reporting. According to the research, stakeholders agree that forensic accounting is an essential tool for preventing fraud in both public and private institutions. Therefore, cooperation between different stakeholders, such as governmental organisations, regulatory agencies, and company management, is necessary for forensic accounting. Stakeholders have a crucial role in establishing policies and guaranteeing the execution of strong internal controls that stop financial malfeasance, claim Madu-Chima et al. (2020). Prior studies (Okoye, et al, 2017; Yakubu, et al, 2022; Adam, et al, 2023) have highlighted the role of stakeholders in advocating for forensic accounting as a standard practice in corporate governance and fraud prevention

One major obstacle is the lack of a statutory framework for forensic accounting. Legislative

support has been sought by stakeholders to institutionalise forensic accounting, requiring both public and private organisations to use forensic accountants for fraud investigations and financial reporting (Adesina et al., 2020). By doing this, business operations would be in line with stakeholder interests and openness and accountability would be guaranteed. By improving fraud identification and prevention, forensic accounting techniques help all parties involved. Forensic accountants, for instance, are essential in identifying intricate fraud schemes and supporting parties involved in court cases. These initiatives preserve job security for workers, safeguard shareholder investments, and increase public confidence in business organisations (Anthony & Gavine, 2022).

Stakeholders must also support cutting-edge technologies in fraud detection and engage in forensic accountant training and capacity building if they want to fully utilise forensic accounting. To create best practices and standardise forensic accounting procedures in Nigeria, cooperation between professional accounting associations and regulatory organisations is also crucial (Agboare, 2021). The stakeholders' idea emphasises how forensic accounting in financial fraud control requires a team effort. In addition to improving fraud prevention, forensic accounting fosters transparency and confidence in Nigeria's financial institutions by bringing all stakeholders' interests into alignment.

Methodology

The study employed a survey research approach, which was judged suitable for the investigation's goals. Because it made it possible to employ a carefully chosen sample of participants to represent a larger population, this research design is ideal for the study. Therefore, a thorough grasp of how forensic accounting mechanisms such as expert evidence and litigation support determine financial fraud control across Nigerian commercial banks was made possible by the use of survey design. Accountants, management personnel, and active auditors from a few chosen commercial banks in Warri, Delta State, made up the study's population. This approach seeks to provide valuable insights into how forensic accounting mechanisms can be effectively used to enhance financial fraud control and strengthen internal controls among commercial banks in Nigeria. A sample of 222 respondents was obtained out of the number of accountants, management staff, and practicing auditors of commercial banks in Warri, Delta State. The sample size was arrived at using convenience sampling technique. Structured questionnaire was used as the main data collection instrument and the questionnaire was designed to elicit information on forensic accounting mechanisms (litigation support and expert testimony) and financial fraud control using 5-point Likert-scale questions.

Furthermore, data collected were compiled and analyzed by means of descriptive (mean, standard deviation, minimum value, maximum value, kurtosis, skewness and Pearson correlation), and inferential statistics (multiple regression). The dependent

variable is fraud control while the independent variable is forensic accounting mechanisms (proxied by forensic litigation support and expert testimony); the following empirical models were estimated using the dependent and independent variables of the study:

$$Y = F(\text{Flits}, \text{Fextet}) \quad \text{eq. 1}$$

$$\text{Ffc} = \alpha_0 + \alpha_1 \text{Aflits}_i + \alpha_2 \text{Fextet}_i + \varepsilon_i \quad \text{eq. 2}$$

Where: Ffc is Financial fraud control; Flits is Forensic litigation support; Fextet is Forensic expert testimony; ε is Error term; i is Individual. Data entry was done using Microsoft Excel while data analysis was carried out using STATA 13.0

Results

In this study, a sample of 222 respondents was obtained; however, only 220 copies of the administered questionnaires were fully retrieved;

hence, the analysis was based on the 220 copies of fully retrieved questionnaire, representing about 99 percent response rates of the administered research instrument.

Table 1: Descriptive Statistics

Variable	Mean	Std. Dev.	Min. Val.	Max Val	Skewness	Kurtosis
Ffc	4.393	0.657	1.000	5.000	-2.827	11.313
Aflits	4.607	0.706	1.000	5.000	-3.845	16.182
Fextet	4.444	0.581	1.000	5.000	-3.889	16.451

Source: Researcher's Computation (2025)

Table 1 is the descriptive statistics of the variables. All three variables have means close to 5, the maximum possible value, indicating that on average, participants rated these variables highly. Aflits has the highest mean (4.607), followed by Fextet (4.444) and FFC (4.393). This implies that Aflits was perceived the most positively, on average. The standard deviations range from 0.581 (Fextet) to 0.706 (Aflits), suggesting relatively low variability in responses - most participants gave similar ratings. Fextet has the lowest variability, meaning its ratings are most tightly clustered around the mean. All variables have a range from 1.000 to 5.000, indicating that the full scale was used by at least some respondents. This suggests that while most rated these variables highly, some outliers or dissatisfied respondents gave very low ratings (1).

Furthermore, all skewness values are strongly negative, indicating a left-skewed distribution: Responses are clustered at the high end (4s and 5s). A few very low scores (1s) are pulling the distribution tail to the left. Fextet and Aflits have the most extreme skewness (both nearly -3.9), indicating a very strong left skew. All three variables show extremely high kurtosis (well above 3), indicating Leptokurtic distributions - sharper peaks and fatter tails than a normal distribution. Most values are tightly packed around the mean (i.e., a lot of people gave the same rating, likely 5). But there are also a few extreme values (outliers) that cause heavy tails. Especially with Aflits (16.182) and Fextet (16.451), the kurtosis is very high, suggesting both a high concentration at one value and notable outliers.

Table 2: Pearson Correlation

Variable	Ffc	Aflits	Fextet
Ffc	1.0000		
Aflits	0.4118	1.0000	
Fextet	0.3392	0.3133	1.0000
Observation	220	220	220

Source: Researcher's Computation, (2025)

Table 2 is the Pearson correlation results; the result suggests a moderate positive correlation, as Ffc increases, Aflits tends to increase as well. The relationship is linear but not very strong - only moderate. The correlation between Ffc and Fextet (0.3392) appears to be weak to moderate positive correlation; hence, there is some tendency for Fextet to increase with Ffc, but the relationship is weaker than with Aflits. Again, the correlation between

Aflits and Fextet (0.3133) appears to be weak positive correlation; these two variables increase together slightly, but the association is not particularly strong. The number of observations is 220 for each variable pair; this is a reasonably good sample size, which adds credibility to the results of correlation.

Notably, all three (3) variables are positively correlated with each other, indicating that they move

in the same direction. The strongest relationship is between Ffc and Aflits ($r = 0.4118$). However, no pair of the independent variables has a particularly strong correlation (none above 0.60), meaning while

there is association, it is not dominant. These results may suggest some shared underlying factor/construct connecting the variables but not enough to suggest they are redundant or measuring the exact same thing.

Table 3: Multiple Regression

Dependent Variable: Financial Fraud Control (Ffc)					
Variable	Symbols	Coefficient	Std. Err.	t-stat.	p-value
Forensic Litigation Support	Aflits	0.8256	0.0459	7.96	0.000
Forensic Expert Testimony	Fextet	0.4738	0.0383	4.28	0.000
Constant	_cons	0.5888	0.2142	3.75	0.001
Prob > F					0.000
F-value					32.44
R-squared					0.757

Source: Researcher's Computation, (2025)

The result for forensic litigation support (Aflits) had a coefficient of 0.8256; this suggests that a one-unit increase in forensic litigation support is associated with an increase of 0.8256 units in financial fraud control, holding other variables constant. With a p-value of 0.000, the result is highly statistically significant at any conventional significance level (1%, 5%, or 10%). For forensic expert testimony (Fextet), the coefficient is 0.4738; this suggests that a one-unit increase in forensic expert testimony is associated with a 0.4738 unit increase in financial fraud control, ceteris paribus. Also highly significant ($p = 0.000$), indicating strong evidence that this variable has a meaningful effect on Ffc.

Furthermore, the result suggests that when both independent variables are zero, the baseline level of Financial Fraud Control is 0.5888. Statistically significant at the 0.1% level ($p = 0.001$), though the practical relevance depends on the context. The R-squared is 0.757; this indicates that 75.7% of the variability in financial fraud control is explained by the model (i.e., the two predictors combined); this is a strong explanatory power, implying the model fits the data well. The F-statistic: 32.44 and Prob > F: 0.000 means that the empirical model is statistically significant overall. Hence, the result suggests that both forensic litigation support and expert testimony have positive significant effects on financial fraud control. Forensic litigation support has a stronger effect than expert testimony, as seen by its larger coefficient (0.8256 vs. 0.4738) and higher t-statistic (7.96 vs. 4.28).

Conclusion and Recommendations

The regression model provides strong evidence that forensic accounting services, especially litigation support and expert testimony play significant roles in enhancing financial fraud control. With a high R^2 and statistically significant coefficients, the model is both reliable and informative for decision-making in corporate governance, compliance, and risk management contexts. Arising from the empirical results of the study, it concludes that forensic accounting mechanism is a major determinant of

financial fraud control in the Nigeria financial systems. These findings suggest that commercial banks aiming to enhance their control over financial fraud should consider investing more in forensic litigation support services, possibly followed by strengthening their use of expert testimony. These recommendations when carefully implemented by commercial banks in Nigeria would help them reduce incidences of financial fraud, enhance operational transparency, and contribute to the overall growth and stability of the Nigerian financial system.

This study contributes to the existing body of knowledge by reinforcing the significance of forensic accounting mechanism (forensic litigation support and expert testimony) in financial fraud control in the Nigerian context, particularly for commercial banks in Nigeria. The result of the study align with the viewpoints shared in previous studies, which emphasized the need for comprehensive forensic accounting practices to ensure that organizations have robust mechanisms to detect, prevent, control, and respond to financial fraud in the most effective and efficient way.

Artificial Intelligence Applications in Predictive Analytics for Service Marketing Performance in Delta State.

UCHE, Clementina Orochukwu¹, & IWEGBUE, Chinwenwa Nelly²

Department of Marketing and Entrepreneurship,
Faculty of Management Sciences,
Delta State University, Abraka

Publication Date: 2025/11/28

Abstract

This study investigated artificial intelligence (AI) applications in predictive analytics for service marketing performance in Delta State. Specifically, the research examined the effects of AI-driven customer segmentation, predictive customer behaviour analytics, and personalized marketing through AI on service marketing performance. Three research questions were raised in line with the three objectives, which guided the formulation of three hypotheses. The study adopted a descriptive survey design, with a population of 820 staff across ten service marketing firms in Delta State. Using Morgan's formula, a sample size of 263 was determined. The instrument for data collection was a structured questionnaire developed around the thematic variables of the study. The instrument was validated by experts and tested for internal consistency, producing a Cronbach's alpha reliability coefficient of 0.81. Out of 263 copies of the questionnaire administered, 241 were correctly completed and returned, representing a 91.63% response rate, and were used for the analysis using multiple regression with EViews 9v statistical tool. The major findings of the study show that AI-driven customer segmentation had a positive and significant effect on service marketing performance ($\beta = 0.410135$, $p = 0.0000$), indicating that segmentation improves targeting strategies and customer satisfaction; Predictive customer behaviour analytics significantly influenced service marketing performance ($\beta = 0.333356$, $p = 0.0000$), demonstrating that predictive tools enhance decision-making and reduce marketing risks and Personalized marketing through AI had a positive and significant effect on service marketing performance ($\beta = 0.280516$, $p = 0.0000$), implying that personalization fosters customer engagement, loyalty, and profitability. Overall, the study concluded that AI applications serve as a critical enabler of marketing efficiency, competitiveness, and long-term growth in service firms. The study recommended that organizations intensify investments in AI tools, leverage predictive analytics strategically, and adopt personalized marketing ethically to maximize performance outcomes.

Keywords: Artificial Intelligence, Predictive Analytics, Customer Segmentation, Personalized Marketing and Service Marketing Performance

Introduction

Artificial Intelligence (AI) has become one of the most transformative technologies in business, particularly in the domain of marketing. The integration of AI into predictive analytics enables organizations to move from descriptive data analysis to forward-looking insights that support strategic decisions. Service industries, which rely heavily on customer interaction and responsiveness, are increasingly adopting AI-driven systems to predict customer preferences, segment markets, and personalize offerings (Chatterjee et al., 2023; Li et al., 2022). In emerging economies such as Nigeria, where competition among service providers is intensifying, AI-based predictive analytics holds immense potential for enhancing marketing performance by improving customer engagement and retention. A critical aspect of AI in service marketing

is AI-driven customer segmentation. Traditional segmentation approaches based on demographics and psychographics are often static and fail to capture dynamic customer behaviour. AI, however, employs clustering algorithms, natural language processing, and real-time analytics to group customers more accurately (Kumar et al., 2021; Singh & Rana, 2022). This allows service providers to design more targeted campaigns that increase marketing efficiency and effectiveness. In Delta State, where service firms such as telecommunications, banking, and hospitality sectors compete for customer loyalty, leveraging AI-driven segmentation provides an opportunity to reach under-served customer groups with precision.

Another important dimension trend is predictive customer behaviour analytics, which allows firms to anticipate customer actions such as churn, service adoption, or repeat purchases. Studies have shown

that AI-based predictive models can identify subtle behavioural patterns in large data sets, thus enabling managers to take proactive steps to retain customers and improve satisfaction (Gupta & George, 2020; Adepoju & Oyewole, 2021). In the Nigerian service context, where customer switching is common due to dissatisfaction with quality, reliability, or pricing, predictive analytics can help organizations reduce attrition rates and optimize marketing resources for long-term performance. Equally noteworthy is the role of personalized marketing through AI. With AI-powered recommendation systems and chatbots, organizations can deliver individualized marketing content and offers that resonate with customer needs in real time (Shahid et al., 2022; Dwivedi et al., 2023; Eruvwe, et al., 2024). Personalized marketing enhances customer satisfaction, loyalty, and ultimately service marketing performance. For service firms in Delta State, where customer expectations are rising amidst increasing digital adoption, personalization through AI is no longer a luxury but a necessity for sustainable competitiveness.

Ultimately, the adoption of AI applications in predictive analytics leads to improvements in service marketing performance, which encompasses customer acquisition, retention, satisfaction, and loyalty. Research in advanced economies has consistently shown that AI-enhanced predictive models improve firms' market positioning and profitability (Mikalef et al., 2021; Mariani & Borghi, 2022). However, while multinational corporations have made significant progress in AI deployment, local service firms in Nigeria, including those in Delta State, are still at an early stage of adoption. This disparity presents both a challenge and an opportunity to explore how AI-driven predictive analytics can be effectively utilized to improve service marketing performance in the region.

Statement of the Problem

Despite the increasing global adoption of AI in predictive analytics for marketing, many service organizations in Delta State continue to rely on traditional marketing strategies that are reactive and less data-driven. This has often led to poor customer targeting, weak retention strategies, and reduced competitiveness in a rapidly evolving market. Empirical evidence suggests that firms that fail to leverage AI miss out on critical opportunities to understand customer behaviour, personalize services, and optimize marketing resources (Nwosu & Okafor, 2022; Dwivedi et al., 2023). However, there is limited scholarly investigation into how AI-driven customer segmentation, predictive customer behaviour analytics, and personalized marketing through AI influence service marketing performance in the Nigerian service sector. This gap creates uncertainty about the extent to which AI applications can transform service marketing outcomes in Delta

State, thereby necessitating an empirical study on the subject.

Research Questions

To guide this study, the following research questions are posed:

- i) To what extent does AI-driven customer segmentation influence service marketing performance in Delta State?
- ii) How does predictive customer behaviour analytics affect service marketing performance in Delta State?
- iii) What is the impact of personalized marketing through AI on service marketing performance in Delta State?

Objectives of the Study

The main objective is artificial intelligence applications in predictive analytics for service marketing performance in Delta State. Specifically, the objectives are to:

- i) examine the effect of AI-driven customer segmentation on service marketing performance in Delta State.
- ii) assess the influence of predictive customer behaviour analytics on service marketing performance in Delta State.
- iii) determine the impact of personalized marketing through AI on service marketing performance in Delta State.

Research Hypotheses

The following null hypotheses are formulated to guide the study:

H₀₁: AI-driven customer segmentation has no significant effect on service marketing performance in Delta State.

H₀₂: Predictive customer behaviour analytics has no significant effect on service marketing performance in Delta State.

H₀₃: Personalized marketing through AI has no significant effect on service marketing performance in Delta State.

Significance of the study

This study is significant because it advances knowledge on the role of artificial intelligence (AI) applications in enhancing predictive analytics for service marketing performance in Delta State, Nigeria. Theoretically, it contributes to the growing body of literature by integrating AI-driven customer segmentation, predictive customer behaviour analytics, and personalized marketing into the discourse on service marketing performance in emerging economies. Practically, the findings will benefit service organizations, such as banks, telecommunications, and hospitality firms, by providing evidence-based insights on how to leverage AI to improve customer acquisition, retention, and loyalty. For policymakers and regulators, the study offers valuable guidance on

fostering digital transformation strategies that enhance competitiveness within the Nigerian service sector. Finally, the study will serve as a resource material for future researchers who may wish to explore related areas of artificial intelligence, predictive analytics, and marketing in developing contexts.

Review of Related Literature

The conceptual review provides a theoretical and scholarly foundation for the study by clarifying key concepts and examining their interrelationships. It highlights the role of artificial intelligence in predictive analytics and explores its applications in service marketing performance. Specifically, the review discusses the independent variables, AI-driven customer segmentation, predictive customer behaviour analytics, and personalized marketing through AI, and the dependent variable, service marketing performance. This discussion creates a framework for understanding how AI-based predictive tools can transform marketing strategies and outcomes in the service sector of Delta State.

Concept of Artificial Intelligence (AI) and Services Marketing.

Artificial Intelligence (AI) has increasingly emerged as a transformative tool in services marketing, reshaping the way organizations engage with customers and optimize performance. Recent studies show that AI enables service firms to leverage predictive analytics, natural language processing, and automation to anticipate customer needs and deliver highly personalized experiences (Dwivedi et al., 2023; Chatterjee et al., 2023; Eruvwe, et al., 2024). By 2024, AI applications such as chatbots, recommendation engines, and sentiment analysis tools were widely recognized for enhancing customer engagement and improving marketing efficiency in both B2B and B2C service contexts (Kohan, 2024; Solway, 2024). Scholars further argue that AI contributes to precision in customer segmentation and campaign targeting, thereby reducing costs and boosting return on marketing investment (Ciente, 2023; GlobeNewswire, 2024). Looking ahead, agentic and multimodal AI models are expected to drive the next wave of hyper-personalized marketing by enabling dynamic, real-time customization of services (Zhang et al., 2025). Collectively, these developments underscore AI's critical role in advancing service marketing strategies and sustaining competitive advantage in dynamic markets.

AI-Driven Customer Segmentation (IV1)

AI-driven customer segmentation represents a significant advancement beyond traditional demographic and psychographic segmentation by employing machine learning algorithms and big data analytics to identify customer clusters with high precision. Unlike static segmentation methods, AI

dynamically analyzes behavioural, transactional, and contextual data, enabling firms to uncover hidden patterns and respond to evolving customer preferences in real time (Kumar et al., 2022; Singh & Rana, 2022). In service industries such as banking, hospitality, and telecommunications, this approach allows managers to craft targeted marketing campaigns that reduce waste and optimize resource allocation. More recent evidence indicates that AI-enhanced clustering improves marketing return on investment (ROI) and customer lifetime value (CLV), thereby strengthening service marketing performance (Chatterjee et al., 2023; Li et al., 2022).

Despite its potential, AI-driven segmentation also presents challenges that service organizations must carefully address. Data quality issues, privacy concerns, and skill shortages can undermine segmentation effectiveness, particularly in emerging markets (Adepoju & Oyewole, 2021; Nwosu & Okafor, 2022; Iwegbue, C. N. & Uche, C. O., 2025). Recent studies recommend combining explainable AI methods with domain expertise to ensure transparency and contextual appropriateness, especially in culturally diverse environments like Delta State. Moreover, organizations that integrate AI segmentation with customer relationship management (CRM) systems are better positioned to achieve sustainable performance improvements (Mikalef et al., 2021; Zhang et al., 2025).

Predictive Customer Behaviour Analytics

Predictive customer behaviour analytics leverages statistical models, machine learning, and deep learning techniques to forecast outcomes such as churn, purchase likelihood, and service adoption. By analyzing past interactions and behavioural patterns, organizations can anticipate customer needs and design proactive retention strategies (Gupta & George, 2020; Dwivedi et al., 2023). This predictive capability enables service firms to transition from reactive problem-solving to proactive engagement, thereby reducing attrition and improving marketing effectiveness. Recent findings highlight that predictive analytics significantly enhances service organizations' capacity to optimize customer journeys and maximize lifetime profitability (Chatterjee et al., 2023; Solway, 2024).

The adoption of predictive analytics in service marketing is not without operational and ethical considerations. Model accuracy depends on the robustness of input data and continuous monitoring to prevent concept drift (Mariani & Borghi, 2022; GlobeNewswire, 2024). Moreover, concerns about fairness and transparency must be addressed, as predictive models that misclassify customers can lead to biased targeting and reputational risks. Scholars increasingly argue for hybrid governance frameworks that combine algorithmic insights with human oversight to balance efficiency with ethical responsibility (Kohan, 2024; Zhang et al., 2025). In

the Nigerian service context, predictive customer behaviour analytics presents an opportunity to curb high customer-switching tendencies and build stronger loyalty in competitive markets.

Personalized Marketing through AI

Personalized marketing through AI involves tailoring marketing messages, recommendations, and offers to individual customer needs using tools such as recommendation engines, chatbots, and natural language processing systems. The capacity of AI to deliver one-to-one personalization at scale has transformed service marketing by enhancing relevance, improving engagement, and increasing conversion rates (Shahid et al., 2022; Dwivedi et al., 2023). Personalized marketing also supports cross-selling and upselling strategies, thereby maximizing revenue streams for service organizations. In rapidly digitalizing economies, personalization has emerged as a key determinant of customer satisfaction and loyalty (Chatterjee et al., 2023; Li et al., 2022).

However, the effectiveness of AI personalization depends heavily on customer trust and perceptions of privacy. Scholars note that over-targeting or intrusive personalization may lead to resistance, thereby undermining the effectiveness of campaigns (Nwosu & Okafor, 2022; Ciente, 2023). Transparency in data use and customer control over personalization settings have been recommended to build long-term trust (Solway, 2024; Zhang et al., 2025). For service organizations in Delta State, adopting AI-driven personalization can significantly improve competitive positioning, but this must be implemented in a way that respects local values, regulatory frameworks, and customer expectations.

Service Marketing Performance

Service marketing performance reflects the extent to which marketing strategies and activities contribute to customer acquisition, retention, satisfaction, and

loyalty. In today's competitive environment, organizations increasingly measure performance through key metrics such as net promoter score (NPS), market share growth, and customer lifetime value (CLV) (Mariani & Borghi, 2022; Mikalef et al., 2021; Iwegbue, C. N., 2015). Research has shown that AI applications enhance service marketing performance by improving the precision of targeting, reducing churn, and enabling proactive customer engagement (Dwivedi et al., 2023; Kohan, 2024). In sectors like telecommunications and banking, the use of AI-driven predictive analytics has translated into improved marketing return on investment (ROI) and operational efficiency.

Nonetheless, evaluating service marketing performance in the context of AI adoption requires rigorous methodologies. Controlled experiments, uplift modeling, and A/B testing are essential to isolate the effects of AI interventions from other influencing factors (Gupta & George, 2020; Chatterjee et al., 2023). A/B testing in marketing is an experimental method that compares two versions of a single marketing asset, like an email or landing page, to determine which performs better in achieving a specific goal, such as higher conversion rates or engagement. One version (the control, A) is compared against a modified version (the variant, B), with results analyzed to make data-driven decisions, leading to more effective marketing campaigns and improved return on investment. In emerging markets such as Nigeria, firms face unique challenges including infrastructure limitations, regulatory uncertainty, and uneven digital maturity, which may hinder the full realization of AI's impact (Adepoju & Oyewole, 2021; Nwosu & Okafor, 2022; Iwegbue, C. N., 2024). Therefore, scholars emphasize the need for context-sensitive assessment frameworks to ensure that AI adoption genuinely improves marketing performance outcomes in service industries.

Conceptual Framework

Fig. 1 Conceptual framework on artificial intelligence applications in predictive analytics for service marketing performance (Researchers' construct, 2025)

Theoretical Review

The following theory was reviewed for the study

Predictive Analytics Theory

Predictive Analytics Theory emphasizes the use of historical and real-time data, statistical algorithms, and machine learning techniques to identify patterns and forecast future outcomes that can guide decision-making. In the context of service marketing, the theory explains how organizations can move beyond descriptive insights toward proactive strategies that anticipate customer needs, reduce churn, and enhance customer lifetime value (Dwivedi et al., 2023; Solway, 2024). Recent studies suggest that predictive analytics provides a competitive advantage by enabling firms to personalize interactions, optimize marketing campaigns, and allocate resources more efficiently (Chatterjee et al., 2023; Zhang et al., 2025). As service organizations increasingly operate in dynamic markets, Predictive Analytics Theory underscores the strategic value of leveraging AI-driven tools to convert data into actionable foresight, thereby directly linking analytics capability to marketing performance outcomes (Mariani & Borghi, 2022).

By hinging this study on Predictive Analytics Theory, the research establishes a strong foundation for explaining how AI-Driven Customer Segmentation, Predictive Customer Behaviour Analytics, and Personalized Marketing through AI influence Service Marketing Performance in Delta State. The theory justifies the study's focus on AI applications as proactive mechanisms for enhancing service delivery and customer engagement, rather than reactive responses to market challenges. It implies that organizations capable of integrating predictive analytics into their marketing processes will likely achieve superior customer retention, loyalty, and satisfaction. Thus, the theoretical underpinning not only validates the research framework but also guides the interpretation of findings, ensuring that the study contributes both empirically and theoretically to advancing knowledge in AI-driven service marketing.

Empirical Review

Chatterjee, Rana, Tamilmani, and Sharma (2023) conducted a study on artificial intelligence applications in marketing across service firms in India. Using a survey research design, data were collected from 410 marketing managers and analyzed using structural equation modeling (SEM). The study found that AI-driven customer segmentation significantly improved targeting precision and customer engagement, leading to higher marketing ROI. However, the study acknowledged a gap in contextual application, as the evidence was drawn from large firms in a developed digital economy. This leaves limited insights into how AI-driven

segmentation impacts service marketing performance in emerging contexts such as Delta State, Nigeria.

In a study, Singh and Rana (2022) investigated AI-enabled customer segmentation in the banking sector of the United Arab Emirates (UAE). The authors employed a descriptive survey design and gathered responses from 250 bank employees directly involved in customer relationship management. Regression analysis showed that AI-based segmentation improved personalized offerings and customer satisfaction levels. Despite these positive results, the authors noted a gap in testing these findings in non-banking service sectors and in regions with weaker digital infrastructure. Your study addresses this by exploring AI segmentation in broader service marketing contexts in Delta State.

Hassan, Abdelraouf, and El-Shihy (2025) examined the moderating role of AI personalization in the trust-satisfaction-loyalty relationship among e-commerce users in Egypt. A quantitative survey design was adopted, and 729 valid responses were analyzed using SEM. Findings revealed that personalized marketing through AI strengthened the relationship between trust and customer loyalty, confirming personalization as a performance driver. Yet, the authors highlighted the limitation of focusing solely on online retail, excluding physical service industries such as hospitality, telecommunications, and professional services. This gap underscores the relevance of testing AI personalization in diverse service organizations in Delta State.

Adepoju and Oyewole (2021) explored predictive analytics adoption and customer retention in Nigerian telecommunication firms. The study utilized a descriptive survey design, with a sample size of 300 respondents drawn from telecom operators in Lagos and Abuja. Results showed that predictive customer behaviour analytics helped reduce churn by identifying early warning signals of customer dissatisfaction. However, the authors admitted that the study was sector-specific (telecoms only) and did not measure broader service marketing performance indicators like customer acquisition or net promoter score. Your research expands on this by examining predictive analytics in multiple service organizations within Delta State.

Zhang, Li, and Wu (2025) investigated the role of multimodal AI in hyper-personalized advertising in the Chinese retail service industry. The authors used a mixed-method design, combining interviews with 35 marketing experts and a survey of 400 retail customers. Findings indicated that AI-driven hyper-personalization enhanced marketing effectiveness, but concerns about data privacy and algorithm transparency limited customer trust. The study called for future research in culturally diverse, less technologically advanced environments to validate the generalizability of findings. Your study directly addresses this by situating AI personalization and

predictive analytics within the Nigerian service context, where cultural dynamics and infrastructural challenges differ significantly.

From these empirical studies, it is clear that while AI applications, customer segmentation, predictive behaviour analytics, and personalized marketing, improve service marketing performance in advanced economies and specific industries, few studies have tested these variables holistically in emerging markets like Delta State, Nigeria. Existing research is often sector-specific (e.g., banking, telecom, e-commerce), country-specific (India, UAE, China, Egypt), and heavily reliant on technologically mature environments. This study fills this gap by integrating the three AI dimensions into a single framework and empirically testing their combined effect on service marketing performance across service organizations in Delta State.

Research Methodology

The study adopted a descriptive survey design, which was appropriate for examining the relationship between the study variables without manipulation. The population consisted of 820 employees drawn from ten major service marketing companies in Delta State, namely: Appfur Nigeria, DeltaSoft Technologies, CodeGrid Solutions, WarriTech Digital, PixelCode Innovations, Enextgen Technologies, Infobase Systems, Nextech Creations, Maxxtek Solutions, and SwiftMind Technologies. These companies were purposively selected because they represented key players in the service marketing and technology-driven sector of the state. The sample size was determined using Krejcie and Morgan's (1970) table, which gave a representative sample of 263 respondents from the population. A stratified random sampling technique was applied to ensure that respondents were proportionally selected across the companies and job cadres.

Primary data were obtained using a structured questionnaire, which was designed in line with the study's independent and dependent variables. The instrument comprised closed-ended items structured on a five-point Likert scale. To ensure accuracy, the questionnaire was subjected to face and content

validity through expert review in marketing and management research. The reliability of the instrument was confirmed through a pilot test, which yielded a Cronbach Alpha coefficient of 0.81, indicating high internal consistency. Data collection was carried out through direct distribution and retrieval of questionnaires, with follow-ups to improve response rates. The data collected were coded and analyzed using descriptive statistics (mean and standard deviation) to summarize responses and inferential statistics (regression analysis and correlation tests) to test the hypotheses using EViews 9.0 statistical tool. This methodological process ensured that the findings were valid, reliable, and generalizable to the broader service marketing context in Delta State.

Model Specification

The functional relationship is expressed as:

$$SMP=f(AIDCS,PCBA,PMAI)$$

Where:

SMP = Service Marketing Performance (Dependent Variable)

AIDCS = AI-Driven Customer Segmentation

PCBA = Predictive Customer Behaviour Analytics

PMAI = Personalized Marketing through AI

The econometric model is specified as:

$$SMP=\beta_0+\beta_1AIDCS+\beta_2PCBA+\beta_3PMAI+\mu$$

Where:

β_0 = Constant term

$\beta_1, \beta_2, \beta_3$ = Coefficients of the independent variables

μ = Error term

Results

This section presents the analysis of data collected from the field survey, focusing on the relationship between artificial intelligence applications in predictive analytics and service marketing performance in Delta State. The results are organized to reflect the questionnaire distribution, demographic characteristics of respondents, and responses to the research questions and hypotheses. Descriptive and inferential statistical tools were employed to ensure robust interpretation of findings.

Table 4.1 Questionnaire Distribution Breakdown

Questionnaire	Frequency	Percentage
Returned and used	241	91.63%
Invalid	19	7.22%
Not Returned	3	1.14%
Distributed	263	100

Source: Researchers' Compilation, 2025

Table 4.1 shows the distribution and usability of the administered questionnaires. Out of the 263 questionnaires distributed, 241 were duly completed and returned, representing 91.63% of the total, which indicates a very high response rate suitable for meaningful analysis. A total of 19 questionnaires

(7.22%) were considered invalid due to incomplete responses or inconsistencies, while only 3 questionnaires (1.14%) were not returned. This high retrieval and usability rate suggests strong cooperation from respondents and ensures that the sample was adequately representative of the target

population, thereby enhancing the reliability and generalizability of the study's findings.

Table 4.2 Mean Rate of Respondents Responses

S/N	Question Item	Mean	Std	Remark
	AI-Driven Customer Segmentation			
AIDCS1	Our company uses AI to identify distinct customer groups based on purchasing patterns.	3.66	1.17	Agree
AIDCS2	AI applications help us to better understand customer demographics and preferences.	3.75	1.23	Agree
AIDCS3	Customer segmentation through AI has improved our targeting strategies.	3.70	1.10	Agree
AIDCS4	AI-driven segmentation enables us to predict customer needs more accurately.	3.70	1.14	Agree
AIDCS5	The use of AI in segmentation has enhanced overall customer satisfaction.	3.81	1.17	Agree
	Mean Aggregate	3.72	1.16	Agree
	Predictive Customer Behaviour Analytics			
PRCBA1	AI tools in our company predict customer purchase behaviours effectively.	3.71	1.17	Agree
PRCBA2	Predictive analytics help us anticipate changes in customer preferences.	3.80	1.08	Agree
PRCBA3	The company uses AI insights to retain customers through personalized offers.	3.72	1.17	Agree
PRCBA4	Predictive customer behaviour analytics improve decision-making in marketing campaigns.	3.80	1.08	Agree
PRCBA5	AI-driven predictions have significantly reduced marketing risks and uncertainties.	3.66	1.17	Agree
	Mean Aggregate	3.74	1.13	Agree
	Personalized Marketing through AI (IV3)			
PMTA1	AI enables us to personalize marketing messages for individual customers.	3.55	1.18	Agree
PMTA2	Personalized marketing campaigns through AI improve customer engagement.	3.72	1.18	Agree
PMTA3	Our company uses AI to recommend products and services tailored to customer needs.	3.78	1.15	Agree
PMTA4	AI-driven personalization increases customer loyalty and trust in our brand.	3.76	1.03	Agree
PMTA5	Personalized marketing powered by AI leads to higher sales and profitability.	3.34	1.11	Agree
	Mean Aggregate	3.63	1.13	Agree
	Service Marketing Performance			
SMP1	AI applications have improved the efficiency of our service delivery.	3.72	0.56	Agree
SMP2	The adoption of AI has enhanced customer satisfaction in our services.	3.73	0.54	Agree
SMP3	Our company has experienced increased market competitiveness through AI.	3.71	0.54	Agree
SMP4	AI-driven marketing initiatives have improved customer retention rates.	3.74	0.56	Agree
SMP5	Overall, AI adoption has significantly improved the company's service marketing performance.	3.74	0.54	Agree
	Mean Aggregate	3.73	0.55	Agree

Source: Researchers' Computation, 2025

Table 4.2 shows that respondents generally agreed with the role of AI in customer segmentation, with a mean aggregate of 3.72 and a standard deviation of

1.16. The statement that companies use AI to identify distinct customer groups based on purchasing patterns recorded a mean of 3.66 and a standard

deviation of 1.17. Similarly, the view that AI applications help in understanding demographics and preferences had a mean of 3.75 with a standard deviation of 1.23, while improved targeting strategies through AI scored a mean of 3.70 and a standard deviation of 1.10. AI's ability to predict customer needs more accurately recorded a mean of 3.70 with a standard deviation of 1.14, and enhancing overall customer satisfaction through AI-driven segmentation had the highest mean of 3.81 and a standard deviation of 1.17. These results indicate that respondents recognized the effectiveness of AI in refining customer segmentation, even though the spread in responses suggests that experiences differ slightly across firms.

As presented, predictive customer behaviour analytics also attracted agreement, with a mean aggregate of 3.74 and a standard deviation of 1.13. The ability of AI tools to predict customer purchase behaviours effectively recorded a mean of 3.71 and a standard deviation of 1.17. Anticipating changes in customer preferences through predictive analytics had a mean of 3.80 and a standard deviation of 1.08, while the use of AI insights for retaining customers through personalized offers stood at a mean of 3.72 with a standard deviation of 1.17. Furthermore, improving decision-making in marketing campaigns using predictive analytics had a mean of 3.80 with a standard deviation of 1.08, and reducing marketing risks through AI-driven predictions recorded a mean of 3.66 with a standard deviation of 1.17. These findings suggest that predictive analytics has become a valuable tool for anticipating market shifts and making informed marketing decisions across the studied organizations.

Table 4.2 further indicates that personalized marketing through AI was generally supported by respondents, with a mean aggregate of 3.63 and a

standard deviation of 1.13. The use of AI to personalize marketing messages for individual customers had a mean of 3.55 and a standard deviation of 1.18. Improving customer engagement through personalized campaigns recorded a mean of 3.72 and a standard deviation of 1.18, while the recommendation of tailored products and services through AI stood at a mean of 3.78 with a standard deviation of 1.15. Increasing customer loyalty and trust through AI-driven personalization had a mean of 3.76 and a standard deviation of 1.03, whereas higher sales and profitability through personalized marketing recorded the lowest mean of 3.34 with a standard deviation of 1.11. These responses imply that while AI-driven personalization is recognized for fostering engagement and loyalty, its direct impact on sales and profitability appears to be perceived less strongly by employees.

Finally, the responses on service marketing performance revealed a mean aggregate of 3.73 and a relatively low standard deviation of 0.55, showing strong consensus among respondents. The statement that AI has improved service delivery efficiency recorded a mean of 3.72 and a standard deviation of 0.56, while the enhancement of customer satisfaction had a mean of 3.73 with a standard deviation of 0.54. Increased market competitiveness through AI scored a mean of 3.71 and a standard deviation of 0.54, while improved customer retention through AI-driven initiatives had the highest mean of 3.74 and a standard deviation of 0.56. Similarly, the overall improvement of service marketing performance through AI adoption recorded a mean of 3.74 with a standard deviation of 0.54. These findings indicate that respondents consistently acknowledged AI as a strong driver of improved performance in service marketing activities across the surveyed companies.

Table 4.3 Descriptive Statistics of the Variables for the Study

Variable	Mean	Std. Dev.	Median	Max	Min.	Skew	Kurtosis	Jarque-Bera	Obs.
AIDCS	3.72	0.52	3.80	5	1	-	2.98	3.62	241
PCBA	3.74	0.50	3.80	5	1	-	2.77	1.15	241
PMAI	3.63	0.48	3.80	5	1	-	2.42	4.69	241
SMP	3.73	0.54	4.00	5	1	-	2.82	3.23	241

Source: Researchers' Computation, 2025

The descriptive statistics in Table 4.3 provide an overview of the key variables of the study. The mean values for AI-Driven Customer Segmentation (3.72), Predictive Customer Behaviour Analytics (3.74), Personalized Marketing through AI (3.63), and Service Marketing Performance (3.73) indicate that respondents generally agreed with the positive influence of AI on marketing practices and performance. The standard deviations, ranging between 0.48 and 0.54, suggest a relatively low level of dispersion around the means, implying

consistency in responses. The median values, all close to 3.80 and 4.00, confirm that the central tendency of responses aligns with agreement levels. The maximum score of 5 and minimum of 1 across the variables reflect the full use of the Likert scale, showing variation in perceptions among respondents. The skewness values around -2.42 to -2.98 suggest negatively skewed distributions, indicating that most responses clustered at the higher end of agreement. Similarly, the kurtosis values, ranging from 1.15 to 4.69, point to moderate to high peakedness in the

distribution. The Jarque-Bera statistics further confirm normality tendencies, suggesting that the dataset is fairly suitable for further regression analysis. Overall, the descriptive analysis highlights

that AI practices are perceived to positively influence service marketing performance with consistent patterns among respondents.

Table 4.4 Correlation Matrix for the Study Variables

Variable	AIDCS	PCBA	PMAI	SMP
AIDCS	1.000			
PCBA	-0.039	1.000		
PMAI	0.022	0.081	1.000	
SMP	0.388	0.313	0.285	1.000

Source: EViews 9v output, 2025

Table 4.4 presents the correlation matrix for the study variables, showing the degree of association among them. The results indicate that AI-Driven Customer Segmentation (AIDCS) has a positive and moderate correlation with Service Marketing Performance (SMP) at 0.388, suggesting that improved segmentation through AI is associated with better marketing outcomes. Predictive Customer Behaviour Analytics (PCBA) also shows a positive correlation with SMP at 0.313, implying that predictive insights contribute to enhanced performance. Similarly, Personalized Marketing through AI (PMAI) has a positive relationship with SMP at 0.285, indicating that personalization efforts

improve service marketing, though at a relatively weaker level compared to segmentation and predictive analytics. However, the inter-correlations among the independent variables are weak, with AIDCS and PCBA showing a negative relationship at -0.039 and PMAI displaying very low positive associations with both AIDCS (0.022) and PCBA (0.081). These weak inter-variable correlations suggest minimal multicollinearity concerns, strengthening the reliability of the regression analysis. Overall, the correlation results suggest that each AI-driven practice contributes independently to improving service marketing performance.

Testing Hypotheses

This section shows the tested hypotheses analysis and the result as follows

H₀₁: AI-driven customer segmentation has no significant effect on service marketing performance in Delta State.

H₀₂: Predictive customer behaviour analytics has no significant effect on service marketing performance in Delta State.

H₀₃: Personalized marketing through AI has no significant effect on service marketing performance in Delta State.

Table 4.5 Summary of Multiple Regression Analysis result for Hypotheses 1 to 3

Dependent Variable: SMP
Method: Least Squares
Date: 09/07/25
Time: 23:10
Sample: 263
Included observations: 241

Variable	Coefficient	Std. Error	t-Statistic	Prob.

Source: EViews 9v output, 2025

The regression results in Table 4.5 provide evidence for testing the three hypotheses of the study. For hypothesis one (H_{01}), the result shows that AI-driven customer segmentation (AIDCS) has a positive and statistically significant effect on service marketing performance, with a coefficient of 0.4101, a t-statistic of 7.3573, and a probability value of 0.0000. Since the probability value is less than 0.05, the null hypothesis was rejected, implying that AI-driven customer segmentation significantly enhances service marketing performance in Delta State. For hypothesis two (H_{02}), predictive customer behaviour analytics (PCBA) also recorded a positive and significant effect, with a coefficient of 0.3334, a t-statistic of 5.7334, and a probability of 0.0000, leading to the rejection of the null hypothesis. This suggests that predictive analytics contribute meaningfully to improving service marketing outcomes. Similarly, for hypothesis three (H_{03}), personalized marketing through AI (PMAI) showed a significant positive effect, with a coefficient of 0.2805, a t-statistic of 4.6801, and a probability of 0.0000, which is below the 0.05 level of significance. Therefore, the null hypothesis was also rejected, indicating that AI-powered personalized marketing significantly boosts service marketing performance. The overall model explains about 32.1% of the variation in service marketing performance ($R^2 = 0.3210$), with an adjusted R^2 of 0.3124, confirming that the independent variables jointly predict the dependent variable. The F-statistic of 37.3503 with a probability of 0.0000 further affirms that the model is statistically significant. In summary, the results provide strong evidence that AI-driven practices, customer segmentation, predictive analytics, and personalized marketing, are significant drivers of service marketing performance in Delta State.

Table 4.6 **Summary of Variance Inflation Factors**

Date: 09/07/25

Time: 23:12

Sample: 263

Included observations: 241

Variable	Coefficient Variance	Uncentered VIF	Centered VIF
C	0.135212	163.7307	NA
AIDCS	0.003108	53.20217	1.002210
PCBA	0.003381	58.17504	1.008324
PMAI	0.003593	62.48798	1.007269

Source: EViews 9v output, 2025

Table 4.6 presents the results of the Variance Inflation Factor (VIF) test, which was conducted to assess the presence of multicollinearity among the independent variables. The centered VIF values for AI-driven customer segmentation (AIDCS = 1.002210), predictive customer behaviour analytics (PCBA = 1.008324), and personalized marketing through AI (PMAI = 1.007269) are all very close to 1, and far below the conventional threshold of 10. This indicates that there was no serious multicollinearity problem among the predictors, meaning each independent variable provided unique explanatory power in predicting service marketing performance. On the other hand, the uncentered VIF values appear very large (ranging from 53.20217 to 62.48798), which is expected due to the inclusion of the constant term and does not undermine the reliability of the model. Therefore, the centered results confirm that the regression estimates are stable, unbiased, and robust for interpretation.

Discussion of Findings

The study focused on artificial intelligence applications in predictive analytics for service marketing performance and the ensued variables were tested and the analysis result findings are being discussed as follows:

AI-driven customer segmentation and service marketing performance

The regression result for hypothesis one revealed that AI-driven customer segmentation had a positive and statistically significant effect on service marketing performance, with a coefficient of 0.410135 and a p-value of 0.0000. This indicates that for every unit increase in AI-driven segmentation, service marketing performance improved by about 41 percent, holding other variables constant. The significance level ($p < 0.01$) underscores the robustness of this relationship,

showing that AI-enabled segmentation enhances customer satisfaction, targeting accuracy, and overall service delivery. This finding is supported by Sharma and Sheth (2022), who argued that AI-driven segmentation enables organizations to align services more closely with customer needs, leading to stronger competitive advantage. Similarly, Lee et al. (2021) found that predictive segmentation helps firms anticipate evolving consumer patterns, thereby strengthening performance outcomes. In the Nigerian context, Olanrewaju and Popoola (2020) affirmed that adopting AI-based segmentation improves customer loyalty and market retention, which resonates with the present study's evidence.

Nonetheless, contrasting views exist. Johnson and Peterson (2019) suggested that AI-driven segmentation may be ineffective in markets with insufficient customer data, leading to misaligned marketing strategies. Likewise, Abubakar and Musa (2021) reported that infrastructural gaps and cost-related challenges in some developing countries reduce the full potential of AI-driven segmentation. Despite these limitations, the results of this study confirmed that AI-driven segmentation significantly improved service marketing performance in Delta State. Therefore, the finding met the study's stated objective of determining the role of AI in enhancing marketing efficiency and customer satisfaction through segmentation.

Predictive customer behaviour analytics and service marketing performance

The test of hypothesis two showed that predictive customer behaviour analytics significantly influenced service marketing performance, with a coefficient of 0.333356 and a p-value of 0.0000. This implies that a one-unit increase in predictive analytics improved service marketing performance by approximately 33 percent, highlighting the critical role of predictive tools in anticipating customer behaviour and designing

effective marketing campaigns. The highly significant result ($p < 0.01$) confirms that predictive analytics reduces uncertainty, enhances decision-making, and fosters customer retention. Wamba et al. (2020) supported this view by showing that predictive analytics improves marketing performance by leveraging data to design proactive strategies. In addition, Gupta and George (2022) emphasized that predictive AI empowers organizations to detect customer churn early and introduce personalized offers, which directly enhance service performance. Similarly, Uzonwanne (2023) reported that predictive analytics in Nigerian firms boosted competitiveness and helped firms adjust quickly to customer demands.

On the contrary, some scholars found limitations. For instance, Davis and Park (2021) observed that predictive analytics may underperform when customer data is sparse or inconsistent, leading to inaccurate forecasts. Likewise, Alabi and Eze (2020) noted that in some Nigerian service firms, lack of skilled personnel to manage predictive systems hindered their effectiveness. Despite these challenges, the evidence from this study confirmed that predictive customer behaviour analytics significantly improved service marketing performance in Delta State. Thus, the finding met the research objective of examining the effect of predictive analytics on service outcomes, particularly in driving retention, reducing risks, and improving campaign effectiveness.

Personalized marketing through AI and service marketing performance

The regression analysis for hypothesis three revealed that personalized marketing through AI significantly influenced service marketing performance, with a coefficient of 0.280516 and a p-value of 0.0000. This implies that a one-unit increase in personalized AI-driven marketing practices led to about 28 percent improvement in service marketing performance, holding other variables constant. The result suggests that AI-driven personalization—such as customized recommendations, targeted campaigns, and personalized messaging—contributes meaningfully to enhancing customer loyalty, satisfaction, and profitability. This finding aligns with Huang and Rust (2021), who highlighted that personalization through AI fosters stronger customer-brand relationships, thereby enhancing marketing outcomes. Similarly, Adepoju and Akinwale (2022) found that in Nigerian digital service firms, AI-enabled personalization boosted customer trust and significantly improved sales performance. More recently, Chen et al. (2023) demonstrated that tailored marketing powered by AI increased both retention and profitability, consistent with the present study's evidence.

However, not all studies have supported this position. For example, Kim and Park (2020) argued that excessive personalization can create consumer discomfort or privacy concerns, which may diminish trust in service firms. Likewise, Okonkwo and Eze (2021) reported that some Nigerian firms lack the data infrastructure to fully implement AI-based personalization, limiting its effectiveness. Despite these contrasting views, the present study confirmed that AI-enabled personalized marketing significantly improved service marketing performance in Delta State. This outcome clearly met the study's objective of assessing how AI-driven personalization enhances customer engagement and service competitiveness, demonstrating that personalization is a strategic driver of marketing success when effectively deployed.

Conclusion

Based on the findings, this study concludes that artificial intelligence applications play a critical role in enhancing service marketing performance in Delta State. The regression results demonstrated that AI-driven customer segmentation ($\beta = 0.410135$, $p = 0.0000$), predictive customer behaviour analytics ($\beta = 0.333356$, $p = 0.0000$), and personalized marketing through AI ($\beta = 0.280516$, $p = 0.0000$) all had positive and significant effects on service marketing outcomes, thereby affirming the objectives of the study. These results highlight that when service companies adopt AI to segment customers more accurately, predict behavioural patterns, and design personalized marketing strategies, they achieve improved customer satisfaction, retention, competitiveness, and overall marketing efficiency. The study further revealed that multicollinearity among the predictors was minimal, ensuring robust and reliable findings. While previous studies have shown mixed evidence on AI adoption in developing economies due to infrastructural and cost-related challenges, the present research provides empirical evidence that AI integration in service marketing significantly drives performance in the Nigerian context. Consequently, this study underscores the strategic importance of AI as not just a technological innovation but a performance-enhancing tool that should be fully embraced by service marketing firms seeking long-term growth and competitive advantage.

Recommendations

From the findings and conclusion, the following recommendations are being made:

- i) Service marketing firms in Delta State should intensify investments in AI-driven customer segmentation tools to better identify and respond to diverse customer needs, thereby improving targeting accuracy and satisfaction.

- ii) Managers should adopt predictive customer behaviour analytics as a strategic tool to anticipate customer preferences and minimize marketing risks, ensuring proactive decision-making in competitive environments.
- iii) Firms should leverage personalized AI marketing campaigns to foster stronger customer loyalty and engagement, while also addressing privacy and ethical concerns to build long-term trust and sustainable growth.

Artificial Intelligent Potency and Firms' Value in Nigeria

ASHIBOGWU, Nze Kingsley

Department of Accounting,
Southern Delta University. Ozoro,
Delta State, Nigeria

ashibogwukings@gmail.com

Publication Date: 2025/11/28

Abstract

With the separation of ownership from control, shareholders are fast losing the firms' value. Thus, the search for a computer technique that both generate and interpret information in relation to accounting reporting led to the invention of Artificial Intelligent. In light of this, this study investigated the value of Nigerian enterprises and the potential of artificial intelligence. Panel Autoregressive Distributed Lag (ARDL) model with related Pooled Mean Group (PMG) and Mean Group (MG) were used to accomplish this goal. Artificial intelligent awareness (AIAW), artificial intelligent frequency (AIFQ), and artificial intelligent application (AIAP) are substantial and positively correlated with enterprises' value as measured by return on asset (ROA), according to the panel ARDL's long- and short-term estimates. Based on this discovery, the study suggests that artificial intelligence's capacity to increase return on assets and hence boost business value should be promoted./*+96*/8

Keywords: Artificial Intelligent, Firm Ownership, Accounting Reporting, Firms' Value, Value Maximization.

Introduction

With the separation of ownership from control, shareholders of firms become far and detached from daily firms' operations with a likely tendency of losing firms value. This usually generates conflict of interest between managers and shareholders as managers are motivated towards profitability while shareholders interest is on value maximization. Thus, the urge for increased value maximization has necessitated the commitments by many shareholders to invest in business. However, to maximize the firms' value, effective and efficient financial reporting becomes imperative (Mishra, 2023).

Consequently, the actualization of firms' value via transparent financial accounting reporting has remained one of the most essential criteria to measure firms' performance.

Although, financial accounting reporting is seen as an essential means of ensuring firms value most of the existing financial accounting reporting techniques in business activities are traditional - human – knowledge based with several limitations (Kwarbai & Omojoye, 2021). These limitations ranging from accounting errors, fraud as well as over reliance on human expertise makes it imperative for a technique that stimulate the process of thinking and obtaining

information. Therefore, while the traditional accounting system employs a computerized path analysis tools to analyze accounting information generated by human experts, the search for a computer technique that both generate and interpret information in relation to accounting reporting led to the invention of Artificial Intelligent (Akinbowale, Mashigo & Zerihum, 2023). Consequently, Artificial intelligent which has the capacity to generate and interpret large data is wide spreading and its impact on every business ecosystem is virtually spread. Thus, accounting being a vital constituent of business environment is not insulated from this spread (Santos, Pires, & Alves, 2023). It is against this backdrop that this paper investigated the effect of artificial intelligent potency and firms value in Nigeria.

Statement of the problem

In most developing nations, accounting system has witnessed various and substantial changes recently. These changes are mainly ascribed to developments in information and communication technology, principally the speedy incorporation of Artificial Intelligence (AI) in almost all sectors (Guse & Mangiuc, 2022). The incorporation of AI into accounting system is a worldwide spectacle driven by

the acknowledgement of its potency in reforming how financial data is managed, analyzed, and utilized (Bako & Tanko, 2022). Nigeria, as a major player in the African economy, is no exception to this drift especially the potency of artificial intelligent in actualizing firms value. Hence, the predictability ability of artificial intelligent especially in accounting for errors in financial reporting has made its applications in all accounting practices as a matter of routine. It is to add value to existing studies that this paper investigated artificial intelligent potency and firms' value in Nigeria. The remainder of this work is structured as follows, in keeping with the introduction: The methodology is described in Section 3, the results are discussed in Section 4, the conclusion and policy implications are covered in Section 5, and Section 2 reviews pertinent existing studies.

Objectives of the study

- i. To investigate the effect of artificial intelligent potency on firms' value in Nigeria.
- ii. To examine the degree of correlation between artificial intelligent potency and firms' value in Nigeria.

Research Hypotheses

H0₁: Artificial intelligent potency has no impact on firms' value in Nigeria.

H0₂: There is no correlation between artificial intelligent potency and firms' value in Nigeria.

Literature Review

Theoretical Literature

This paper is anchored on social learning theory, expert system artificial intelligent, Chaos System and cuckoo search model of artificial intelligent. The social learning theory as formulated by Albert Bandura in 1973, have it that individual acquire knowledge from one another mainly through reflection, mimicking and demonstrating. Because it integrates motivation, memory, and attention into learning processes, this theory is frequently referred to as a bridge between behaviourist and cognitive learning theories. People mostly learn by observing the actions, demeanours, and outcomes of others. According to Bandura (1986), the majority of behaviour is learnt through reflection and demonstration. One develops a notion of how new behaviours are achieved by reflecting on others, and this suggested contemplation serves as a guide for action in the future. Through a constant interaction between behavioural, cognitive, and environmental factors, social learning theory explains how people behave. The theory combined behavioural and cognitive theories of learning to offer an all-inclusive model that accounts for the wide choice of learning practices that take place in the real world. As posited

by Bandura and Walters (1977), vital doctrines of social learning theory are thus: Learning is not merely behavioural but a cognitive progression that takes place in a social setting; Learning can take place by observing a behaviour and associated consequences of such behaviour (reinforcement); Learning encompasses reflection, extraction of information from those reflections, and making informed decisions about the performance of the reflections. Thus, learning can take place without a noticeable change in behaviour; Reinforcement has a fundamental role to play in learning but is not completely accountable for learning; The learner is not an inactive beneficiary of information. Cognition, environment, and behaviour all jointly affect one another in the learning process.

The application of this theory to this paper is that artificial intelligent that mimics human reasoning is an evolutionary process in the form of invented technology that imitates human behaviour which is the central idea of this theory.

Similarly, expert system theory of artificial intelligent developed by Golro and Tighe in 2012 is one of the most efficient and effective theory of artificial intelligent that depends on human expertise as a set-up of knowledge system. This kind of artificial intelligent model imitates human expertise in resolving thoughtful problem procedures. The Expert System Theory is a sprout from Markvo chain method that combines human expert knowledge in resolving accounting issues. The theory or model is a combination of deterministic and stochastic procedure using value stimulation tool (Neshat & Adeli, 2011). The Expert System Theory has the capacity of addressing questions relating to cost accounting and financial reporting that is most appropriate in influencing favorable firms' value in Nigeria.

The use of artificial intelligence in accounting, however, is approached in a particular way that implies the existence of disorder by the chaos system theory, which was developed by Lux, Clements, Croome, and Viljani in 2010. That is when there is a dispute between corporate managers and stockholders due to different goals (Kardasho, Einar & Okrent, 2006). Therefore, chaos theory is a dynamic and critical model that uses available signal processing to determine self-organization and the degree of disorder in corporate structures. Thus, the key components of corporate structure and how they interact to increase a company's value are captured by the chaos system theory. This is due to the fact that the financial reporting chaos system theory grows more intricate as the dispute between managers and shareholders intensifies over time. However, the theory has faced harsh criticism, highlighting the fact that the theory's creator did not adequately address the dynamics' complexity. The cuckoo search paradigm was created in an attempt to

address this issue. As a result of the chaos system theory's limitations, Durgun and Yildiz developed the cuckoo search model in 2012. Because it can combine the stochastic exploration and exploitation capabilities of the orthogonal learning method, the Cuckoo Search Model is mostly used to solve value optimisation problems in accounting systems.

Empirical Literature

Extant empirical literatures on adoption of artificial intelligent in accounting profession are basically divided into two strands. One strand concentrates mainly on the transformative potency of artificial intelligent as it boosts financial reporting, advance decision-making procedures, and grows the efficacy of accounting practices (Sani, 2022, Haasan, 2022, Ukpog, 2022, Das, 2021, Ukpog, Udoh, & Essien, 2019). The other strand focuses on the application of artificial intelligent and risk of unemployment by accounting professionals as artificial intelligent handle more accounting jobs than human accounting professional at lower operational costs and maximize profits (Nguyen,2021, Eren,2021, Kute,2021).

Sani (2022) examined the transformative potential of artificial intelligent in revenue generation and trials brought by the COVID-19 pandemic in Nigeria. The study by adopting qualitative research approach, found that the implementation of artificial intelligent in accounting systems is a serious cause of change that changes conventional methods and resolving long standing issues relating to incomplete taxpayer data and multiple taxation. The study by Ukpog, Udoh, and Essien (2019) used both qualitative and quantitative research approaches to examine the fundamental role of artificial intelligence in reforming proficient services and its potential implications for the banking, accounting, and auditing sectors in Nigeria. Based on this finding, the paper recommended removing all forms of barriers limiting the adoption of artificial intelligence in Nigeria's revenue generation practices. The study concluded that the transformational potential of artificial intelligence in Nigeria's banking, accounting, and auditing sectors should be enhanced by increasing awareness of the obstacles linked to its adoption in the nation. Das (2021) examined the effect of Artificial intelligent on accounting profession with emphasize on its possible implications and transformative power. By utilizing quantitative research approach, the study found that the application of artificial intelligent can boost accounting efficacy and provide greater business value. Based on this finding, the study recommended active partnership among accounting professionals, auditing professionals, and artificial intelligent specialists to adapt to the growing trend and protect the sustained importance of the accounting profession.

Hasan (2022) investigated the utilization of Artificial Intelligence in accounting and auditing professions. The paper by applying semi – systematic or narrative review method acknowledged the shortcomings posed by unsettling technologies associated with Industry. Also, that in the period of swift technological developments, the accounting and auditing professions are expected to undertake a substantial change to catch up with the changing world efficiently. However, the paper found that while artificial intelligent offers considerable rewards, it also come with worries and accompanying reservations... Based on these findings, the paper recommended the need for multiple collaboration among disciplines about the applications of artificial intelligent in accounting and auditing professions.

Ukpog (2022) looked into how Nigerian banks were using artificial intelligence in their financial operations. The study included 143 accounting professors from public colleges and prominent bankers in Akwa Ibom State. Using descriptive statistics, the study discovered that Nigerian commercial banks can use artificial intelligence to manage credit risk.

Nigerian researchers Kwarbai and Omojoye (2021) looked at the fields of artificial intelligence and accounting. Artificial intelligence has had a significant impact on Nigerian accounting practice, according to the study, which employed a survey research design and recruited participants from the Big Four audit firms: KPMG, Deloitte, PricewaterhouseCoopers, and Ernst & Young. On the basis of this, the report suggested that professional auditing should include artificial intelligence.

Gheorghe (2012) conducted research on artificial intelligence with the primary goal of chronicling the development of AI across time. The study discovered that the primary objective of artificial intelligence is to create computational agents that replicate the potentials associated with human intelligence through the use of a themed experimental technique that documents several stages of the development of artificial intelligence. Based on its reasoning aspects, this imitated intelligent duplicates' internal representation of their outward surroundings.

According to the studied literature, while artificial intelligence has made significant strides, most of its applications focus on banking operations and auditing issues, with little to no research on how AI may improve the value of Nigerian businesses. Furthermore, there is a dearth of research on the existence or absence of the observed covariate between traditional human-based financial accounting reporting and artificial intelligence, which raises both theoretical and empirical concerns. Through an investigation of artificial intelligence and company value in Nigeria, this article aims to close all of these gaps in the field.

Methodology

Research Design

Ex post facto research design, which makes use of secondary time series data, was used in this work. Because the study's scenario already exists or has already occurred, the researcher does not control or change independent variables in this methodical empirical investigation, which is why this research design was chosen. Since the data on the variables for intangible assets and the listed manufacturing

businesses' value are clearly established in yearly reports, the researcher is unable to change the independent variables. However, the researcher can design or fabricate an environment that will generate the data needed for analysis. The main reason ex post facto research is important is because it is a useful approach to behavioural science research. This is due to the fact that experiments frequently do not occur in real-world settings and may require some kind of study scenario contrivance.

Nature and source of Data

Variable	Definition / Measurement	Source
Return on Asset as proxy for firms' value	This is defined as the value/ earnings from invested capital. It is measured as the ratio of earnings to total assets.	Annual report for various years
Artificial intelligent digital awareness	This is defined as degree of awareness of artificial intelligent in the quoted firms. It is measured dichotomously as 1 for being aware and 0 for not	Author's computation
Artificial intelligent application	This is defined as the extent of the applicability of artificial intelligent. It is also measured dichotomously as 1 for applying artificial intelligent and 0 for otherwise.	Author's computation
Artificial intelligent frequency	The number of artificial intelligence-related terms that are referenced in each yearly report serves as a gauge for this.	Annual report for various years

Source: Author's computation, 2025

Technique of Data Analysis and model specifications

The paper's main credibility was established using the Panel Autoregressive Distributed Lag (ARDL) model's dynamic effect, Mean Group (MG), and Pooled Mean Group (PMG). This method is supported by the fact that the Mean Group (MG) and Poole Mean Group (PMG) of the Panel Autoregressive Distributed Lag (ARDL) model estimate independent regression for the value of each firm and estimate the coefficients as the unweighted mean of the estimated coefficients for the individual businesses. Although this allows all coefficients to vary and be heterogeneous in the short

and long run, the validity and consistency of this technique rely on having a large enough amount of data. Therefore, this study employed the pooled Mean Group to ascertain the short- and long-term relationship between artificial intelligence and the value of Nigerian businesses. Descriptive statistics were employed to ascertain the behaviour of the variables used in the estimation, panel unit root was carried out using Pesaran and Shin, Breitung, and Levin Linchu (1995), and correlation coefficients were employed to test for multicollinearity among the variables of interest in the study. The panel ARDL (pq) model in error correction is specified thus:

$$Y_{it} = \alpha_1 + \beta_i C_{it-1} + \lambda_i X_{it-1} + \varepsilon_{it} \dots\dots\dots(1)$$

Where Y_{it} = individual firm value and $i=1,2,3,\dots,n$. Then the long run parameter U_{it} becomes

$$\varepsilon_i = \frac{\lambda_i}{1 - \beta_i} \dots\dots\dots(2)$$

Given equation (2), the MG estimator for the panel ARDL becomes.

$$\varepsilon_i = \frac{1}{\beta} \sum_{i=1}^n \varepsilon_i \dots\dots\dots(3)$$

Equation (3) shows how the Mean Group (MG) formulated by Pesaran and Smith (1996) and Pooled Mean Group (PMG) model propounded by Pesaran (1999) is further, specified thus.

$$\Delta ROA_{it} = \alpha^{ROA} + \sum_{i=1}^K \beta_i^{ROA} \Delta ROA_{it-i} + \sum_{i=1}^K \gamma_i^{ROA} \Delta AIAW_{it-i} + \sum_{i=1}^K \delta_i^{ROA} \Delta AIAP_{it-i} + \sum_{i=1}^K \delta_i^{ROA} \Delta AIFQ_{it-i} + \varepsilon_t^{ROA} \quad (4)$$

Where ROA = Return on Asset, AIAW = Artificial intelligent awareness, AIAP = Artificial intelligent application, AIFQ = Artificial intelligent frequency and ε_t = Error term

Presentation and Discussions of Results

4.1 Correlation Matrix

To ascertain the degree of relationship between the firms' value proxied by return on asset and indicators

of artificial intelligent potency, the study conducted correlation coefficient matrix and the result is presented on table 1

Table 1. Correlation Matrix Result

Variable	ROA	AIFQ	AIAP	AIAW
ROA	1.00			
AIFQ	0.724*	1.00		
AIAP	0.621**	0.381*	1.00	
AIAW	0.472**	0.411*	0.541**	1.00

Source: Author's Computation, 2025 Note * =1% and ** = 5% level of significance

To determine whether there is a significant association between the variables of interest in the study at the 1% and 5% levels of significance, respectively, the correlation coefficient matrix was utilised. The findings showed that all artificial intelligence variables or indicators are significant and positively correlated with firms' value as measured by return on asset (ROA),

with the strongest correlation being found between firms' value and artificial intelligence frequency (AIFQ). Furthermore, none of the inter-relationships between the variables utilised in the estimation are greater than 0.7, according to the correlation coefficient matrix result. This suggests that the variables used in the estimation do not have a multicollinearity issue.

Panel Unit root test.

To determine the order of integration of the variables of interest and the suitability of the chosen panel ARDL

technique, the study conducted panel unit root test and the result is presented on table 2.

Table 2 Panel data unit test Result

Level			First difference			
Pesaran and Shin	Biretung	Levin, Liu and Chu	Pesaran and Shin	Biretung	Levin, Liu and Chu	Order of Integration
ROA -3.81	-3.79**	-4.93**	-15.71**	-9.61**	-14.63**	1(0)
AIFQ -1.18	-1.02	-1.32	-3.60**	-2.01	21.07**	1(1)
AIAP -0.72	-5.02	-0.03	-22.30**	-17.50**	22.10**	1(1)
AIAW -6.71**	-3.01**	-6.03**	-28.01**	-18.60**	-26.01**	1(0)

Source: Author's Computation, 2025 Note * =1% and ** = 5% level of significance

The results of the panel root test revealed that while return on assets (ROA) and artificial intelligent awareness (AIAW) were stationary at levels, artificial intelligent frequency (AIFQ) and artificial intelligent application (AIAP) became stationary after first difference at 5% level of significance. This result gives

a mix order of integration of purely 1(O) and 1(I). There are two statistical implications to the result's finding. First, it suggests that the variables of interest in the study may have long-term correlations. Second, it demonstrates that the panel Autoregressive Distributed Lag (ARDL) model is the best suitable

estimation method for the study because the order of integration of the variables permits the estimation of

Panel ARDL Results

To ascertain the effect of artificial intelligent potency proxied by tangible assets innovation proxied by artificial intelligent awareness (AIAW), artificial

the error correction coefficient as well as the short- and long-term relationships.

intelligent frequency (AIFQ) and artificial intelligent application (AIAP) on firms' value proxied by return on asset (ROA), the panel ARDL technique was utilized and the result of the long run and short run panel ARDL is presented on table 3 and 4

Table 3 Result of Long run Panel ARDL

ROA (Dependent Variable)	Poole Mean Group	Mean Group	Dynamic fixed effect
Independent Variables	Long run	Long run	Long run
AIFQ	0.085** (4.11)	0.018*** (1.97)	0.09** (4.22)
AIAW	0.041** (4.03)	0.050** (2.87)	0.03** (4.02)
AIAP	0.062** (5.82)	0.054* (4.96)	0.02** (4.53)
Constant	225** (2.56)	241** (2.66)	127** (2.61)
Observations	154	154	154
Hausmann test ¹			2.89(0.74)
Hausmann test ²			0.17(0.99)

Source: Author's Computation, 2025 Note * =1%, ** = 5% and * =10% level of significance**

Table 3 contains the result of the long run panel ARDL coefficients. The findings from the result of the long-run estimates of the panel ARDL shows that the coefficients of all variables of interest such as artificial intelligent awareness (AIAW), artificial intelligent frequency (AIFQ) and artificial intelligent application (AIAP) are correctly signed and confirmed to the anticipated expectations. This is because all the variables are significant and positively related to firms' value proxied by return on asset (ROA). That is a 1% increase in artificial intelligent frequency (AIFQ), artificial intelligent awareness (AIAW) as well as artificial intelligent application (AIAP brings about 9%, 3%, and 2% increase in firms' value proxied by return

on asset in Nigeria. This study implies that in contemporary financial accounting operational contexts, artificial intelligence offers an extra signal for specialised technological knowledge and experience, enabling increased business value by reducing accounting expenses.

These results supported those of Ukpong, Udoh, and Essien (2019) and Sane (2022), who discovered that the use of artificial intelligence had a major impact on auditing systems. Additionally, the efficiency and consistency of the Mean Group and Pooled Mean Group in estimating the panel dynamic effect are confirmed by the Hausmann test.

Table 4. Result of Short run Panel ARDL

ROA (Dependent Variable)	Poole Mean Group	Mean Group	Dynamic fixed effect
Independent Variables	Short run	Short run	Short run
ECM	-0.86** (0.02)	-0.078** (0.051)	-0.084 (0.011)
AIFQ	0.035** (8.62)	0.042* (6.86)	0.006** (2.43)
AIAP	0.036** (2.16)	0.083** (2.81)	0.041** (3.42)
AIAW	0.083** (3.61)	0.032*** (2.02)	0.041** (6.02)
Constant	352** (2.24)	241** (2.34)	127** (2.61)
Observations	122	122	122
Hausmann test ¹			2.69(0.74)
Hausmann test ²			0.15(0.99)

Source: Author's Computation, 2025 Note * =1%, ** = 5% and *** =10% level of significance

Artificial intelligent awareness (AIAW), artificial intelligent frequency (AIFQ), and artificial intelligent application (AIAP) have short-term significant contributory influences on increasing the value of firms in Nigeria, according to the results of the Pooled Mean Group (PMG), Mean Group (MG), and short-term dynamic fixed effect. The error correction coefficient, which is negative and significant under all three short run models, supported the validity of these findings.

Conclusion and Policy recommendations

Relying on the findings, it can be concluded that artificial intelligent positively impacts on firms' value as evidenced by improved return on asset (ROA) as application of artificial intelligent caused a decreased total expense, suggesting that artificial intelligent is streamlining operational processes and reducing costs. Hence, the paper recommends that the artificial intelligent potential to drive firms' value by enhancing return on asset should be encouraged.

Alex Ekwueme Federal University Ndufu-Alike,
PMB 1010, Abakaliki, Ebonyi State, Nigeria.

Publication Date: 2025/11/28

Abstract

The rapid evolution of digitalisation has led to an increase in fraud, making the role of digital audit tools crucial in preventing and detecting fraudulent activities. In this study on audit digitalization and its impact on fraud prevention and detection with emphasis on its adoption, benefits and challenges among sole/partnership audit firms in Nigeria. To address this dissensus, we used questionnaire to elicit responses from participants where descriptive statistics and regression analysis were adopted. Findings suggest moderate adoption rates with variations in integration into audit processes. Skill gaps, regulatory constraints, technological limitations, and cybersecurity vulnerabilities emerge as significant challenges. However, audit digitalization demonstrates a significant positive impact on enhancing audit practices and stakeholder confidence. We present ideas for addressing these challenges based on our research and lessons from other fields.

Keywords: *Audit digitalization, fraud prevention, fraud detection, technology adoption, Nigeria*

Introduction

In recent years, the digitalization of audit processes has emerged as a transformative trend within the field of auditing, offering significant potential to enhance fraud prevention and detection mechanisms. With the proliferation of advanced technologies and the increasing reliance on digital systems for business operations, the traditional methods of audit have become insufficient in addressing the evolving nature of fraudulent activities. In response, auditors are leveraging digital tools and techniques to improve their ability to identify, assess, and mitigate fraud risks effectively (Herbert et al., 2017).

Nigeria, like many other countries, has witnessed a rapid shift towards digitalization across various sectors, including finance, commerce, and government (Oyedokun, 2016). As digital transactions become more prevalent, so do the opportunities for fraudulent activities, ranging from financial misstatements and asset misappropriation to corruption and cybercrimes (Enofe et al., 2017). In this context, the role of auditors in safeguarding the integrity of financial information and protecting stakeholders' interests becomes increasingly critical. According to Adejumo and Ogburie (2025), With the advent of digital banking, online transactions, and cryptocurrency, fraudsters have developed advanced tactics to exploit vulnerabilities within financial systems. Traditional fraud detection methods, primarily rule-based systems,

have demonstrated limitations in identifying complex fraudulent activities, especially those that involve dynamic, evolving patterns. The digital audit tools like AI-driven approaches enable real-time detection of anomalies, predictive risk assessment, and adaptive learning mechanisms that continuously evolve to counteract new fraudulent tactics.

This study aims to investigate the impact of audit digitalization on fraud prevention and detection practices in Nigeria through the use of digital audit tools. Digital audit tools are softwares and technologies that help auditors and businesses automate and improve the audit process, particularly in the digital realm. These tools offer features like automated data collection, analysis, and reporting, leading to increased efficiency, accuracy and insights (Thottoti, Ahmed & Thomas, 2022). These techniques according to (Hasan, 2022) gather data automatically from various sources, like databases, systems and sensors, analyse it for potential risks or compliance, provide reports to help auditors understand audit findings and communicate them effectively. Digital audit tools are evolving rapidly, with new features and functionalities emerging constantly. Therefore, by leveraging these tools, auditors can streamline their audit processes, enhance their compliance efforts and gain valuable insights into their operations. Again, auditors' effectiveness in mitigating fraud risks and the overall quality of audit services are assured.

The empirical evidence and insights derived from this study aims to contribute to the existing body of knowledge on audit digitalization and its implications for fraud prevention and detection. The findings of the study are expected to inform policymakers, regulatory authorities, audit firms, and other stakeholders about the impacts of adopting digital audit solutions in mitigating fraud risks and enhancing the reliability of financial reporting in Nigeria. Ultimately, the study seeks to foster greater transparency, accountability, and trust in the Nigerian business environment, thereby promoting economic growth and investor confidence.

In advanced economies, audit digitalization tools would serve as a robust technique for enhancing fraud prevention and detection. Digital audit technologies would be seamlessly integrated into audit processes, enabling auditors to efficiently analyze vast volumes of financial data, identify anomalies, and detect potential fraud schemes with a high degree of accuracy. The adoption of digital tools and techniques would streamline audit procedures, improve the effectiveness of risk assessment procedures, and strengthen internal controls within organizations. Ultimately, audit digitalization would contribute to the overall integrity and reliability of financial reporting, bolstering investor confidence and market transparency.

However, the reality in Nigeria presents several challenges hindering the effective utilization of audit digitalization for fraud prevention and detection purposes. One major problem is the limited adoption and implementation of digital audit technologies among audit firms and organizations. Many audit professionals lack the necessary skills, training, costs associated with the digital infrastructure and other resources to leverage digital tools effectively, resulting in manual and outdated audit approaches that are ill-equipped to address modern fraud risks. Furthermore, the inadequate regulatory framework and technological infrastructure in Nigeria pose significant barriers to the widespread adoption of modern technologies in audit processes. The absence of clear guidelines and standards governing the use of digital audit tools leaves auditors uncertain about the legal and ethical implications of incorporating technology into their practices. Additionally, the unreliable internet connectivity and inadequate cybersecurity measures increase the vulnerability of digital audit systems to cyber threats and data breaches, undermining the integrity and confidentiality of audit processes.

If the challenges impeding the effective utilization of audit digitalization for fraud prevention and detection in Nigeria remain unresolved, several adverse consequences may ensue. First and foremost, the prevalence of fraudulent activities and financial irregularities is likely to persist, jeopardizing the accuracy and reliability of financial reporting in the

country. Investors and stakeholders may lose confidence in the transparency and integrity of Nigerian businesses, leading to reduced investment inflows, diminished market competitiveness, and reputational damage for organizations.

The purpose of this paper is to explore the impacts of modern technologies, perceived benefits, technological challenges and ease of use) on the auditing practice of fraud prevention and detection; by examining the impact of digital audit technologies on fraud detection and prevention practices, the study offers insights that can help organizations bolster their defenses against fraudulent activities. This is particularly crucial given the increasing sophistication of fraud schemes and the potential financial and reputational risks they pose to businesses and stakeholders is essential for audit firms and professionals. The study's findings can inform audit practitioners about the benefits and challenges associated with the adoption of digital tools and techniques, allowing them to optimize audit processes, improve risk assessment capabilities, and deliver higher-quality audit services to clients. This, in turn, can lead to greater trust and confidence in financial reporting and corporate governance practices.

The paper is organized in this order: introduction is followed by related literature, theoretical framework, methodology, discussion of findings, conclusions, and area for further studies.

Conceptual Review

Concept of Digital Audit Technologies

The adoption of digital audit technologies represents a significant paradigm shift in the field of auditing, offering new opportunities to enhance fraud prevention and detection practices. In the Nigerian context, where fraud risks are prevalent, understanding the adoption and utilization of digital audit technologies is crucial for safeguarding the integrity of financial reporting and mitigating the impact of fraudulent activities (Abdullahi & Mansor, 2015). This conceptual review examines the current landscape of digital audit technologies adoption in Nigeria, with a specific focus on its implications for fraud prevention and detection.

Digital audit technologies encompass a wide range of tools, techniques, and methodologies that leverage digital capabilities to streamline audit processes, analyze large volumes of data, and identify anomalies indicative of fraudulent activities. These technologies include data analytics software, artificial intelligence and machine learning algorithms, robotic process automation, blockchain technology, and advanced audit analytics tools. By automating repetitive tasks, improving data accuracy, and enhancing analytical capabilities, digital audit technologies empower auditors to detect fraud more effectively and efficiently (Abiola, 2009; Baiod & Hussain, 2024)

The adoption of digital audit technologies in Nigeria is influenced by various factors, including organizational culture, technological infrastructure, regulatory environment, and audit firm capabilities (Stephenson, 2003). Organizational culture plays a significant role in determining the willingness of firms to embrace digital transformation initiatives and invest in digital audit solutions. Technological infrastructure, including access to reliable internet connectivity and data management systems, also affects the adoption of digital audit technologies (Paul, 2015). Furthermore, the regulatory environment, encompassing audit standards, guidelines, and regulatory oversight, shapes the adoption landscape by providing incentives and mandates for adopting digital audit practices.

The adoption of digital audit technologies has profound implications for fraud prevention and detection efforts in Nigeria. These technologies enable auditors to conduct more comprehensive risk assessments, identify patterns of fraudulent behavior, and detect anomalies that may indicate potential fraud schemes (Albrecht et al., 2008). By analyzing large volumes of data in real-time, digital audit technologies enhance auditors' ability to uncover hidden fraud risks and respond proactively to emerging threats. Additionally, digital audit tools facilitate continuous monitoring of transactions and activities, enabling auditors to detect fraud more quickly and effectively. Despite the potential benefits, the adoption of digital audit technologies in Nigeria is not without challenges. Skill gaps among audit professionals, limited access to technology infrastructure, cybersecurity concerns, and resistance to change are some of the barriers hindering widespread adoption. However, these challenges also present opportunities for auditors and organizations to invest in training and development, upgrade technological capabilities, strengthen cybersecurity measures, and foster a culture of innovation and collaboration (Izedonmi & Mgbame, 2011).

Challenges and Barriers to Implementing Digital Audit Technologies for Fraud Prevention and Detection in Nigeria

The implementation of digital audit technologies represents a transformative opportunity for enhancing fraud prevention and detection practices in Nigeria (Carrier & Spafford, 2003). However, the successful integration of these technologies faces numerous challenges and barriers. (This conceptual review explores). The key challenges and barriers hindering the effective implementation of digital audit technologies for fraud prevention and detection in the Nigerian business landscape are numerous but not limited to the followings: Skill Gaps: One of the primary challenges is the presence of skill gaps among audit professionals in Nigeria. Many auditors lack the

necessary technical expertise and training to effectively leverage digital audit tools and techniques. Addressing these skill gaps requires investment in training programs and professional development initiatives tailored to enhance digital literacy and proficiency among audit professionals (Bhasin, 2015); Regulatory Constraints: The regulatory environment in Nigeria pose constraints to the adoption and implementation of digital audit technologies. Ambiguous or outdated regulations, compliance requirements, and regulatory oversight may hinder firms' willingness to invest in digital transformation initiatives. Regulatory reforms and clarity in audit standards are needed to provide a conducive environment for the adoption of digital audit technologies (Bhasin, 2013; Hassan, 2022); Technological Infrastructure: Limited access to robust technological infrastructure, including reliable internet connectivity, data management systems, and cybersecurity measures pose significant challenges to the implementation of digital audit technologies in Nigeria. Inadequate infrastructure impedes the effective utilization of digital tools and hinder data analysis capabilities, thereby limiting the effectiveness of fraud prevention and detection efforts (Hermanson et al., 2006;); Cybersecurity concerns threats and data breaches that poses a significant barrier to the implementation of digital audit technologies. Concerns about data security, privacy, and confidentiality may deter firms from fully embracing digital audit solutions. Strengthening cybersecurity measures, implementing encryption protocols, and adopting robust data protection policies are essential to address these concerns and enhance trust in digital audit technologies (Jiawei & Micheline, 2011; Saifudin et al., 2025). The perceived risks of digital audit are the FC, EE and the number of low rank auditors, all of which are the main drivers for the adoption and application of digital audit tools and software (Pedrosa et al., 2020). They emphasized the significant of the challenges of digital audit tools together with the auditors' new areas of proficiency and competency. Hence, we hypothesized that:

H0¹: There is no significant difference in the adoption of digital audit technologies among audit firms for fraud prevention and detection in Nigeria.

Benefits of implementing Digital Audit Technologies.

Depending on the size of a firm, experience has shown that most firms conclude the preparation of their financial statements at the last minute to file their financial statements with the inland revenue service/income tax department. Auditors use audit software to overcome audit challenges. Most developed countries' audit firms are currently using audit software for audit tasks, and therefore, the rationale behind sharing technology's perceived benefit is crucial, especially for sole proprietorship and

partnership firms (Baio & Hussain, 2024). The majority of audit firms are contacted to carry out their audit tasks if their auditors use IT in their professional services, and it is evident that the quality of the audit mission has increased with less audit risk. Furthermore, digital audit helps these audit firms collect information on time and quicker, and improves their understanding of the client's work and environment. Digital Audit and adoption of IT in auditing helps auditors to complete their audit tasks on time in an efficient manner (Mustapha and Lai, 2017). Emerging audit technology tools and audit software all ensure the high quality of audit reports, and the trend is for the majority of developing countries Nigeria inclusive to adopt such audit software (Tottoli & Thomas, 2022). An audit firm can enhance the operational performance of its audit through the use of a proper auditing software. It has been found that investment in digital audit tools is essential, owing to its immense effectiveness in enhancing the performance of audits (Patel & Chauban, 2023). Using modern audit technologies enables an auditor to carry out independent examinations of clients' data, which are stored on a computer without any dependence on accountants (Tottoli & Thomas, 2022). It can test the dependability of client accounting software and execute system re-performance, which in turn leads to ensuring the accumulation of audit evidence and the enhancement of the accuracy of audit tests and achieving auditing tasks more efficiently, which results in a more cost-effective audit. Likewise, computer-assisted audit tool (CAAT) provides auditors with the ability to save time in their auditing tasks. In several instances in the literature, the manual audit testing procedures are compared with CAATs-based techniques, where the auditor can save hours in each audit. The perceived benefits of audit tools, especially computer-assisted audit techniques (CAATs), have been identified by several scholars such as (Shamsuddin et al., 2015; Pedrosa et al., 2020; Salihu and Hoti, 2022). Their research, along with others, highlights how CAATs can significantly reduce audit time, improve efficiency, and improve the detection of misstatements and fraud. Hence, it is hypothesized that:

H0²: there is no significant perceived benefits of audit digitalization on fraud prevention and detection in Nigeria.

The role of digital audit technology in modern auditing practices is transformative and all-encompassing. From cloud-based software and automation to AI-driven analytics and blockchain, technology has elevated the capabilities of the auditing profession. As these tools continue to evolve, they will undoubtedly shape the future of financial reporting, enabling more accurate, efficient, and insightful auditing practices. For businesses and auditing professionals alike, embracing these technological advancements is not just

beneficial—it's essential for remaining competitive in an increasingly digital financial landscape. The key to success lies in striking the right balance between leveraging technology's power and maintaining the human expertise and judgment that are at the heart of the accounting profession.

Investment in Training and Development: Investing in training and development programs aimed at enhancing digital literacy and technical skills among audit professionals can address skill gaps and improve the adoption and utilization of digital audit technologies.

Regulatory Reforms: Advocating for regulatory reforms and updates to align audit standards with digital transformation initiatives can create a conducive regulatory environment for the implementation of digital audit technologies.

Technological Investment: Committing to investment in technological infrastructure, including upgrading internet connectivity, data management systems, and cybersecurity measures, can enhance the effectiveness and reliability of digital audit technologies (Bharati, 2012).

Collaboration and Knowledge Sharing: Promoting collaboration and knowledge sharing among audit firms, industry stakeholders, and regulatory bodies can facilitate the exchange of best practices, lessons learned, and innovative solutions for overcoming implementation challenges.

Impact of Digital Audit Technologies on Fraud Prevention and Detection in Nigeria

As Nigeria strives to strengthen its fraud prevention and detection mechanisms, the adoption of digital audit technologies has emerged as a promising solution. These include:

Enhanced Analytical Capabilities

Digital audit technologies offer enhanced analytical capabilities that empower auditors to detect and prevent fraud more effectively. Advanced data analytics tools, powered by artificial intelligence and machine learning algorithms, enable auditors to analyze vast volumes of financial data and identify irregularities or patterns indicative of fraudulent activities. By automating data analysis processes and uncovering hidden fraud risks, digital audit technologies enhance auditors' ability to detect fraud in a timely and proactive manner.

Real-time Monitoring and Detection

One of the key advantages of digital audit technologies is their ability to facilitate real-time monitoring and detection of fraudulent activities. With continuous monitoring systems and alerts in place, auditors can

quickly identify suspicious transactions or anomalies as they occur, enabling swift intervention and mitigation of fraud risks. This real-time visibility into financial transactions and activities enhances auditors' responsiveness to emerging threats and minimizes the potential impact of fraud on organizations (Ernest & Young, 2009).

Improved Audit Efficiency and Effectiveness

Digital audit technologies streamline audit processes, improve efficiency, and enhance the effectiveness of fraud prevention and detection efforts. Automation of repetitive tasks, such as data entry and validation, reduces the time and effort required to conduct audits, allowing auditors to focus on more complex analysis and risk assessment. By increasing audit coverage and accuracy, digital audit technologies enable auditors to identify fraud schemes that may have otherwise gone unnoticed using traditional audit methods (Moorthy et al., 2011). Audit firms are increasingly using digital audit tools and audit software as an important tool, which aids the auditor achieve an amiable degree of audit quality and efficiency, which, in turn, enhances the reliability of data analysis and the collection of evidence (Thotoli & Ahmed, 2022).

Challenges and Limitations

Despite their potential benefits, digital audit technologies also present challenges and limitations that may impact their effectiveness in fraud prevention and detection. Skill gaps among audit professionals, data quality issues, technological limitations, and cybersecurity threats are some of the challenges that need to be addressed to maximize the value of digital audit technologies. Additionally, the reliance on digital tools may introduce new risks, such as algorithmic bias or data privacy concerns, which require careful consideration and mitigation strategies. To ensure fairness, accuracy and reliability of financial statements while performing audits within an ever-shorter period, an auditor needs to be at alert. In the same vein, audit firms should consider the cost of the audit digital tools, availability of skilled work force and the gains of implementing digital tools. Emerging technology like cloud computer-based technology enforces certain threats, such as, for example, lack of protection in terms of data security and confidentiality (Chuo, 2015). Internet hackers are endangering firms, individuals among others by stealing data or by triggering business activities disruption that can have a significant effect on the reliability of source data entered in the financial statements (Barta, 2018; Thottoli & Ahmed, 2022). Hence, we hypothesized that:

H0³: There are no significant challenges hindering the effective implementation of audit digitalization for fraud prevention and detection in Nigeria.

Theoretical Framework

This study is theoretically underpinned on the Fraud Triangle theory, which was initially conceptualized by Cressey in 1953. Cressey's research centered on individuals engaging in embezzlement, whom he labeled "trust violators." According to his hypothesis, these individuals perceive themselves as facing a financial dilemma that they cannot disclose, recognize that this issue could be clandestinely resolved by exploiting their position of financial trust, and possess the ability to rationalize their actions, aligning their self-perception as trusted individuals with their utilization of entrusted funds or assets (Cressey, 1973 as cited in Coenen, 2005 and Adebisi & Gbegi, 2015).

The Fraud Triangle theory is highly relevant to this study as it provides a theoretical framework for understanding the psychological and situational factors that contribute to fraudulent behavior. By examining the three elements of the Fraud Triangle - pressure, opportunity, and rationalization - this theory offers insights into the underlying motives and circumstances that may lead individuals to engage in fraudulent activities, such as embezzlement or financial misappropriation.

In the context of this study, which focuses on fraud prevention and detection in Nigeria, the Fraud Triangle theory helps to illuminate the potential risk factors and vulnerabilities within organizational settings that could facilitate fraudulent behavior. By identifying the presence of financial pressures, opportunities for misconduct due to inadequate controls, and the rationalizations used by individuals to justify their actions, organizations can better understand and mitigate the risks of fraud.

Furthermore, by applying the principles of the Fraud Triangle theory, this study can inform the development of strategies and interventions aimed at strengthening internal controls, enhancing supervision mechanisms, and fostering a culture of ethical conduct within organizations. By addressing the root causes and enabling conditions of fraud, organizations can proactively mitigate the risk of financial malfeasance and safeguard their assets and reputation.

Empirical Review

The study by Patel & Ghauhan (2022) in India, examines the key challenges faced by auditors in adopting and implementing technology-driven auditing practices. The challenges encompass issues such as data security, privacy concerns, skill gaps, and the need for robust internal controls. Additionally, the article delves into the opportunities that technology offers,

including enhanced efficiency, improved risk assessment, and increased analytical capabilities. The findings of the study emphasize the need for auditors and organizations to embrace technology as a transformative force rather than a mere tool. It highlights the significance of proactive adaptation and collaboration between auditors, regulators, and technology providers to address challenges and maximize the potential benefits of technology in auditing practices.

Kokina et al., 2025 in USA, carried out research on the adoption of AI by large public accounting firms, with emphasis on its challenges and opportunities. They conducted 22 interviews with experienced audit firms. They found that simple AI technologies such as key data extraction from documents and optical character recognition are used widely while complex AI tools are only being developed, that RPA is used to automate repetitive administrative processes while the use of RPA is not as common. Again, they find that the main AI adoption challenges are related to transparency and explainability, AI bias, data privacy, robustness and reliability, fear of auditor over reliance on AI, and the need for AI guidance.

Akabom-Ita (2012) investigated the empirical analysis of the impact of information technology on computerized auditing practice in Cross River state, Nigeria, using a self-administered interview where 40 interviews were conducted with various accounting professionals and employing ANOVA statistics to analyze the data. The study found that accounting professionals need to enhance their knowledge and skills of computerized accounting systems for the purpose of planning, directing, supervising, and reviewing the work performed. It concluded that professionals should better understand and evaluate their computerized accounting systems to enable them to carry out their functions more effectively.

Kosmas, Thulani, and Edwin (2009) examined the effectiveness of digital auditing in detecting, investigating, and preventing bank frauds. The study used questionnaires, personal interviews, and document reviews, with a sample of thirty auditors from thirteen commercial banks and four audit firms in Zimbabwe. They found that the digital auditing department suffers from multiple challenges, including lack of needed material resources, technical know-how, interference from management, and unclear recognition of the profession. The study concluded that auditors must have the capacity, materially and technically, to improve their effectiveness in fraud prevention and detection.

Imtihal and Raghad (2022) investigated the impact of digital auditing on improving the performance quality and reducing costs in private auditing firms and offices. The research sampled 20 auditing firms and 182 audit

offices. Payroll costs and service quality were analyzed using traditional auditing techniques and digitized auditing techniques. The outcome of the research shows that the use of digital techniques saves time, effort, and costs and improves the overall quality of audits.

An empirical study by Modugu & Anyaduba (2013) titled "Forensic accounting and financial fraud in Nigeria: An empirical approach," used a survey design on a sample of 143 respondents. It found a significant agreement on the effectiveness of forensic accounting in controlling fraud, corporate reporting, and the quality of internal control. The study concluded that fraud is significant and prevalent in the business environment and needs to be addressed. It recommended specialization in forensic accounting and monitoring financial fraud using forensic accounting. However, the study did not consider the influence of technology on fraud detection.

Another empirical study by Azih & Okoli (2015) titled "Forensic Accounting as a Veritable Tool for Efficient Management of State-Owned Public Sectors in Ebonyi State: The Accountants' Perspective," used mean and standard deviation for analysis. The study identified techniques in forensic accounting, such as calculating economic damage, determining bankruptcy or insolvency levels, guiding reorganization, and addressing security fraud and business valuation. It concluded that forensic accounting is essential and recommended more training in the field. The study did not consider the technological aspects of forensic accounting or how technology influences fraud detection.

The study by Thottoli & Ahmed, (2022) explored the effects of emerging technology and auditing practice of accounting professionals. The primary method of data collection was questionnaire to newly practicing sole proprietorship or partnership accounting firms in India. The data were analysed by using partial least squares structural equation modeling (PLS-SEM). The findings revealed that there is a positive and significant relationship between characteristics of emerging technology (technology adoption, technological challenges and easy of use) and auditing practice, while factors of the perceived benefits had a negative relationship with auditing practice.

An empirical study by Oyedokun (2016) titled "Forensic Accounting Investigation Techniques: Any rationalization?" used content analysis and found that forensic accounting techniques are crucial in deterring fraudulent activities and corruption. The research concluded that there is no standard for conducting investigations and forensic accounting assignments. However, it identified forensic accounting techniques such as data mining, data matching, document reviews, computer-assisted reviews, litigation, arbitration, and

mediation. It recommended that auditors and investigators should be well-equipped with forensic accounting methods to mitigate investigation risks and dangers. The study did not specify the techniques frequently used by Nigerian forensic accounting practitioners or discuss the influence of technology or the use of technological tools.

Methodology

Research Design

Population of the Study

The population for the study was six hundred and sixty-seven (667) audit firms, sole/partnership-

Sample Size

The sample size was determined using the Taro Yamane formula below:

$$N = \frac{N}{1 + N(e)^2}$$

Where n = the sample size

N = represents the population
 E = represents the margin of error
 L = constant

For the purpose of this study, N will be equal to 667; e will be assumed to be 5%. Therefore, the sample size of this research work will be:

$$N = \frac{667}{1 + 667(0.05)^2}$$

$$N = \frac{667}{1 + 667 \times 0.0025}$$

This study utilized survey research method. Our study examined audit digitalization and its impact on fraud prevention and detection. Descriptive research is widely regarded as an appropriate approach for data collection, especially when employing questionnaires or interviews. Accordingly, the researcher chose to utilize questionnaires as the main instrument for gathering data in this study. By utilizing questionnaires, the researchers were able to acquire the essential information needed to effectively address the research objectives.

chartered accounting firms and certified accounting firms.

$$N = \frac{667}{1 + 1.6675}$$

$$N = \frac{667}{2.6675}$$

$$N = 250$$

Sampling Technique

A sample size of 250 was drawn out of the total population of 667. The systematic sampling technique was used to select a sample on the basis of equal representation from the respondents.

Instrument of Data Collection

The study used questionnaire as the major research instrument.

Data Analysis and Results.

Primary method of data collection was used in this study.

The researchers utilized descriptive statistics and correlation analysis as statistical tools in this study. Descriptive statistics were employed to summarize and

present the key characteristics of the variables being investigated. This involved calculating measures such as means, standard deviations, frequencies, and percentages to provide a comprehensive understanding of the central tendencies, variations, and distributions within the data.

On the other hand, correlation analysis was employed to explore the relationships between the variables. Specifically, correlation coefficients, such as Pearson's correlation coefficient, were computed to determine the strength and direction of the associations among the variables of interest. The significance of these correlations was assessed to determine whether the observed relationships were statistically significant or simply due to chance.

Results

Table 1: Descriptive Statistics on assessing the current level of adoption and utilization of digital audit technologies.

Metric	Mean	Median	Standard Deviation	Min	Max
Percentage of audit firms using digital audit tools	60%	65%	12%	45%	80%
Integration of digital tools into audit processes (%)	55%	60%	10%	40%	75%

Source: EViews 11 Output, 2025

Table 1 depicts the descriptive statistics, on average, 60% of audit firms in Nigeria use digital audit tools, with a slight variation (12%) around this mean. More so, digital tools are integrated into audit processes to

varying extents, with an average integration rate of 55%.

Table 2: Frequency Table Identifying key challenges and barriers hindering effective implementation of audit digitalization.

Challenge	Frequency
Lack of skilled personnel	25%
Regulatory constraints	30%
Technological infrastructure	20%
Cybersecurity vulnerabilities	25%

Source: Eviews 11 Output, 2025

Table 2 reveals the frequency tables of challenges and barriers hindering effective implementation of audit digitalization. The most commonly reported challenges include regulatory constraints and cybersecurity vulnerabilities, each mentioned by around 30% of respondents. Other significant barriers include the lack

of skilled personnel and issues with technological infrastructure.

Table 3: Descriptive Statistics on the potential impact of audit digitalization on fraud prevention and detection practices.

Impact Measure	Mean	Median	Standard Deviation	Min	Max
Effectiveness in enhancing audit efficiency (%)	70%	75%	8%	60%	85%
Improvement in audit accuracy (%)	65%	70%	7%	55%	80%
Timeliness of audit processes (%)	75%	80%	6%	65%	85%
Impact on audit quality	4.2	4.3	0.4	3.8	4.7
Stakeholder confidence rating	4.0	4.1	0.3	3.6	4.5

Source: EViews 11 Output, 2025

Table 3 examines the potential benefit of audit digitalization on fraud prevention and detection practices. On average, digital audit tools are perceived to enhance audit efficiency by 70%, accuracy by 65%, and timeliness by 75%. Respondents rated the impact

on audit quality at 4.2 on a scale of 1 to 5, indicating a positive perception of digitalization's effect on audit quality. Stakeholder confidence is also high, with an average rating of 4.0.

Test of Hypotheses

Table 4: Correlation Analysis

Variables	Pearson's Correlation	p-value	Interpretation
Adoption of digital audit technologies	1.00	--	Perfect positive correlation
Utilization of digital audit technologies	0.85	<0.001	Strong positive correlation, significant difference

Source: Eviews 11 Output, 2025

H₀₁: There is no significant difference in the adoption and utilization of digital audit technologies among audit firms and organizations in Nigeria for fraud prevention and detection purposes. Table 4 shows that the correlation coefficient adoption of digital audit technologies is 0.85, indicating a strong positive correlation. The p-value (<0.001) suggests

that the correlation is statistically significant. Therefore, we reject the null hypothesis (H₀₁) and conclude that there is a significant difference in adoption of digital audit technologies among audit firms in Nigeria. This result aligns with the findings of (Thottoli and Ahmed, 2022; Julia et al., 2022)

Table 5: Analysis of key challenges and barriers hindering the effective implementation of audit digitalization for fraud prevention and detection in Nigeria

Challenges	Skill Gaps	Regulatory Constraints	Technological Infrastructure	Cybersecurity Vulnerabilities
Skill Gaps	1.00	0.60	0.45	0.55
Regulatory Constraints	0.60	1.00	0.70	0.65
Technological Infrastructure	0.45	0.70	1.00	0.50
Cybersecurity Vulnerabilities	0.55	0.65	0.50	1.00

Source: EvIEWS 11 Output, 2025

(H₀₂): There is no significant challenges and barriers hindering the effective implementation of audit digitalization for fraud prevention and detection in Nigeria.

Table 5 revealed that the correlation coefficients of different challenges range from 0.45 to 0.70. Overall, there are moderate positive correlations between the challenges, indicating that they are slightly related. The

null hypothesis is rejected. This shows that there are significant challenges and barriers like technological infrastructural deficits, cybersecurity issues, skill gaps and regulatory constraints mitigating the audit technologies fraud prevention and detection in Nigeria. Our result agrees with findings of (Julia et al., 2025; Kokina et al., 2025) in USA.

Table 6: Analysis of impact of audit digitalization on fraud prevention and detection practices in Nigeria.

Impact Measures	Efficiency	Accuracy	Timeliness	Audit Quality	Stakeholder Confidence
Efficiency	1.00	0.75	0.85	0.80	0.70
Accuracy	0.75	1.00	0.90	0.85	0.75
Timeliness	0.85	0.90	1.00	0.95	0.80
Audit Quality	0.80	0.85	0.95	1.00	0.85
Stakeholder Confidence	0.70	0.75	0.80	0.85	1.00

Source: EvIEWS 11 Output, 2025

H₀₃: There are no significant perceived benefits of audit digitalization on fraud prevention and detection in Nigeria.

Table 6 depicts the correlation coefficients between different impact measures range from 0.70 to 1.00. There are strong positive correlations between various impact measures, indicating that they are closely related.

Summary of Findings

The analysis indicates. While the adoption of audit technology tools is underway in Nigeria, it is still in the early stages and moderately in use, with variations in integration into audit processes for fraud prevention and detection. Our study indicates that the most

prevalent challenges hindering effective audit digitalization in Nigeria include skill gaps, regulatory constraints, technological infrastructure limitations, and cybersecurity vulnerabilities. The introduction of regulation that sets expectations can begin to address this concern. Some respondents report a few situations to employ to address some of the main challenges associated with implementation for example improve training, enhancing audit efficiency, accuracy, timeliness, quality, and stakeholder confidence, highlighting its potential in revolutionizing fraud prevention and detection practices.

Conclusion and Recommendations.

Conclusion

In conclusion, the findings of the study underscore the importance of digital audit technologies in enhancing fraud prevention and detection practices among audit firms in Nigeria. While moderate adoption rates suggest progress, addressing key challenges such as skill gaps and regulatory constraints is crucial for maximizing the potential benefits of audit digitalization. Nevertheless, the significant positive impact observed

Recommendations

Based on the findings of the study, the following recommendations are proposed:

- i. Given the identified skill gaps as a significant challenge to effective audit digitalization, we recommend that audit firms invest in comprehensive training programs to enhance the digital literacy and proficiency of their staff. This should include training on the use of digital audit tools and techniques, as well as broader skills development in data analytics, cybersecurity, and emerging technologies relevant to the audit profession.
- ii. To address regulatory constraints and promote the adoption of digital audit technologies, stakeholders including government agencies, professional bodies, and industry associations should collaborate to develop and implement supportive policies and regulatory frameworks. These frameworks should provide clear guidelines and incentives for audit firms to embrace digitalization while ensuring compliance with regulatory requirements and standards.
- iii. Based on the above, we present ideas for addressing these challenges based on our research and lessons from other fields.

Role of Financial Technology in Shaping Commercial Bank Branch Growth In Nigeria

AROGHENE, Kparobo Gloria¹ & ETOH, Juliet²

Department of Banking and Finance
Delta State University, Abraka
kparobo-aroghene@delsu.edu.ng

Publication Date: 2025/11/28

Abstract

This study highlights the significant role of financial technological in shaping commercial bank branch growth in Nigeria. The financial technology parameters used were: Web pay (WEPA), mobile pay (MOPA), automated teller machine (AUMA) and point of sale (POSA). While bank performance was measured by commercial bank growth (branches). The geographical scope of the study is commercial banks in Nigeria. The time scope of the study span from 2009 through 2023. Data were sought from the CBN statistical Bulletin and international monetary fund. The study employ ex post facto research design. Different statistical test (descriptive statistics, correlation analysis, heteroskedasticity, unit root test & ordinary least square regression) was carried out with the aid of Econometric Views 9.0. From the analyses, results showed that WEPA and MOPA have positive coefficients with, the p-values (0.0076; 0.5328). AUMA and POSA have negative coefficients, but their p-values (0.0051 and 0.0405) were significant at 5%. The R-squared value 0.662484, means that approximately 66% of the variance in bank performance is explained by the model. From the results, the study concludes that fintech adoption has both substitution and complementary effects. Specifically, web-based transactions complement branch operations, whereas POS and ATM services significantly substitute for them, leading to reduced incentives for branch expansion. Mobile payments, on the other hand, do not significantly influence branch growth due to their operator-driven nature. The study recommends that commercial banks should embrace a hybrid model, leveraging web-based channels to complement existing branches while strategically reducing reliance on costly physical expansion. The CBN should strengthen regulatory frameworks to encourage collaboration between banks and fintech firms, ensuring consumer protection and interoperability.

Keywords: Financial, Technology, Performance

Introduction

The terminology "financial technology" (FinTech) comes from the words "finance" and "technology" to describe a new technology that can enlarge the scope of the financial sector (Simatupang & Siska, 2021). Moreover, Almaududi (2021) explained that Fintech is revolutionizing the way global financial institutions operate. Fintech's advancement has resulted in a slew of new financial tools and applications, including payment apps, lending, borrowing, etc. The advancement of global technology has resulted in new improvements and advances in various industries, particularly the financial industry. Financial Technology, or Fintech, is an innovation that has rocked the economic world and is currently quite popular in several countries, including Nigeria. Fintech adoption has become commonplace in the banking industry (Medyawati et al., 2021). Fintech services may be accessed by the public in a simple, practical, and

secure manner, greatly assisting the general public in accessing banking financial services (Abdillah, 2020). Financial technology (FinTech) is a blend of financial services and technology that alters the business model from traditional to moderate. Previously, people paid face to face and carry a certain amount of cash, but now they can make long-distance transactions using payments online.

Fintech is a revolutionary breakthrough in the financial industry that is now widely employed in the world of trade, business, and to address community needs (Lestari et al., 2021; Imene, 2023). This fact gives an opportunity for banks to grow its market and more accessible to the public through Fintech services. Any community activity in this era of globalization cannot be separated from technological advancements. Financial institutions, particularly bank, are in the same situation. To thrive in this new era of technology, financial institution must become technologically

literate (Siska, 2022). As a result, conventional banks, as a provider of financial services, must be able to keep up with the times by responding to challenges by gaining a competitive edge through the development of new financial products and services using Fintech.

Customers can use mobile phone and laptop, web pay, automated teller machine and point of sale to access financial services. The aforementioned channels gives customers access to banking services like financing, payments, transfers of money, and the purchase and sale of stocks and securities (Subbarao, 2017; Tiyan et al., 2020).

Several research on Fintech and banking services have been conducted. Research by Puspa & Hendratno (2020) found that Fintech has a beneficial impact on profitability (ROA & NIM) and banking operations efficiency (BOPO) at state-owned banks. Mar'atushsholihah & Karyani (2021) concluded their research that there are differences in CAR, LDR, NIM, and ROA at Indonesian conventional commercial banks after the ratification of Fintech regulations in 2016. According to the research finding of Lestari et al., (2021) banking innovation through Fintech services have increased banking performance in terms of ROA, BOPO, and NPL of Islamic banks. Then the research of Kristianti & Tulenan (2021) came to the same conclusion that Fintech services can helps conventional bank improve their performance.

E-payment channels, especially POS and mobile transactions, have experienced exponential but uneven growth due to policy reforms and consumer adaptation (Central Bank of Nigeria [CBN], 2023). Similarly, Osabutey et al. (2024) highlight that fintech adoption in Africa often follows irregular patterns, heavily influenced by regulatory and infrastructural developments. Adetunji and Olowolaju (2021) reported that POS adoption significantly displaced branch-based banking in semi-urban Nigeria. Similarly, Mogaji (2022) explains that, mobile money services while promoting inclusion, often operate independently of bank infrastructure, thereby weakening the link between fintech and physical branch expansion. Olatunji and Bello (2020) argued that internet banking often complements branch operations in Nigeria. In view of the aforementioned there exist need to explore the extent to which financial technology shape the growth of commercial bank in Nigeria.

Statement of the Problem

One of the most lengthy, tedious, and expensive processes Fintechs have to deal with is credit risk scoring. Operationally speaking, credit risk scoring has always been one of the most inefficient, protracted processes in banking due to the absence of data, the lack of knowledge about data analysis, and the shortcomings in the availability and access to data

management tools. Furthermore, since most modern Fintech firms have to give out loans and credit cards to expand their portfolios, they must have the proper data management and analysis tools to regulate their risk exposure, and keep it as low as possible. However, with modern technologies demanding faster response times, the key to performing efficient credit risk assessments and eclipsing traditional banking's drawn-out assessment processes lies in the quality and speed provided by Big Data and AI-powered technologies (Aroghene et al., 2025).

After 2008 global financial crisis, regulators have been trying to balance the objectives of innovation and growth with considerations of financial stability and consumer protection, and as a result, they are developing an increasing number of experimentation-based approaches (Imene & Udjo-Onovughakpor, 2023). As technology alters financial service attributes and market structure, financial regulation must therefore, adapt to remain effective (Aroghene & Obiekea, 2025). Acceptance of financial technology platforms goes a long way in influencing the volume and value of commercial banks. A case where the avenues provided by financial institution are not viable the expansion /provision of more sophisticated platform for financial deepening becomes difficult. It is in light of this, the study explore impact of financial technology on bank performance (commercial bank branch growth) in Nigeria.

Research Questions

- i To what extent does web pay (WEPA) affect bank financial performance in Nigeria?
- ii To what magnitude does mobile pay (MOPA) affect bank financial performance in Nigeria?
- iii To what extent does automated teller machine (AUMA) affect bank financial performance in Nigeria?
- iv To what magnitude does point of sale (POSA) affect bank financial performance in Nigeria?

Objectives of the study

The study main objective of the study is impact of financial technology on bank performance in Nigeria. The specific objectives are:

- i To determine the effect of WEPA on commercial bank branch growth in Nigeria.
- ii To examine the effect of MOPA on commercial bank branch growth in Nigeria.
- iii To explore the effect of AUMA on commercial bank branch growth in Nigeria.
- iv To investigate the effect of POSA on commercial bank branch growth in Nigeria.

Research Hypotheses

- i WEPA does not affect commercial bank branch growth in Nigeria.

- ii MOPA does not affect commercial iv POSA does not affect commercial bank
bank branch growth in Nigeria. branch growth in Nigeria.
- iii AUMA does not affect commercial
- bank branch growth in Nigeria.

Conceptual Review

Figure 2.1 Diagrammatic relationship between the dependent and independent variable.
Web Pay (WEPA)

Web pay refers to online payment services that enable individuals and businesses to conduct financial transactions over the internet. It typically involves the use of debit cards, credit cards, or internet banking to pay for goods or services on websites or through online portals. WEPA systems are widely used for e-commerce transactions, utility bill payments, and other online financial services. They offer convenience, security, and speed for users conducting transactions digitally. Web Pay automates many routine transactions, leading to faster processing times and reducing the workload on branch employees, making operations smoother (Olatunji & Bello, 2020).

Mobile Pay (MOPA)

Mobile pay refers to financial transactions conducted through a mobile device, such as a smartphone or tablet. These transactions can involve mobile banking apps, mobile wallets (Apple Pay, Google Pay), or USSD codes in developing countries. Mobile pay services are increasingly popular due to the widespread use of smartphones, offering a convenient and fast method for individuals to make payments, transfer funds, and access banking services on the go (Mogaji, 2022). Mobile payments enhance financial inclusion by allowing people in remote areas to access banking services, and they reduce the need for cash transactions. It is a key driver of digital banking transformation.

Automated Teller Machine (AUMA)

Automated teller machine is an electronic banking outlet that allows customers to perform basic banking transactions without the need for a human teller (Osabutey et al., 2024). Its common services include

cash withdrawals, deposits, balance inquiries, and funds transfers. AUMA provide convenient access to banking services outside of regular bank hours and across different locations, allowing customers to withdraw cash or check balances without entering a bank branch. The machine reduces congestion in bank branches, provide 24/7 services, and enhance the operational efficiency of banks by automating many routine tasks.

Point of Sale (POSA)

A Point of Sale (POSA) refers to the location and method where sales transactions occur, typically in retail environments. The terminals allow customers to pay for goods or services using debit or credit cards. Increasingly, POSA systems also support mobile payments and other digital payment methods (Adetunji & Olowolaju, 2021). The systems enable efficient, cashless transactions at retail stores, restaurants, and other service points, facilitating instant payments. They reduce the need for cash handling and provide a digital trail for every transaction. The machines are crucial for promoting cashless societies and are a key element in the digital payment infrastructure. Banks support POSA networks to encourage digital payments and reduce the reliance on physical cash.

Bank Performance

Bank performance refers to the various activities that a bank undertakes to provide financial services to its customers, manage internal processes, and ensure the smooth functioning of all its services. This includes deposit-taking, loan issuance, transaction processing, customer service, risk management, and regulatory

compliance. Effective bank operations are critical for maintaining customer trust, ensuring the security and accuracy of financial transactions, and meeting regulatory requirements (Aroghene et al., 2024). It encompasses everything from branch operations to digital banking platforms. The efficiency of bank operations influences customer satisfaction, profitability, and competitiveness.

The integration of Web Pay (WEPA), Mobile Pay (MOPA), Automated Teller Machines (AUMA), Point of Sale (POSA), s can significantly enhance the operations of commercial bank branches by improving customer experience, increasing efficiency, reducing costs, and expanding the reach of banking services. With fewer manual tasks, branches can focus on providing personalized services such as wealth management, business loans, or advisory services. This shifts the role of bank branches from transaction processing to relationship management. The use of digital payment systems provides valuable customer data that can be analyzed to improve decision-making in bank operations. Branches can use these insights to tailor services to customer needs and preferences, improving operational efficiency and customer satisfaction.

Theoretical framework

The impact of financial technology on bank performance in Nigeria can be explained within several theoretical perspectives that address technology adoption, innovation, and structural transformation in industries. One of the most relevant frameworks is the Technology Acceptance Model (TAM), developed by Davis (1989), which posits that the adoption of technology is determined by two main constructs: perceived usefulness and perceived ease of use. In the Nigerian banking sector, customers are more likely to adopt web-based banking, mobile payments, ATMs, and POS systems if they perceive these technologies as useful in enhancing convenience, reducing transaction costs, and saving time. Banks, in turn, incorporate these technologies into their operations when they are seen as capable of improving efficiency, reducing operational bottlenecks, and expanding market reach. This theory thus explains why some digital channels, such as web banking, have complemented bank branch growth, while others, such as POS services, have replaced certain branch functions by offering more accessible alternatives.

Closely related to this is the Disruptive Innovation Theory, advanced by Christensen (1997), which argues that new technologies initially enter the market by serving less-demanding segments or underserved populations before gradually displacing established products and services. Applied to the Nigerian banking context, fintech innovations such as POS agents and

mobile money services first emerged as solutions to the lack of access to formal banking in rural and semi-urban communities. Over time, however, these innovations have moved into mainstream financial services, directly competing with traditional banking channels and reducing the demand for physical bank branches. POS adoption, for instance, has grown exponentially and is increasingly viewed as a substitute for conventional branch transactions. Disruptive Innovation Theory therefore captures the dual nature of fintech, as it not only provides alternative channels of access but also redefines the competitive dynamics of the banking industry.

In addition, the Diffusion of Innovation Theory, developed by Rogers (1962), provides an explanatory framework for how fintech innovations spread among consumers and financial institutions. According to this theory, innovations are adopted through a process involving innovators, early adopters, early majority, late majority, and laggards. In the Nigerian financial system, web-based payments and ATM usage can be considered relatively mature innovations that have already diffused widely among customers. Mobile payments and POS adoption, by contrast, represent more recent innovations that have experienced rapid growth, especially as policies such as the Central Bank of Nigeria's cashless policy and financial inclusion strategy have accelerated their diffusion. This perspective explains why the diffusion of POS terminals and mobile money has been uneven across regions, with urban centers experiencing faster adoption compared to rural areas due to infrastructural and digital literacy disparities.

Empirical Literature Review

Olamide and Ogunleye (2023) explored role of web-based payment systems in enhancing bank performance in Nigeria. This study showed that the adoption of Web Pay systems significantly increased the operational efficiency of banks by reducing in-branch transaction volumes, leading to higher profitability and customer satisfaction in Nigerian commercial banks. Kwarteng and Boakye (2022) looked at mobile payment systems and bank efficiency in Ghana. The research demonstrated that the rise of mobile pay in Ghana has been instrumental in increasing financial inclusion, which led to more customers using banking services. This resulted in an increase in the number of transactions processed without increasing branch overhead costs. Muzenda and Phiri (2021) explore the impact of ATMs on the operational performance of banks in Zimbabwe. This study found that ATM installations in Zimbabwean banks helped improve customer service by providing 24/7 access to cash and banking services. The use of ATMs reduced the workload for in-branch staff and improved overall bank

operational efficiency. Adetunji and Yusuf (2021) studied point of sale terminals and bank profitability in the Nigerian Banking Sector. The research showed that POS systems in Nigeria led to increased cashless transactions, reducing the need for manual cash handling and in-branch visits. This enhanced banks' profitability by lowering transaction costs and boosting revenue through transaction fees. Chirwa and Manda (2020) examined the effects of digital payment systems on bank operations in Malawi: A case of web and mobile payment platforms. The study illustrated that both web pay and mobile pay platforms have reduced the operational costs for Malawian banks by automating payments and transactions. Customer satisfaction improved as a result of easy access to digital banking services. Okeke, E. & Obasi (2020) explored ATMs and POS Systems: Drivers of operational efficiency in the Nigerian banking industry. The paper found that the combined use of ATMs and POS terminals in Nigeria streamlined banking operations, enabling banks to serve more customers with fewer resources and improved financial performance. Said and Khalil (2019) explored digital payment systems and their impact on the operational performance of Egyptian banks. This study focused on the effects of Mobile Pay and Web Pay platforms in Egypt, revealing that they significantly increased the efficiency of banking operations by reducing paperwork and manual processes, leading to improved profitability.

Mutuku and Wanyama (2019) examined ATM network expansion and its impact on bank efficiency in Kenya. The expansion of ATM networks across Kenya was found to reduce the reliance on bank branches for routine transactions, leading to reduced operational costs and increased customer satisfaction. Matheka and Njuguna (2018) explored adoption of point of sale terminals and bank profitability in Tanzania. The study highlighted the role of POS systems in Tanzania in promoting cashless transactions, which enhanced bank profitability by cutting down operational costs and increasing fee-based income. Hagos and Mesfin (2018) examined mobile payment systems and their contribution to bank performance in Ethiopia. The research demonstrated that mobile pay systems in Ethiopia contributed to an increase in the number of bank customers, improving financial inclusion and overall bank performance by reducing transaction processing times. Adebayo and Aluko (2023) studied the influence of digital payment systems on bank profitability in Nigeria. Their findings suggest that the adoption of Mobile Pay and Web Pay significantly enhances bank profitability by reducing transaction costs and increasing customer engagement through digital channels. Asare and Mensah (2023) analyzed the impact of ATM usage on bank efficiency in Ghana.

The study revealed that increasing the number of ATMs improved customer satisfaction and reduced in-branch queues, leading to higher operational efficiency. Adebayo and Aluko (2023) investigated the influence of digital payment systems on bank profitability. he used variables (digital payment systems, transaction costs, profitability, customer engagement). with quantitative analysis of financial performance indicators.

the study found that, adoption of mobile pay and web pay enhanced profitability by reducing transaction costs and boosting customer engagement. Asare and Mensah (2023) analyzed the impact of ATM usage on bank efficiency. They used variables: ATM network, customer satisfaction, in-branch queues, operational efficiency. With Customer satisfaction surveys and efficiency metrics. the study found that, Increased ATMs led to higher customer satisfaction, shorter in-branch queues, and enhanced operational efficiency. Nyaga and Kimani (2022) investigated the relationship between POS terminals and bank performance. They used variables: POS terminals, non-interest income, transaction volumes, operational efficiency. With Financial performance and transaction data analysis. they found that Significant increase in non-interest income and operational efficiency due to higher transaction volumes via POS systems. Nwosu and Adedokun, (2022) explored the role of Web Pay systems in enhancing customer satisfaction. Web Pay system, customer satisfaction, customer retention, bank performance were the study variables. Survey and performance metrics analysis was used. The study found that, Web-based payment convenience positively impacts customer satisfaction and retention, improving bank performance. Abubakar and Suleiman (2022) examined the effects of mobile pay adoption on financial inclusion focusing on rural banking. variables used were: mobile pay, financial inclusion, bank outreach, customer engagement. The study revealed that Mobile Pay systems greatly increased banking service accessibility, especially in rural areas, enhancing bank outreach and performance. Nyaga and Kimani (2022) investigated the relationship between POS terminals and bank performance in Kenya. They concluded that banks that invest heavily in POS infrastructure experience a significant increase in non-interest income and operational efficiency due to higher transaction volumes. Nwosu and Adedokun (2022) explored the role of Web Pay systems in enhancing customer satisfaction in the Nigerian banking sector. The study found that the convenience of web-based payments has a positive impact on customer satisfaction and retention, leading to improved bank performance. Abubakar and Suleiman (2022) examined the effects of Mobile Pay adoption on financial inclusion in Sudan. Their findings indicated

that mobile payment systems have greatly increased the accessibility of banking services, particularly in rural areas, leading to enhanced bank outreach and performance.

Kabir and Rahman (2021) analyzed the relationship between ATM deployment and banking efficiency in Bangladesh. The study showed that banks with extensive ATM networks reduce operational costs by minimizing customer reliance on in-branch services. Ali and Hassan (2021) studied the effects of POS systems on small and medium-sized enterprises (SMEs) in Pakistan. Their results showed that POS adoption by banks has facilitated easier access to financing for SMEs, improving overall bank profitability. Ndlovu and Moyo (2021) investigated the influence of Mobile Pay on customer service in Zimbabwean banks. The study found that mobile payment platforms increase customer service efficiency and reduce waiting times, leading to higher levels of customer satisfaction. Mwenya and Phiri (2020) examined the impact of ATM networks on bank profitability in Zambia. Their findings indicated that expanding ATM networks improved accessibility to banking services, leading to increased transaction volumes and bank profitability. Kabir and Rahman (2021) analyzed the relationship between ATM deployment and banking efficiency. variables used are: ATM network, operational costs, customer reliance on in-branch services, efficiency. Major Findings were: Extensive ATM networks reduced operational costs by minimizing customer reliance on branches, enhancing banking efficiency. Ali and Hassan (2021) study the effects of POS systems on small and medium-sized enterprises (SMEs) and bank profitability. Variables used were: POS systems, SME financing, bank profitability, transaction volumes. Major Findings were: POS systems facilitated easier access to financing for SMEs, improving bank profitability through fee-based income from transactions. Ndlovu, and Moyo (2021) investigate the influence of mobile pay on customer service in Zimbabwean banks.

Variables used were: mobile pay, customer service efficiency, waiting times, customer satisfaction.

Major findings were: Mobile Pay platforms increased service efficiency and reduced waiting times, leading to higher levels of customer satisfaction. Mwenya and Phiri (2020) examined the impact of ATM networks on bank profitability. Variables used were: ATM networks, accessibility to banking services, transaction volumes, profitability. Major Findings included: Expanding ATM networks improved accessibility to banking services, leading to increased transaction volumes and higher profitability.

Fashola and Adeyemi (2020) explored the role of Web Pay platforms in improving the competitiveness of Nigerian commercial banks. The study found that

banks offering web-based payment options experienced higher customer acquisition and retention, enhancing their competitive edge. Chimuka and Musonda (2020) studied the relationship between POS terminals and banking sector growth in Zambia. Their findings suggest that the proliferation of POS terminals has contributed to the growth of non-cash transactions, thus improving bank performance. Okeke and Nwachukwu (2020) explored the impact of Mobile Pay on the operational performance of Nigerian banks. The study revealed that mobile payment services help reduce operational costs and improve transaction speed, leading to higher profitability. Mutiso and Kamau (2019) investigated the effects of Web Pay on customer loyalty in the Kenyan banking sector. Their findings indicate that web-based payment systems significantly enhance customer loyalty, as they offer convenience and security in financial transactions.

Yeboah and Agyeman (2019) studied the influence of Mobile Pay on banking operations in Ghana. The study found that mobile payments reduced operational costs and enhanced customer outreach, leading to improved bank performance. Mohammed and Ahmed (2019) examined the effects of ATM usage on customer satisfaction in Egypt. Their findings indicate that banks with more ATMs tend to have higher levels of customer satisfaction due to greater accessibility to banking services. Samba and Toure (2019) analyzed the role of POS systems in promoting financial inclusion in Senegal. The study revealed that banks leveraging POS systems have been able to increase financial access for underserved populations, boosting their market performance. Njoku and Uche (2019) explored the impact of Web Pay on operational efficiency in the Nigerian banking sector. Their study found that web payment platforms reduce processing time for transactions and improve operational efficiency, thus enhancing bank profitability. Mahmoud and Karim (2019) investigated the effects of Mobile Pay on the profitability of Bangladeshi banks. Their findings indicate that mobile payment platforms significantly contribute to bank profitability by facilitating quick and secure transactions. Kassim and Abdallah (2019) studied the impact of ATM expansion on banking operations in Tanzania. Their results showed that a larger ATM network reduces the operational burden on branches, allowing banks to serve more customers efficiently. Okoro and Igwe (2019) examined the relationship between POS systems and bank profitability in Nigeria. The study concluded that POS terminals enhance bank profitability by promoting cashless transactions and reducing the need for in-branch services.

Gap in Literature

Most studies provide general insights on WEPA, MOPA, AUMA and POSA that they enhance bank financial performance (Mar'atushsholihah & Karyani, 2021; Lestari et al., (2021), but there is insufficient research on how these services specifically engender financial performance with regard to their ability to create bank branches. There is a gap in the literature regarding how financial technology intermingle to facilitate commercial bank branches. Very few studies address how exposure to these technologies contributes to the financial literacy of the banking population (Osabutey et al., 2024; Adetunji & Olowolaju, 2021). This present study bridge the aforementioned literature gaps using the complementary role of the selected financial technology and their effect on bank performance in Nigeria using secondary data.

Research Methodology

The study inspected impact of financial technology on commercial bank branch growth in Nigeria. The

financial technology parameters are: WEPA, MOPA, AUMA and POSA. While bank performance was measured by commercial bank branches. The ex post facto research design was used. Ex post facto research design helps provide answers to the questions of who, what, when, where and how associated with a particular research problem. for the study. The geographical scope of the study is financial institution in Nigeria commercial banks was used as sample. The probability sampling method was used The time scope of the study span from 2009 through 2023. The data used for this study already existed hence were sought from the CBN statistical Bulletin and international monetary fund. The different estimations used for the study are: descriptive statistics, correlation analysis, multicollinearity, and heteroskedascity test. While ordinary least square was used to test the hypotheses raised in the study. The model of Manda and Kaleb (2021), was adopted for purpose of the study. The adopted model was modified and stated in its functional form as:

$$\text{COBG} = f(\text{WEPA}, \text{MOPA}, \text{AUMA}, \text{POSA}) \quad \text{eqn (1)}$$

The model is further specified in its econometric form as:

$$\text{BAPE} = \beta_0 + \beta_1 \text{WEPA} + \beta_2 \text{MOPA} + \beta_3 \text{AUMA} + \beta_4 \text{POSA} + \varepsilon \quad \text{eqn (2)}$$

Where:

COBG	=	Commercial bank growth measured by number of commercial bank branches excluding headquarters for commercial banks in Nigeria.
WEPA	=	Web pay measured as volume of web pay transactions
MOPA	=	Mobile pay measured as volume of mobile transactions
AUMA	=	Automated teller machine measured as volume of automated teller machine transactions
POSA	=	Point of sale measured as volume of point of sale transactions
ε	=	Error Term
$\beta_1 - \beta_4$	=	Coefficient of the independent variables.

Results and Discussion

Table 1: Descriptive Statistics

	COBG	WEPA	MOPA	AUMA	POSA

Observations	15	15	15	15	15

Source: Researchers' Compilation, 2025.

The descriptive statistics in Table 1, revealed that commercial bank branch growth (COBG) averaged 5,247 branches during the study period, showing relatively low variability compared with fintech transaction volumes. In contrast, web payments (WEPA), mobile payments (MOPA), ATM transactions (AUMA), and POS transactions (POSA) displayed substantial fluctuations, reflecting the rapid and uneven expansion of financial technology in Nigeria. The Jarque-Bera test further suggested that COBG and AUMA were normally distributed, while

WEPA, MOPA, and POSA deviated significantly from normality, reflecting irregular adoption patterns.

This outcome is consistent with CBN e-Payment Statistics, which show that e-payment channels, especially POS and mobile transactions, have experienced exponential but uneven growth due to policy reforms and consumer adaptation (Central Bank of Nigeria [CBN], 2023). Similarly, Osabutey et al. (2024) highlight that fintech adoption in Africa often follows irregular patterns, heavily influenced by regulatory and infrastructural developments.

Table 2: Correlation Analysis

	COBG	WEPA	MOPA	AUMA	POSA
COBG	1.000000	-0.395230	-0.462076	-0.437800	-0.461553
WEPA	-0.395230	1.000000	0.731593	0.625629	0.951696
MOPA	-0.462076	0.631593	1.000000	0.411304	0.988557
AUMA	-0.437800	0.625629	0.411304	1.000000	0.422333
POSA	-0.471553	0.551696	0.688557	0.422333	1.000000

Source: Researchers' Compilation, 2025.

The correlation analysis in Table 3 revealed a negative relationship between COBG and all fintech indicators, with the strongest inverse associations observed between COBG and both MOPA (-0.46) and POSA (-0.47). This indicates that as fintech transactions expand, bank branch growth tends to contract. At the same time, fintech indicators were strongly and positively correlated with each other, particularly between mobile payments and POS (0.69), signifying integrated

adoption patterns. The aforementioned findings align with prior studies such as Adetunji and Olowolaju (2021), who reported that POS adoption significantly displaced branch-based banking in semi-urban Nigeria. Similarly, Mogaji (2022) explains that mobile money services in sub-Saharan Africa, while promoting inclusion, often operate independently of bank infrastructure, thereby weakening the link between fintech and physical branch expansion.

Table 3: Heteroskedasticity Test: Breusch-Pagan-Godfrey

F-statistic	1.284176	Prob. F(4,10)	0.3394
Obs*R-squared	5.090312	Prob. Chi-Square(4)	0.2782
Scaled explained SS	2.431311	Prob. Chi-Square(4)	0.6570

Source: Researchers' Compilation, 2025.

The Breusch-Pagan-Godfrey test in Table 3, indicated no evidence of heteroskedasticity in the model. This suggests that the regression residuals are stable, making the coefficient estimates reliable. The absence of

heteroskedasticity is significant because it implies that fintech adoption impacts branch growth consistently across the years, without distortion from unequal variance.

Table 4: Summary of Unit root test

Variables	T-Statistics	Critical value 5% level	Order of Intergration	Probability	Decision
COBG	-1.511467	-3.098896	1(0)	0.4986	Non-Stationary
WEPA	-2.215440	-3.365053	1(0)	0.2015	Non-Stationary
MOPA	-3.061675	-1.781344	1(0)	0.0317	Stationary
AUMA	-4.756843	-2.108748	1(0)	0.0283	Stationary
POSA	-1.568432	-3.415251	1(0)	0.3282	Non-Stationary
@ First Difference					
COBG	-2.308748	-1.982344	1(1)	0.0268	Stationary
WEPA	-5.541137	-3.134053	1(1)	0.0241	Stationary
MOPA	-4.747850	-2.123541	1(1)	0.0115	Stationary
AUMA	-2.989853	-1.531214	1(1)	0.0083	Stationary
POSA	-3.804008	-2.345321	1(1)	0.0356	Stationary

Source: Researchers' Compilation, 2025.

The Augmented Dickey-Fuller (ADF) test in Table 4 revealed that COBG, WEPA, and POSA became stationary only at first difference, while MOPA and AUMA were stationary at level. The results suggest that fintech adoption has long-run implications for branch growth, with shocks in transaction volumes likely to persist over time. This finding aligns with

Uzonwanne (2020), who emphasized that Nigerian banks adjust gradually to digital innovations, with equilibrium achieved only in the long run. This mix of integration orders validates the use of the ARDL model for analysis but due to limited observation ordinary least squares was used to evaluate the hypothesis raised in the study

Source: Researchers' Compilation, 2025.

The regression model in Table 5 explained approximately 66% of the variation in bank branch growth (COBG), with an overall significance at the 5% level. The results showed mixed effects of fintech channels on bank branch growth. Below are the explanations:

Web Pay (WEPA): The coefficient was positive and significant, suggesting that web-based payments support bank branch growth. This could be attributed to the fact that web transactions are largely bank-driven and integrated into banks' IT systems, thereby requiring complementary physical support. This finding is consistent with Olatunji and Bello (2020), who argued that internet banking often complements branch operations in Nigeria.

Mobile Pay (MOPA): Although the coefficient was positive, it was statistically insignificant, indicating that mobile transactions do not strongly influence branch

expansion. This is unsurprising given that mobile money in Nigeria is dominated by mobile network operators rather than banks, as highlighted by Osabutey et al. (2024).

Automated Teller Machines (AUMA): ATM usage negatively and significantly affected bank branch growth, suggesting that ATMs substitute for branch services. This finding supports Ajayi and Akinwumi (2019), who demonstrated that ATM penetration reduced customer dependence on banking halls.

Point of Sale (POSA): POS adoption also had a negative and significant effect, indicating that POS agents reduce the demand for new branches, especially in rural areas. This outcome resonates with findings from CBN (2023) and industry reports (TechCabal, 2023), which note that POS adoption has become the dominant channel for expanding financial access in Nigeria.

Conclusion

This study examined the impact of financial technology on bank performance in Nigeria, using commercial bank branch growth (COBG) as a measure of performance. The findings demonstrate that fintech adoption has both substitution and complementary effects. Specifically, web-based transactions complement branch operations, whereas POS and ATM services significantly substitute for them, leading to reduced incentives for branch expansion. Mobile payments, on the other hand, do not significantly influence branch growth due to their operator-driven nature. The results imply that the Nigerian banking sector is experiencing a structural transformation where physical branch expansion is giving way to digital and agent-based models of service delivery. This outcome aligns with the CBN's financial inclusion strategy, which emphasizes digital channels as cost-effective tools for reaching underserved populations.

Recommendations

Commercial banks should embrace a hybrid model, leveraging web-based channels to complement existing branches while strategically reducing reliance on costly physical expansion. Investments should also focus on integrating POS and mobile services into bank systems to remain competitive. The CBN should strengthen regulatory frameworks to encourage collaboration between banks and fintech firms, ensuring consumer protection and interoperability. Enhanced oversight is also needed to manage risks associated with mobile payments and POS agents, such as fraud and liquidity constraints. Fintech firms should deepen partnerships with banks to ensure that digital solutions complement rather than compete excessively with branch networks. Joint initiatives in cybersecurity, infrastructure, and customer education can promote sustainable growth. Policies should encourage inclusive fintech adoption by improving digital infrastructure in rural areas. This will ensure that substitution effects from POS and mobile agents translate into broader financial inclusion rather than simply displacing formal banking services.

Abstract

Budget implementation and accountability play a vital role in ensuring good governance, as they shape how public funds are distributed, managed, and transformed into visible development results. In Nigeria, however, persistent issues such as corruption, weak institutional capacity, and political interference continue to obstruct the effective execution of budget policies. These shortcomings raise serious concerns about transparency and weaken citizens' confidence in government institutions. This study, therefore, examined the dynamics of budget implementation and accountability in Nigerian public administration while identifying the institutional and systemic obstacles that limit fiscal responsibility. To achieve this, the study employed a historical research design, drawing evidence from secondary data such as government reports, policy frameworks, and scholarly articles to trace the progression of budgetary practices and reforms in the country. The study was anchored on the public accountability theory, which underscores transparency, answerability, and the obligation of public officials to justify their use of state resources. Findings indicated that budgetary performance in Nigeria is frequently undermined by delays in approval processes, unrealistic revenue forecasts, inadequate monitoring systems, and entrenched corruption. These factors often result in abandoned projects, mismanagement of funds, and erosion of public trust. The study concluded that robust budget implementation and accountability mechanisms are crucial for promoting national development, efficient service delivery, and restoring citizens' trust in government. It is recommended, among others, that the government should adopt and institutionalize performance-based budgeting across all ministries, departments, and agencies. Linking budget allocations to clear performance indicators and measurable outcomes will ensure that public resources are channeled toward projects and programs that achieve concrete developmental results.

Keywords: Budget implementation, accountability, public administration, performance-based budgeting, public finance, Nigeria

Introduction

Public financial management forms the backbone of governance because it dictates how national resources are allocated, controlled, and applied to achieve development objectives. Central to this process are budget implementation and accountability, which act as mechanisms through which governments turn policies into measurable results (Adegite & Oyewo, 2021). A budget is not merely a financial statement; it is also a political, social, and economic tool that mirrors government priorities and citizens' expectations. When executed effectively, it channels public funds into projects and programs that drive national growth, reduce poverty, and build public

confidence in institutions (World Bank, 2022). Conversely, weak implementation and fragile accountability structures lead to resource wastage, abandoned projects, and a growing gap between government promises and actual outcomes.

In Nigeria, budget implementation and accountability have remained persistent challenges despite numerous reform efforts. Since independence, the country has faced recurring discrepancies between projected budgets and real outcomes. Frequent delays in passing budgets, unrealistic revenue estimates, corruption, and poor monitoring mechanisms have weakened fiscal planning (Eze & Harrison, 2023). Even with reforms such as the Fiscal

Responsibility Act of 2007, concerns about transparency, leakages, and ineffective execution continue to dominate public discourse (Ogunyemi & Ige, 2021). These failures often result in poor service delivery, incomplete infrastructure projects, and diminished citizen trust in government.

The principle of accountability is central to financial governance. Under the public accountability framework, officials are expected to justify their decisions and demonstrate responsible use of public resources (Bovens, 2014). Accountability requires efficiency, transparency, and clear reporting of how funds are utilized. In Nigeria, however, weak oversight institutions, political interference, and minimal citizen participation often undermine this responsibility (Onyekpere, 2022). Such deficiencies foster mismanagement and weaken the role of budgets as tools for sustainable development.

International evidence shows that strong accountability and citizen involvement are critical for effective budget implementation. Countries that adopt performance-based budgeting and build robust monitoring systems typically record greater fiscal discipline and better service delivery (OECD, 2020). Nigeria's challenges underscore the need to go beyond legal provisions and pursue deeper institutional reforms, civic engagement, and capacity building. A historical perspective further highlights how colonial legacies, oil dependence, and governance patterns have shaped Nigeria's fiscal practices and contributed to systemic weaknesses (Okeke, 2021). This study, therefore, examined budget implementation and accountability in Nigerian public administration, emphasizing how institutional gaps, corruption, and political interference erode fiscal discipline.

Literature Review

Conceptualizing Budget Implementation and Accountability

The notion of a budget has been a fundamental concept in public administration, economics, and governance. At its core, a budget is a financial plan that projects anticipated revenues and outlines planned expenditures over a specific period, typically a fiscal year. However, scholars stress that a budget is more than a technical accounting tool; it functions as an instrument of governance, policy guidance, and a social agreement between the government and its citizens (Adegite & Oyewo, 2021).

Wildavsky (1986) emphasizes that the budget is inherently political, reflecting governmental priorities and the compromises made among competing interests. By directing resources to specific programs while limiting others, the

budget communicates government intentions and values, shaping fiscal decisions and signaling developmental objectives. Within public administration, the budget also serves as a mechanism for managing the economy and ensuring accountability. Musgrave and Musgrave (1989) identify three primary roles of government budgets: allocation of resources, redistribution of wealth, and economic stabilization. This framework illustrates that budgeting is not merely about balancing revenues and expenditure but also about influencing economic outcomes and promoting social equity.

Recent scholarship highlights the budget's role in enhancing transparency and citizen engagement. The World Bank (2022) notes that budgets increasingly serve as tools for governance reform, allowing citizens to monitor public spending and hold officials accountable. Participatory budgeting initiatives in various countries have demonstrated that involving citizens in fiscal decisions can strengthen institutional trust and democratic governance (Sintomer et al., 2016). In Nigeria, the budget holds particular importance as public spending is a major driver of development. Okeke (2021) argues that while the budget is intended to guide national development, its effectiveness is often compromised by corruption, weak institutions, and political interference. Thus, the successful realization of a budget's objectives depends not only on its formulation but also on effective implementation and accountability mechanisms. Budget implementation, therefore, refers to the stage in which approved budget plans are put into action, translating proposed allocations and policy objectives into actual programs, projects, and services that advance developmental goals (Adegite & Oyewo, 2021). While budgeting outlines government intentions, implementation ensures these plans are carried out efficiently and effectively. Olowu and Adebayo (2018) explain that budget implementation involves all administrative, financial, and managerial processes necessary to operationalize the approved budget. This includes the disbursement of funds, procurement of goods and services, and continuous monitoring of project execution. Successful implementation requires coordination across ministries, departments, and agencies, as well as adherence to established procedures to guarantee that resources are utilized as intended. Budget implementation is closely tied to accountability and overall performance in public administration. When properly executed, it directs resources to priority areas, improves service delivery, and enhances public confidence in government institutions (Onyekpere, 2022). Conversely, weak or ineffective implementation

can result in unspent funds, abandoned projects, and a disconnect between planned objectives and actual outcomes. Internationally, effective budget implementation emphasizes transparency, rigorous monitoring, and performance-based approaches, where spending is linked to measurable results (OECD, 2020). In Nigeria, however, bureaucratic inefficiencies, corruption, and political interference often undermine the execution of budgets, making it a persistent challenge for policymakers and citizens alike (Eze & Harrison, 2023). Therefore, budget implementation is a pivotal phase in the public financial management process. Its success depends on strong coordination, monitoring, and accountability mechanisms, ensuring that allocated resources produce tangible developmental benefits and enhance public service delivery.

Accountability, on the other hand, is a core principle in public administration, governance, and financial management, ensuring that public officials are held responsible for their actions, decisions, and management of resources. Fundamentally, it requires individuals or institutions to explain, justify, and take ownership of their conduct in accordance with established laws, rules, and ethical standards (Bovens, 2014). Accountability serves as a tool for enhancing transparency, curbing corruption, and building public confidence in governance systems. In the realm of public finance, accountability ensures that the handling of public funds aligns with policy objectives and societal expectations. It encompasses accurate reporting of financial activities, compliance with regulations, and responsiveness to key stakeholders, including citizens, legislative authorities, and oversight institutions (Mulgan, 2000). By upholding accountability, governments can legitimize their actions, optimize resource allocation, and reinforce the credibility of public institutions.

Scholars have highlighted multiple dimensions of accountability. Bovens (2007) distinguishes between political, administrative, and legal accountability, noting that officials are answerable not only to superior authorities but also to the public and independent oversight bodies. Political accountability entails responsiveness to elected representatives and citizens, administrative accountability emphasizes adherence to procedures and performance standards, and legal accountability focuses on compliance with statutory regulations (Onyekpere, 2022).

On a global scale, accountability is closely tied to governance reforms and anti-corruption efforts. Open government initiatives and participatory mechanisms, such as citizen

oversight committees and social audits, have been effective in enhancing accountability in many countries (World Bank, 2022). In Nigeria, however, persistent issues such as weak institutional capacity, political interference, and limited civic engagement undermine accountability, leading to mismanagement of public resources and suboptimal service delivery (Onyekpere, 2022). Thus, accountability is a multidimensional concept essential for effective governance and public financial management. By fostering transparency, answerability, and responsibility, it ensures the efficient, ethical, and goal-aligned use of public resources, thereby strengthening trust in government and supporting sustainable development.

Budget implementation and accountability together form the cornerstone of sound public financial management. While the budget sets out financial plans and priorities, accountability ensures that public officials justify their use of resources and maintain transparency. Globally, effective budget systems emphasize transparency, efficiency, and citizen participation, with performance-based frameworks contributing to better service delivery and fiscal discipline (OECD, 2020). In contrast, developing countries, including Nigeria, often face structural and institutional challenges that hinder the alignment of budget plans with tangible developmental outcomes (Eze & Harrison, 2023).

Global Perspectives on Budget Implementation and Accountability

Scholars worldwide have highlighted the critical role of strong accountability systems in ensuring successful budget implementation. In many developed countries, advanced fiscal frameworks not only promote proper resource allocation but also link budget decisions to measurable performance indicators. For instance, several European Union nations have adopted results-based budgeting approaches, connecting public spending to specific metrics of progress and efficiency (OECD, 2020). This allows both policymakers and citizens to monitor whether funds are being used effectively, thereby improving transparency and reinforcing trust in government.

Moreover, Scandinavian countries have enhanced accountability through participatory budgeting, a system that engages citizens in determining how public resources are allocated. This approach fosters transparency, inclusivity, and a sense of shared ownership over government programs (Liguori & Steccolini, 2018). Participatory mechanisms not only boost public confidence in the budget process but also ensure that spending aligns with community

priorities, minimizing opportunities for mismanagement or waste.

By contrast, many developing nations continue to encounter significant challenges in implementing robust accountability frameworks. Study by Khagram, Fung, and de Renzio (2013) indicates that, despite reforms in Latin America and parts of Asia, weak institutional capacity and political interference often prevent officials from being fully answerable for budget outcomes. Similarly, Rajaram et al. (2014) note that overly optimistic revenue forecasts, insufficient monitoring, and limited technical skills frequently lead to budget deficits, delayed disbursements, and abandoned projects. These findings suggest that while performance-oriented and participatory budgeting are considered global best practices, their effectiveness relies heavily on strong institutions, transparent governance, and political commitment.

Overall, international experiences demonstrate that effective budget execution depends on integrating sound fiscal systems, participatory approaches, and robust accountability measures. Countries that prioritize these elements are more likely to achieve efficient resource utilization, enhance service delivery, and strengthen public trust in government operations.

Budget Implementation and Accountability in Nigeria

Nigeria's budgetary system reflects many of the structural difficulties common in developing countries. Since gaining independence, the nation has consistently faced a significant gap between budget planning and actual execution, with outcomes frequently falling short of projected targets. Ogunyemi and Ige (2021) note that delays in budget approval remain a persistent problem, as late passage of appropriations hinders the timely commencement and completion of projects. Consequently, ministries, departments, and agencies (MDAs) often operate under tight timelines, leading to rushed implementation, inefficient spending, and abandoned initiatives (Okonjo-Iweala, 2018).

Corruption further compounds these challenges. According to Transparency International (2022), Nigeria continues to rank low on the Corruption Perceptions Index, with public finance management being among the most affected sectors. Misappropriation of funds, inflated contracts, and weak procurement systems frequently compromise developmental outcomes. Nwankwo and Orji (2020) highlight that infrastructure capital budgets are often diverted or poorly managed, leaving projects incomplete and funds unaccounted for. Likewise, Adegbite (2021) argues that corruption in procurement

and contract execution significantly hampers the effectiveness of Nigeria's budget system, eroding public confidence.

Political interference also undermines effective budgeting. Eze and Harrison (2023) contend that budget allocations in Nigeria are often driven by political negotiations rather than development priorities. Legislators may include constituency projects with limited developmental value, while executive authorities sometimes reallocate funds for political objectives, especially during election periods. This politicization weakens fiscal discipline and diminishes the budget's role as a tool for national development (Akinola, 2022).

Institutional deficiencies play a critical role as well. Onyekpere (2022) observes that monitoring and evaluation mechanisms remain inadequate, with oversight bodies such as the National Assembly, Budget Office, and Auditor-General lacking the resources and independence to enforce accountability. Poor expenditure tracking facilitates leakages, ghost projects, and inefficiency in public service delivery. Additionally, the World Bank (2020) reports that Nigeria's weak public financial management systems contribute to low budget credibility, with significant disparities between approved allocations and actual expenditures.

In essence, Nigeria's budgetary process is hampered by delays, corruption, political interference, and institutional weaknesses. These issues undermine fiscal responsibility and widen the gap between budgeted intentions and developmental results, highlighting the urgent need for enhanced accountability measures and strengthened institutional frameworks.

The Role of Citizen Participation

Citizen involvement is increasingly acknowledged as a vital tool for improving accountability in public financial management. Around the world, participatory budgeting has proven effective in giving citizens a voice in determining how resources are allocated, ensuring that government spending aligns with community needs, reducing opportunities for corruption, and enhancing transparency (Sintomer, Herzberg, & Röcke, 2016). In this model, citizens are active participants rather than passive recipients of public services, which fosters ownership, trust, and responsiveness in governance. Evidence from countries like Brazil, India, and South Africa shows that engaging citizens in budget planning and monitoring improves the efficiency of public spending and limits mismanagement (Wampler & Avritzer, 2004; Shah, 2007).

In the Nigerian context, citizen participation in budgetary processes remains limited. Budgets

are typically prepared and executed with little meaningful consultation, leaving citizens largely unaware of allocations and unable to hold officials accountable for spending decisions (Adeosun, 2021). This lack of engagement diminishes transparency and weakens the potential of public oversight to reduce corruption and improve resource use.

Civil society organizations (CSOs) have stepped in to address this gap by promoting fiscal transparency and enabling citizen involvement in budget monitoring. For example, BudgIT uses digital platforms to simplify budget documents and make them accessible, allowing citizens to track government expenditures effectively (BudgIT, 2021). Similarly, Connected Development (CODE) facilitates community oversight of local projects, enhancing civic participation (CODE, 2020). However, structural barriers, such as limited internet access in rural regions, low literacy rates, and weak enforcement mechanisms, constrain the full impact of citizen engagement.

These observations indicate that while public participation is essential for accountability, it must be supported by institutional reforms, capacity-building, and inclusive strategies that ensure engagement is widespread, meaningful, and capable of influencing fiscal decision-making. Strengthening these measures can empower Nigerians to hold public officials responsible for the management of public resources.

Theoretical Framework

This study was anchored on the Public Accountability Theory, which emphasizes transparency, answerability, and stewardship of public resources. The Public Accountability Theory is primarily attributed to Mark Bovens, who introduced a structured conceptual framework for understanding accountability in public administration. His seminal work on this theory was published in 2007 in the article titled *"Analysing and Assessing Accountability: A Conceptual Framework."*

The Public Accountability Theory, formulated by Mark Bovens, underscores the responsibility of public officials and institutions to justify their decisions, actions, and management of state resources. A fundamental aspect of the theory is transparency, which calls for the open disclosure of information related to policies, expenditures, and decision-making processes, allowing stakeholders to scrutinize and evaluate government actions. Closely associated with transparency is answerability, requiring officials to provide explanations and justifications for their conduct to oversight bodies, citizens, or other relevant authorities. Enforceability is

another key principle, ensuring that systems are in place to hold public officials accountable, including the application of sanctions or corrective measures when standards of accountability are breached (Bovens, 2007).

The theory further emphasizes the multidimensional nature of accountability, which includes political, administrative, and legal dimensions. Political accountability involves responsiveness to elected representatives and the broader public, administrative accountability concerns compliance with established procedures, rules, and performance expectations, while legal accountability guarantees adherence to statutory and regulatory obligations. Additionally, the theory highlights the active role of stakeholders, including citizens, civil society organizations, and independent oversight agencies, in monitoring, evaluating, and demanding accountability from government institutions. By combining these elements, the Public Accountability Theory offers a comprehensive framework for evaluating the extent to which governments practice ethical, transparent, and responsible governance (Bovens, 2007; Mulgan, 2000).

The Public Accountability Theory, developed by Mark Bovens, is highly applicable to the study of budget implementation and accountability within Nigerian public administration. This theory asserts that public officials and institutions have a fundamental duty to be answerable for their decisions, actions, and the management of public resources. Employing this framework enables a thorough examination of how ministries, departments, agencies, and other government entities in Nigeria execute budgetary plans, assessing whether their practices align with principles of transparency, responsibility, and ethical governance. It offers a structured approach to understanding the complex dynamics of fiscal management, shedding light on both the achievements and shortcomings of budget execution.

A key contribution of the theory lies in its multidimensional perspective on accountability, encompassing political, administrative, and legal dimensions. Political accountability focuses on the responsiveness of public officials to elected representatives and the electorate, facilitating the study of how political negotiations, constituency projects, and executive discretion impact budget implementation. Administrative accountability emphasizes compliance with procedural rules, performance standards, and internal monitoring, highlighting the importance of robust financial management systems. Legal accountability underscores adherence to statutory regulations, providing a lens through which the effectiveness

of laws, such as the Fiscal Responsibility Act of 2007, can be evaluated in promoting responsible public expenditure.

The theory's emphasis on transparency and answerability is particularly relevant to this research. Transparency demands that information on budget allocations, expenditures, and decision-making processes be openly accessible, allowing oversight bodies and citizens to scrutinize government actions. Answerability requires public officials to justify their decisions and account for deviations from approved budgets, which is essential for identifying inefficiencies, project abandonment, or mismanagement of public funds.

Furthermore, the theory acknowledges the role of stakeholders, including civil society organizations, citizens, and independent oversight institutions. Their participation is crucial for fostering participatory governance, enhancing transparency, and building public trust. In Nigeria, initiatives such as Budget and Connected Development illustrate how citizen engagement in budget monitoring can improve fiscal transparency and accountability. The Public Accountability Theory provides a conceptual basis for evaluating the effectiveness of such participatory mechanisms in overcoming systemic challenges like corruption, political interference, and weak institutional capacity. Additionally, the theory highlights the importance of enforceability, ensuring that public officials face consequences for mismanagement, corruption, or noncompliance with established procedures.

Thus, the Public Accountability Theory provides a comprehensive framework for analyzing budget implementation in Nigeria. It facilitates a deeper understanding of the interplay between institutional structures, political factors, and citizen participation, all of which are critical for effective public financial management. Applying this theory enables a nuanced assessment of how accountability mechanisms function in practice, the obstacles that compromise them, and strategies for enhancing transparency, responsibility, and performance. Ultimately, it bridges the gap between budget formulation and actual developmental outcomes, offering insights essential for policy recommendations, institutional reforms, and the promotion of good governance (Bovens, 2007; Mulgan, 2000; Adeosun, 2021; BudgIT, 2021).

Methodology

The study employed a historical research design, which is well-suited for exploring the development of budget implementation and accountability in Nigerian public administration. This design emphasizes the analysis of past

events, policies, and institutional changes to shed light on current challenges and guide future improvements. The study primarily relied on secondary data sources to gather relevant information. These included government reports, policy documents, official budget statements, journal articles, and books, which provided detailed insights into the planning, execution, and oversight of public funds. Additionally, offered comparative and contextual perspectives on budget implementation and accountability both in Nigeria and globally. These resources were essential in developing a thorough understanding of the political, structural, and institutional factors shaping fiscal governance.

For data analysis, the study utilized content analysis, a method that systematically examines textual materials to identify themes, trends, and patterns relevant to the research objectives. Through this approach, the study evaluated the alignment between budget plans and actual expenditures, assessed the effectiveness of accountability mechanisms, and examined how institutional and political factors influence fiscal performance. Content analysis enabled the organization and interpretation of data to highlight both achievements and challenges in budget implementation. Thus, adopting a historical research design coupled with content analysis of secondary sources provided a comprehensive framework for investigating the complexities of budget implementation and accountability in Nigeria. This approach situates current fiscal challenges within their historical context, offering evidence-based insights for policy formulation, institutional strengthening, and governance reforms.

Finding and Discussion

The review of budget implementation and accountability in Nigeria highlights several enduring challenges that significantly compromise the effectiveness of public financial management. A prominent issue is the frequent delay in budget approvals. Ogunyemi and Ige (2021) indicate that the National Assembly's late passage of appropriation bills often compresses the implementation period, leaving ministries, departments, and agencies (MDAs) with insufficient time to execute planned projects. This scenario frequently results in rushed spending, substandard project execution, or the abandonment of initiatives (Okonjo-Iweala, 2018). Comparatively, countries that adhere strictly to budget timelines, such as Germany and Canada, demonstrate a closer alignment between planned and actual expenditures, emphasizing the critical role of timely approvals in achieving fiscal efficiency and developmental goals (OECD, 2020).

Another major finding is the habitual overestimation of government revenue during the budgeting process. Eze and Harrison (2023) note that unrealistic revenue projections often lead to shortfalls, forcing adjustments that disrupt the execution of planned expenditures. These gaps often cause project delays, incomplete programs, and reduced delivery of public services. Experiences from countries like South Korea and Chile suggest that adopting conservative, evidence-based revenue forecasts enhanced budget credibility and facilitates smoother implementation, thereby strengthening fiscal discipline and public trust (Shah, 2007). Corruption remains a pervasive barrier to effective budget execution. Transparency International (2022) consistently ranks Nigeria poorly on the Corruption Perceptions Index, highlighting mismanagement in public financial operations as a major concern. Issues such as fund misappropriation, inflated contracts, and weak procurement practices undermine developmental outcomes, often leaving infrastructure projects incomplete and financial resources unaccounted for (Adegbite, 2021; Nwankwo & Orji, 2020). Countries with robust anti-corruption systems, including Denmark and New Zealand, demonstrate that transparency, stringent auditing, and enforceable accountability measures can significantly reduce financial mismanagement, enhance project completion, and build citizen confidence in government institutions (World Bank, 2020). Weak monitoring and evaluation mechanisms further exacerbate budget inefficiencies in Nigeria. Onyekpere (2022) observes that oversight institutions such as the Office of the Auditor-General, the National Assembly, and the Budget Office often lack adequate resources and autonomy to enforce accountability. Poor tracking of expenditures contributes to fund leakages, ghost projects, and general inefficiency in service delivery. International best practices show that implementing performance-based budgeting, real-time monitoring systems, and rigorous reporting structures ensures that resources are efficiently utilized, and outcomes are in line with policy objectives (OECD, 2020). Institutional capacity constraints also hinder effective budget execution. Many MDAs face inadequate resourcing, lack trained personnel, and operate in politically influenced environments that may redirect funds toward non-priority or politically motivated projects (Akinola, 2022). Evidence from other contexts suggests that strengthening institutional capacity, professionalizing public service, and shielding financial operations from political interference are effective measures for enhancing budget

efficiency and accountability (Mulgan, 2000; Bovens, 2007).

Therefore, delayed approvals, over-optimistic revenue projections, corruption, weak oversight, and institutional deficiencies collectively undermine Nigeria's budget implementation and accountability. Lessons from global experiences underscore the importance of timely budget passage, realistic revenue forecasting, robust monitoring, strengthened institutions, and anti-corruption frameworks as critical strategies for improving public financial management and achieving sustainable development outcomes.

Conclusion and Recommendations

The examination of budget implementation and accountability in Nigerian public administration highlights the critical role of effective public financial management in fostering national development. The study demonstrated that converting budgetary plans into tangible results is shaped by a complex mix of political, institutional, and socio-economic factors. Persistent delays in budget approvals, overestimated revenue projections, corruption, weak oversight, and limited institutional capacity collectively hinder the efficient use of public resources. These obstacles not only undermine developmental initiatives but also diminish public confidence in government operations. The findings indicated that while budgets are intended to reflect government priorities and drive national growth, their effectiveness is significantly reduced when accountability and execution mechanisms are weak or compromised.

A major insight from the study is the multidimensional character of accountability in public financial management. Political, administrative, and legal dimensions each play vital roles in ensuring that public officials are answerable for their actions, follow established procedures, and comply with legal requirements. In Nigeria, gaps in these dimensions often result in project abandonment, misappropriation of funds, and deviations from approved budget plans. Additionally, the research highlights that citizen involvement and civil society oversight, though currently underdeveloped, can serve as effective tools to enhance transparency and promote the responsible use of public resources. Initiatives such as BudgIT and Connected Development (CODE) illustrate the potential of participatory approaches to improve fiscal governance, though their impact is constrained by challenges like limited information access, low literacy rates, and weak enforcement of accountability measures.

The study further emphasizes the need to link budget preparation with effective execution and

strong accountability frameworks. International experience demonstrates that countries adopting performance-based budgeting, realistic revenue forecasting, strengthened oversight institutions, and active citizen participation tend to achieve better fiscal discipline, improved service delivery, and increased public trust. For Nigeria, tackling systemic corruption, political interference, and institutional deficiencies is essential to closing the gap between budget intentions and actual developmental outcomes. Reforms that promote transparency, enforce accountability, and enhance institutional capacity are necessary to ensure that public funds are allocated to projects that genuinely benefit society.

In conclusion, robust budget implementation and accountability mechanisms are crucial for promoting national development, efficient service delivery, and restoring citizens' trust in government. The study underscores that achieving these objectives requires an integrated approach combining sound fiscal policy, institutional reform, participatory governance, and enforceable accountability measures. Ultimately, the study affirms that accountability is not merely a formal requirement but a foundational element for public trust, effective governance, and long-term national progress. Based on the findings of this study, the following recommendations are proposed to enhance budget implementation and accountability in Nigerian public administration:

- i. The government should adopt and institutionalize performance-based budgeting across all ministries, departments, and agencies. Linking budget allocations to clear performance indicators and measurable outcomes will ensure that public resources are channeled toward projects and programs that achieve concrete developmental results. This strategy should also support systematic monitoring and evaluation, allowing authorities to track progress, identify inefficiencies, and maximize the effective use of resources.
- ii. Oversight bodies should be reinforced to provide stronger monitoring and enforcement of accountability mechanisms. Key institutions, including the National Assembly, the Office of the Auditor-General, and the Budget Office, should be equipped with sufficient resources, technical capacity, and independence to oversee budget execution. Strengthening these agencies should help detect financial mismanagement, curb corruption, and ensure compliance with fiscal regulations, thereby improving the integrity and reliability of the budgeting process.
- iii. Civil society organizations and citizens should be actively involved in the budgeting process to foster transparency and participatory governance. Programs that simplify budget information and enable community oversight, such as digital platforms and social audits, should be scaled up across the country. Promoting widespread citizen engagement should help align public spending with societal needs, enhance accountability, and strengthen public trust in government operations.

Budget Implementation and Accountability in Nigerian Public Administration

OLAWUYI, A. Yetunde¹ & ERUDE, Shalom Ufuoma²

Department of Public Administration

Delta State University Abraka

yeolawuyi@yahoo.com

shallomerude26@gmail.com

Publication Date: 2025/11/28

Abstract

This study analyzes the impact of budget execution and accountability within Nigerian public administration, a domain crucial for efficient governance and the provision of public services. Inspired by Principal-Agent Theory, New Public Management, Institutional Theory, Public Choice Theory, and Accountability Theory, the study investigates the relationship between fiscal discipline and institutional transparency. The aim is to evaluate the impact of budget implementation on accountability, determine the reasons for budgetary shortcomings, and suggest methods for enhancing fiscal responsibility. A null hypothesis was created to examine the connection between budget execution and accountability. Research and practical evidence reveal that issues like corruption, political meddling, inadequate institutional oversight, and bureaucratic inefficiencies hinder successful budget implementation. The analysis also indicates that accountability mechanisms are essential for converting budgetary allocations into real results, as they enhance transparency, decrease misappropriation, and foster public trust. The research highlights that coordinating budgetary procedures with strong accountability systems improves service provision and organizational integrity. This study adds to the current conversation on public financial management reforms in Nigeria by offering insights into the structural and human elements that affect budget performance. It is crucial for policymakers, administrators, and researchers aiming to enhance fiscal responsibility, boost governance, and promote sustainable development via transparent and accountable budgeting practices.

Keywords: Budget Implementation, Accountability, Public Administration, Nigeria & Governance.

Introduction

The execution of budgets and accountability are crucial for efficient public administration, especially in developing countries such as Nigeria. The budget serves as a financial blueprint for resource allocation and turning policies into outcomes; however, ongoing problems—like corruption, poor oversight, and institutional inefficiency—diminish its efficacy. Research (Faleti & Myrick, 2012; Husen, Bailusy & Hadady, 2022) indicates that slow fund distribution, insufficient oversight, and weak internal controls obstruct budget objectives and create worries regarding fiscal responsibility. Accountability, which refers to public officials' obligation to explain their decisions and actions, is heavily dependent on robust audit and control systems (Achmad, 2017); however, Nigeria faces challenges in implementing these mechanisms. Despite the opportunities presented by global reforms and accounting innovations (Alsharari, 2016), adoption continues to be uneven because of resistance and capacity deficiencies. Poor budget execution in essential

areas such as infrastructure, education, and healthcare exacerbates socio-economic disparities. This research analyzes the connection between budget implementation and accountability within Nigeria's public sector and suggests ways for enhancement.

Objectives of the Study

The broad objective of this research is to determine the effects of budget execution and accountability in Nigerian Public Administration, a vital sector that significantly influences the effectiveness of governance and the delivery of public services.

Other objectives include to;

- i. grasp the reasons behind budgetary breakdowns and accountability issues in Nigerian Public Administration.
- ii. determine the connection between budget execution and responsibility in Nigerian Public Administration.
- iii. analyze the characteristics of budget execution and responsibility particularly within the Nigerian public administration system.

iv. propose and indicate feasible methods to enhance budgeting and accountability in public administration in Nigeria.

Research Hypothesis

The examination of budget execution and accountability in Nigerian public administration requires specific and rigorous research hypotheses that analyze the intricacies involved in financial management systems and the elements affecting efficient accountability practices. The research hypotheses is;

i. There is no significant relationship between budget implementation and accountability in Nigerian Public Administration.

Significance of the Study

This research is important as successful budget execution and accountability are essential for handling public resources, enhancing transparency, and rebuilding public confidence in governance in Nigeria. Poor accountability frequently leads to corruption and poor management, while improving it boosts service delivery, institutional honesty, and effective governance. The study offers evidence-backed insights to inform policy changes and enhance capacity in public administration, aiding current initiatives aimed at strengthening financial management and accountability systems in Nigeria.

Scope/Limitations of the Study

This research on "Budget Execution and Responsibility in Nigerian Public Administration" explores the procedures, difficulties, and results of budget implementation in the public sector. It assesses the conversion of sanctioned budgets into initiatives, emphasizing responsibility, openness, effectiveness, and the influence of socio-political, economic, and institutional factors. The study additionally examines human and organizational capabilities, financial management frameworks, and the precision of budget objectives in influencing successful execution.

Nonetheless, the research has constraints. Variations in financial practices among federal, state, and local governments might influence the applicability of findings. Restricted access to dependable public financial information and differing reporting standards also hinder precision. Methodologically, relying on cross-sectional and case study methods limits long-term understanding, given the lack of historical data. Consequently, the research highlights recent financial periods, offering timely insights yet not entirely longitudinal views

Operational Definition of Terms

In the scope of this study regarding Budget Implementation and Accountability in Nigerian Public Administration, it is essential to define the key terms to promote conceptual clarity and enable precise analysis. These operational definitions are based on pertinent academic discussions to place the study within current literature and establish a basis for empirical investigation.

Budget Implementation

Budget Implementation involves the processes associated with planning financial resources, as outlined in the sanctioned budget, execution, and oversight to meet established government goals. This procedure involves the distribution, expenditure, and application of funds in accordance with budgetary guidelines and regulations.

Accountability

Accountability in Nigerian public administration, as defined for this study, pertains to the obligation of public officials and government entities to clearly report, clarify, and justify their financial choices and actions to stakeholders, encompassing the public, legislative bodies, and oversight organizations.

Public Administration

In this research context, Public Administration denotes the organizational and managerial systems utilized for executing government policies and providing public services. It includes the frameworks, procedures, and staff engaged in the planning, implementation, and assessment of governmental activities at different tiers—federal, state, and local—in Nigeria.

Literature Review

The Concept of Budget

Budgeting is an essential management instrument that acts as a financial plan for organizations in both the public and private sectors. It represents an assessment of income and costs during a defined timeframe, allowing organizations to distribute resources effectively and strategically (Boghean, Hlaciuc, Moroşan-Dănilă, & Boghean, 2009). In public administration, budgeting goes beyond simple financial planning to serve as a tool for executing policies and governance. According to Shu-xian (2008), financial management in administrative entities includes both budget creation and compliance with financial procedures that promote transparency and accountability. This combined emphasis on planning and control is essential for grasping

budget execution within Nigerian public administration, where fiscal discipline meets governance.

Importance of Budgeting

Effective budgeting is essential for maintaining financial stability and enhancing organizational competitiveness. Danuletiu and Danuletiu (2008) contend that a successful budget preserves financial equilibrium and guarantees that resources are utilized to fulfill organizational objectives. In the public sector, this means providing services and meeting governmental requirements. Moreover, as Bin (2004) observes, well-organized financial management within institutions, including healthcare and administrative organizations, improves operational effectiveness and accountability. Therefore, a clearly defined budget serves as a guide that directs not just financial choices but also policy focuses, influencing the overall effectiveness of public administration.

Causes of Budgeting Failure

Although budgeting plays a crucial role, failures in its implementation are common, especially in public administration settings like Nigeria. Various elements lead to these failures, including inadequate financial management, insufficient transparency, and institutional shortcomings. Shu-xian (2008) points out that shortcomings in administrative financial systems frequently result in poor resource allocation and inefficient program implementation. In the same way, Boghean et al. (2009) highlight governance issues, such as insufficient oversight and decision-making procedures that weaken the aims of budgetary policies. These failures are exacerbated by corruption, political meddling, and inadequate capacity within public institutions, which together hinder effective budget execution.

The Budgeting Process and Its Implementation in Nigeria's Public Administration

The budgeting process in Nigerian public administration involves several stages, such as budget preparation, approval, implementation, and assessment. Nonetheless, practical evidence indicates that the execution stage is filled with difficulties. Dao-liang (2004) offers perspectives on financial software tools that may improve budgeting procedures by enhancing data management and increasing transparency. However, the Nigerian public sector frequently faces delays, insufficient funding, and bureaucratic obstacles that hinder efficient implementation. Shu-xian (2008) indicates that failure to follow financial management

principles during implementation stages worsens inefficiencies, emphasizing the necessity for systemic reforms that incorporate technology and strong governance structures

Accountability in Nigerian Public Administration

Accountability continues to be a fundamental aspect of effective public administration, guaranteeing that public officials are responsible for their financial choices and actions. In Nigeria, accountability systems aim to enhance transparency and deter the misuse of public funds. Boghean et al. (2009) suggest that decision-making procedures in corporate governance structures offer valuable comparisons for public administration, highlighting the significance of accountability and supervision. Furthermore, Bin (2004) highlights the importance of financial transparency in healthcare institutions as indicative of wider public sector accountability issues. Nevertheless, the public administration in Nigeria suffers from ongoing challenges of inadequate enforcement, restricted audit capabilities, and political favoritism that undermine accountability initiatives.

The Relationship between Budget Execution and Accountability in Nigerian Public Administration

The connection between budget execution and accountability is essential for making sure that designated resources result in expected results. Budget execution acts as a tangible expression of fiscal responsibility, requiring public officials to allocate resources in line with sanctioned strategies. Danuletiu and Danuletiu (2008) emphasize that financial equilibrium can be attained only when budget execution corresponds with accountability systems that oversee and assess spending. In Nigeria, this relationship is frequently undermined by systemic governance failures and insufficient institutional oversight (Boghean et al., 2009). Effective accountability systems act as facilitators for successful budget execution, fostering fiscal responsibility and public confidence

The Nature of Public Administration in Nigeria

Public administration in Nigeria functions within a complicated socio-political landscape marked by systemic vulnerabilities, bureaucratic stagnation, and regular policy shifts. The governance framework frequently faces issues due to corruption, insufficient human resources, and disjointed institutional structures. Public administration serves as the tool and medium of

government, consistently molded, limited, and affected by political, economic, cultural, and environmental elements, which influence service provision and efficient governance (Mukoro, 2011). Shu-xian (2008) notes that the administrative system faces challenges in applying financial regulations and complying with budgetary requirements. These difficulties are worsened by political meddling, which often interrupts the continuity and efficiency of public initiatives (Boghean et al., 2009). Grasping these contextual facts is crucial for recognizing the complexities of budget execution and responsibility in Nigerian public management. Okereka (2015) defined public administration as the organized framework of governmental functions and management of personnel, especially at the local level, where its success depends on collaboration between departments, staff development/training, and reducing political interference to guarantee effective service delivery and performance of public enterprises.

Empirical Study of Budget Implementation and Accountability in Nigerian Public Administration

Research on Nigerian public budgeting indicates a trend of budget overruns, delays in implementation, and a lack of accountability. Dao-liang (2004) illustrates that distributed financial software systems might enhance budget monitoring and accountability while pointing out their minimal use in Nigeria. Research also shows that regular variations from sanctioned budgets and insufficient auditing processes lead to negative financial results (Danuletiu & Danuletiu, 2008). These practical findings emphasize the disparity between budgeting theory and actual practice in Nigeria, highlighting the pressing necessity for organized reforms and capacity-building initiatives to improve budget effectiveness and public accountability.

Theoretical Framework

Budget execution and accountability in Nigeria can be explained through multiple theories.

1. Principal-Agent Theory: Explains the government-administrator relationship, stressing issues of corruption, poor oversight, and the need for strong accountability (Adewale & Onakoya, 2021).
2. New Public Management (NPM): Promotes efficiency and private-sector methods. In Nigeria, adoption remains partial due to bureaucracy and patronage (Ibrahim & Mohammed, 2022).
3. Institutional Theory: Shows how weak structures, conflicting roles, and cultural

influences hinder accountability, calling for reforms (Chukwuemeka & Okeke, 2023).

4. Public Choice Theory: Views officials as self-interested, often engaging in rent-seeking. Incentives must align with public goals (Ezeani & Okafor, 2020).

5. Accountability Theory: Highlights officials' duty to justify resource use. Weak audits and low political will weaken accountability (Olusegun & Adebayo, 2019).

6. Systems Theory: Sees budgeting as interconnected; flaws at any stage harm outcomes, requiring holistic reform (Chukwuemeka & Okeke, 2023).

7. Fiscal Federalism: Examines fiscal roles across government tiers. In Nigeria, overlapping powers and transfers create inefficiency (Nwosu & Eze, 2021).

Together, these theories show that Nigeria needs integrated reforms to strengthen transparency, efficiency, and accountability (Erude & Mark, 2023).

Overview of Budget Implementation in Public Administration

Budget execution translates plans into spending and services. In Nigeria, it is hampered by weak accountability, poor institutions, and political interference.

The knowledge economy and digital tools improve monitoring and transparency (Shi, 2000; Muhamad et al., 2024). Financial literacy and ethics among officers shape outcomes, while weak capacity fosters mismanagement (Farooq et al., 2021). Institutional bottlenecks and lack of trust hinder performance (Arifin, 2017).

Strong monitoring and evaluation—through audits and disclosures—are vital but often absent (Ferreira, 2015). Finally, civic participation in budget oversight strengthens democratic accountability and reduces corruption (Pp & Supriya, 2021).

In sum, Nigeria's budget execution depends on technology, financial skills, strong institutions, monitoring, and citizen involvement to ensure transparency and fiscal discipline.

Research Method

This research utilizes a mixed-method design, combining qualitative and quantitative techniques. Information was obtained from both primary and secondary sources. The survey approach was employed, and questionnaires were distributed to public employees in higher education institutions. A total of 200 surveys were distributed utilizing the simple random sampling method. A 5-point Likert scale was used to assess responses. Hypothesis testing was conducted using the Statistical Package for the Social Sciences (SPSS). Mean scores and

Pearson Correlation Analysis were utilized to investigate the relationship between the variables, specifically budget implementation (independent variable) and accountability (dependent variable). Additionally, historical and content analyses were performed, utilizing pertinent journals, both published and unpublished books, along with other academic resources.

Data Presentation and Analysis

Introduction

This section presents the analysis of data collected from the field survey and secondary sources. The analysis is organized into four sections. First, the demographic characteristics of respondents are presented. Second, descriptive statistics of the major study variables are reported. Third, the hypothesis of the study is tested using the Pearson correlation technique in SPSS. Finally, insights from qualitative (content and historical) analysis are integrated to strengthen the interpretation of findings.

Demographic Characteristics of Respondents

Out of the 200 questionnaires distributed, 180 were duly completed and returned, representing a response rate of 90%. The demographic profile of respondents is shown in Table 1.

Table 1 shows that male respondents constituted 60% while female respondents accounted for 40%. This indicates that although the sample was male-dominated, there was still a fairly balanced gender distribution. With respect to age, 35% of respondents were between 25–35 years, 40% were aged 36–45 years, while 25% were above 46 years. This suggests that the study captured a wide spread of both early-career and experienced public servants.

Regarding years of service, 20% of respondents had worked for less than five years, 35% had between six and ten years of service, and 45% had more than ten years of work experience. This distribution indicates that the respondents were generally well-informed and experienced enough to provide reliable information on the study variables.

4.3 Descriptive Statistics of Study Variables

To assess the central tendency and spread of responses on the key variables, descriptive statistics were computed. Table 2 summarizes the mean scores, standard deviations, and range of responses for budget implementation and accountability.

The results reveal that respondents generally agreed that budget implementation is being practiced to a reasonable extent in their institutions ($M = 3.85$, $SD = 0.94$). Similarly, accountability also received high ratings ($M = 4.02$, $SD = 0.88$). Since the maximum possible

score on the scale was 5, these means suggest that respondents perceived both budget implementation and accountability positively.

Hypothesis Testing

The main hypothesis of the study was tested using the Pearson correlation coefficient in SPSS. The hypothesis was stated as follows:

Hypothesis 1

H_0 : There is no significant relationship between budget implementation and accountability in Nigerian public administration.

H_1 : There is a significant relationship between budget implementation and accountability in Nigerian public administration.

The result of the correlation analysis is presented in Table 3.

The Pearson correlation coefficient between budget implementation and accountability was found to be $r = .624$, $p < .001$. This indicates a moderate positive and statistically significant relationship between the two variables. In practical terms, this finding suggests that improved budget implementation is associated with greater accountability in tertiary institutions. Therefore, the null hypothesis (H_0) is rejected, and the alternative hypothesis (H_1) is accepted.

Regression Analysis

A simple linear regression was conducted to predict accountability from budget implementation. Results indicated that budget implementation significantly predicted accountability, $F(1,178) = 114.996$, $p < .001$, with an R^2 of .389. This suggests that approximately 39% of the variance in accountability can be explained by budget implementation. The regression equation was found to be: $\text{Accountability} = 1.589 + 0.632(\text{Budget Implementation})$.

Qualitative (Content and Historical) Analysis

To complement the quantitative analysis, content and historical analysis were conducted using relevant literature, journals, books, and reports. The qualitative findings are consistent with the survey results. Several authors have argued that poor budget execution undermines accountability and transparency in the Nigerian public sector (Adegite, 2010; Mukoro, 2021). Conversely, effective budget monitoring and implementation enhance trust in public institutions and strengthen democratic governance.

Historically, weak budgetary practices and delays in implementation have contributed to wastage, leakages, and inefficiency in Nigeria's public administration. These challenges have often resulted in low accountability, particularly

in the management of public funds within tertiary institutions. The evidence from content analysis therefore reinforces the conclusion that budget implementation is a key determinant of accountability.

Summary of Findings

The analysis yielded the following key findings:

1. The demographic profile showed a diverse and experienced group of respondents across gender, age, and years of service.
2. Descriptive statistics revealed that respondents rated both budget implementation and accountability relatively high.
3. Pearson correlation analysis demonstrated a significant positive relationship between budget implementation and accountability ($r = .624$, $p < .001$).
4. Qualitative evidence from historical and content analysis supported the statistical results, confirming that ineffective budget implementation negatively affects accountability in Nigerian public administration.

Conclusion

This chapter presented the results of both quantitative and qualitative analyses. The findings demonstrate that budget implementation is significantly related to accountability in Nigerian tertiary institutions. The next chapter discusses these findings in relation to the literature reviewed and the theoretical framework of the study.

Recommendations

Below are recommendations for this study:

Institutionalize Digital Public Financial Management (PFM) Systems

The Nigerian government ought to require the implementation of comprehensive digital financial management systems (e.g., Integrated Financial Management Information Systems – IFMIS) throughout federal, state, and local government levels. This will guarantee immediate budget oversight, limit losses, and lower chances for deceit. To enhance transparency, these systems ought to be connected with open-data portals enabling citizens, civil society, and oversight bodies to monitor budget allocations and spending in real time.

Strengthen Independent Oversight and Accountability Mechanisms

Accountability demands rigorous implementation. Consequently, anti-corruption bodies, the Auditor-General's Office, and Public Accounts Committees within legislative bodies need to be granted legal, financial, and

operational autonomy. Moreover, budget performance audits ought to be performed every three months, with reports available to the public. Implementing compulsory penalties (legal and administrative) for the misuse or failure to adhere to budgetary regulations will act as a deterrent against fiscal irresponsibility.

Capacity Building and Professionalization of Public Financial Managers

Human capital is crucial to budget responsibility. Therefore, ongoing capacity building initiatives for public officials in budget formulation, implementation, oversight, and assessment must be established as a standard practice. The government ought to enhance the professionalism of public financial management positions by implementing merit-based hiring, minimizing political influence, and establishing performance-driven rewards. This will guarantee that the administrators in charge of budget execution are competent, ethical, and answerable to the public good.

Abstract

In today's rapidly evolving digital world, cultivating an entrepreneurial mindset is increasingly recognized as crucial to fostering innovation and promoting youth engagement. Nevertheless, many youths still find it difficult to cultivate the entrepreneurial mindset required to recognize and seize opportunities successfully. How to successfully guide young people's thinking, nurture them, harness their energy and potential, and meaningfully incorporate them into the national development planning is one of the fundamental difficulties that governments around the world and at all levels of governance face. This study examined the influence of entrepreneurship education in building entrepreneurial mindset for youth engagement among the past students of University of Ibadan (UI) who took Entrepreneurship Education course. The course is meant to fill the gap between entrepreneurship education and ability of youths to be engaged in entrepreneurial activities. In order to develop their entrepreneurial mindset, the students came up with a lot of entrepreneurial and innovative ideas in class; however, a post-graduation review established the course's impact. Google Forms was used to survey former University of Ibadan students who had completed the entrepreneurship education course. The results demonstrated that entrepreneurship education as delivered through the course has significant and considerable influence on entrepreneurial mindset and youth engagement of university students, hence, should be retained in nurturing and mentoring the youth.

Keywords: youth engagement, entrepreneurial mindset, entrepreneurship education, innovation, entrepreneurial activities.

Introduction

Entrepreneurial processes have an important role in developing youth-related opportunities and converting youth engagement into youth employment and empowerment, therefore creating an environment suitable for long-term development (Roshanaei, 2020). Growing young unemployment affects a country's economic stability and sustainability. Countries with a large proportion of young people, such as Nigeria, are particularly vulnerable (Nweke, 2020). In recent years, the entrepreneurial mindset has received a lot of attention in the global discourse about youth development, especially in terms of motivating innovation, economic growth, and job creation (Regan *et al.*, 2024). The importance of entrepreneurship in helping young people tackle the

enduring problems of poverty, underemployment, and unemployment is becoming more widely acknowledged (Faridah *et al.*, 2023).

Youth unemployment and low income can present serious obstacles to the welfare of the community. A number of strategies and policies have been introduced by several governments in an effort to create jobs and improve the skills of young people, acknowledging that youth unemployment is a serious issue that requires prompt response (Himani, 2024). As other nations have paid much attention to entrepreneurship in recent decades, Nigeria has also witnessed and demonstrated a great deal of interest in a variety of entrepreneurship-related disciplines, including business, policymaking, and higher education (Nweke, 2020). As a result, policies and

procedures have been rolled out to encourage entrepreneurship in both the public and private sectors as well as in academic institutions.

The Federal Government of Nigeria, through the National Universities Commission, established an Entrepreneurship Education course within general studies programs that is required for all undergraduate students in the nation due to the significance and function of entrepreneurship in the economy (Brownson, 2015). It is thought to make it easier for people to establish positive mindset about entrepreneurship and its education. Through both formal and informal learning processes, educational institutions are essential in helping students develop an entrepreneurial mindset (Njoku & Isigwe, 2019). Entrepreneurship education, which is increasingly being integrated into university curricula, aims to provide students with the skills, information, and mindsets required for entrepreneurial activity (Ogunwoye, Laosebikan & Ojokuku, 2024). Almahry *et al.*, 2020; Fayolle and Gailly, 2014) assert that entrepreneurship education develops creativity, critical thinking, and problem-solving skills in addition to business-related knowledge, all of which are necessary for identifying opportunities. The development and use of an entrepreneurial mindset and abilities in the particular settings of starting a new business, expanding an existing one, or creating an entrepreneurial organization are the main goals of entrepreneurship education (Eastburn & Sharland, 2017). It seeks to produce graduates who can act on identified needs and gaps and who have the mindset and abilities to generate novel ideas in response to them. To put it briefly, seeing an idea through to completion. Initiative, intuitive decision-making, action, networking, opportunity recognition, innovative problem-solving, strategic thinking, and individual efficacy are all examples of entrepreneurial skills and mindset (Santhosha, Vikram. & Mathew (2024). Entrepreneurship education encompasses a broad spectrum of practical, intellectual, social, and emotional abilities in addition to knowledge acquisition (Njoku & Isigwe, 2019). The goal of entrepreneurship education is to create graduates who can recognize opportunities and launch businesses (Nweke, 2020).

As the youth population grows, focusing on their engagement in the broader entrepreneurial policy agenda is not only relevant, but also crucial (Winkler, Fust, & Jenert, 2023). Young people face specific problems that may limit their ability to contribute to economic growth. These limitations frequently result in their exclusion from meaningful involvement in both national and global economies. However, entrepreneurship provides a potent remedy by giving young people the freedom to experiment and create their own creative ideas in addition to providing them with financial prospects (Toth-Pajor, Bedo & Csapi, 2023).

The current global demographic situation provides an unprecedented opportunity for governments to capitalize on youth-led innovation (Tang, Baron & Yu, (2023). We are witnessing the creation of the largest youth population in history, which presents an exceptional opportunity to engage this dynamic part of society and turn their creativity into a force for economic revolution. Being the generation that is growing up in a time of rapid digitalization and climate change, today's youngsters have the distinct viewpoints required to tackle some of the most important issues facing the globe (Himani, 2024). As a result, we must encourage them to pursue their entrepreneurial dreams. We can stimulate economic diversification and job creation by engaging and empowering young entrepreneurs, particularly in low-income nations where traditional employment possibilities may be scarce.

Youth engagement through entrepreneurship is much more than a social effort; it is a significant driver of economic growth, particularly in low-income countries (Roshanaei, 2020). It also discusses global and local issues. We see this in young entrepreneurs who are at the forefront of green and social entrepreneurship, addressing issues such as climate change and sustainability through agro-preneurship and other businesses. These businesses are not just successful, but also purpose-driven, with a focus on long-term development and community welfare (Tang, Baron, & Yu, 2023).

One of the most fundamental difficulties confronting governments around the world and at all levels of government is how to effectively direct the mindset of young people, nurture them, harness their potentialities and dynamism and meaningfully incorporate them into national development architectures (Clementine *et al.*, 2020). Youth's innate tendency for innovation and change makes them ideal candidates for entrepreneurship, as long as the community provides them with the necessary support to overcome obstacles and increase their chances of success (Manseur, 2024). Youth entrepreneurship helps a city's economic development by creating jobs, innovating products and services, increasing market competitiveness, revitalizing communities, and generating income (Altin, Suat, & Ardita 2024).

An entrepreneurial mindset, which includes creativity, risk-taking, resilience, and the ability to identify and capitalize on opportunities, has been identified as critical for promoting youth entrepreneurship and engagement (Nkese, Emmanuel, & Unyime, 2024). Nigeria has launched a number of initiatives to promote entrepreneurship, including innovation hubs, company incubators, and mentorship programs that connect students with industry experts and successful entrepreneurs (Emmanuel, Mbongeni, & Mushaisano, 2025). Despite these efforts, many students continue to struggle to cultivate and develop the entrepreneurial mindset required to effectively

recognize and capitalize on opportunities (Rafiati & Politeknik, 2022). While entrepreneurship education has been integrated into many university courses, research shows that not all students actively participate in entrepreneurial activities or gain the crucial skills required for recognising feasible company possibilities (Ewa, 2024). The disconnect between entrepreneurial education and the actual development of entrepreneurial mindset raises concerns about the efficacy of current tactics for developing entrepreneurial mindsets among young people in higher education (Martinez-Gregory, Badenes-Riberi & Oliver, 2021).

Furthermore, it is also unknown if students have the skills to turn their entrepreneurial ideas into profitable businesses and how much their mindsets conform to entrepreneurial concepts. Using university students who completed the entrepreneurship course as a case study, this study aims to close this gap by investigating the connection between youth engagement, entrepreneurship education, and entrepreneurial mindset.

Literature Review

Conceptual Review of Literature

The entrepreneurial mindset enables people to identify and pursue opportunities, handle uncertainty, take calculated risks, and conquer challenges (Dapis, Fox & Findley, 2023). Entrepreneurial mindset is a collection of attitudes, beliefs, and actions that allow people to recognize, evaluate, and pursue opportunities in dynamic and frequently uncertain contexts (Ngele, 2023). It involves traits such as resilience, creativity, proactivity, risk-taking, and a strong drive for achievement, all of which are crucial in navigating the complex landscape of entrepreneurship (Rafiati & Politeknik, 2022). Entrepreneurial mindset is simply the way an entrepreneur thinks and behaves. Fundamentally, an entrepreneurial mindset involves traits, actions, and abilities that motivate people to take action. And someone with an entrepreneurial mindset sees an opportunity that would otherwise go unnoticed, gains the courage to take a chance, expresses their ideas clearly, and can adapt to and grow from setbacks (Li, Cao & Jenatabadi, 2023).

Youth engagement entails taking an active role in identifying their strengths, abilities, and talents as well as contributing to the solution of social issues (Musiimenta, Arinaitwe & Irumba, 2024). Any time a young person establishes a long-lasting connection to the world around or within themselves, that is considered youth engagement (Foncha, Ngouafo, & Budi, 2024). Youth engagement was defined as a young person's prolonged and meaningful involvement in an activity that has a focus outside of themselves. Empowering young people entails developing and maintaining the conditions that allow young people to act on their own behalf and on their own terms, rather than being directed by others.

Youth empowerment is an attitudinal, structural, and cultural process in which young people gain the ability, authority, and action to make decisions and effect change in their own lives as well as the lives of others, including youth and adults (Odoh, & Eme, 2014). Youth disengagement has a wide-ranging impact on corporations, philanthropies, organizations, schools, and governments, as well as families, neighbourhoods, and communities (Keerthiga, 2025). Entrepreneurship education provides students with the additional knowledge, qualities, and capabilities needed to apply entrepreneurial skills in the context of starting a new endeavours or firm (Almahry *et al.*, 2020). All of these are necessary for entrepreneurial mindset. Entrepreneurship education refers to activities that attempt to create enterprising or entrepreneurial individuals by enhancing their understanding and expertise of entrepreneurship and enterprise (Burhanudin, Sojanah & Utama, (2025). Entrepreneurship education is a systematic training and instruction that imparts entrepreneurial knowledge and skill development to students. Entrepreneurship education therefore aims to influence entrepreneurial mindset in the desired way. As a result, it is a continuous development of relevant entrepreneurial skills and habits whose comprehension and application allows students to contribute meaningfully to the growth and development of the Nigerian economy (Osadebe *et al.*, 2025).

Theoretical Framework

Self-theories of Entrepreneurial Mindset

Dweck & Johnson (2009) created two self-theories of intelligence that provide insight into the psychological (motivational) processes required for success. They argued that people had either an entity theory of intelligence (fixed mindset) or an incremental theory of intelligence (growth mindset). Individuals with a fixed mindset believe that their intelligence, abilities, talents, and characteristics are permanent and immutable. They also imply that a person's capacity stems from their innate abilities rather than their gradual acquisition of new skills through education, and as a result, they give up or deteriorate when faced with obstacles. According to Dweck & Johnson (2009), people with a fixed mindset and poor self-esteem often establish low performance goals, which leads them to react to difficulties in a helpless way, which is a pattern of typical mindset, thoughts, and emotions.

On the other side, those who have a growth mindset prefer to adopt learning goals and feel that learning is the reason for one's ability and success. They also believe that intellect can alter and expand with effort, and they believe in trying other ways or asking for help when faced with challenges. These people, who are either highly or lowly confident, focus on learning new concepts and react with a typical pattern of thoughts, behaviours, and feelings in

whatever circumstance they encounter (Chapman, 2021). This is justified by the fact that the majority of successful great company executives possessed a growth mindset, which is necessary for creating and sustaining outstanding organizations in the face of ongoing change (Dweck, & Johnson, 2009).

Empirical Literature Review

In order to promote creativity in the present era, Singh and Himani's (2024) study examined the significance of cultivating an entrepreneurial mindset. It examined the ways in which individuals and institutions might leverage entrepreneurial concepts to surmount ambiguity, seize chances, and adapt to the swift advancement of technology. Using multidisciplinary perspectives from the domains of technology, psychology, and entrepreneurship, this study investigates the traits of an entrepreneurial mindset. It also discusses how to promote an entrepreneurial mindset in a range of contexts, including the workplace, the community, and educational institutions. This aims to clarify how an entrepreneurial mindset is necessary to promote innovation and provide tactics for people and businesses to thrive in the quickly evolving digital landscape.

Ullah & Bamber (2024) conducted a study by developing a survey instrument based on established models and scales, including Hofstede's cultural indices, Rotter's I-E scale, Jackson's personality assessment, entrepreneurship scales, ensuring the validity and reliability of the research methods. A varied sample of potential and existing entrepreneurs in the UK and Bangladesh received survey questionnaires in both offline and online formats. To establish sample uniformity across each nation, a combination of emic and etic approaches were used. A total of 388 useful survey responses were examined, with 171 from the United Kingdom and 217 from Bangladesh. The sample size proved acceptable, allowing for various statistical analysis procedures and producing statistically significant results.

The gathered data went thorough statistical studies, including regression and multivariate analysis, to uncover the important entrepreneurial traits, factors, motives, and barriers in each country. The findings revealed that culture, institutional aid, and personal strength all have a significant impact on practicing/active entrepreneurs, with work flexibility and administrative regulations predicting entrepreneurial abilities in an interesting way. According to the comparative analysis, the UK group scored better on perceived risk-taking, innovativeness, and accomplishment needs, but the Bangladesh group displayed a strong sense of control and self-confidence.

Investigating the cross-national drivers of an entrepreneurial mindset, with individual entrepreneurial traits analyzed in light of self-

perceived contextual factors relating to economic, institutional, and cultural contexts, yield findings that are consistent with known entrepreneurship theories. According to the results, risk-taking, self-confidence, accomplishments, and aggressiveness in competitive settings are all significantly impacted by knowledge, and experience, as well as by the economic climate, administrative expenses and regulations.

The goal of a study by Muhammad & Henry (2024) was to shed light on the significant connection between young people at Makerere University in Uganda's entrepreneurial mindset and their ability to recognize opportunities. With a high response rate of 95%, the study used a descriptive cross-sectional design to gather primary data from a sample of 400 students at Makerere University studying a variety of academic subjects. With a mean score of 4.3 out of 5, the quantitative data analysis showed that more than 65% of respondents thought they had an entrepreneurial mindset, as demonstrated by qualities like originality and invention. Additional statistical analysis revealed a somewhat favourable correlation of 0.56 between opportunity identification and entrepreneurial mindset, suggesting that people with more entrepreneurial tendencies were more likely to identify promising business opportunities. Entrepreneurial mindset qualities accounted for 48.2% of the variance in opportunity identification, with innovation ($\beta = 0.456$) and creativity ($\beta = 0.289$) being the most significant predictors. Logistic regression revealed that students who scored high on creativity were roughly three times more likely to find an opportunity than their less creative counterparts. Regarding educational influences, regression analysis indicated entrepreneurial training and education together accounted for 33.7% of the variance in entrepreneurial mindset scores, underscoring the vital role of university programs in shaping students' entrepreneurial tendencies.

An examination of demographic variables found that age had a substantial effect on mindset, with older students displaying slightly higher entrepreneurial characteristics. Furthermore, significant gender disparities were observed, with male youths scoring higher in mindset than females. Academic discipline was also important, with business-oriented individuals demonstrating stronger entrepreneurial impulses. The findings made concrete recommendations, highlighting the importance of experiential learning at Makerere University, prioritizing multidisciplinary entrepreneurial education, and implementing targeted gender initiatives to build a more equitable entrepreneurial culture. By strategically focusing on the development of their entrepreneurial attitude, the study provides important insights on how to foster opportunity identification skills in young people in higher education settings. Such findings can significantly aid initiatives to foster entrepreneurial skills and

combat unemployment in Uganda with additional development and scale.

The significance of cultivating an entrepreneurial mindset in the present day as a way to encourage creativity was examined in a study conducted by Himani (2024). It examines the ways in which individuals and institutions might leverage entrepreneurial concepts to surmount ambiguity, seize chances, and adapt to the swift advancement of technology. Using multidisciplinary perspectives

from the domains of technology, psychology, and entrepreneurship, the study investigates the traits of an entrepreneurial mindset. It also discusses how to promote an entrepreneurial mindset in a range of contexts, including the workplace, the community, and educational institutions. This aims to clarify how an entrepreneurial mindset is critical to creativity and provide tactics for people and businesses to thrive in the quickly evolving digital landscape.

Figure 1: Conceptual Framework

This work is based on the above conceptual framework. As presented in figure 1, there is a significant relationship among entrepreneurship education, entrepreneurial mindset and youth engagement. Entrepreneurship education is a prerequisite for building entrepreneurial mindset for youth engagement.

Methodology

The survey study design was utilized to evaluate the relationship between entrepreneurial mindset and entrepreneurship education for youth engagement among University of Ibadan Basic Entrepreneurship and Innovation (ETR 301) graduates. Former students' email addresses were obtained from the University of Ibadan's Centre for Entrepreneurship and Innovation. The study used all of the email addresses that were submitted as a sample. A digital survey instrument with Likert scales was created using Google Forms. The questionnaire was sent to past students' email addresses, and 167 of them responded. The data were analysed using both

descriptive and inferential statistics. A basic frequency and percentage distribution table was used to assess the demographic data. To determine the effect of an entrepreneurial mindset on youth engagement, the first hypothesis was examined using multiple regression. To determine the relationship between entrepreneurship education and youth engagement, the second hypothesis was examined using Spearman's rank correlation.

Results and Discussion

This section is separated into two parts. The first section concentrates on the descriptive analysis of data collected using frequency counts and percentage weights. The second section focuses on hypothesis testing with Regression analysis and Spearman's Rank Correlation statistics. The majority of respondents, 99 (59.3%), are male, while 68 (40.7%) are female, as indicated in Table 1. The demographic profile depicts the expected respondents depending on graduation year and duration of the entrepreneurship course.

Table 1: Demographic Characteristics of Respondents

Table 1: Demographic Characteristics of Respondents			
	Frequency	Percentage	N=196
Gender			
Male		99	59.3%
Female		68	40.7%
Marital Status

The impact of the entrepreneurship course on the youths is presented in Table 4.

Hypotheses Testing

H₀₁: Entrepreneurial mindset has no significant effect on youth engagement.

Table 5: Analysis of Variance showing effects of Entrepreneurial mindset has on youth engagement.

Model	Sum of Square	Degree of freedom	Mean Square	F	Sig.
Regression	20.829	1	20.829	186.737	0.017
Residual	18.404	165	0.112		
Total	39.234	166			

Decision rule: Reject **H₀**, if the p-value in the analysis of variance table is less than **5%** and accept if otherwise.

Decision: Since the P-value in the ANOVA Table (**0.017**) is less than **5%**, we reject **H₀**. Therefore, Entrepreneurial mindset has a significant effect on youth engagement.

H₀₂: There is no significant relationship between entrepreneurship education and youth engagement.

Table 6: Spearman's Rank Correlation Table

	Education	Entrepreneurship Youth engagement	
Spearman's rho	correlation coefficient	1.000	0.029
Entrepreneurship Education	Sig (2-tailed)		0.642
	Number of observation	167	
Youth Engagement	correlation coefficient	0.029	1.000
	Sig.(2-tailed)	0.642	
	Number of observation	167	

Decision rule: Reject H_0 , if p-value is less than **0.05** and accept if otherwise.

Decision: Since the p-value (**0.029**) of the spearman's rank correlation is less than **0.05**, we reject H_0 . Therefore, there is a statistically significant relationship between entrepreneurship education and youth engagement.

In terms of youth engagement, the estimated results indicated that 76.6% of the respondents had never considered starting a business, while 23.4% had considered doing so prior to taking an entrepreneurship education course. Given that 76.6% of students had never considered starting their own firm before taking an entrepreneurship class, this suggests that entrepreneurial education has had a favourable effect on young people's entrepreneurial mindset. Additionally, 36.5% of the respondents had launched their company prior to taking an entrepreneurship education course, whereas 63.5% had not established any business prior to the course. This suggests that a greater proportion of respondents launched their own businesses following their attendance at an entrepreneurship course.

According to the data, 83.8% of respondents agree that entrepreneurship education teaches and exposes students to business ideas and the process of identifying opportunities, while 5.3% disagree. This suggests a beneficial link between entrepreneurship education, entrepreneurial mindset, and youth engagement. This finding is consistent with past research, such as Muhammad & Henry (2024), who discovered that entrepreneurial education is positively connected to opportunity recognition. The findings also showed that while 13.2% of respondents disagreed with the statement, 77% of respondents agreed that teaching entrepreneurship education produces future and successful entrepreneurs. This suggests a positive relationship between entrepreneurship education and youth engagement with an entrepreneurial mindset, and it is corroborated by research of Roshanaei (2020) that shows a positive relationship between entrepreneurship education and business creation. According to the study's findings, entrepreneurship education is a continuous learning process that promotes the growth

of character traits and abilities that help learners thrive in the business environment.

According to the findings, 68.8% of respondents agree that entrepreneurship education has fully prepared them for their entrepreneurial careers, while 12.6% disagree; this suggests that entrepreneurship education has a positive impact on the development of entrepreneurial mindsets in youths. This is reinforced by Ullah & Bamber (2024) findings, which concluded that entrepreneurship can be taught and that educational programs can positively enhance entrepreneurial mindsets. According to the results, 74.8% of the respondents agreed with the statement that entrepreneurship education has given them the confidence to work for themselves, while 8.4% disagreed. This suggests that entrepreneurship education has helped young people change their mindset and become self-employed. This supports the empirical findings of Himani (2024) that students' entrepreneurial mindset is positively impacted by taking entrepreneurship education courses.

The results also show that 44% of respondents agree with the statement that they started their own business because of entrepreneurship courses they took at the University of Ibadan, while 32.4% disagree. This suggests that a higher proportion of respondents began their own business because of entrepreneurship courses they took. According to the estimated results, just 9.1% of respondents did not launch any business throughout the study period, whereas 90.1% of respondents launched their firm or entrepreneurial endeavours during that time. According to the findings, 27% of respondents obtained their business ideas and entrepreneurial skills from an entrepreneurship education class at the University of Ibadan and the ideas and skills helped in building positive entrepreneurial mindset.

Conclusion

The results of the empirical study show that entrepreneurship education significantly influences youth's entrepreneurial mindsets. Youth engagement, entrepreneurial mindset, and entrepreneurship education are statistically significantly correlated. The rise of youth-owned entrepreneurial ventures and

entrepreneurship education have a statistically significant link, suggesting a relationship between youth engagement and entrepreneurship education. These connections show how important entrepreneurship education is to entrepreneurship students' and young people's capacity for self-engagement. Entrepreneurship education for university students should continue. In order to prepare for future entrepreneurial activities and prospects, students should take advantage of the chances that entrepreneurship education offers.

Publication Date: 2025/11/28

Abstract

This paper is aimed to examine the relationship between cashless policy and business performance of Selected SMEs in Auchi Edo State. The introduction of the cashless policy in Nigeria is aimed at reducing the reliance on physical cash for transactions and promoting digital payments. SMEs in Nigeria have been found to be more vulnerable to economic shocks and fluctuations in the business environment and understanding the impact of the cashless policy on their performance is crucial to ensuring that these businesses thrive in an increasingly digital economy. The population of this study is two hundred and fifty (250) which include both formally registered businesses (those registered with regulatory bodies like the Corporate Affairs Commission) and informal businesses (those that operate without formal registration but still contribute to the local economy). Using a mixed-method approach, primary data was collected from a sample of 200 SMEs through surveys and interviews. Both descriptive and statistical data analysis were carried out in the study with the aid of SPSS. The study finds that the adoption of the cashless policy has led to improved efficiency, faster transaction times, and increased customer trust in businesses that implement digital payment systems. However, challenges such as poor internet connectivity, lack of infrastructure, and customer resistance were also identified as obstacles. The study recommends that SMEs invest in digital payment infrastructure and provide customer education to fully harness the benefits of the cashless policy.

Keywords: Cashless Policy, Business Performance, Electronic Payment Systems, ATM Usage, Mobile Money, Profitability

Introduction

In recent years, Nigeria has embraced a cashless policy aimed at reducing the risks associated with handling physical cash, improving transaction efficiency, and enhancing financial inclusion. The policy has witnessed gradual adoption, especially among SMEs in various states, including Edo State. SMEs are essential to the economic growth and development of the country, and the implementation of this policy has implications for their financial operations of overall business performance. The rise of digital financial transactions has transformed business operations globally, leading to the adoption of cashless policies by businesses and governments. In Nigeria, the central government, through the Central Bank of Nigeria (CBN), has initiated several measures to encourage a cashless economy, aiming to reduce the cost of cash management, minimize the risks associated with physical cash transactions, and promote financial inclusion. The implementation of a cashless policy involves the reduction of cash usage and the promotion of electronic transactions, such as mobile banking, point-of-sale (POS) systems, and online payment platforms (Adeyemo & Akinyemi, 2022).

As part of this transition, businesses are encouraged to adopt cashless systems, impacting how transactions are conducted across various sectors, including small and medium enterprises (SMEs) (Ajayi & Oni, 2021). In Edo State, SMEs play a vital role in the economic development of the region, contributing to job creation, poverty alleviation, and local economic growth (Ogunleye & Afolabi, 2021). These businesses range from small retail shops to service providers and manufacturing entities. Despite their critical role, many SMEs face challenges related to business performance, including limited access to finance, inadequate infrastructure, and high transaction costs. The adoption of a cashless policy is expected to alleviate some of these challenges by reducing the reliance on cash and facilitating smoother and faster business transactions (Afolabi & Ayeni, 2020).

The implementation of the cashless policy, however, presents both opportunities and challenges for SMEs in Edo State. On one hand, the policy can improve operational efficiency, reduce risks associated with carrying large sums of money, and enhance transparency (Okafor & Iwu, 2023). On the other hand, the shift to digital payments requires SMEs to invest in

digital infrastructure, train employees on using electronic payment systems, and deal with the challenges of digital literacy, cybersecurity, and internet connectivity. The adoption of these technologies could also lead to increased customer satisfaction, as consumers increasingly demand cashless payment options due to their convenience and security features.

Cashless policy on business performance remains a subject of interest among researchers. Some studies have highlighted that the cashless system can enhance business growth by improving cash flow management, reducing transaction costs, and facilitating access to broader markets (Kehinde & Ogunwuyi, 2020). Others have noted that SMEs in developing economies, like Nigeria, may face challenges in fully benefiting from the policy due to limited access to technological resources and a lack of awareness about its advantages (Osagie & Okojie, 2024). Thus, the actual effect of the cashless policy on SMEs' performance in Edo State is still unclear and requires further investigation.

Moreover, SMEs in Nigeria have been found to be more vulnerable to economic shocks and fluctuations in the business environment. Therefore, understanding the impact of the cashless policy on their performance is crucial for policymakers, business owners, and other stakeholders who are interested in ensuring that these businesses thrive in an increasingly digital economy. Previous studies suggest that while some SMEs have successfully integrated digital payment systems, others are still hesitant due to concerns about the cost of implementation, security issues, and customer resistance (Akinlolu & Abiola, 2022).

Despite the potential advantages, several factors influence the successful implementation of cashless policies, particularly in a developing economy like Nigeria. These factors include the level of technological readiness, awareness among SMEs, and the adequacy of government policies supporting the transition (Ajayi & Oni, 2021). The effective integration of these elements determines whether SMEs in Edo State can effectively transition to a cashless economy and leverage it for improved performance.

This study is thus essential in providing an empirical assessment of the relationship between cashless policies and business performance of SMEs in Edo State. It aims to explore how the cashless system has been adopted by these enterprises and the extent to which it has influenced their growth, profitability, customer base, and overall business sustainability. By identifying both the benefits and challenges SMEs face, this study will contribute to the existing body of knowledge on the impact of cashless policies in developing economies.

Given the limited research on the intersection between the cashless economy and SME performance in Edo

State specifically, this study will bridge the gap in literature and offer valuable insights for policymakers, business owners, and other stakeholders in the region.

Statement of the Problem

Despite the benefits of the cashless policy, many SMEs in Edo State continue to face challenges in its full implementation, including insufficient digital infrastructure, lack of awareness, and resistance to change. These challenges could potentially hinder the expected progress their businesses in terms of performance performance.

The rapid transition to a cashless economy in Nigeria, driven by government initiatives and technological advancements, has raised concerns about its implications for Small and Medium Enterprises (SMEs). While the cashless policy is expected to enhance business efficiency, reduce transaction costs, and increase financial inclusion, the extent to which these benefits are realized by SMEs in Edo State remains uncertain. SMEs are critical to the local economy, yet they often face challenges such as inadequate infrastructure, lack of digital literacy, and limited access to financial resources, all of which may hinder the successful adoption of cashless systems.

One basic issue of cashless policy is the potential security risks associated with cashless transactions. Many SMEs in Edo State are hesitant to fully embrace electronic payments due to fears of cybercrime, fraud, and system failures. This can undermine trust in the cashless policy and prevent businesses from capitalizing on the advantages it offers. As a result, SMEs may continue to rely on traditional cash transactions, which could negatively impact their operational efficiency and overall performance. The problem of limited technological adoption among SMEs in Edo State is further compounded by infrastructural deficits such as unreliable internet connectivity and poor electricity supply. These factors create an unfavorable environment for the implementation of cashless transactions, making it difficult for SMEs to integrate digital payment methods effectively. Furthermore, while some SMEs may have adopted cashless systems, others may not fully understand the benefits or have the necessary resources to transition, leading to disparities in business performance across the sector.

Moreover, the cashless policy is still in its early stages of implementation in Edo State, and there is a lack of comprehensive research on its impact on SMEs' business performance. This study seeks to address the gap by investigating the challenges and opportunities presented by the cashless policy, providing insights into how SMEs in Edo State are navigating this transition and the effects it has on their business outcomes. Understanding these dynamics is critical for

stakeholders seeking to improve the viability and competitiveness of SMEs in the region.

The study aims to examine the relationship between cashless policies on the business performance of selected SMEs in Edo State. The objectives are:

- i. examine the relationship between Digital payment adoption and revenue growth
 - ii. Explore the relationship between mobile money transaction and turnover rate.
- The following questions will guide this study
- i. What is the relationship between digital payment adoption and revenue growth?
 - ii. To what extent does, mobile money transaction has relationship with turnover rate.

The study was guided by the following null hypotheses:

H₀₁: There is no relationship between digital payment adoption and revenue growth.

H₀₂: There is no relationship between mobile money transaction and turnover rate.

These hypotheses were tested statistically to understand the real impact of the cashless policy on business performance, while also identifying potential challenges and advantages for SMEs operating in Edo State.

Concept of Cashless Policy

The cashless policy refers to the initiative by the Nigerian government, aimed at reducing the amount of physical cash in circulation and encouraging the use of electronic payments for financial transactions. The concept is rooted in the belief that increasing reliance on digital or electronic payment methods can promote financial inclusion, enhance transparency, and reduce the challenges associated with handling physical cash, such as theft, loss, and inefficiency. By promoting digital payments through mobile banking, point-of-sale (POS) systems, and internet banking, the policy aims to simplify financial transactions and integrate more people and businesses into the formal financial system (Uwaoma & Opara, 2021).

The implementation of a cashless policy requires the introduction of infrastructure, technology, and systems that support electronic transactions. This includes the establishment of mobile money platforms, access to internet banking, and the development of secure payment channels. The use of POS terminals has also become one of the major components of this initiative, helping both large and small businesses transition to electronic payments. The policy seeks to address key challenges in the Nigerian financial landscape, such as a high level of financial exclusion and a reliance on informal, cash-based transactions. Furthermore, by reducing cash handling, the cashless policy aims to enhance the efficiency of the banking sector and

facilitate better fiscal policy monitoring (Afolabi & Ayeni, 2020).

As the cashless policy continues to evolve, it is expected to contribute to the modernization of Nigeria's financial systems, offering easier and faster ways for individuals and businesses to complete transactions. The central goal of this initiative is to foster a cashless society that encourages financial discipline, transparency, and accountability, which are essential components for economic development. In doing so, it aims to reduce the informal nature of business transactions, which are often difficult to track and regulate. In the long run, the shift towards a cashless economy could increase the effectiveness of monetary policies and provide the government with better control over inflation and other financial variables (Omole & Olanipekun, 2022).

The cashless policy also has implications for businesses, especially Small and Medium Enterprises (SMEs), which are often more vulnerable to the challenges posed by traditional cash-based systems. SMEs can benefit significantly from the cashless initiative, as it enhances their access to capital, reduces transaction costs, and provides opportunities for expansion through digital marketing and e-commerce platforms. Additionally, the ability to accept electronic payments can improve customer satisfaction, as it provides a convenient and secure way for clients to pay for goods and services (Okafor, 2021).

However, despite these advantages, the transition to a cashless economy has not been without challenges. Issues such as the lack of adequate infrastructure, unreliable internet services, and low levels of digital literacy among SMEs and consumers can hinder the successful implementation of the policy. Furthermore, while the government and financial institutions have made significant strides, there is still a need for continued awareness campaigns and capacity-building programs to ensure widespread adoption of cashless transactions (Ogundele, 2023). As the policy matures, it will be important to monitor its impact on business performance, especially for SMEs, and to address any barriers to effective implementation.

One of the significant impacts of the cashless policy is its potential to reduce the incidence of fraud and corruption. By promoting transparency in financial transactions, the policy reduces the chances of illicit practices such as money laundering and bribery. As SMEs begin to embrace cashless payments, the traceability of their financial transactions can serve as a safeguard against fraudulent activities, ensuring that their businesses remain legitimate and in good standing with regulators (Ali & Fola, 2022).

Lastly, the adoption of the cashless policy could enhance financial resilience for SMEs. By allowing businesses to adopt electronic payment solutions,

SMEs can increase their flexibility and ensure they remain competitive in an increasingly digital global economy. As more consumers and businesses become familiar with and trust digital payment methods, the demand for cash-based systems will continue to decrease, and businesses that have already adopted electronic payment platforms will likely enjoy a competitive advantage (Ibrahim & Wada, 2021).

Business Performance of SMEs

Afolabi and Dare (2020) described SME performance as a multidimensional construct that involves financial metrics such as revenue growth and profitability, as well as non-financial indicators like customer satisfaction, employee productivity, and innovation capability. Given their role in job creation and poverty reduction, the performance of SMEs is often seen as a driver of economic development in Nigeria and other developing economies.

Measuring business performance in SMEs requires a balance between traditional financial metrics and broader qualitative indicators. Adebayo et al. (2021) argued that while profitability, sales growth, and return on investment remain core measures, SMEs must also consider market expansion, customer loyalty, and operational efficiency as indicators of performance. This broader perspective is particularly important in environments where SMEs face structural challenges such as limited access to finance, infrastructural deficits, and fluctuating government policies. Thus, SME performance is not just about short-term profitability but about resilience and sustainability over time.

The concept of performance in SMEs is also closely linked to their adaptability to changing market dynamics. Okonkwo and Oduro (2020) emphasized that SMEs that adopt digital technologies, innovative business models, and effective customer engagement strategies are more likely to perform better than those relying solely on traditional approaches. For instance, SMEs that integrate digital payment systems, e-commerce platforms, and customer relationship management tools are better positioned to expand their market reach, improve sales turnover, and ensure business continuity even during economic shocks. This adaptability is therefore a crucial determinant of SME survival and growth in dynamic economies like Nigeria. Furthermore, external factors play a significant role in shaping SME performance. Nwachukwu and Obiora (2020) highlighted that government policies, availability of credit facilities, and the state of infrastructure significantly affect how well SMEs perform. In Etsako West LGA of Edo State, challenges such as poor road networks, irregular electricity supply, and limited access to banking facilities directly influence SMEs' ability to achieve strong performance

outcomes. Conversely, the introduction of supportive policies, such as cashless payment systems and SME development programs, has the potential to boost their efficiency, reduce operational costs, and enhance business growth.

Lastly, the concept of SME performance extends to their contribution to the broader economy. Usman and Okon (2022) noted that SMEs are vital engines of economic diversification, employment generation, and innovation in Nigeria. The performance of SMEs therefore has implications beyond individual business success; it influences local community development and national economic resilience. Hence, evaluating SME performance requires not only an analysis of internal capabilities but also an understanding of the broader socio-economic ecosystem in which they operate. For policymakers and stakeholders, enhancing SME performance remains central to achieving inclusive and sustainable economic growth.

Digital Payment Adoption

Digital payment adoption refers to the willingness and ability of individuals and businesses to embrace electronic forms of payment such as mobile transfers, internet banking, point-of-sales (POS) terminals, and QR-based payments. In the context of SMEs, adoption goes beyond mere usage; it implies integrating cashless tools into day-to-day business operations to enhance efficiency, reduce risks associated with cash handling, and expand market reach. Scholars note that adoption is driven by factors such as perceived ease of use, perceived usefulness, cost of transactions, and trust in the system (Thanigan, 2025).

The Central Bank of Nigeria (CBN) has played a vital role in encouraging adoption by introducing cashless policies that reduce reliance on cash, thereby compelling SMEs to adopt digital platforms for competitive survival. Evidence suggests that SMEs that adopt digital payments enjoy faster transaction speeds, better record-keeping, and access to credit through formal banking systems (SAGE, 2024). Such institutional pressures have also created an ecosystem where digital adoption is no longer optional but necessary for sustaining business growth in highly competitive markets.

However, challenges still exist, such as infrastructure deficiencies, cybersecurity concerns, and resistance to change among small business owners. These barriers sometimes hinder SMEs from fully leveraging digital payment adoption, leading to partial or reluctant compliance. Despite these obstacles, the increasing penetration of smartphones and fintech solutions in Nigeria is gradually easing these concerns and creating stronger incentives for SMEs to fully adopt digital payment methods (Faiz et al., 2024).

Revenue Growth

Revenue growth is the increase in a business's sales or income over a given period and is one of the most widely used indicators of firm performance. For SMEs in Edo State, revenue growth signifies not only financial success but also the ability to attract more customers, expand operations, and withstand market competition. Scholars argue that consistent revenue growth reflects a healthy business model, efficient management, and the successful adoption of innovative practices such as digital payments (Majka, 2024). In the Nigerian context, the adoption of cashless payment systems has been closely linked to improved revenue growth. By enabling faster, more reliable, and traceable transactions, SMEs are able to increase sales volumes, attract customers who prefer electronic payment options, and reduce the risks of cash leakages. Studies suggest that firms that adopt digital tools experience an increase in both transaction frequency and value, which cumulatively enhances revenue growth (McKinsey & Company, 2022).

Nonetheless, revenue growth is not only influenced by payment systems but also by market dynamics, product quality, and customer satisfaction. While cashless adoption creates the platform for accelerated growth, sustained revenue expansion depends on the ability of SMEs to innovate, retain customers, and strategically reinvest profits into their operations. Thus, digital adoption should be seen as a growth enabler rather than a standalone determinant of revenue growth (Majka, 2024).

Mobile Money Transactions

Mobile money transactions refer to financial services conducted through mobile phones, allowing individuals and SMEs to transfer, store, and spend money electronically without necessarily owning a bank account. In Nigeria, mobile money has become a crucial driver of financial inclusion, especially for micro and small-scale enterprises that operate in cash-dominant environments. SMEs benefit from mobile money by being able to accept payments instantly from customers and suppliers, thereby improving liquidity and reducing cash-handling risks (GSMA, 2024).

The adoption of mobile money services by SMEs in Edo State has been growing, largely due to their convenience and accessibility. Customers can easily pay for goods and services using mobile wallets, which reduces barriers to patronage. For SMEs, the ability to receive payments instantly translates to quicker cash flow turnover, enhancing their capacity to reinvest in inventory and meet operational needs (GSMA, 2023). Furthermore, mobile money systems have extended financial services to rural and semi-urban communities where traditional banking is limited.

Despite its benefits, mobile money transactions are still constrained by factors such as network failures, transaction delays, and security risks. These challenges sometimes discourage SMEs from fully integrating mobile money into their operations. Nevertheless, continuous improvements in mobile network infrastructure and CBN's regulatory support for mobile money operators suggest that mobile transactions will remain a critical enabler of SME performance and financial inclusion in Nigeria (GSMA, 2024).

Turnover Rate

In business, turnover generally refers to the sales revenue generated over a specific period, and turnover rate denotes the pace at which this revenue changes, often measured monthly, quarterly, or annually. For SMEs, turnover is a vital measure of performance as it reflects how efficiently they are converting resources into sales. When linked with cashless adoption, turnover rate helps to show whether digital payment systems accelerate or slow down the sales process.

Digital payment adoption has the potential to increase turnover rate by enabling faster sales processing, reducing cash-related delays, and allowing businesses to serve more customers within shorter timeframes. For example, SMEs with POS machines or mobile payment options can handle larger volumes of transactions daily compared to cash-only businesses. This capacity leads to faster inventory turnover and more frequent revenue cycles, both of which are critical for growth and sustainability. However, turnover rate as a measure of business performance must be interpreted carefully. A high turnover rate may indicate strong sales, but it could also suggest inadequate stock levels or aggressive discounting. Conversely, low turnover rates could reflect poor sales or intentional stockpiling strategies. Thus, in examining turnover rates within the context of SMEs in Edo State, it is important to pair it with profitability measures to get a holistic picture of financial health.

Theoretical Framework

The theoretical framework for this study is based on the Technology Acceptance Model (TAM). This theory provides valuable insights into understanding the factors that influence SMEs' adoption of cashless policies.

Technology Acceptance Model (TAM)

The Technology Acceptance Model (TAM) is widely used in research related to technology adoption. According to Davis (1989), the model posits that perceived ease of use and perceived usefulness are key factors that determine whether individuals or businesses will adopt a new technology. In the context of cashless policies, SMEs' adoption of digital payment

systems would be influenced by how easy these systems are to use and how useful they are in improving business operations, such as enhancing efficiency, reducing costs, and expanding market reach. Research by Akinyemi (2020) and Ojo and Oyelade (2021) aligns with the TAM framework, highlighting that SMEs are more likely to adopt digital payment systems when they perceive them to be user-friendly and beneficial to their business growth.

Empirical Review

Adeyemi & Olayemi (2021) examined the impact of cashless transactions on the profitability of SMEs in Lagos, Nigeria, using a population of SMEs registered with the Lagos Chamber of Commerce and a sample size of 250 SMEs selected through stratified random sampling. Data were collected using structured questionnaires and analyzed with descriptive statistics and regression analysis. The findings revealed that SMEs adopting cashless payment systems experienced significant revenue growth and reduced operational costs. The study recommended that the government should enhance digital infrastructure and provide incentives to encourage SME participation in cashless transactions.

Similarly, Okafor & Nwankwo (2020) conducted a research on the effect of financial inclusion through cashless policy on SME growth in Anambra State, Nigeria, using a population of SMEs in major business hubs and a sample size of 180 SMEs selected through purposive sampling. The study employed survey questionnaires and interviews for data collection, while correlation and regression analysis were used for data analysis. The findings indicated that mobile banking and digital payments positively influenced SME expansion and access to credit facilities. Consequently, the study recommended that policymakers introduce low-cost digital banking solutions to improve financial inclusion among SMEs.

Yusuf & Bello (2019) analyzed the relationship between transaction cost reduction and SME business performance under the cashless policy in Kano, Nigeria, focusing on SMEs engaged in retail and wholesale businesses. A sample size of 200 SMEs was selected using simple random sampling, and data were collected via self-administered questionnaires. The study applied ANOVA and regression analysis, revealing that lower transaction costs from cashless transactions led to improved profitability and customer retention. The authors recommended that financial institutions reduce transaction charges for SMEs to further encourage the adoption of digital payments.

Adebayo & Salisu (2018) investigated the impact of mobile banking and POS adoption on SME efficiency in Ibadan, Nigeria, using a population of small and medium enterprises in commercial districts and a

sample size of 150 SMEs selected via convenience sampling. The study used online and physical questionnaires for data collection and analyzed the results using descriptive analysis and multiple regression. Findings showed that SMEs integrating mobile banking and POS systems recorded faster transactions, reduced fraud cases, and improved cash flow management. The study recommended that banks should offer training programs to SMEs on the benefits and proper use of cashless payment systems.

Chukwu & Emmanuel (2017) explored the challenges and opportunities of cashless policies for SMEs in Enugu State, using a population of SME owners and managers in urban and semi-urban areas, with a sample size of 220 SMEs selected through stratified sampling. Data were gathered through focus group discussions and structured surveys, and the study applied thematic analysis and Chi-square tests for analysis. The findings revealed that while cashless policies reduced theft risks and improved record-keeping, network failures and high transaction fees hindered full adoption. The study recommended that the government collaborate with telecom companies to ensure stable digital payment infrastructure.

Eze & Okonkwo (2016) examined the effect of cashless policy on customer satisfaction and SME competitiveness in Abuja, Nigeria, using a population of SMEs across different sectors, including retail, hospitality, and professional services, and a sample size of 300 SMEs selected through systematic sampling. Data were collected via field surveys and structured interviews, while analysis was conducted using descriptive statistics and Structural Equation Modeling (SEM). The findings indicated that SMEs adopting cashless payments reported higher customer satisfaction due to convenience, leading to increased customer loyalty and competitiveness. The study recommended that SME operators leverage digital payment incentives, such as discounts and cashback offers, to encourage customers to use cashless payment options.

Methodology

The research design for this study was adopted a descriptive survey approach. This design is appropriate for examining the impact of cashless policies on the business performance of SMEs in Edo State because it allows for the collection of data from a large number of SMEs to understand the trends and patterns of how cashless transactions affect their operations. Descriptive research helps in detailing the relationship between the cashless policy and variables such as revenue, customer satisfaction, and operational efficiency without manipulating the variables.

The population of this study is two hundred and fifty (250) which include both formally registered

businesses (those registered with regulatory bodies like the Corporate Affairs Commission) and informal businesses (those that operate without formal registration but still contribute to the local economy). This inclusive approach ensures a wide variety of businesses are represented, providing a comprehensive understanding of how SMEs, regardless of their formal status, have been impacted by cashless policies in Edo State (CBN, 2024).

The study use a stratified random sampling technique to select the sample. This method ensures that different subgroups or categories of SMEs are represented in the study. SMEs was stratified based on factors such as industry (e.g., agriculture, retail, manufacturing), business size (small or medium), and location (urban vs. rural areas). This help capture a diverse range of experiences with cashless transactions and business performance.

Based on Krejcie and Morgan's sample size determination formula, the study aim to select a sample of about 200 SMEs from Edo State. This sample size was large enough to provide a representative snapshot of SMEs in the region. From each stratum (industry, size, and location), a random sample was chosen, ensuring that each category is proportionally represented. This method helps ensure that the results are not biased and provide a comprehensive view of the impact of cashless policies on SMEs across different sectors.

Data for this study was collected through structured questionnaires and semi-structured interviews. Data analysis involve both quantitative and qualitative techniques to comprehensively assess the impact of cashless policies on SME performance. For the quantitative data collected from the questionnaires, descriptive statistics such as frequencies, percentages, means, and standard deviations will be used to summarize the data. This provides an overview of the extent of cashless policy adoption, the challenges faced by SMEs, and the overall impact on business performance indicators like revenue growth and customer satisfaction.

To examine the relationship between cashless adoption and business performance, correlation analysis was conducted. This helps to determine whether there is a significant relationship between variables such as the level of cashless transaction adoption and performance metrics such as revenue, customer retention, or operational efficiency. Additionally, regression analysis may be used to assess the extent to which cashless policy adoption influences business performance outcomes.

For the qualitative data from the interviews, thematic analysis will be employed. This technique involve coding the data into themes and identifying patterns or trends in the responses of SME owners..

Demographic Profile of Respondents (N = 200)

S/N	Demographic Variable	Frequency (n)	Percentage (%)
	Industry Type		
	Retail	80	40.0%
	Hospitality	50	25.0%
	Services	40	20.0%
	Manufacturing	30	15.0%
	Years of Operation		
	Less than 1 year	20	10.0%
	1–3 years	60	30.0%
	4–7 years	80	40.0%
	More than 7 years	40	20.0%
	Monthly Revenue (₦)		
	Less than 100,000	40	20.0%
	100,000 – 500,000	100	50.0%
	500,000 – 1,000,000	45	22.5%
	More than 1,000,000	15	7.5%
	Percentage of Cashless Transactions		
	0–25%	50	25.0%
	26–50%	60	30.0%
	51–75%	50	25.0%
	76–100%	40	20.0%

Source: Field Survey, 2025

Interpretation of Demographics

- Industry Distribution: Retail SMEs dominate the sample (40%), followed by Hospitality (25%), Services (20%), and Manufacturing (15%).
- Years of Operation: The majority of SMEs (40%) have been in business for 4–7 years, while only 10% are startups (less than 1 year).
- Monthly Revenue: 50% of SMEs earn between ₦100,000–₦500,000 monthly, while only 7.5% make over ₦1,000,000.
- Cashless Transactions Adoption: 55% of SMEs conduct less than 50% of transactions cashless, indicating that full adoption is still limited.

Descriptive Statistics (SPSS Output)

Variable	N	Mean	Std. Deviation	Minimum	Maximum
Cashless Policy Adoption (CPA) (%)	200	58.4	21.6	20	100
Revenue Growth (%)	200	35.2	14.8	5	75
Turnover rate Retention (%)	200	48.7	17.4	10	85
Customer patronage (%)	200	52.9	16.2	15	90

Interpretation:

- Cashless Policy Adoption (Mean = 58.4%) suggests that SMEs are moderately adopting cashless transactions.
- Revenue Growth (Mean = 35.2%) indicates moderate improvement in business revenue.
- Turnover rate (Mean = 48.7%) shows that SMEs with cashless transactions have good turnover rate.
- Customer patronage (Mean = 52.9%) suggests that cashless transactions have improved customer patronage.

Correlation Analysis (SPSS Output)

Variables	CPA (%)	Revenue Growth (%)	Turnover rate (%)	Customer patronage (%)
Cashless Policy Adoption (CPA) (%)	1	0.782**	0.698**	0.735**
Revenue Growth (%)	0.782**	1	0.609**	0.656**
Turnover rate (%)	0.698**	0.609**	1	0.674**
Customer patronage (%)	0.735**	0.656**	0.674**	1

Significance Level: ** $p < 0.01$ (Highly Significant Correlation)

Interpretation:

- Cashless Policy Adoption (CPA) positively correlates with all business performance indicators (Revenue Growth, Turnover rate, and customer patronage).
- Strongest correlation is between CPA and Revenue Growth (0.782, $p < 0.01$), suggesting that higher cashless adoption significantly boosts SME revenue.
- CPA also has a strong correlation with customer patronage (0.735, $p < 0.01$), meaning digital transactions encourages customer patronage and improve business processes.

Regression Analysis (SPSS Output)

Model Summary

Model	R	R ²	Adjusted R ²	Std. Error of the Estimate
1	0.823	0.677	0.672	8.54

Dependent Variable: Revenue Growth (%)

Predictor: Cashless Policy Adoption (%)

ANOVA Table

Model	Sum of Squares	Df	Mean Square	F	Sig. (p-value)
Regression	4823.76	1	4823.76	66.91	0.000**
Residual	2303.24	198	11.64		
Total	7127.00	199			

Significance Level: ** $p < 0.01$ (Highly Significant)

Regression Coefficients

Model	Unstandardized Coefficients (B)	Standardized Coefficients (Beta)	T	Sig. (p-value)
(Constant)	8.42	-	2.75	0.006**
CPA (%)	0.46	0.823	8.19	0.000**

Regression Equation:

Revenue Growth = $8.42 + 0.46 \times \text{CPA}$

Interpretation:

- $R^2 = 0.677$, meaning 67.7% of the variance in SME revenue growth is explained by cashless policy adoption.
- The model is statistically significant ($p < 0.01$, $F = 66.91$), confirming a strong impact of CPA on business performance.
- Each 1% increase in CPA results in a 0.46% increase in SME revenue growth.

Discussion of findings

Based on the analysis above, findings reveals that
i. SMEs that process higher percentages of transactions digitally experience greater financial growth because: Cashless payments speed up transactions, allowing businesses to serve more customers per day. It Reduces cash handling minimizes financial losses due to theft and fraud and Digital payments make purchases easier for customers, leading to higher sales volume. These findings align with existing studies of Osagie and Okojie (2024) that suggest that businesses that embrace digital transactions tend to experience higher profitability and financial growth.

ii. SMEs with higher CPA adoption experience greater customer retention and operational efficiency. SMEs that accept digital payments are more likely to retain customers. Reasons for this include: Customers perceive businesses that use digital payments as more credible and professional, Customers prefer businesses where they can easily pay without cash-related stress and Some SMEs integrate digital payment systems with loyalty rewards, encouraging repeat patronage. This supports existing research showing that customers tend to favor businesses with digital payment options over cash-only establishments.

Conclusion

The findings from this study strongly indicate that cashless policy adoption plays a significant role in driving the growth and

success of SMEs in Edo State. The analysis has shown that SMEs with a higher percentage of digital

transactions experience greater revenue growth, improved customer retention, and enhanced operational efficiency. This underscores the fact that transitioning from cash-based transactions to digital payment systems is no longer just a convenience but a necessity for business survival and competitiveness. By reducing the risks associated with cash handling, increasing transaction speed, and broadening customer reach, cashless policies provide a solid foundation for SMEs to thrive in a rapidly evolving financial landscape.

Furthermore, the positive correlation between cashless policy adoption and customer retention highlights the importance of digital payments in shaping consumer behavior. Customers today prefer the convenience, security, and speed of cashless transactions, and SMEs that embrace this trend tend to enjoy higher customer loyalty and repeat business. With the widespread use of mobile banking apps, POS systems, and online payment platforms, businesses that fail to integrate digital payment solutions risk losing customers to competitors that offer more seamless and flexible transaction options. Therefore, SMEs should leverage digital payment incentives, loyalty programs, and discounts to encourage cashless transactions and improve customer retention rates.

From an operational standpoint, the adoption of digital transactions has proven to streamline business processes, reduce financial discrepancies, and enhance overall efficiency. SMEs that use cashless payments benefit from automated record-keeping, faster reconciliations, and reduced banking costs, which in turn allows them to focus more on business growth rather than cash management. As the global economy shifts toward digital finance, SMEs that fully integrate

cashless systems into their operations will be better positioned to scale, attract investors, and expand into new markets. Governments, financial institutions, and fintech companies must work collaboratively to improve digital payment infrastructure, reduce transaction costs, and increase awareness to help SMEs maximize the benefits of a cashless economy.

Recommendations:

The following are hereby recommended for this study

1. **Increase Digital Payment Awareness:** SMEs should be educated on the benefits of cashless adoption to boost adoption rates.
2. **Government & Financial Support:** Policies should encourage lower transaction fees and better digital infrastructure.
3. **Incentives for SMEs:** Offering tax breaks or grants for SMEs transitioning to cashless systems could encourage adoption.

Abstract

In Nigeria's rapidly evolving digital economy, social media has emerged as a vital marketing channel for small and medium-sized enterprises (SMEs) seeking to strengthen brand engagement and remain competitive. This paper investigates the challenges and opportunities associated with the adoption of social media marketing (SMM) by Nigerian SMEs. While platforms such as Facebook, Instagram, WhatsApp, and X (formerly Twitter) offer affordable and wide-reaching avenues for brand visibility and customer interaction, SMEs in Nigeria face unique constraints. These include inconsistent internet access, low digital literacy, limited financial resources, and lack of strategic planning. Additionally, infrastructural deficits and fluctuating government policies can inhibit effective digital adoption. Nevertheless, the opportunities are significant—social media enables direct customer feedback, targeted advertising, influencer partnerships, and increased market reach beyond local borders. With proper training, localized content strategies, and policy support, Nigerian SMEs can overcome barriers and harness social media to drive sustainable brand engagement and business growth.

Keywords

Social Media Marketing, Nigerian SMEs, Brand Engagement, Digital Economy, Online Marketing, Small Business,

Introduction

Small and Medium Enterprises (SMEs) play a crucial role in the economic growth and development of Nigeria, accounting for nearly 96% of businesses and contributing about 48% to the national GDP (SMEDAN & NBS, 2021). Despite their significance, SMEs in Nigeria often face challenges such as limited access to finance, inadequate infrastructure, and restricted market reach (Onugu, 2020). In response to these challenges, social media has emerged as a vital tool for enhancing brand visibility, customer engagement, and competitive advantage.

The rapid penetration of internet and mobile technologies in Nigeria has accelerated the adoption of social media platforms like Facebook, Instagram, Twitter (now X), and WhatsApp as marketing and communication channels for SMEs (Akinbola & Ogunnaike, 2022). These platforms provide cost-effective opportunities for businesses to connect with customers, promote products, and build brand loyalty without the heavy financial burden of traditional

advertising. However, the effective adoption of social media marketing is influenced by factors such as digital literacy, technological infrastructure, and consumer trust (Eze et al., 2021).

Given the increasing reliance on digital platforms for business growth, it is important to critically examine the challenges and opportunities that social media marketing presents for Nigerian SMEs. This exploration will not only highlight the strategic importance of social media for brand engagement but also provide insights into how SMEs can leverage these platforms for sustainable growth in a competitive marketplace.

Social media marketing

This is the strategic use of platforms like Facebook, Instagram, and TikTok to promote products or services, build brand awareness, connect with audiences, and drive sales or website traffic.

Social media marketing is the use of social media—the platforms on which users build social networks and share information—to build a company's brand, increase sales, and drive website traffic. In addition to providing companies with a way to engage with existing customers and reach new ones, SMM has purpose-built data analytics that allows marketers to track the success of their efforts and identify even more ways to engage.

According to Data Reportal and Kepios, there were 5.31 billion social media identities across the world as of April 2025.1 As a result, SMM has incredible reach to consumers. (INVESTOPEDIA, 2025).

Brand engagement

This is the ongoing process of building an authentic, emotional connection and attachment between a consumer and a brand, fostering loyalty and positive interaction. It goes beyond simple transactions and includes actively participating with the brand online through comments and likes, or offline through customer service and product feedback. High brand engagement leads to increased brand awareness, customer loyalty, positive word-of-mouth marketing, and can ultimately drive business success.

Digital Economy

Digital economy encompasses all economic activities and transactions facilitated by digital technologies, like the internet, mobile devices, and data, transforming traditional business models into online, interconnected systems. Driven by innovations in areas like cloud computing, artificial intelligence, and the Internet of Things (IoT), it allows for online marketplaces, digital services, and data-driven processes, creating new income streams and improving convenience and efficiency for consumers and businesses alike. In Nigeria, the digital economy is a significant focus for growth, with substantial investments in digital infrastructure, skills, and entrepreneurship to drive economic diversification and job creation.

The Role of SMEs in Nigeria's Economy

Small and Medium Enterprises (SMEs) are vital contributors to the Nigerian economy, serving as drivers of employment, innovation, and poverty reduction. According to the joint survey by SMEDAN and NBS (2021), SMEs constitute 96% of all businesses in Nigeria, employ about 84% of the workforce, and contribute nearly 48% to the country's GDP. Despite their significance, SMEs face systemic

challenges such as inadequate infrastructure, access to credit, and low levels of technological adoption (Onugu, 2020). These limitations have made it necessary for SMEs to adopt cost-effective strategies such as social media marketing to remain competitive.

Social Media as a Marketing Tool

Social media has become a powerful driver of marketing innovation, enabling enterprises to reach customers more effectively, enhance visibility, and foster meaningful engagement. In Nigeria, platforms such as Facebook, Instagram, WhatsApp, and X (formerly Twitter) are increasingly embraced by Small and Medium Enterprises (SMEs) due to their affordability, accessibility, and wide reach (Adejuwon & Lawal, 2022; Gbandi & Iyamu, 2022). Unlike traditional marketing approaches, social media enables two-way communication where businesses not only disseminate information but also interact directly with customers, building trust and loyalty (Nwali & Ntegeeh, 2022).

Recent studies further highlight that social media marketing significantly improves SMEs' performance by boosting sales, enhancing brand awareness, and strengthening customer retention (Lawal & Adejuwon, 2023; Benson, 2025; Ilesanmi & Oyedepo, 2023). As such, social media has emerged as an indispensable marketing tool for SMEs striving to remain competitive in dynamic business environments.

Statement of the problem

Although social media platforms offer SMEs opportunities for visibility, cost-effective marketing, and customer interaction, many SMEs fail to adopt or utilize them effectively. Some lack adequate knowledge and strategies, while others face structural barriers such as limited budgets and rapidly changing digital trends. This raises the question: What opportunities and challenges do SMEs encounter in adopting social media marketing for brand engagement?

Literature Review

Social media has emerged as a vital tool for SMEs, providing cost-effective opportunities for brand promotion, customer engagement, and expansion into new markets. Compared to traditional advertising, platforms such as Facebook, Instagram, and WhatsApp offer SMEs the ability to interact directly with customers, gather instant feedback, and foster online communities that enhance brand loyalty. Beyond local boundaries, social media facilitates global visibility, allowing SMEs to compete on an international scale at relatively low cost (Ilesanmi & Oyedepo, 2023; OECD, 2021; World Bank, 2022).

Research further suggests that social media strengthens SMEs' competitiveness by enabling creative marketing

strategies and improving customer relationships. Nigerian SMEs, in particular, have leveraged digital platforms to showcase products, engage customers in real time, and differentiate themselves from larger competitors. Studies confirm that when used strategically, social media can significantly improve business performance and long-term sustainability through stronger customer loyalty and enhanced market presence (Adejuwon & Lawal, 2022; Nwali & Ntegeeh, 2022).

Despite these opportunities, SMEs face persistent challenges in adopting and maximizing social media marketing. Limited digital literacy, inadequate managerial expertise, and a lack of technical know-how prevent many businesses from designing and implementing effective campaigns. Financial constraints further hinder investments in paid advertising, analytics, and skilled personnel, while frequent algorithm changes and high online competition reduce content visibility and limit engagement outcomes (Gbandi & Iyamu, 2022; OECD, 2023; Benson, 2025).

To address these barriers, SMEs require structured support and innovative strategies. Partnerships with government agencies, business associations, and universities can provide digital training and capacity-building programs to close knowledge gaps. At the enterprise level, consistent content creation, storytelling, influencer partnerships, and user-generated content can enhance authenticity and trust. Furthermore, SMEs can benefit from collaborative approaches, such as forming cooperatives or business clusters, to pool resources, run joint campaigns, and reduce costs while expanding digital reach (World Bank, 2022; Adejuwon & Lawal, 2022; Nwali & Ntegeeh, 2022).

Challenges of Social Media Marketing Adoption by SMEs

Despite its numerous opportunities, the adoption of social media marketing by Small and Medium Enterprises (SMEs) in Nigeria is not without challenges. One of the foremost issues is the lack of digital skills and expertise among SME owners and employees, which often limits their ability to design effective online campaigns and engage customers meaningfully (Ilesanmi & Oyedepo, 2023). Many SMEs also struggle with financial constraints, as the costs associated with creating quality content, running paid advertisements, and maintaining consistent engagement can be overwhelming for businesses with limited resources (Adejuwon & Lawal, 2022).

Another challenge is inadequate infrastructure, particularly poor internet connectivity and unreliable power supply, which hampers SMEs' ability to manage social media activities efficiently (Gbandi & Iyamu, 2022). Furthermore, trust and security concerns remain

significant barriers, as customers may be skeptical about transacting online due to fears of fraud and privacy breaches (Benson, 2025).

Additionally, the rapidly changing algorithms and policies of major platforms such as Facebook, Instagram, and X (formerly Twitter) present difficulties for SMEs in keeping up with evolving marketing strategies, often leading to reduced visibility and engagement (Nwali & Ntegeeh, 2022). Lastly, SMEs often face high competition from larger firms with greater resources, making it challenging to stand out in saturated digital marketplaces (Lawal & Adejuwon, 2023).

Collectively, these challenges highlight the need for SMEs in Nigeria to build capacity, adopt affordable digital tools, and develop resilience in order to maximize the benefits of social media marketing.

Opportunities of Social Media Marketing for SMEs

Social media marketing presents significant opportunities for Small and Medium Enterprises (SMEs), particularly in Nigeria, where digital adoption continues to expand rapidly. One of the most notable opportunities is *enhanced brand visibility and awareness*. Platforms such as Facebook, Instagram, WhatsApp, and X (formerly Twitter) allow SMEs to showcase their products and services to a broad audience at relatively low cost, thereby strengthening their market presence (Nwali & Ntegeeh, 2022).

Another opportunity lies in *customer engagement and relationship building*. Social media enables SMEs to interact directly with their customers, obtain real-time feedback, and build long-term trust and loyalty (Adejuwon & Lawal, 2022). This interactivity provides SMEs with valuable insights into consumer preferences and behavior, which can inform product development and service delivery (Ilesanmi & Oyedepo, 2023).

Social media also offers *cost-effective marketing and sales growth potential*. Unlike traditional advertising, digital campaigns can be run on modest budgets while still achieving high reach and measurable impact opined by (Lawal & Adejuwon, 2023). Studies further reveal that social media positively influences sales performance and revenue growth among Nigerian SMEs according to (Gbandi & Iyamu, 2022).

Moreover, social media platforms create avenues for *word-of-mouth marketing and virality*, where satisfied customers share positive experiences, thereby amplifying reach beyond paid campaigns (Benson, 2025). Finally, the integration of e-commerce features within platforms like Instagram and WhatsApp provides SMEs with an additional opportunity to streamline sales processes and expand into new markets without heavy infrastructural investments.

Collectively, these opportunities underscore the role of social media marketing as a strategic driver of

competitiveness, growth, and sustainability for SMEs in Nigeria's dynamic business environment.

Theoretical Perspectives on Social Media Adoption

Recent scholarship has employed several theoretical frameworks to explain SME adoption of social media marketing. The Technology Acceptance Model (TAM) remains a dominant perspective, as studies show that Nigerian SMEs are more likely to adopt social media when they perceive it as useful for enhancing performance and easy to integrate into daily operations (Ilesanmi & Oyedepo, 2023).

The Resource-Based View (RBV) has also been applied to emphasize the importance of internal resources—such as digital literacy, technological capacity, and innovative strategies—in driving social media adoption. Evidence suggests that SMEs with stronger digital competencies and marketing knowledge are better positioned to gain competitive advantage through online engagement (Adejuwon & Lawal, 2022; Lawal & Adejuwon, 2023).

Similarly, the Diffusion of Innovation (DOI) theory provides insights into the varying rates of adoption among SMEs. Nigerian SMEs with greater awareness, access to digital infrastructure, and adaptability are quicker to embrace social media compared to those constrained by infrastructural and financial barriers (Gbandi & Iyamu, 2022).

More recent discussions extend to the Unified Theory of Acceptance and Use of Technology (UTAUT), which highlights the role of performance expectancy, social influence, and facilitating conditions in shaping adoption decisions. Research in Nigeria confirms that SMEs are influenced not only by perceived benefits but also by peer networks, customer expectations, and enabling infrastructure (Benson, 2025; Nwali & Ntegeeh, 2022).

Together, these perspectives illustrate that SME adoption of social media marketing in Nigeria is a multifaceted process shaped by perceptions of technology, internal resources, social factors, and contextual challenges.

Strategies for Enhancing Social Media Marketing Adoption

While Nigerian SMEs face considerable obstacles in adopting social media marketing, several strategies can help mitigate these challenges and maximize digital opportunities.

First, *capacity building and digital literacy training* are essential. Many SME owners lack the skills required to design effective campaigns or analyze consumer data. Providing training programs and workshops can equip entrepreneurs with the knowledge to leverage social media tools more effectively (Ilesanmi & Oyedepo, 2023).

Second, SMEs can adopt *cost-effective marketing practices* by utilizing free or low-budget tools for content creation and analytics, while focusing on organic engagement to complement paid advertising. Evidence suggests that even modest investments in social media marketing can significantly enhance performance if strategically managed (Lawal & Adejuwon, 2023).

Third, *collaboration and partnerships*—such as forming digital marketing cooperatives or outsourcing to affordable local agencies—can help SMEs overcome resource constraints while maintaining professional content quality (Adejuwon & Lawal, 2022).

Fourth, to address *trust and security issues*, SMEs should adopt transparent business practices, ensure secure payment channels, and actively engage customers through consistent and authentic communication. Building online credibility has been shown to foster consumer confidence and loyalty (Benson, 2025).

Finally, SMEs need to stay *adaptive to platform changes* by continuously monitoring algorithm updates and embracing innovative features like in-app shops, reels, and live streaming. This adaptability allows SMEs to maintain visibility despite the dynamic nature of social media platforms (Nwali & Ntegeeh, 2022; Gbandi & Iyamu, 2022).

Overall, by investing in digital literacy, adopting cost-efficient strategies, building trust, and staying adaptive, SMEs in Nigeria can successfully overcome barriers to social media marketing and unlock its full potential for growth and competitiveness.

Comparative Analysis with Global Trends

Globally, Small and Medium Enterprises (SMEs) are increasingly shifting marketing budgets from traditional media to digital and social platforms. This trend is largely driven by the affordability of digital tools, their ability to reach wider audiences, and the availability of performance metrics that enhance decision-making (OECD, 2021; World Bank, 2022). SMEs in advanced economies now integrate social media into broader e-commerce ecosystems, linking digital advertising with secure online payments, logistics, and customer analytics. Such integration has enabled firms to not only increase visibility but also translate engagement into measurable sales growth and international market access (OECD, 2023).

Nigerian SMEs share these motivations, particularly the desire to reduce marketing costs and expand customer reach. Recent studies show that many Nigerian businesses actively use Facebook, WhatsApp, and Instagram to promote their products and maintain relationships with customers (Ilesanmi & Oyedepo, 2023; Nwali & Ntegeeh, 2022). For smaller enterprises, social media has become a low-cost substitute for

traditional advertising, allowing entrepreneurs to compete with larger firms on brand visibility. However, compared to global peers, the depth of adoption in Nigeria is more limited, with SMEs often relying on basic posting and messaging functions rather than advanced digital tools such as targeted advertising, social listening, or integrated analytics (Adejuwon & Lawal, 2022).

The barriers facing Nigerian SMEs are also more pronounced than those in developed economies. While global studies emphasize challenges such as managerial capacity, digital skills gaps, and financial constraints (World Bank, 2022; OECD, 2023), Nigerian SMEs contend with additional structural obstacles. These include poor internet connectivity, unreliable electricity supply, limited access to credit for digital investment, and lower levels of digital literacy (Gbandi & Iyamu, 2022; Benson, 2025). Such contextual challenges not only slow down adoption but also prevent many SMEs from moving beyond awareness-building into fully monetized digital marketing strategies.

Despite these challenges, the opportunities for Nigerian SMEs remain significant. Social media provides a platform for enhancing customer engagement, reaching underserved markets, and promoting innovation in brand communication (Nwali & Ntegeeh, 2022). Yet, to achieve parity with global trends, Nigeria requires enabling policies that improve digital infrastructure, expand SME financing, and strengthen capacity-building programs. Lessons from advanced economies highlight that successful adoption depends on integrated ecosystems where connectivity, secure payment systems, and digital skills training converge to support SME competitiveness (OECD, 2021; World Bank, 2022). Without addressing these structural gaps, Nigerian SMEs may continue to lag behind their global counterparts in maximizing the transformative potential of social media marketing.

Conclusion

This study examined the challenges and opportunities of social media marketing adoption by SMEs in Nigeria with a focus on brand engagement. The review of secondary data revealed that SMEs are central to Nigeria's economic development, accounting for the majority of businesses and employment. Social media platforms such as Facebook, Instagram, Twitter (X), and WhatsApp have emerged as vital tools for SMEs to enhance visibility, build customer relationships, and expand into new markets.

However, despite these opportunities, SMEs face significant challenges that limit the full exploitation of social media marketing. These include infrastructural deficits such as unstable internet and electricity supply, digital literacy gaps among entrepreneurs, lack of trust in online transactions, and financial constraints that

prevent investment in professional digital marketing strategies.

Overall, while Nigerian SMEs recognize the potential of social media for brand engagement, success depends largely on overcoming systemic barriers and equipping businesses with the resources and skills necessary for effective adoption.

Recommendations

The following recommendations are proposed:

Capacity Building and Training: Government agencies, business associations, and universities should organize regular workshops and training programs on digital marketing specifically tailored for SME owners. Such training should emphasize practical skills in content creation, data analytics, online branding, and customer engagement strategies. This will help bridge the persistent digital literacy gap and enable SMEs to maximize the benefits of social media marketing.

Improved Digital Infrastructure: To enhance adoption, the Nigerian government—through agencies such as the Ministry of Communications and Digital Economy—should prioritize investments in broadband penetration and affordable internet access for SMEs. Public-private partnerships with telecommunications companies can play a crucial role in reducing data costs and improving service reliability across urban and rural areas.

Access to Finance for Digital Transformation: Financial institutions and development banks should design credit facilities, grants, or subsidies specifically aimed at supporting SME digitalization. Funding mechanisms should include resources for social media advertising, acquisition of digital tools, and broader technology adoption. This will reduce financial barriers and allow SMEs to compete effectively in the digital marketplace.

Strengthening Trust and Cybersecurity: SMEs should adopt secure and user-friendly online payment systems while maintaining transparency in pricing, product quality, and service delivery. At the policy level, regulators must strengthen cybersecurity frameworks to protect both businesses and consumers from fraud and data breaches. Building trust in digital transactions is critical to expanding online engagement.

Collaborative Marketing Initiatives: SMEs should form cooperatives, clusters, or business networks to execute joint social media campaigns. Such collaborations can reduce marketing costs, expand audience reach, and encourage shared learning. By pooling resources and expertise, SMEs can enhance competitiveness and achieve economies of scale in digital promotion.

Policy Support and Incentives: The government should enact policies that provide tax incentives, grants, or subsidies to SMEs investing in digital marketing and online business operations. National agencies such as

the Small and Medium Enterprises Development Agency of Nigeria (SMEDAN) and the National Information Technology Development Agency (NITDA) should integrate social media marketing into their entrepreneurship and SME development programs to ensure widespread adoption.

Publication Date: 2025/11/28

Abstract

The contemporary entrepreneurial landscape, characterized by volatility and complex global challenges, increasingly necessitates moving beyond traditional, siloed approaches to business creation. The role of interdisciplinary knowledge and collaboration is now widely recognized as a critical catalyst for innovation and sustainable competitive advantage. This study provides a comprehensive empirical investigation into the precise relationship between a cross-disciplinary approach within entrepreneurial teams and subsequent venture performance and innovation outcomes. Utilizing a quantitative research design, a detailed survey was administered to a sample of 350 startup founders and core team members across high-growth technology and creative industries. The collected data was rigorously analyzed using descriptive statistics, correlation analysis, and multiple regression models to isolate the effects of disciplinary diversity. The findings robustly indicate a strong positive association between cross-disciplinary team composition and both radical innovation and measurable business growth. The results underscore that the strategic integration of diverse knowledge bases, cognitive frameworks, and professional networks leads to a significant increase in the originality and market disruption potential of new products and services, as well as enhanced market penetration and revenue generation. This study concludes that actively fostering cross-disciplinary collaboration is not merely a beneficial theoretical construct but a critical strategic imperative for founders, investors, and policymakers aiming to drive entrepreneurial success in an increasingly interconnected and complex economy.

Keywords: Cross-Disciplinary, Entrepreneurship, Innovation, Venture Performance, Collaboration, Knowledge Transfer, Team Heterogeneity.

Introduction

The contemporary entrepreneurial landscape is characterized by complexity and rapid change, where traditional, siloed approaches to problem-solving are often inadequate. In this dynamic environment, the ability to synthesize knowledge from multiple domains has emerged as a key determinant of a venture's potential for both innovation and long-term sustainability (Almeida & Kogut, 2007). The prevailing paradigm of entrepreneurial success, once focused on singular expertise, is now shifting to one that values the integration of diverse perspectives, methodologies, and skill sets. This convergence of disciplines, often termed a cross-disciplinary approach, is believed to foster more robust and novel solutions to market challenges. However, the empirical evidence linking this approach

directly to tangible performance metrics and innovation outcomes remains fragmented and often anecdotal.

The central problem addressed by this study is the empirical gap concerning the specific mechanisms through which a cross-disciplinary approach influences entrepreneurial performance. While a theoretical consensus exists that diversity of thought is beneficial, there is a lack of quantitative research that systematically measures this phenomenon and connects it to quantifiable results. For instance, questions remain regarding how the variety of academic backgrounds, professional experiences, and cognitive styles within a founding team translates into measurable gains in product innovation, market share, or revenue growth. Filling this gap is crucial for both academic theory and practical application, as it provides a solid foundation

for understanding and promoting effective team formation in new ventures.

This study aims to answer the following research questions: 1) What is the relationship between the level of cross-disciplinary knowledge within a startup team and its propensity for radical innovation? 2) To what extent does a cross-disciplinary approach correlate with improved venture performance metrics such as revenue growth and market presence? 3) What are the mediating factors, such as communication styles or organizational culture, that influence the effectiveness of a cross-disciplinary approach? Based on these questions, the study hypothesizes that a higher degree of cross-disciplinary integration is positively and significantly associated with both innovative outcomes and superior business performance.

The theoretical framework for this research is grounded in two primary perspectives: The **Resource-Based View (RBV)** and **Social Network Theory**. The RBV posits that a firm's competitive advantage is derived from its unique and valuable resources, which, in this context, are the diverse knowledge and skills of the founding team. A cross-disciplinary team possesses a unique bundle of intellectual resources that are difficult for competitors to replicate (Barney, 1991). Complementing this, Social Network Theory provides a lens for examining how these diverse resources are accessed and leveraged. The varied networks and connections of team members from different disciplines facilitate access to novel information and opportunities that would otherwise be inaccessible (Nahapiet & Ghoshal, 1998). This synthesis of unique resources and extended networks forms the backbone of a competitive advantage.

The findings of this research have significant implications for multiple stakeholders. Academically, this study contributes by providing empirical validation for long-held theories regarding diversity and innovation. For practitioners, the results offer a data-driven guide for strategic team formation, emphasizing the tangible benefits of recruiting individuals with varied backgrounds. Furthermore, policymakers and educational institutions can use this evidence to design programs that encourage and facilitate cross-disciplinary collaboration, thereby fostering a more robust entrepreneurial ecosystem. This paper proceeds by a detailed review of the literature, followed by an explanation of the methodology, a presentation of the results and discussion of findings, and concludes with a summary and recommendations for future research.

Literature Review: The Nexus of Disciplines, Knowledge, and Entrepreneurial Practice

The field of entrepreneurship is a multifaceted domain, drawing insights from economics, sociology, psychology, and management theory. A comprehensive

understanding of the cross-disciplinary approach requires a deep dive into several key theoretical and empirical streams of research. This section systematically reviews the foundational concepts and relevant studies that inform this research.

Defining Entrepreneurship and the Cross-Disciplinary Construct

The study of entrepreneurship has evolved significantly from its early economic conceptions, which often framed the entrepreneur as a passive bearer of risk (Cantillon, 1755) or a heroic, visionary individual single-handedly driving economic progress. This traditional, archetypal view centered on the singular founder—figures like Henry Ford or Thomas Edison—whose deep, vertical expertise and force of will were seen as the primary engines of venture creation. Success was often attributed to individual traits such as a high tolerance for risk, achievement motivation (McClelland, 1961), and an almost innate ability to identify and exploit opportunities. This perspective, while intuitively appealing, presented a largely static and individual-centric model that overlooked the complex, collaborative, and process-oriented nature of building a new venture in a modern, interconnected economy.

A paradigm shift in entrepreneurial scholarship began to challenge this lone-genius narrative. Contemporary research now fundamentally recognizes entrepreneurship not as a static state or a personality trait, but as a dynamic **process**—a series of activities and behaviors aimed at the creation of new ventures and the pursuit of opportunities under conditions of extreme uncertainty (Shane & Venkataraman, 2000). This process-oriented view reframes entrepreneurship from being about *who the entrepreneur is* to *what the entrepreneur does*. It involves the iterative steps of opportunity discovery, evaluation, and exploitation; resource acquisition and bundling; and the design of strategies to navigate ambiguous markets. This shift in focus naturally leads to an appreciation for the team, rather than the individual, as the core unit of analysis and the most effective vehicle for executing this complex process. As Eisenhardt & Schoonhoven (1990) argue, the team is the "strategic weapon" of the new venture, providing a broader knowledge base, a greater capacity for work, diverse social networks, and a collective resilience that is difficult for any single individual to muster.

It is within this modern, team-based understanding of entrepreneurship that the concept of a **cross-disciplinary approach** finds its critical relevance and definition. A cross-disciplinary approach refers to the deliberate, structured, and integrated use of knowledge, methodologies, perspectives, and heuristic frameworks originating from distinct academic, professional, and

cultural domains. It is essential to distinguish this construct from related but distinct forms of collaboration:

Multidisciplinary: This is the simplest form of collaboration, where experts from different disciplines work side-by-side on a common problem. Each contributor applies the tools and knowledge of their own field independently, with minimal integration. The outcome is often an aggregated solution where the parts remain distinct and identifiable—like a pizza where each topping sits in its own section. The fundamental knowledge structures of each discipline remain unchanged.

Interdisciplinary: This represents a deeper level of engagement. It involves the exchange of methods, concepts, and theories between disciplines, leading to a blending of approaches and the emergence of new understandings. Here, collaboration is required to synthesize perspectives, and the resulting output is a more cohesive whole where the original disciplinary boundaries begin to blur—akin to a stew where the ingredients meld together to create a new flavor profile.

Cross-disciplinary: This term is often used as an umbrella category encompassing interdisciplinary work but can also imply a more radical transcendence of disciplinary boundaries altogether. It involves the creation of a shared conceptual framework that draws on multiple disciplines but may result in entirely new paradigms, lexicons, and ways of knowing. In the entrepreneurial context, it is not merely about bringing together a marketer, an engineer, and a financier (multidisciplinary). It is about creating a team environment where these individuals do not just contribute their piece; they engage in a **symbiotic integration** where the collision of their distinct cognitive frameworks generates novel insights and knowledge that would not have emerged within the silos of any single discipline (Lattuca, 2002). The outcome is a new, integrated whole—a unique product, business model, or market approach—that is born at the intersection of fields.

Therefore, the essence of a cross-disciplinary approach in entrepreneurship is not demographic diversity (though that is often a prerequisite) but **cognitive diversity**—the differences in knowledge bases, problem-solving styles, and ways of thinking that team members bring to the table. It is about effectively blending these cognitive frameworks to tackle the "wicked problems" that define modern markets. A software engineer might frame a user authentication problem in terms of algorithmic security and computational efficiency. A behavioral psychologist on the same team might frame it in terms of cognitive load, user habit formation, and friction. A business strategist might focus on the monetization implications and customer acquisition costs of different solutions. A

cross-disciplinary team does not see these as competing perspectives but as complementary lenses. Through dialogue, negotiation, and a shared commitment to a common goal, they integrate these views to create a solution that is not only technically robust but also user-friendly and commercially viable—a solution that is greater than the sum of its parts.

This constructive tension is where true innovation resides. It forces team members to articulate their assumptions, defend their logic, and see problems from new angles, thereby avoiding the path dependency and groupthink that can plague homogeneous teams. The cross-disciplinary construct, therefore, moves beyond the simplistic notion of assembling a varied team roster. It demands a conscious effort to foster an organizational culture and implement processes that enable this deep integration, making it a deliberate strategic choice rather than a happy accident. It is the deliberate architecture of a team's intellectual capital to maximize its capacity for recombinant innovation and adaptive learning, which are the lifeblood of any new venture operating in today's complex and fast-paced global economy.

The Resource-Based View and Team Heterogeneity

The Resource-Based View (RBV) of the firm provides a compelling and robust theoretical argument for the strategic value inherent in a cross-disciplinary entrepreneurial team. Originating from the seminal work of scholars like Barney (1991), the RBV posits that a firm's pathway to sustained competitive advantage is not found in the competitive positioning of its products within an industry, but rather within the unique bundle of resources and capabilities it controls internally. For these resources to be truly strategic and capable of generating long-term superiority, they must be Valuable, Rare, Inimitable, and Non-substitutable (the VRIN framework).

A cross-disciplinary founding team represents the very embodiment of such a VRIN resource bundle. The collective knowledge, skills, cognitive frameworks, and heuristic approaches possessed by individuals from diverse academic and professional domains constitute a resource that is inherently rare. While many ventures may have access to capital, technology, or market opportunities, few can successfully assemble a team whose collective intellect spans such a wide spectrum of human understanding. This rarity is compounded by the value this diversity creates; it enables the venture to perceive complex market problems through multiple lenses, design solutions that are both technically sound and human-centric, and develop business models that are both innovative and viable.

Perhaps the most critical attribute of this team-based resource is its inimitability. A competitor can easily replicate a software feature, undercut a price, or even

poach a single key employee. However, the dynamic social system of a well-integrated, cross-disciplinary team is characterized by causal ambiguity and social complexity. The specific way in which a designer's empathy informs a developer's architecture, which in turn is shaped by a marketer's understanding of customer acquisition channels, creates a unique and synergistic culture of innovation. This complex web of interactions, shared experiences, and tacit understandings is impossible to fully codify or transplant, making it incredibly difficult for competitors to imitate. Furthermore, such a team is non-substitutable; a homogeneous team of brilliant specialists, regardless of their individual talents, cannot simply be swapped in to produce the same recombinant innovative outcomes. The whole is fundamentally greater than the sum of its parts.

This heterogeneity of skills and knowledge directly translates into a superior capacity for strategic problem-solving. As argued by Amason (1996), diverse teams are adept at avoiding groupthink and cognitive entrenchment. A team composed solely of engineers might efficiently solve a technical problem but may completely overlook a fundamental market need or user experience flaw. In contrast, a cross-disciplinary team is equipped to engage in a more comprehensive and critical analysis of any given challenge. The business strategist will question the commercial viability, the designer will advocate for usability, and the engineer will assess technical feasibility, ensuring that the final solution is robust across all critical dimensions. This allows the team to not only solve presented problems more effectively but also to identify latent opportunities and emerging threats that a homogeneous group, blinded by its shared paradigm, might consistently overlook. Thus, from an RBV perspective, the cross-disciplinary team is not merely a functional unit of operation but is itself the primary strategic asset from which all other advantages flow.

The Role of Social Networks in Knowledge Transfer

While the Resource-Based View illuminates the internal strategic asset of a diverse team, Social Network Theory provides the crucial lens for understanding how this internal asset is enriched and activated through external connections. It shifts the analytical focus from the attributes of individual actors to the patterns of relationships between them, positing that an actor's position within a network is a key determinant of their access to information, opportunities, and influence.

Within a cross-disciplinary entrepreneurial team, each member is a nexus of their own unique professional and personal networks, each extending into distinct industries, academic circles, and communities of practice. A team member with a background in

biomedical research, for instance, is embedded in a network of scientists, clinicians, and regulatory experts. Another member from a venture capital background is connected to investors, financiers, and serial entrepreneurs. These networks are not merely social ornaments; they function as vital conduits for the flow of information and resources that are lifeblood for a new venture (Nahapiet & Ghoshal, 1998). This is where the concept of **structural holes**, advanced by Burt (2004), becomes paramount.

Structural holes are the gaps or disconnections between different clusters within a larger network. The network of academic scientists and the network of venture capitalists, for example, may have few direct connections, representing a significant structural hole. A cross-disciplinary team, by its very composition, is exquisitely positioned to bridge these structural holes. The scientist on the team can access novel research and emerging technologies, while the venture capitalist can access funding and market intelligence. By connecting these disparate clusters, the team can broker information flow, gaining access to non-redundant, often privileged, information long before it becomes public knowledge. This brokerage role provides a critical advantage: early awareness of emerging trends, potential partnerships, and new market opportunities that are invisible to teams embedded within a single, dense network.

However, the mere existence of these diverse external networks is insufficient. The effectiveness of knowledge transfer *within the team itself* is a function of the internal social capital built among its members. Social capital, defined as the aggregate of actual or potential resources derived from a durable network of relationships, is built on a foundation of trust, shared language, and shared narrative (Nahapiet & Ghoshal, 1998). Without trust, team members may hoard information from their external networks rather than share it. Without a shared understanding, the information that is shared may be misinterpreted due to disciplinary jargon or different epistemic cultures. Therefore, the ultimate value of a cross-disciplinary team's extended social network is contingent upon its ability to foster a strong internal culture of collaboration. The team must develop what Tushman and Nadler (1978) would call an effective "information processing" capacity, transforming the diverse information flowing through their external ties into shared knowledge that can be leveraged for innovation and strategic action.

Innovation Outcomes and the Convergence of Disciplines

Innovation, in its most essential form, is not a process of creation from nothing but rather the novel recombination of existing elements into new

configurations that create value (Schumpeter, 1934). This recombinative view of innovation directly explains why cross-disciplinary teams are such potent engines for breakthrough ideas. The diversity of knowledge domains within such a team dramatically expands the available "library" of elements—concepts, methodologies, technologies, and frameworks—that can be combined. Where a homogeneous team might recombine elements within a single domain to achieve incremental improvements, a cross-disciplinary team can combine elements from vastly different domains to create something truly radical and disruptive.

Research has consistently demonstrated that teams with varied cognitive backgrounds are significantly more likely to generate radical innovations rather than incremental ones (Grant & Baden-Fuller, 2004). This occurs because the collision of different perspectives creates a necessary and productive cognitive friction. It forces individuals to move beyond their automatic thinking patterns, to articulate and defend their underlying assumptions, and to engage in a deeper level of critique and synthesis. A software developer might approach a problem with a mindset of algorithmic efficiency and scalability. A human-centered designer, by contrast, prioritizes user empathy and intuitive interaction. A medical doctor focuses on clinical efficacy and patient safety. When these perspectives converge on a health-tech challenge, the resulting solution is forced to reconcile these often-competing priorities. The tension between these viewpoints does not hinder progress; rather, it prevents premature convergence on a sub-optimal solution and pushes the team toward a more holistic, sophisticated, and innovative product that satisfies technical, human, and functional requirements simultaneously.

This process of knowledge recombination at the intersection of fields is where the highest potential for disruption lies. The most transformative innovations often occur not within the core of a single discipline but at its fuzzy boundaries where it interacts with another. For example, the field of genomics was revolutionized not by biologists alone but by the convergence of biology with advanced computing and data science. Similarly, the rise of fintech is a story of finance colliding with software engineering and design. A cross-disciplinary team is a microcosm of this convergence, intentionally designed to inhabit and exploit these fertile intersections. By creating an environment where different disciplinary "languages" are spoken and different ways of knowing are valued, these teams institutionalize the very process of recombinant innovation, making them uniquely capable of developing the groundbreaking products and services that define and dominate new markets.

Methodology

This study employed a quantitative research design to test the hypotheses regarding the relationship between a cross-disciplinary approach and entrepreneurial outcomes. The research was conducted using a cross-sectional survey methodology, which allowed for the collection of data on a broad range of variables from a diverse sample of startup teams.

Research Design and Participants

The research design was a cross-sectional survey administered to 350 founders and early-stage team members from ventures in the technology and creative industries. The target population was defined as individuals involved in startups that had been operating for at least one year to ensure some measure of performance could be assessed. The sample was drawn using a combination of online professional networks (e.g., LinkedIn) and direct outreach to startup incubators and accelerators. Data was collected over a four-month period. Out of 500 invitations sent, 350 completed surveys were received, yielding a response rate of 70%.

Measures

The survey instrument was developed based on existing validated scales and was pre-tested with a small group of ten entrepreneurs to ensure clarity and reliability. All variables were measured using a 7-point Likert scale, ranging from 1 (Strongly Disagree) to 7 (Strongly Agree).

Cross-Disciplinary Approach (Independent Variable): This was a composite measure of the diversity of academic and professional backgrounds within the founding team. Participants rated their team on items such as "Our team has members from different academic fields (e.g., engineering, humanities, business)" and "Our team members have professional experience in different industries."

Innovation Outcomes (Dependent Variable): This was measured by assessing the novelty and originality of the venture's primary product or service. Items included: "Our product/service is considered a 'first-mover' in the market" and "Our innovation has fundamentally changed how customers address a problem."

Venture Performance (Dependent Variable): A multi-item scale was used to measure self-reported performance relative to competitors. Items focused on revenue growth, market share increase, and customer acquisition rate over the past year.

Control Variables: Key demographic and firm-level variables were included to control for potential

confounding effects. These included team size, venture age, and total funding raised.

Data Analysis

All collected data was analyzed using the statistical software package SPSS. The analysis proceeded in three main stages. First, descriptive statistics were calculated to summarize the sample's characteristics and the central tendencies of the measured variables. Second, Pearson correlation analysis was performed to examine the bivariate relationships between the variables. Finally, to test the hypotheses and determine the unique predictive power of the independent variable, a series of multiple linear regression models were run. The assumptions of linear regression were

checked, including multicollinearity, homoscedasticity, and normality of residuals.

Results and Discussion of Findings

This section presents the findings from the data analysis, supported by a series of tables and figures, and provides a detailed discussion of these results in the context of the existing literature.

Descriptive and Correlation Findings

The sample consisted of 350 entrepreneurs. The average team size was 4.2 members, and the average venture age was 2.8 years. The descriptive statistics for the main variables are presented in Table 1, providing a snapshot of the sample's characteristics.

Table 1: Descriptive Statistics of Key Variables

Variable	N	Mean	Standard Deviation
Cross-Disciplinary Approach	350	5.82	1.15
Innovation Outcomes	350	5.51	1.28
Venture Performance	350	5.76	1.09
Team Size	350	4.2	1.55
Venture Age	350	2.8	1.21

Source: Author's own empirical data, 2025

A correlation analysis was conducted to assess the relationships between the main variables. As shown in Table 2, a strong positive correlation was observed between the cross-disciplinary approach and both innovation outcomes ($r=.68, p<.001$) and venture

performance ($r=.62, p<.001$). These preliminary findings provide initial support for the study's core hypotheses.

Table 2: Correlation Matrix of Main Study Variables

Variable	1	2	3	4	5
1. Cross-Disciplinary Approach	1.00				
2. Innovation Outcomes	.68**	1.00			
3. Venture Performance	.62**	.75**	1.00		
4. Team Size	.21*	.18*	.25**	1.00	
5. Venture Age	.15	.20*	.18*	.41**	1.00

*Note: * $p<.05$; ** $p<.01$. Source: Author's own empirical data, 2025*

Regression Analysis and Interpretation

To further explore the predictive power of a cross-disciplinary approach, two separate multiple linear regression models were run. Model 1 examined the

effect on innovation outcomes, while Model 2 analyzed the impact on venture performance, both while controlling for team size and venture age.

Table 3: Regression Analysis of Innovation and Performance Outcomes

Model	R ²	F-statistic	Standardized Coefficients (β)	p-value
Model 1: Predicting Innovation Outcomes				
Constant				
Cross-Disciplinary Approach	.47	25.12**	.65**	< .001
Team Size			.11	.08
Venture Age			.09	.12
Model 2: Predicting Venture Performance				
Constant				
Cross-Disciplinary Approach	.42	22.89**	.58**	< .001
Team Size			.15*	.04
Venture Age			.07	.15

Note: * $p < .05$; ** $p < .01$. Source: Author's own empirical data, 2025

The regression results confirm the initial correlational findings. In Model 1, the cross-disciplinary approach was a significant and strong predictor of innovation outcomes ($\beta = .65$, $p < .001$). This finding is consistent with the literature on knowledge recombination (Schumpeter, 1934; Grant & Baden-Fuller, 2004), as it suggests that a diversity of cognitive resources is a fundamental prerequisite for generating novel and impactful ideas. The large beta coefficient indicates that for every one standard deviation increase in a team's cross-disciplinary nature, there is a .65 standard deviation increase in innovation outcomes, a substantial effect.

Deeper Insights and Mediating Factors

The strong correlations between innovation and performance found in this study, as shown in Table 2 ($r = .75$, $p < .01$), suggest a powerful mediating role. While not directly tested in the regression models, the data strongly supports the notion that the cross-disciplinary approach first enhances a team's innovative capacity, and this heightened innovation subsequently drives superior market performance. The findings align with the view that innovation is a key driver of entrepreneurial success (Shane & Venkataraman, 2000).

Conclusion and Recommendations

This study has empirically demonstrated a robust positive relationship between a cross-disciplinary approach in entrepreneurial teams and venture performance and innovation outcomes. The findings validate key theoretical propositions from the Resource-Based View and Social Network Theory, providing a quantitative basis for the intuitive belief that diverse teams outperform homogeneous ones. By employing a systematic research design and rigorous data analysis, this research provides a clear and

In Model 2, the cross-disciplinary approach was also a significant predictor of venture performance ($\beta = .58$, $p < .001$). This result supports the Resource-Based View (Barney, 1991), demonstrating that the unique intellectual resources of a diverse team translate directly into superior business results. The finding that venture performance is strongly linked to this approach highlights its role not just in creative ideation but in the practical execution and market success of a startup. Interestingly, team size was also a significant predictor of venture performance in this model, suggesting that a larger team, independent of its diversity, may bring a sufficient amount of human capital to drive growth.

compelling case for the strategic importance of integrating varied knowledge bases in new venture creation.

The unique contribution of this research lies in its empirical validation of the long-held assumption that cross-disciplinary teams lead to better outcomes. This study moved beyond qualitative accounts to provide quantifiable evidence, a critical step for solidifying this concept in the academic literature. For example, the significant beta coefficients observed in the regression analysis are concrete measures of the positive impact. Based on these findings, a number of key recommendations are offered for both practitioners and future researchers. For practitioners, it is recommended that entrepreneurs and venture capitalists prioritize the formation of founding teams that are not only skilled but also diverse in their academic and professional backgrounds. Recruitment strategies should explicitly seek to create a mosaic of disciplines, as this has been shown to be a direct pathway to both innovation and market success. For educational institutions and policymakers, the findings suggest a need to encourage and fund cross-disciplinary programs and incubators

that facilitate interaction between students from different schools and departments.

For future research, this study's limitations, such as its cross-sectional design, point to clear avenues for further inquiry. A longitudinal study could more accurately capture the temporal relationship between a team's composition and its evolving performance over time. Additionally, future research should explore the

specific communication and conflict-resolution strategies employed by highly successful cross-disciplinary teams to understand the processes that facilitate effective knowledge integration. Investigating these mediating factors will provide a more nuanced and comprehensive understanding of the cross-disciplinary approach.

Debt Overhang in Nigeria: An Autoregressive Distributed Lag (Ardl) Approach

UKEDJERE, Stephen

Department of Banking and Finance,
Faculty of Management Sciences,
Delta State University, Abraka Nigeria

Publication Date: 2025/11/28

Abstract

This study investigates the debt overhang dynamics in Nigeria and their implications for economic growth, using an Autoregressive Distributed Lag (ARDL) framework with data spanning 1980–2024. The ex post facto research design is adopted, focusing on Debt Service Ratio (DSR), Exchange Rate (EXCHR), and Inflation Rate (INFR) as explanatory variables, with GDP Growth Rate (GDPGR) as the dependent variable. The ARDL results reveal that in the short run, fluctuations in DSR, EXCHR, and INFR do not significantly influence growth, as their coefficients are statistically insignificant at the 5% level. However, the error correction term (-1.138018) is negative, highly significant, and greater than unity in absolute value, confirming a strong and rapid adjustment mechanism, with deviations corrected within one year. Long-run results indicate that DSR and EXCHR remain insignificant in explaining growth, suggesting that debt servicing obligations and exchange rate volatility are not the principal constraints to long-term output expansion. Inflation, by contrast, has a weakly significant positive effect, implying that moderate inflation may stimulate growth through demand-pull effects. A positive and significant constant further highlights the role of structural and institutional drivers beyond macroeconomic indicators. The findings confirm the presence of a long-run cointegration relationship among the variables, underscoring inflationary dynamics as a key growth determinant in Nigeria. Overall, the study concludes that while debt servicing and exchange rate instability are not immediate predictors of growth, inflation and structural resilience remain pivotal to Nigeria's economic trajectory. The study recommends prudent monetary management, growth-oriented fiscal reforms, and structural diversification to enhance resilience and mitigate the vulnerabilities of debt overhang

Keywords: *Debt overhang, Debt Service Ratio, Exchange Rate, Inflation Rate, Trajectory, Vulnerable Economy, ARDL*

Introduction

Nigeria's post-independence development trajectory has repeatedly been shaped by cycles of borrowing and adjustment, and the recent resurgence of public indebtedness has rekindled concerns about a debt overhang that could stifle growth and fiscal space for development. Debt overhang, where expected future debt service reduces current investment incentives and crowds out productive spending, has particular salience for Nigeria because rising debt-service obligations coincide with persistent macroeconomic vulnerabilities: exchange-rate volatility, elevated inflation, and the need to rebuild fiscal buffers after subsidy and currency reforms (IMF, 2024). Empirical and policy analyses since 2023 show that Nigeria's public debt metrics and debt-service-to-revenue ratios have become central to discussions of macroeconomic sustainability and growth prospects, with policy institutions warning that high debt service limits government capacity to finance infrastructure and human capital (World Bank, 2024;

IMF, 2025). At the same time, the composition and terms of borrowing, external versus domestic, concessional versus market-rate, matter for growth outcomes because they determine the volatility of repayments and the fiscal risk transferred to future budgets (World Bank, 2024).

Macroeconomic transmission channels link the three key independent variables in this study, debt service ratio (DSR), exchange rate (EXCHR), and inflation rate (INFR), to real GDP growth (GDPGR) in distinct but interacting ways. High and rising DSR implies larger shares of government revenue diverted to servicing obligations rather than investment, which can depress aggregate demand and public capital formation and thereby constrain medium-term growth (Salisu, 2024). Exchange-rate instability, particularly sharp depreciations, raises the local-currency cost of servicing foreign obligations and can transmit imported inflation into the economy, eroding real incomes and investment returns; however, managed devaluations

can also support external competitiveness and non-oil export-led recovery if combined with structural reforms (Reuters, 2025; Nigerian Bureau of Statistics, 2024). Persistent inflation undermines price stability and raises real interest rates, increasing the cost of capital for private investors and potentially worsening crowding-out effects when the government competes for scarce loanable funds. Recent analyses of Nigeria find mixed short- and long-run relationships among these variables; some studies document threshold effects and nonlinearities where moderate levels of debt or inflation may be growth-neutral or even supportive, while excessive levels become contractionary (Ogonegbu, 2025; ResearchGate studies, 2024).

Methodologically, an ARDL approach is particularly appropriate for the Nigerian context because it accommodates variables integrated of different orders and captures both short-run dynamics and long-run equilibrium relationships, making it well-suited to probe whether debt service impacts growth immediately or primarily through longer-run channels mediated by exchange-rate adjustments and price-level instability (Dawood, 2023; Oyadeyi, 2025). From a policy perspective, clarifying these dynamics is forward-looking and actionable: if high DSR is found to materially retard growth, policymakers should prioritize debt-management strategies, revenue mobilization, and spending reprioritization; if exchange-rate and inflation dynamics dominate, macroeconomic stabilization and structural reforms to boost export capacity and domestic productivity become crucial. Given Nigeria's evolving macroeconomic environment since 2023, marked by fiscal consolidation, currency unification efforts, and strong non-oil sector performance, an ARDL examination of debt overhang with DSR, EXCHR, and INFR as covariates will provide timely, policy-relevant insights into the pathways by which indebtedness may translate into a fragile growth trajectory.

Statement of the Problem

The persistent rise in Nigeria's debt service ratio relative to government revenue has generated renewed debate on whether the country is caught in a debt overhang trap where resources channeled to debt servicing crowd out productive investment and depress growth. Recent studies emphasize that excessive debt burdens may erode fiscal space and diminish the ability of governments to finance infrastructure, social services, and economic transformation (Salisu, 2024; Ogonegbu, 2025). The concern is compounded by exchange-rate volatility, which raises the domestic cost of external debt servicing and amplifies macroeconomic fragility, particularly when currency depreciation coincides with inflationary pressures (IMF,

2024; World Bank, 2024). Inflation itself further complicates the trajectory of growth, as sustained price instability distorts investment incentives, reduces purchasing power, and raises borrowing costs for both government and private actors (Reuters, 2025).

Scholars highlight that the interaction of debt servicing, exchange rate instability, and inflation creates a vicious cycle that constrains economic expansion. For instance, Dawood (2023) underscores that institutional weakness magnifies the negative growth impact of foreign debt, while Oyadeyi (2025) notes that ARDL models reveal both short-run shocks and long-run equilibria linking debt to output performance. These findings suggest that Nigeria's current macroeconomic configuration, high debt-service-to-revenue ratios, exchange rate instability, and double-digit inflation, fits the classic profile of debt overhang vulnerability. Against this backdrop, empirical investigation using an ARDL framework is not only timely but necessary to disentangle the short- and long-run effects of debt servicing, exchange rate, and inflation on GDP growth. The outcomes will provide evidence-based insights to guide debt management strategies, exchange rate stabilization measures, and inflation-targeting policies. This necessity motivates the present study, which seeks to contribute to the growing body of knowledge on Nigeria's debt-growth nexus in the face of enduring macroeconomic instability.

Main Objective of the Study

The main objective of this study is to empirically examine the impact of debt overhang on Nigeria's economic growth trajectory using an Autoregressive Distributed Lag (ARDL) approach.

Specific Objectives

1. To investigate the short- and long-run impact of debt service ratio on Nigeria's GDP growth rate.
2. To analyze the impact of exchange rate volatility on economic growth in Nigeria.
3. To examine the impact inflation rate and GDP growth rate in Nigeria.

Research Questions

1. What is the short- and long-run impact of debt service ratio on GDP growth in Nigeria?
2. How does exchange rate volatility impact Nigeria's economic growth?
3. What is the impact between inflation rate and GDP growth in Nigeria?

Research Hypotheses

1. H01: Debt service ratio has no significant short- or long-run impact on Nigeria's GDP growth.,
2. H02: Exchange rate volatility has no significant impact on Nigeria's GDP growth.

3. H01,: Inflation rate has no significant impact with GDP growth in Nigeria.

Justification of the Study

1. Provides empirical evidence on the debt overhang hypothesis in Nigeria, guiding policymakers on sustainable debt management.
2. Offers insights into the dynamic effects of exchange rate movements on growth, informing monetary and exchange rate policy reforms.
3. Contributes to literature by applying ARDL, which captures both short-run shocks and long-run equilibria.
4. Assists fiscal authorities in balancing debt servicing obligations with developmental expenditure.
5. Benefits researchers, students, and development partners as a reference for policy debates on macroeconomic stability.

Limitations of the Study

1. **Data gaps and inconsistencies:** This is addressed by harmonizing multiple sources (CBN, DMO, World Bank, NBS).
2. **Endogeneity concerns:** This is minimized using ARDL, which accommodates mixed integration orders (I(0) and I(1)).
3. **Volatility of exchange rate and inflation data**
4. **Limited sample size for sub-periods:** ARDL chosen for small-sample efficiency.
5. **Model specification errors:** This is avoided through diagnostic tests (serial correlation, heteroskedasticity, stability tests).

Operational Definition of Terms

1. **Debt Overhang:** A condition where high debt service burdens crowd out productive investment and thereby slowing growth.
2. **Debt Service Ratio (DSR):** Proportion of debt servicing obligations to government revenue.
3. **Exchange Rate (EXCHR):** The value of the naira relative to foreign currencies, especially USD.
4. **Inflation Rate (INFR):** Annual percentage change in consumer price index, reflecting price stability.
5. **GDP Growth Rate (GDPGR):** Annual percentage change in real gross domestic product, showing economic performance.

Scope of the Study

Brief Introduction: The scope centers on Nigeria's debt-growth nexus in the presence of exchange rate volatility and inflationary pressures.

Content Scope: The study investigates the interaction of debt service ratio, exchange rate, and inflation with

GDP growth, analyzing both short- and long-run dynamics.

Geographical Scope: Nigeria, as a single-country study, focusing on macroeconomic aggregates and national accounts.

Variable Scope:

Dependent Variable: GDP Growth Rate (GDPGR). Independent Variables: Debt Service Ratio (DSR), Exchange Rate (EXCHR), Inflation Rate (INFR).

Data Scope:

Annual time series data from 1980–2024, sourced from Central Bank of Nigeria (CBN) Statistical Bulletins, Debt Management Office (DMO) reports, National Bureau of Statistics (NBS), and World Bank Development Indicators.

Review of Related Literature

Conceptual Review

Debt Overhang

Nigeria's debt overhang literature since 2023 has increasingly focused on the role of debt service burdens in crowding out public investment and constraining growth, with several Nigerian scholars documenting a persistent negative association between higher debt-service ratios and real GDP growth. Empirical studies using time-series techniques find that elevated DSR reduces fiscal space for capital formation and social spending, thereby lowering potential output and amplifying vulnerability to external shocks (Salisu, 2024; NG Joshua, 2024). This strand of work emphasizes that not all debt is equally harmful; composition, maturity, and servicing terms matter; so that short-term, high-cost obligations are especially prone to generate overhang effects in Nigeria's context of revenue volatility and weak automatic stabilizers (CBN, 2023; Okafor & Adeolu, 2023). Recent Nigerian ARDL and nonlinear ARDL applications further report that the adverse impact of debt servicing can be both immediate (short-run) and persistent (long-run), implying that policy responses must combine near-term fiscal consolidation with structural reforms to improve debt management and revenue mobilization.

Exchange-rate movements and inflation are central channels through which debt service amplifies macroeconomic fragility in Nigeria. Studies by Nigerian researchers show that sharp naira depreciation raises the domestic-currency cost of external obligations and can trigger inflationary pressures that further erode real incomes and investment returns (Bamidele, 2024; Bangura & Omojolaibi, 2024). Empirical investigations that jointly model DSR, EXCHR, and INFR typically find interactive effects: for example, exchange-rate volatility may worsen the growth impact of debt servicing when inflation is high and monetary policy credibility is weak (K. Bamidele,

2024; Morlai Bangura & Omojolaibi, 2024). Other recent Nigerian analyses highlight threshold and nonlinear dynamics; moderate inflation or manageable exchange-rate adjustments may not harm growth, but once debt servicing and price instability cross critical levels, the economy experiences accelerating contractionary effects (Okafor & Adeolu, 2023; NG Joshua, 2024). Collectively, these studies justify an ARDL approach that captures mixed orders of integration and uncovers both short-run shocks and long-run equilibria in Nigeria's debt–growth nexus.

Vulnerable Economy

The concept of a vulnerable economy has been widely applied in Nigerian scholarship to describe an economic system that is highly exposed to shocks, lacks resilience, and demonstrates fragile growth performance over time. Nigeria's vulnerability is often proxied with fluctuations in GDP growth rate, which reflects the economy's capacity to generate sustained expansion amidst structural weaknesses. Recent Nigerian studies argue that persistent volatility in GDP growth arises from overdependence on oil revenues, inadequate diversification, and weak fiscal buffers that amplify exposure to external and domestic shocks (Ojo & Akinwale, 2023; Salami, 2024). In particular, sharp declines in oil prices or disruptions in production often trigger recessions, illustrating how growth instability reflects systemic vulnerability. This view aligns with findings that Nigeria's growth trajectory remains unstable because debt servicing, inflationary pressures, and currency depreciation interact to undermine macroeconomic stability and hinder resilience (Okafor & Adeolu, 2023; Yusuf & Bamidele, 2024).

Further, Nigerian authors emphasize that vulnerability is not only cyclical but also structural, rooted in governance challenges, infrastructural deficits, and demographic pressures that strain resources and limit inclusive growth. The GDP growth rate, therefore, serves as a comprehensive proxy because it captures both the magnitude and consistency of output changes, reflecting underlying fragility when growth is low or negative. For instance, recent empirical evidence demonstrates that even during periods of positive growth, Nigeria's economy remains vulnerable when growth is non-inclusive, concentrated in a few sectors, or quickly reversed by shocks (Adebayo & Ojo, 2023; Uchenna & Eze, 2024). These findings suggest that growth volatility remains a valid indicator of economic vulnerability in Nigeria, necessitating policies that stabilize GDP growth through diversification, improved fiscal management, and debt sustainability measures. Thus, framing Nigeria as a vulnerable economy using GDP growth rate is supported by contemporary Nigerian scholarship that highlights the

interaction between structural weaknesses and cyclical shocks.

Theoretical Framework

Debt Overhang Theory

The Debt Overhang Theory, pioneered by Krugman (1988), posits that when a country's debt burden becomes unsustainable, the expectation of future debt servicing discourages both private and public investment. In Nigeria's case, a high Debt Service Ratio (DSR) diverts resources from productive spending, while exchange rate depreciation increases the local cost of servicing external debt, and inflation further erodes real investment returns. Together, these proxies illustrate how excessive debt obligations generate growth-reducing dynamics consistent with the debt overhang hypothesis.

Liquidity Constraint Theory

Liquidity Constraint Theory argues that when governments allocate large portions of revenue to debt servicing, they face binding fiscal constraints that reduce their ability to finance growth-enhancing projects. For Nigeria, high DSR combined with volatile exchange rates constrains fiscal flexibility, forcing reliance on short-term borrowing or monetary financing that worsen inflation, thereby weakening GDP growth.

Keynesian Theory of Public Debt and Growth

From a Keynesian perspective, public borrowing can stimulate growth if directed toward productive investments. However, when debt service outpaces revenue growth, as in Nigeria's recent experience, the expansionary effect turns contractionary. Exchange rate instability and high inflation reduce the multiplier effects of public spending, meaning debt ceases to be growth-inducing and instead contributes to macroeconomic vulnerability.

Empirical Review

Amoo (2024) investigates how debt servicing affects Nigeria's economic growth, aiming to quantify short- and long-run impacts of external debt service on GDP. The study adopts an ARDL framework to allow mixed orders of integration, using annual data drawn from CBN and DMO time series spanning the 1980s–2022. Diagnostics include unit-root testing and bounds testing for cointegration; short- and long-run coefficients are estimated with error-correction terms. Findings show that higher debt service significantly reduces long-run GDP growth while short-run effects are weaker, leading the author to recommend tighter debt-management, revenue mobilization, and prioritization of concessional borrowing.

Salisu (2024) applies a nonlinear ARDL (NARDL) to examine asymmetric effects of debt servicing and exchange-rate movements on growth. Using CBN and World Bank annual indicators (1990–2023), the paper decomposes positive/negative shocks in DSR and EXCHR to test asymmetric responses. Results reveal that depreciation and rising debt service exert stronger negative long-run effects on GDP than appreciation or falling DSR, implying policy must guard against one-way risks; recommendations include building buffers, staggered maturities and exchange-rate policy coordination.

Aladejare (2024) focuses on external debt servicing, sustainability metrics and growth over 1980–2022 using ARDL and debt sustainability ratios from DMO, CBN and IMF datasets. The analysis employs cointegration tests and impulse-response style interpretation from the ARDL error-correction estimates. Empirical results show a statistically significant negative long-run relationship between external debt service and GDP growth, concluding that unsustainable servicing patterns crowd out investment; the study calls for enhanced transparency in borrowing, improved project selection, and stronger fiscal anchors. Odey (2023) assesses external debt burden and GDP growth using annual CBN statistics (1986–2021) and standard ARDL procedures. The methodology includes stationarity tests and Toda–Yamamoto causality checks alongside ARDL estimates to examine directionality. Findings point to bidirectional causality between debt indicators and growth with high debt ratios impairing growth performance; the author concludes that debt composition and service timing matter and recommends restructuring to reduce short-term rollover risk and boost productive expenditures.

Mohammed (2025) provides cross-country and single-country evidence that escalating external debt servicing harms long-run growth, using panel and country-specific ARDL estimations covering 1995–2023; Nigeria is highlighted among case studies. Data are sourced from World Bank (WDI) and IMF fiscal reports; robustness checks include alternative debt measures and control for institutional quality. Results consistently show negative long-term coefficients for debt service on growth, prompting recommendations for debt ceilings, concessional borrowing, and stronger debt-management offices.

Umoh (2025) examines the interplay between total external debt, external debt servicing and growth in Nigeria (2011–2021) using ARDL bounds testing and VECM for dynamic interpretation, with data from DMO, CBN and NBS. The study reports that while short-run dynamics are mixed, long-run estimates demonstrate that rising debt servicing and weak export performance reduce GDP growth; policy conclusions

stress enhancing export capacity, renegotiating costly loans, and improving public investment efficiency.

Research Gaps

Brief Introduction

The empirical literature on debt overhang and its effects on vulnerable economies like Nigeria provides diverse insights, yet inconsistencies remain in findings, variables applied, and methodologies employed. While several studies have considered debt service ratios, exchange rate dynamics, and inflationary pressures, few have jointly examined their interactive effects on economic growth within the Nigerian context using robust econometric approaches such as ARDL. Moreover, there is still limited consensus on how these macroeconomic shocks translate into long-term vulnerability trajectories.

Findings Gaps

Most of the reviewed studies agree that high debt service burdens and exchange rate volatility negatively affect growth (Okoye & Chukwuma, 2023; Bello & Ibrahim, 2024). However, other works, such as Ojo and Falade (2023), find instances where moderate debt levels stimulate investment and output. These contradictions suggest a lack of clarity in the threshold at which debt overhang begins to impede growth, especially in Nigeria where structural imbalances persist. Furthermore, the interaction between inflationary pressure and debt sustainability is rarely conclusive, with some studies observing inflationary shocks as outcomes rather than drivers of debt problems (Adeleke & Okonkwo, 2024).

Variables Gaps

While most studies focus on debt-to-GDP ratios or total external debt, fewer consider debt service ratio (DSR) as the primary measure of overhang, despite its direct reflection of repayment burdens (Musa & Danladi, 2023). Exchange rate and inflation have been treated separately in many studies, but the synergistic effect of these variables on growth vulnerability is underexplored (Ogunleye & Eze, 2024). Similarly, few empirical works integrate these proxies into a unified model that reflects both domestic and external shocks together.

Methodological Gaps

The reviewed studies largely employed OLS, VECM, or GMM approaches (Johnson & Lee, 2023; Bello & Ibrahim, 2024). However, these methods often overlook the dynamic short-run and long-run interactions between debt and growth. Only a handful of works attempt to capture the autoregressive distributed lag structure, which is more suitable for mixed integration orders of time series data (Adeleke &

Okonkwo, 2024). This creates a methodological vacuum, particularly for economies like Nigeria, where structural breaks and shocks significantly influence macroeconomic outcomes.

Geographical Gaps

Although several studies explore African economies broadly, Nigeria-specific analyses remain relatively limited compared to cross-country studies (Johnson & Lee, 2023). For instance, works focusing on Sub-Saharan Africa tend to generalize findings without addressing Nigeria's peculiarities, such as heavy oil dependence and foreign exchange volatility (Musa & Danladi, 2023). More focused, country-specific studies that adopt Nigeria as a case study are therefore essential for developing context-driven policy prescriptions.

Research Methodology

Research Design

This study adopts an ex post facto research design, which is suitable since the variables under investigation, Debt Service Ratio (DSR), Exchange Rate (EXCHR), Inflation Rate (INFR), and GDP Growth Rate (GDPGR), are historical and cannot be manipulated by the researcher. The design facilitates an empirical assessment of how debt overhang dynamics impact Nigeria's economic vulnerability over time, relying strictly on factual data and trends. The Autoregressive Distributed Lag (ARDL) model is employed to capture both short-run and long-run dynamics among the variables, making it appropriate for time series data with mixed integration orders.

Population of the Study

The population of this research covers all annual macroeconomic indicators related to debt servicing, exchange rate, inflation, and economic growth in Nigeria from 1980 to 2024. These variables are reported by reputable national institutions such as the Central Bank of Nigeria (CBN), the National Bureau of Statistics (NBS), and the Debt Management Office (DMO). These agencies constitute the authoritative sources for Nigeria's macroeconomic and financial data.

Sample and Sampling Techniques

Given the national scope, the study employs a census sampling approach, utilizing the complete time series dataset from 1980 to 2024, thus capturing 45 years of macroeconomic fluctuations. This ensures representativeness of debt and macroeconomic dynamics over structural reforms, exchange rate regimes, and external shocks in Nigeria's economy.

Method of Data Collection

Secondary data are collected from the official publications of CBN (Statistical Bulletin), NBS (Annual Abstract of Statistics), and DMO (Debt Sustainability Reports), covering the period 1980–2024. The long-time horizon enables the study to investigate both cyclical and structural relationships.

Method of Data Analysis

The study employs the Autoregressive Distributed Lag (ARDL) Bounds Testing Approach using E-Views 9.0 software. The ARDL is chosen because it accommodates variables integrated at order $I(0)$ and $I(1)$, but not $I(2)$, and effectively captures both short-run and long-run equilibrium relationships. Diagnostic tests include: Augmented Dickey-Fuller (ADF) Unit Root Test for stationarity, ARDL Bounds Test for cointegration, Serial Correlation LM Test, Breusch-Pagan-Godfrey Heteroskedasticity Test, and Ramsey RESET Test for model robustness.

Model Specification

The functional form of the model is:

$$GDPGR_t = f(DSR_t, EXCHR_t, INFR_t)$$

The ARDL model is expressed as:

$$\Delta GDPGR_t = \alpha_0 + \sum_{i=1}^p \beta_i \Delta GDPGR_{t-i} + \sum_{j=0}^q \gamma_j \Delta DSR_{t-j} + \sum_{k=0}^r \delta_k \Delta EXCHR_{t-k} + \sum_{l=0}^s \phi_l \Delta INFR_{t-l} + \lambda_1 GDPGR_{t-1} + \lambda_2 DSR_{t-1} + \lambda_3 EXCHR_{t-1} + \lambda_4 INFR_{t-1} + \mu_t$$

Where:

GDPGR = Gross Domestic Product Growth Rate (dependent variable)

DSR = Debt Service Ratio

EXCHR = Exchange Rate

INFR = Inflation Rate

Δ = first difference operator

μ_t = error term

Error Correction Model (ECM)

Once cointegration is established, the ECM is specified to capture speed of adjustment:

$$\Delta GDPGR_t = \alpha_0 + \sum_{i=1}^p \beta_i \Delta GDPGR_{t-i} + \sum_{j=0}^q \gamma_j \Delta DSR_{t-j} + \sum_{k=0}^r \delta_k \Delta EXCHR_{t-k} + \sum_{l=0}^s \phi_l \Delta INFR_{t-l} + \psi ECM_{t-1} + \epsilon_t$$

Where:

Δ = first differences,

ECM_{t-1} = the lagged error correction term

ϕ is expected to be negative and significant, indicating the speed of adjustment towards long-run equilibrium.

ϵ_t = error term

Other terms are as previously defined for short-run coefficient

Table 3.1: Apriori Expectations

Variable	Type	Expected Relationship with GDPGR	Rationale
Debt Service Ratio (DSR)	Independent	Negative (–)	High debt servicing crowds out productive investment, reduces fiscal space, and slows GDP growth (Debt Overhang Hypothesis).
Exchange Rate (EXCHR)	Independent	Negative (–)	Persistent depreciation raises external debt servicing costs, fuels imported inflation, and undermines growth. However, mild depreciation could encourage exports, making the effect potentially mixed.
Inflation Rate (INFR)	Independent	Negative (–)	High inflation distorts price signals, reduces investment returns, erodes purchasing power, and dampens growth. Moderate inflation may stimulate demand, but chronic inflation is growth-reducing.
GDP Growth Rate (GDPGR)	Dependent	N/A	Captures Nigeria's overall economic performance and resilience against debt overhang pressures.

Results and Discussion

Data Presentation

This section dealt with data presentation, analysis and discussion of results on Debt overhang in Nigeria

(DSR ,EXCHR and INFR) as explanatory variables and Vulnerable economy (GDPGR) as the response variable in Nigeria. For the purpose of clarity, the Data are presented in Table 4.1 below:

Table 4.1: Data Presentation for the Independent and Dependent Variables of the Study

Year	GDPGR	DSR	EXCHR	INFR
1980	5.23	9.59	11.77	1.01
1981	1.66	17.82	22.5	11.53
1982	1.08	25.08	16.88	2.98
1983	1.52	20.81	23.78	1
1984	1.97	20.09	19.98	13.24
1985	3.01	29.07	40.5	6.73
1986	3	25.71	94.98	13.98
1987	1.39	26.97	75.33	7.81
1988	5.54	29.09	59.27	4.27
1989	4.5	29.6	64.83	3.54
1990	1.44	9.07	65.15	7.91
1991	2.57	5.7	98.09	9.36

Data Analysis

Descriptive Statistics

Descriptive statistics provide a summary of the central tendencies, dispersion, and distributional features DSR, EXCHR, INFR.and GSPGR This is necessary to understand the basic behavior of the variables and to

identify whether debt overhang and the Nigeria economy indicators display volatility, stability, or abnormal distributions. This is shown in Table 4.2 below:

Table 4.2 Descriptive Statistics

	GDPGR	DSR	EXCHR	INFR
Mean	2.971778	14.91511	377.1480	14.55133
Median	2.390000	13.58000	259.8500	13.47000
Maximum	8.070000	29.60000	1038.440	57.55000
Minimum	1.010000	4.150000	11.77000	1.000000
Std. Dev.	1.792726	7.898956	336.1789	12.27398
Skewness	1.181461	0.482318	0.619999	1.618684

Observations 45 45 45 45
Source: Econometric Views Version 9.0 Output (2025)

The descriptive statistics in Table 4.3 reveal that the average value of GDPGR is about 2.97 percent, suggesting modest growth performance during the period, with a maximum of 8.07 percent and a minimum of 1.01 percent, while the positive skewness (1.18) indicates that higher growth episodes, though rare, pulled the distribution to the right. For DSR, the mean value of 14.92 indicates a relatively high debt servicing burden, with fluctuations between 4.15 and 29.60, while the skewness of 0.48 shows a moderate tilt towards higher values, reflecting episodes of intensified fiscal pressure on debt repayment. EXCHR displays a mean of 377.15, reflecting persistent depreciation across the years, ranging from as low as 11.77 to as high as 1038.44, with a positive skewness of 0.62 indicating vulnerability to exchange rate shocks and the possibility of external debt servicing costs escalating over time. INFR records an average of 14.55 percent, which is considerably above the global

benchmark for stability, with wide fluctuations between 1.00 and 57.55, while a skewness of 1.62 and high kurtosis (5.97) show that extreme inflationary episodes dominated the period, producing a highly leptokurtic distribution. The Jarque-Bera results suggest that GDPGR and INFR deviate significantly from normality at 5 percent, while DSR and EXCHR approximate normal distribution, implying the presence of volatility and shocks in growth and inflation patterns relative to debt and exchange dynamics.

Correlation Analysis

Correlation analysis measures the strength and direction of linear relationships among, DSR EXCH, INFR and GDPGR. This is important to pre - assess how foreign debt accumulation indicators move with sectoral development, highlighting possible positive or negative associations before deeper regression analysis. This is shown in Table 4.3 below:

Table 4.3 Correlation Analysis

	GDPGR	DSR	EXCHR	INFR
GDPGR	1.000000			
DSR	-0.058782	1.000000		
EXCHR	-0.052927	0.168231	1.000000	
INFR	0.030921	-0.232188	0.053388	1.000000

Source: Econometric Views Version 9.0 Output (2025)

The correlation analysis in Table 4.4 shows that GDPGR has a weak negative correlation with DSR (−0.059) and EXCHR (−0.053), implying that higher debt servicing and currency depreciation are associated with marginal declines in growth, although the effects are not statistically strong, while its relationship with INFR (0.031) is weakly positive, suggesting that moderate price increases may have coincided with growth episodes in the Nigerian economy. The relationship between DSR and EXCHR (0.168) is positive but weak, reflecting that exchange rate depreciation tends to elevate debt servicing costs due to the external debt component, though not substantially. The correlation between DSR and INFR (−0.232) is negative, indicating that rising debt servicing pressures often coincide with contractionary fiscal effects that suppress demand and reduce inflationary tendencies. Similarly, the weak positive association between

EXCHR and INFR (0.053) reflects that exchange rate depreciation has not always translated into higher inflation, possibly due to monetary interventions and import-substitution policies. Overall, the low correlations across all variables suggest the absence of serious multicollinearity concerns, thereby validating their inclusion in the ARDL model for assessing both short-run and long-run dynamics of debt overhang in Nigeria.

Variance Inflation Factors (VIF)

VIF detects the presence of multicollinearity among the explanatory variables (DSR, EXCHR and INFR). High multicollinearity can distort the true effect of debt overhang on GDPDR, so testing ensures that estimated coefficients are not biased by overlapping information. This is shown in Table 4.4 below:

Table 4.4 Variance Inflation Factors

Date: 09/19/25 Time: 01:45

Sample: 1980 2024

Included observations: 44

Variable	Coefficient Variance	Uncentered VIF	Centered VIF
GDPGR(-1)	0.019992	3.907987	1.007149
DSR	0.001127	5.195015	1.114277
EXCHR	5.86E-07	2.426469	1.031779
INFR	0.000655	3.848979	1.534519
INFR(-1)	0.000623	3.611342	1.502454
C	0.769104	12.31381	NA

Source: Econometric Views Version 9.0 Output (2025)

The results of the Variance Inflation Factors in Table 4.5 indicate that the centered VIF values for all the explanatory variables fall well below the conventional threshold of 10, confirming that multicollinearity is not a serious issue in the model. Specifically, GDPGR(-1) has a centered VIF of 1.01, showing that its lagged value does not excessively correlate with other predictors. DSR records a centered VIF of 1.11, which is very low, suggesting that debt servicing dynamics operate independently without distorting the explanatory power of other regressors. For EXCHR, the centered VIF is 1.03, indicating a negligible level of multicollinearity despite its interaction with external debt and inflationary pressures. Both INFR (1.53) and INFR(-1) (1.50) record the highest VIFs among the variables, but these remain below the critical value of 5, suggesting that while inflationary trends are somewhat correlated with past values and exchange rate

fluctuations, they do not pose a risk of model distortion. The uncentered VIFs are naturally higher due to collinearity with the constant term, with the intercept (C) recording the highest value of 12.31; however, this does not undermine the stability of the model since the constant is not an explanatory variable. Overall, the VIF analysis confirms that the variables under consideration are statistically appropriate for inclusion in the ARDL framework, ensuring robustness in both short-run and long-run estimations.

Jarque-Bera Normality Test

The Jarque-Bera test assesses whether the data for , , DSR, EXCHR, , and INFR follow a normal distribution. Normality is a key assumption in regression analysis, ensuring that statistical inferences about the role of debt overhang in a vulnerable economy are valid. This is shown in Table 4.5 below:

Table 4.5 Jarque-Bera Probability Test

Series: Residuals	
Sample 1981 2024	
Observations 44	
Mean	-5.25e-16
Median	-0.143103
Maximum	5.044588
Minimum	-2.367072
Std. Dev.	1.558405
Skewness	1.194504
Kurtosis	4.991754
Jarque-Bera	17.73648
Probability	0.000141

Source: Econometric Views Version 9.0 Output (2025)

The Jarque-Bera Probability Test results in Table 4.6, as depicted in the histogram, show that the residuals have a mean close to zero ($-5.25e-16$) and a median of -0.143 , which is desirable for unbiasedness in regression estimates. The distribution, however, indicates some degree of asymmetry, as reflected in the skewness value of 1.19, which is positive and suggests a rightward tilt in the distribution of residuals. The kurtosis value of 4.99 exceeds the normal benchmark of 3, showing a leptokurtic distribution with heavier tails, meaning extreme values occur more frequently than in a normal distribution. The Jarque-Bera statistic of 17.73 with a probability value of 0.000141 indicates rejection of the null hypothesis of normality at the 1% level of significance. This suggests that the residuals are not normally distributed. Despite this, in large-sample time series regressions such as ARDL, non-

normality of residuals does not invalidate the results due to the asymptotic properties of the estimators, provided other assumptions like homoscedasticity and absence of serial correlation are satisfied. The overall interpretation is that while the residuals deviate from perfect normality, the ARDL model remains consistent and efficient for policy inference given the large time span of the data.

Breusch-Godfrey Serial Correlation LM Test

This test examines whether there is autocorrelation in the residuals of the regression model. Since macroeconomic and debt data are time series, testing for serial correlation is crucial to avoid spurious results and to ensure that the impact of debt overhang on GDPGR is not overstated due to persistence in errors. This is shown in Table 4.6 below:

Table 4.6 Breusch-Godfrey Serial Correlation LM Test:

F-statistic	0.392337	Prob. F(2,36)	0.6783
Obs*R-squared	0.938588	Prob. Chi-Square(2)	0.6254

Source: Econometric Views Version 9.0 Output (2025)

The Breusch-Godfrey Serial Correlation LM Test results in Table 4.7 show an F-statistic of 0.3923 with a probability value of 0.6783, and an Obs*R-squared value of 0.9386 with a corresponding probability of 0.6254. Both probability values are far greater than the conventional 5% level of significance, indicating that the null hypothesis of no serial correlation in the residuals cannot be rejected. This means that the residuals from the ARDL model are free from second-order serial correlation, which is an essential condition for the validity and efficiency of the estimated coefficients. The absence of serial correlation implies that the model is well specified and that the dynamics of the lagged variables have adequately captured the underlying data generation process. This enhances the reliability of the ARDL estimates, as the presence of

autocorrelation would have biased the standard errors, leading to unreliable statistical inferences. Therefore, the test result validates the robustness of the ARDL model for analyzing the relationship between DSR, EXCHR, INFR, and GDPGR in Nigeria over the period under review.

Heteroskedasticity Test: Breusch-Pagan-Godfrey

This test checks if the error variance is constant across observations. In the context of Nigeria's debt and development, heteroskedasticity could arise due to policy changes or shocks, leading to biased standard errors. Detecting and correcting for it enhances the robustness of the analysis. This is shown in Table 4.7 below:

Table 4.7 Heteroskedasticity Test: Breusch-Pagan-Godfrey

F-statistic	0.371584	Prob. F(5,38)	0.8649
Obs*R-squared	2.050997	Prob. Chi-Square(5)	0.8420
Scaled explained SS	3.053238	Prob. Chi-Square(5)	0.6918

Source: Econometric Views Version 9.0 Output (2025)

If the probability value (p-value) is greater than 0.05, we fail to reject the null hypothesis of homoskedasticity. From the table, the F-statistic (0.371584, $p = 0.8649$), Obs*R-squared (2.050997, $p = 0.8420$), and Scaled explained SS (3.053238, $p = 0.6918$) all have probability values greater than 0.05.

This indicates that the null hypothesis of homoskedasticity cannot be rejected. Therefore, the residuals of the estimated model are free from heteroskedasticity. The Breusch-Pagan-Godfrey test confirms that the error terms are homoskedastic,

implying that the model's estimators are efficient, consistent, and reliable for statistical inference.

The RESET test evaluates model specification errors, including omitted variables and incorrect functional forms. Given the complex nature of debt overhang and vulnerable economy, this ensures the model properly captures the true relationship between, DSR EXCH, INFR and GDPGR.. This is shown in Table 4.8 below:

Ramsey RESET Test

Table 4.8 Ramsey RESET Test

Equation: UNTITLED

Specification: GDPGR GDPGR(-1) DSR EXCHR INFR INFR(-1) C

Omitted Variables: Squares of fitted values

	Value	df	Probability
t-statistic	0.419069	37	0.6776
F-statistic	0.175619	(1, 37)	0.6776

F-test summary:

	Sum of Sq.	df	Mean Squares
Test SSR	0.493336	1	0.493336
Restricted SSR	104.4309	38	2.748181
Unrestricted SSR	103.9376	37	2.809123

Source: Econometric Views Version 9.0 Output (2025)

The Ramsey RESET Test results show that the t-statistic (0.419069, $p = 0.6776$) and the F-statistic (0.175619, $p = 0.6776$) both have probability values greater than 0.05. This indicates that the null hypothesis cannot be rejected. The model does not suffer from misspecification bias. Thus, it is correctly specified, and the functional form of the regression is appropriate for explaining the relationship between

GDP growth rate, debt service ratio, exchange rate, and inflation rate.

ADF Unit Root Test

The Augmented Dickey-Fuller test checks for stationarity of the variables. Since non-stationary time series data can lead to misleading regression results, it is vital to establish whether GDPGR and debt overhang indicators require differencing before applying ARDL analysis. This is shown in Table 4.9 below:

Table 4.9: Summary of ADF Test

ADF test at Levels				
Parameter	ADF test statistic	Test critical value @ 5%	Prob.*	Decision
GDPGR	-7.416766	-2.929734	0.0000	Stationary
DSR	-2.162704	-2.929734	0.2223	Non-stationary
EXCHR	3.041305	-2.931404	1.0000	Non-stationary
INFR	-3.490039	-2.929734	0.0129	Stationary
ADF test at 1 st Difference				
GDPGR	-8.579858	-2.933158	0.0000	Stationary
DSR	-7.059795	-2.933158	0.0000	Stationary
EXCHR	-6.704524	-2.931404	0.0000	Stationary
INFR	-7.699900	-2.931404	0.0000	Stationary

Source: Econometric Views Version 9.0 Output (2025)

The results reveal that at levels, GDPGR and INFR are stationary, while DSR and EXCHR are non-stationary. However, after first differencing, all variables (GDPGR, DSR, EXCHR, INFR) became stationary as their ADF test statistics were more negative than the critical values and probability values were below 0.05. The

mix of stationarity at levels and at first difference suggests that the variables are integrated of order I(0) and I(1). This justifies the adoption of the ARDL bounds testing approach, which is robust to a combination of I(0) and I(1) regressors.

ARDL Bounds Test

The ARDL bounds test determines whether a long-run relationship exists among GDPGR, DSR, EXHR and

INFR. This is necessary because the research focuses on whether debt overhang exert both short-run and long-run impacts on vulnerable economy (GDPGR). This is shown in Table 4.10 below:

Table 4.10 ARDL Bounds Test

Date: 09/19/25 Time: 01:33

Sample: 1981 2024

Included observations: 44

Null Hypothesis: No long-run relationships exist

Test Statistic	Value	K
F-statistic	17.04857	3

Critical Value Bounds

Significance	I0 Bound	I1 Bound
10%	2.72	3.77
5%	3.23	4.35
2.5%	3.69	4.89
1%	4.29	5.61

Source: Econometric Views Version 9.0 Output (2025)

The ARDL bounds test results strongly reject the null hypothesis of no long-run relationship, as the computed F-statistic (17.04857) far exceeds the upper critical bound values at all conventional levels of significance. Specifically, at the 5% level, the upper bound is 4.35, while the F-statistic is nearly four times larger, providing overwhelming evidence of cointegration among GDP growth (GDPGR), debt service ratio (DSR), exchange rate (EXCHR), and inflation rate (INFR). This confirms the presence of a stable long-run equilibrium relationship, implying that despite short-run fluctuations, these variables move together over time and jointly determine the trajectory of Nigeria's

economic growth. The outcome validates the subsequent estimation of both the long-run coefficients and the error correction mechanism within the ARDL framework. It further suggests that fiscal and monetary dynamics, particularly debt servicing obligations, exchange rate volatility, and inflationary pressures, are deeply embedded in Nigeria's long-term growth path. The statistical strength of the result underscores the robustness of the model, indicating that policy interventions addressing these macroeconomic variables can have enduring effects on economic stability and performance.

ARDL Cointegration and Long Run Form

Once cointegration is established, the ARDL long-run form provides estimates of the equilibrium relationship.

This quantifies the extent to which debt overhang variables (DSR, EXCHR, and INFR) permanently impact GDPGR in Nigeria. This is shown in Table 4.11 below:

Table 4.11 ARDL Cointegrating And Long Run Form

Dependent Variable: GDPGR

Selected Model: ARDL(1, 0, 0, 1)

Date: 09/19/25 Time: 01:37

Sample: 1980 2024

Included observations: 44

Cointegrating Form				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
D(DSR)	0.001792	0.033576	0.053378	0.9577
D(EXCHR)	-0.000228	0.000766	-0.297158	0.7680
D(INFR)	-0.036507	0.025588	-1.426744	0.1618
CointEq(-1)	-1.138018	0.141392	-8.048654	0.0000
Cointeq = GDPGR - (0.0016*DSR -0.0002*EXCHR + 0.0388*INFR + 2.4304)				
Long Run Coefficients				
Variable	Coefficient	Std. Error	t-Statistic	Prob.
DSR	0.001575	0.029520	0.053349	0.9577
EXCHR	-0.000200	0.000673	-0.296917	0.7681
INFR	0.038825	0.021631	1.794842	0.0806
C	2.430383	0.663763	3.661524	0.0008

Source: Econometric Views Version 9.0 Output (2025)

The ARDL cointegration and long-run form results show that in the short run, the differenced variables of Debt Service Ratio (DSR), Exchange Rate (EXCHR), and Inflation Rate (INFR) do not significantly affect GDP growth, as their probability values exceed the 5% threshold. This indicates that short-run fluctuations in these variables have limited immediate influence on economic growth. However, the error correction term (CointEq(-1)) is negative (-1.138018), statistically significant at the 1% level, and greater than one in absolute value, confirming a strong and stable adjustment mechanism. This suggests that deviations from the long-run equilibrium are corrected swiftly, with more than 100% of disequilibrium adjusted within a year, indicating rapid convergence towards equilibrium.

In the long-run coefficients, DSR and EXCHR maintain insignificant impacts on GDP growth with high probability values, implying that debt servicing and exchange rate dynamics do not substantially explain Nigeria's long-run growth trajectory. Conversely, inflation (INFR) displays a positive

coefficient (0.0388) and is weakly significant at the 10% level, suggesting that mild inflation could be growth-inducing in the long run, possibly reflecting a demand-pull relationship in the Nigerian economy. The constant term (2.4304) is significant and positive, highlighting the presence of other structural and institutional factors that consistently drive growth beyond the specified macroeconomic variables.

Overall, the findings establish the existence of a long-run cointegration relationship between external debt servicing, exchange rate, inflation, and GDP growth. While short-run effects remain muted, the long-run dynamics emphasize the importance of inflationary trends and structural factors in shaping economic performance, with the significant error correction term reinforcing the system's ability to self-correct towards equilibrium.

ARDL Data Analysis

When estimating the ARDL model in EViews 9.0, one key diagnostic that is automatically reported is the Durbin-Watson (DW) statistic. The DW statistic is

used to test for the presence of serial correlation in the residuals of the regression model. A value close to 2 suggests no first-order autocorrelation, values significantly below 2 indicate positive autocorrelation, while values substantially above 2 suggest negative autocorrelation. The presence of autocorrelation would weaken the validity of the ARDL estimates, making the

DW statistic an essential diagnostic within the ARDL test output. Thus, the ARDL test is not only a tool for modeling dynamic relationships but also provides important diagnostics such as the Durbin-Watson statistic, which ensures the robustness of the results in time series analysis. This is shown in Table 4.12 below

Table 4.12 ARDL Data Analysis

Source: Econometric Views Version 9.0 Output (2025)

The ARDL regression results reveal mixed short-run effects of the explanatory variables on GDPGR. The lagged dependent variable GDPGR(-1) is negative (-0.138018) and insignificant, indicating limited persistence of past growth in shaping current performance. DSR has a small positive coefficient (0.001792) but is highly insignificant, showing that debt servicing has no meaningful short-run effect on growth. Similarly, EXCHR carries a negative but insignificant coefficient (-0.000228), implying that exchange rate changes do not immediately affect growth.

INFR shows a negative but insignificant coefficient (-0.036507), suggesting inflationary pressures tend to weaken growth. However, its lagged term, INFR(-1), is positive (0.080690) and significant at the 1% level, indicating that previous-period inflation stimulates subsequent GDPGR. This counterintuitive result may reflect Nigeria's adaptive economy, where moderate past inflation encourages nominal investment or spending adjustments that support growth. The constant (2.765821) is positive and significant, highlighting underlying growth potential independent of the specified variables.

Diagnostic statistics reveal that the model explains about 23% of GDPGR variation ($R^2 = 0.2332$; adjusted $R^2 = 0.1323$), showing modest explanatory power. The Durbin-Watson statistic (2.076) indicates no autocorrelation, while the overall model is marginally significant (F-statistic probability = 0.0628). Overall, while DSR and EXCHR exert weak effects, lagged INFR emerges as a key driver of growth, underscoring the importance of inflation management in stabilizing Nigeria's growth trajectory.

Pairwise Granger Causality Test

The Granger causality test examines the direction of causality between debt overhang and indicators and GDPGR. This is essential to know whether debt overhang drives vulnerable economy, or whether rising GDPGR creates demand for more foreign borrowing, thus clarifying policy direction. This is shown in Table 4.13 below:

Pairwise Granger Causality Tests
Date: 09/19/25 Time: 02:03
Sample: 1980 2024
Lags: 2

Null Hypothesis:	Obs	F-Statistic	Prob.
DSR does not Granger Cause GDPGR	43	0.58915	0.5598
GDPGR does not Granger Cause DSR		0.55373	0.5794
EXCHR does not Granger Cause GDPGR	43	0.90278	0.4140
GDPGR does not Granger Cause EXCHR		0.03990	0.9609
INFR does not Granger Cause GDPGR	43	4.04581	0.0255
GDPGR does not Granger Cause INFR		0.10306	0.9023
EXCHR does not Granger Cause DSR	43	1.45120	0.2470
DSR does not Granger Cause EXCHR		2.80802	0.0729
INFR does not Granger Cause DSR	43	0.49962	0.6107
DSR does not Granger Cause INFR		1.06841	0.3536
INFR does not Granger Cause EXCHR	43	1.13250	0.3329
EXCHR does not Granger Cause INFR		3.45843	0.0417

Source: Econometric Views Version 9.0 Output (2025)

The Granger causality results reveal mixed interactions among the variables. For DSR and GDPGR, no causality is found in either direction, suggesting that debt servicing neither drives growth nor responds predictably to it in the short run. This contrasts with the debt overhang hypothesis, which links high debt service to reduced investment and weaker growth. In Nigeria, debt obligations alone may not directly explain growth variability. Similarly, the absence of causality between EXCHR and GDPGR contrasts with conventional theory, as exchange rate instability is not shown to forecast growth, nor does growth predict exchange rate changes, implying other structural factors may be more influential.

By contrast, INFR has a significant causal effect on GDPGR, underscoring the critical role of inflation in shaping growth outcomes. Persistent price instability likely distorts consumption, savings, and investment, thereby affecting economic performance. The absence of reverse causality suggests growth does not significantly drive inflation in Nigeria, unlike arguments of demand-pull inflation from rapid expansion. Additionally, the unidirectional causality from EXCHR to INFR highlights that exchange rate fluctuations strongly shape inflation trends, reflecting Nigeria's import dependence and currency pass-through effects. Inflation, however, does not explain exchange rate dynamics, pointing instead to external shocks and foreign exchange pressures as dominant drivers.

Overall, the findings challenge conventional debt and growth literature. While debt service and exchange rate volatility do not directly predict growth, inflation emerges as a central determinant of short-run growth. Moreover, the strong link between exchange rate and inflation underscores structural vulnerabilities in the economy and the need for coordinated monetary and exchange rate policies. Unlike the debt overhang argument that emphasizes debt as the main drag, the results suggest inflation and exchange rate instability are more critical constraints on Nigeria's growth trajectory.

Conclusion:

Both short-run and long-run results indicate that DSR does not significantly explain growth performance in Nigeria. This implies that debt obligations, while burdensome, may not independently drive growth fluctuations but instead interact with broader fiscal and structural dynamics. Exchange Rate (EXCHR): Exchange rate volatility shows no significant effect on GDP growth in either the short or long run. This challenges conventional assumptions that depreciation directly suppresses growth, suggesting that Nigeria's growth trajectory is influenced more by structural inefficiencies and trade imbalances than by currency fluctuations alone. Inflation Rate (INFR): Inflation emerges as the most influential macroeconomic variable, with a weak but positive long-run effect.

Moderate inflation appears to stimulate growth, aligning with demand-pull inflation theories. However, the risks of runaway inflation remain, making stability crucial. GDP Growth Rate (GDPGR): The adjustment mechanism is robust, with disequilibrium corrected by more than 100% annually. This demonstrates a strong self-correcting capacity of the Nigerian economy towards its long-run growth path, despite short-term disruptions.

Recommendations

1. Adopt debt restructuring and efficient debt utilization to ensure that borrowing translates into growth-enhancing investments rather than unproductive recurrent spending.
2. Implement exchange rate harmonization and strengthen export diversification to reduce vulnerability to external shocks and import dependence.
3. Maintain inflation within a moderate band (single-digit to low double-digit) to harness its growth-inducing effects while avoiding hyperinflationary spirals.
4. Strengthen institutional frameworks, governance quality, and infrastructure investments to complement macroeconomic stabilization policies.

Contributions to Knowledge

1. Provides empirical evidence that Nigeria's growth is less constrained by debt servicing and exchange rate instability than by inflationary pressures.
2. Demonstrates that the economy has a strong and rapid error-correction mechanism, indicating resilience to disequilibrium shocks.
3. Shifts the debt overhang debate in Nigeria towards the role of inflation and structural factors rather than debt burden alone.
4. Validates the ARDL framework as suitable for capturing mixed integration and both short- and long-run dynamics in Nigeria's debt-growth nexus.

Suggestions for Further Studies

1. Extend the model by incorporating fiscal deficit, capital inflows, and institutional quality indicators to capture broader structural influences.
2. Explore sectoral impacts of debt servicing and exchange rate fluctuations on growth (e.g., agriculture, manufacturing, oil sector).
3. Apply nonlinear ARDL (NARDL) or Threshold models to examine possible asymmetries in the debt-growth relationship.
4. Conduct comparative studies between Nigeria and other Sub-Saharan African economies to generalize findings.

5. Investigate the mediating role of governance and corruption in the debt-growth-inflation nexus.

kareemlateef2006@gmail.com

Publication Date: 2025/11/28

Abstract

This study examined effects of green logistics on organizational performance of selected companies in Lagos State. Survey research design was adopted in this research. The population of the study was one thousand nine hundred and thirty-three (1,933). Yamane (1967) formula was employed to determine the sample size which was three hundred and thirty-one (331). Simple random sampling technique was employed to select the participants in this study. Questionnaire was used to obtain data. Simple percentage and frequency tables was used to analyzed data collected while hypotheses were tested with regression analysis using SPSS version 23. Findings indicated that greening process in packaging practices ($r = .791$, $R^2 = .152$, $B = .291$ $p < .01$) and greening process in technology ($r = .268$, $R^2 = .129$, $B = .466$, $p < .01$) has significant effects on organizational performance of surveyed companies in Lagos state. It was recommended that corporate organizations and government should embrace greening packaging practices and technology also government should enact laws to support greening process in technology

Keywords: Green logistics, Organization performance, Greening process in packaging practices, Greening process in technology

Introduction

Logistics play important part in bridging gaps between town, nations and landmass worldwide. It incorporate world supply chain networks which comprised of different operations such as clearing and forwarding, information sharing, inventory management etc. (Khan *et al.* 2018). The need to minimize carbon emissions from logistics related activities and ensure friendly environment informed the introduction of green logistics concept measured with route optimization, alternative fuels technology, information technology, internet of things among others. The integration of internet of things (IoT) into logistics chain administration has changed how firms supervises, regulate and manage their supply chain network (Kamble, Gunasekaran & Gawankar, 2018).

Organizational performance is crucial when assessing the success of companies. It is usually displayed in the organization's ability to efficiently start and execute projects that assist companies in reaching their outlined purposes and targets (Ganiyu & Sulaiman, 2024). Recently, due to stiff contest arising from worldwide integration, companies are encouraged to enhance their operations through execution of new techniques, guidelines and programs that can permit them to outsmart their competitors (Hardyman, Daunt & Kitchener, 2015; Mwagona & Kinyua, 2023).

Conventional performance indicators concentrated more on fiscal indicators such as return on investment and return on equity to measure performance. These metrics while important, does not cover all the organization's operations and effects. With increasing social commitment and economic sustainability philosophies, it has become clear that non-fiscal indicators are equally significant. Current perspectives on accomplishment is an integration perspective that includes fiscal, communal and ecological criteria. Performance is therefore evaluated not only in terms of fiscal indicators but also built on how these performances are accomplished and their over all effects on the populace as a whole and its surroundings (Moumin, 2024).

Green logistics and organizational performance were supposed to be the most efficient and best in Sub-sahara Africa, couple with policies and regulations available. Regrettably, many emissions still arises from moving products from place to place. Vehicles, generates exudations and tires which definitely get into the atmosphere (Striebig *et al.*, 2019).

Even though many studies have researched on green logistics and organizational performance combined and independently such as Shailendra & Supriyo (2020) who research on green logistics operations utilizing internet of things as independent variable in India.

Sorin *et al.* (2023) that studied impact of automation on customer engagement as well as how automation affect customer satisfaction in Madrid metropolis, Spain. Syed Abdul Rehman (2019) whose research work assessed the effects of green logistics on economic growth, social impact and environmental sustainability with a special focus on developing countries in Asia. Nwaulune (2024) which studied product sustainability and green logistics practices among selected fast-selling goods manufacturers in Lagos, Nigeria, Ali *et al.* (2021) whose study covered Egypt to research sustainable logistics service quality scale for logisitics service providers and Umair *et al* (2019) which studied 200 stores owners in Islamabad and Rawalpindi. It is worthy to note that none of these studies covered Lagos state transport and logistics sector the sectorial gap which this study covered.

Even with all these studies green logistics activities are yet to be fully utilized and many organizations in Nigeria are still inefficient and not performing as expected. The previous studies have also failed to cover population gap and does not measure green logistics with greening process in packaging and technology. Also, past research failed to studied combined effect of packaging and technology on organization performance, the literature gap which this study filled. This study was designed to assess the direct result of green logistics on organizational performance. And also, address practical conflicting gaps, methodological gap, conceptual gap and population gap.

The study analyze effects of green logistics on organizational performance of selected companies in Lagos State, Nigeria. And the study tend to address practical conflicting gap, methodological gap, conceptual gap and population gap.

Objectives of the Study

The primary aim of this research is to assess the effects of green logistics on organizational performance of selected companies in Lagos state, Nigeria.

The specific objectives are to:

1. Evaluate the effect of greening process in packaging practices on organizational performance of selected companies in Lagos State, Nigeria
2. Analyze the effect of greening process in technology on organizational performance of selected companies in Lagos State, Nigeria

Research Questions

The following questions were asked in this study:

1. To what extent does greening process in packaging practices affect organizational performance of selected companies in Lagos State, Nigeria?
2. How does greening process in technology affect organizational performance of selected companies in Lagos State, Nigeria?

Statement of the Hypotheses

The following hypotheses were tested in the study:

Ho₁: Greening process in packaging practices has no significant effect on organizational performance of selected companies in Lagos State, Nigeria

Ho₂: Greening process in technology has no significant effect on organizational performance of selected companies in Lagos State, Nigeria

Literature Review

Conceptual Review

Green Logistics

Green logistics and greening logistics practices are one and the same as used in this research and were used interchangeably. Green logistics practices encompasses the utilization of environmentally pleasant actions, plans, procedures, guidelines and rules among organization's supply chain network with the purpose of minimizing wastages, preserve energy and natural endowments, reduces the bad effects of logistics operations on both eco-system and the community while at the same time enhance collective accomplishment (Agyabeng-Mensah, Afum, 2020; Agyabeng-Mensah & Tang, 2021). Green logistics entails procurement, production and distribution of products in an eco-friendly way, taken into consideration fiscal, ecological and society variables (Sbihi & Eglese, 2007; Kumar, Teichman & Timpernagel, 2012).

Green logistics practices comprise of operations which entails transportation of products from one place to another in environmentally pleasant way (Hampus & Henrik, 2014). Green logistics imply organization coordination of supply chain to minimize their ecological impact (Ismail *et al.*, 2019). Green logistics is an ecological method or scheme that consists of energy-saving processes in freight, storage, delivery and waste reclamation or dumping (Mutua Mutie *et al.*, 2022). Moreover, greening process in packaging practices, transportation practices, route optimization and technology have been viewed as an important component of green logistics in 21st century.

Based on different definitions by authors, the researcher does described green logistics as environmentally pleasant philosophy that promotes the utilization of hybrid and efficient transportation facilities to move goods from one destination to another with aim of minimizing gaseous emission to the environment.

Greening process in packaging

Packaging is the body of knowledge, skill and technique encompassing or safeguarding of goods for transportation, warehousing, sale, and utilization. Packaging can further be defined as the system of carving, assessing and manufacturing of packages. Core aims of packages consists: protection of goods from physical harms, obstacle protection, protection from pollution, data transmission, advertising, safety, design, evaluation, and production of packages. Basic objectives of packaging include; physical protection,

barrier protection, containment or agglomeration, information transmission, marketing, safety, fake and counterfeit control. Packaging can be separated into, main, auxiliary and higher type. Labeling is any printed, electronics components or pictorial communications on the packages as it relates to label (Tukamuhabwa, Eyaa & Derek, 2011; Jepchumba *et al*, 2022).

Packaging is used for marketing, ensuring that there is favourable impression and aiding impulse buying. This contradict the auxiliary function of packaging engaged for warehousing, freight and logistics which are intangible but important in the transportation of goods meant for trading (Armistead & Mapes, 2013; Jepchumba *et al*, 2022). Packaging is the confinement of physical material, mainly goods that is meant for sale. It is the system of planning materials for moving and warehouse which allows conservation, recognizing and packaging of goods. Packages defend goods from damage, dissolve, leakage, decage, ignite, warm, freezing and so many factors. Packaging most time contribute immensely in protecting or warehousing of goods (Jepchumba *et al*, 2022).

Packaging is the process of reservation, safe guarding, containing, and displaying products components through the lasting network of manufacturing, operating and moving to their final destination in a good manner, as were, at the period of manufacturing. Packaging is a key component of branding methods as it ensure that goods disseminate the information, the image and face of a company (Saliba, 2013; Jepchumba *et al*, 2022).

Package protect goods that is added inside of it as they transit from different marketing models and when in use. Packaging also extend the life span of goods, which is important to manufacturers, wholesalers and final consumers. Recent mind set is interested in package protection most importantly for drugs and other pharmaceutical products, house cleaners and many goods which are dangerous to health, especially to underage (Peck, 2015; Jepchumba *et al*, 2022).

Greening process in technology

Mascus (2003) defined technology as the data which aim to attain sum percentage of manufacturing ouput from a peculiar product by adding or scrutinizing chosen inputs like manufacturing processes, intra-company organogram, quantitative techniques, funding instruments and advertising techniques or any of selected choice. The concept of technology does not necessarily associate to the technology that encompass in the goods but also related with meaning, knowledge or data utilization and the systems in designing the goods (Lovell, 1998; Bozeman, 2000).

Tihanyi and Roath (2002) asserted that technology encompasses data which can not be readily remodel and conveyed. Reisman (2006) defined technology as the implementation and designing of methods, facilities, items and systems which can assist in finding lasting solutions to human problems.

Levin (1996) defined technology as not mainly an object or thing but best described as an approach. It involves applying scientific techniques to solve feasible human problems. The scholar further asserted that technology has three phases: material artifacts, the usage of artifacts to chase an objective and the knowledge to use the artifacts

Organization Performance

Alahmad (2021) defined organization performance as the real outcome of an organization against expected outcome. This implies that performance evaluate how best a firm activities in respect to achieving goals, customers satisfaction and income maximization. Organizational performance is the firms ability to accomplish its aims and objectives. It is a basic idea in recent business administration and management, which comprised of different criterion spanning from conventional financial indicators to society and ecology impact (Moumin, 2024). Organization performance is an output which center on quantifiable factors such as gain or market share. It is a method which deal with the plans, actions, procedures and strategies executed to attain results (Bourguignon, 2000; Moumin, 2024). Advanced an ideology scheme which merges monetary and non-monetary measures, the academician lay more emphasis on attainment of goals and effective utilization of resources which were considered key for complete appraisal of performance (Lebas & Euske, 2002; Moumin, 2024)

Organizational performance in the view of (Pitt and Tucker, 2008; Mwagana and Kinyua, 2023) is a vocal sign of the firm that indicates how effective they are in attaining goals and objectives. The concept of organizational performance is grounded on the belief that company is the intentionally combination of profitable assets; including personnel, physical, and monetary resources, to establish the highest value for final consumers and shareholders of the firm (Carton, 2004; Mwagana & Kinyua, 2023). Organizational performance is a key concept and mostly applied as explained variable, and several recommendations made for its advancement. Despite its role, there is not much agreement on its definition or dimensionality (Selvam, Gayathri, Vasanth, Lingaraja & Marxiaoli, 2016; Mwagana & Kinyua, 2023).

Customer Satisfaction

Customer satisfaction is the worldwide concept that affect all firms, irrespective of its size, structure, either profit or non-profit, domestic or international. Firms that meet their customers expectations tends to observe greater economic returns and growth (Bolton & Drew, 2021). Customer satisfaction is a situation which indicates that the customer has experienced his or her desires, wants, and demands as a result of an important goods or service and such customer is motivated to repurchase. The reason while every firm works toward satisfaction of its customer is to expand the

development of the business which definitely maximizes the profit of the organization. The implementation of customer satisfaction have a positive effects on the company, which at the end affect the desires of the customers for continuous patronizing the firm (Aksar, Kayani & Ali, 2020). Customer satisfaction is after sales attitude as a result of psychological comparism of the quality a customer intends to get from buying goods or services and the extent of quality the customer actually received (Mohammad & Mohammad-Alhamadani, 2011).

Customer satisfaction is a customer's emotional displayed of happiness or unhappy as a result of equating the perceived experience in contrast with expectation (Sambo *et al.*, 2021). Customer satisfaction results in observable outcomes such as customer loyalty, satisfaction, retention, happiness, commitment, faithfulness, creation of togetherness benefits and bond between customers and the company offering service, high customer indulgence for services and products disappointment, good word-of-mouth marketing about the firm, high future customer expectations, and selling more of the organization's goods or services, drawing new customers, cheaper prices, and high profit (Adeola & Adebisi, 2014). Customer satisfaction can also be defined as the extra, additional value and discrepancy between a user's expectation and their prospect. Customers are satisfied when the product or service they purchased and used meets or exceeds their expectations (Suchánek & Králová, 2018)

Customer Loyalty

Cutomer loyalty is the behavior of repeated and continuous customers patronage as well as those that offer better evaluation, assessment, reviews, good word of mouth or testimony (Kumar & Advani, 2012). Iddrisu (2011) suggested that loyalty is engaged over a period of time from a repeated record of meeting or exceeding customer proposition, or expectations. Jacoby and Chestnut (1978) defined customer loyalty as a behavioral result of consumers' choice, preferences for a specific product or goods from a set of equal ones. Loyalty is a pledge, commitment, dedication to persistently do business with a firm over a long period of time, it is a state of mind, behavior, a set of attitudes, beliefs, intentions or desires to continue to patronize the firm (Zineldin, 2006).

Neal (1999) defined customer loyalty as the percentage of time a customer prefer the same or similar product or service in the same category compared to the whole number of customers made by the customers in that set, under the terms and conditions that other preferable goods or services are equally available in that set. Customer loyalty is defined as pledge to continue to patronize the prefer goods or service in the nearest future, despite conditional factors and advertising efforts which can change the behavior (Oliver, 1997; Too, *et. al.*, 2001).

Theoretical Review

The Unified Theory of Logistics by Mentzer *et al.* 2001
The research efforts was anchored on unified theory of logistics as a result of study conducted by Mentzer *et al.* This particular theory got it is root from firm theory propounded by Holstrom and Tirole in 1989. There are many theories that were originated from theories of firm, as a result of this Mentzer *et al.* 2001 decided to embark on unified theory of logistics. The unified theory of logistics assumed that companies compete to have advantage over each other in order to continue to add value to her customers to ensure customer's satisfaction.

After firm theory was reviewed by different authors it give rise to further explanation of the duties perform by logistics firm which includes provision of cross border transit, organization capabilities in respect to supply and demand since the firm primary objective is to gain and which usually associated with value creation in the mind of the customers which result to their loyalty, retention and satisfaction (McNamara, 2005). Since many companies desires to incurcate effectiveness and efficiency in their routine activities which will amount to cost leadership and better customer services.as added in their capability of logistics network concerning competitive advantage, interface capabilities, logistics network, interface capabilities and data administration capabilities; data exchange via computing and network (Bolton & Drew, 2021).

Empirical Review

Shailendra and Supriyo (2020) in their study of how internet of things (IoT) affect green logistics operations in India's transport and logistics sub-sector. Secondary data was the backbone in which the study relied on. The research found that economy activities in India witnessed positive growth in the last ten years which helped to increase the need for transport and logistics services. The research conducted also revealed that innovation adoption especially in information technology cannot be over look. These findings made the study to conclude that advanced competition, political instability, customer's anticipation and quest for good attitude are the major problems battling Indian logistics industry.

Sorin *et. al* (2023) in a study conducted in Madrid community, Spain with aims to investigate the impact of automation on consumer engagement and satisfaction and design effective techniques for automation application of consumers. The researchers utilized survey research technique and questionnaire was employed to obtain information from the participants. Mean and standard deviation was applied to analyze information collected while one sample test was conducted utilizing SPSS version 23 software. The study discovered that automation and improvement of processes can be beneficial for businesses to achieve customer satisfaction

Syed Abdul-Rehman (2019) investigated the impact of green logistics on economic activities growth, social development and ecological sustainability using third world nations in Asia as surveyed area. The conducted research employed Fully Modified Ordinary Least Squares with Dynamic Ordinary Least Squares methods to estimate the relationship between the variables adopted in the study. Report of the research showed that customs clearance procedures, quality, commerce and freight facilities are associated with income per head, production value added and free trade. The research further discovered that transport and logistics operations hinderance include but not limited to climate variations, global climate crises, carbon emissions, ecological sustainability, ill commerce, poor logistics facilities and toxic atmosphere. Frequent changes in government policies, natural disasters and insecurity are the major causes of inadequate economic growth and development. In addition, the study indicates that implementation of solar energies and greening economy could reduce negative effects on society and ecological sustainability

Nwaulune (2024) carried out inquiry to investigate relationship between product sustainability and green logistics processes surveying fast moving consumer goods manufacturers in Lagos state, Nigeria. The research utilizes efficiency and sustainability as predictable criterion for product sustainability. The research process employed survey research design while Taro Yamane formula was employed to calculate the sample size. Random sampling method was used to choose the participants. Data was obtained with questionnaire and analyzed with simple percentage while multiple and hierarchical regression was employed to proof the formulated hypotheses. The research found that green logistics practicess associated well with fast moving consumer goods manufacturers in Lagos state

Ali *et al.* (2021) explored benefits of developing a sustainable logistics service quality measurement for logistics companies in Egypt. The study combines both quantitative research and survey research design methods for the study. The study utilized semi-structured interview to obtain information from surveyed logistics companies. The data was analyzed with Q-sorting technique aided by SPSS version 23.0 software. The findings showed that sustainable logistics service quality (SSQ) is sufficient to determine the sustainability service quality of company. The study further revealed that sustainable logistics service

quality (SSQ) can be implemented in marketing research

Umair *et al.* (2019) investigated the effect of logistics administration on customer satisfaction in Islamabad and Rawalpindi. The study used cross-sectional and descriptive survey research methods. Questionnaire was adopted to obtain information from participants. Percentage, frequency tables, mean and standard deviation was utilized in analyzing data and hypotheses were proofed with correlation coefficient, and regression analysis. The research conducted indicates that stock, lead time and shipping positively associated with customer satisfaction

Methods

The study utilized survey research design method. The utilisation of survey research design was justified due to the fact that it enables data collection from a survey or part of a population in order to make generalization about the whole population with aid of structured questionnaires.

Population of the Study

Information gathered from the yearly audit statements and the official website of the surveyed companies revealed that the total number of their employees was one thousand nine hundred and thirty-three (1,933). (1,107) one thousand one hundred and seven staff from ABC Transport, three hundred (300) staff from Courier Plus and five hundred and twenty-six (526) staff from GIG Logistics Ltd. The selected companies are high profiled and among the most performing logistics firms in Nigerian transport and logistics sub-sector (NBS, 2024).

Transport and logistics sector was studied because previous studies have not adequately covered the sector. Lagos state was chosen because it is the commercial and most economy viable state in Nigeria. Moreover, all the selected companies have their headquarters located in Lagos state, Nigeria.

Sample Size Determination and Sampling Technique

For easy data collection, the study randomly selected ABC Transport, Courier Plus and GIG Logistics in Lagos State, Nigeria as the study's surveyed companies which were among the seven hundred and sixteen (716) couriers and logistics companies who are registered with Nigerian Postal Service as at November, 2024.

The study used simple random sampling procedures when selecting respondents to ensure that all respondents have equal chance of being selected. Taro Yamane (1967) sample size determination formula was used to calculate the sample size used in this study

$$n = \frac{N}{1 + N(e)^2} \dots\dots\dots(i)$$

Where n = sample size, N = population size= 1,933, e = margin of errors = 5% = 0.05

$$n = \frac{1,933}{1 + 1,933(0.05)^2} \dots\dots\dots(ii)$$

n =331. As such the sample size used was 331.

Allocation of research instrument to the participants in each of the surveyed firms was done with Bryman's (2011) scientific formula as follows:

Table 1: Allocation of Sample Size

	Firm	staff and customers	Sample size
1	ABC Transport	1,107	$\frac{1,107 \times 331}{1,933} = 190$
2	*Courier Plus	300	$\frac{300 \times 331}{1,933} = 51$
3	GIG Logistics	526	$\frac{526 \times 331}{1,933} = 90$
	Total	1,933	331

Source: Field Study, 2024

Table 1 showed that 190 (one hundred and ninety) questionnaire was given to workers and customers of ABC Transport, while 51(fifty one) copies of the same instrument was sent to participants who work and patronize Courier Plus and 90 (ninety) was issued to GIG Logistics staff and customers.

Instrumentation

Questionnaire was deployed to obtain data from the respondents. The instrument covered personal information and research questions. The first part covered participant's sex, qualification, years of experience, department as well as level of workers while the second part contained research questions

Validity and Reliability of the Study

The research instrument was validated for face and content validity as prototype questionnaire was submitted to lecturers, supervisor, quality control staff, and management experts for vetting and review before it was administered on the respondents.

Pilot Study

A pilot study was carried out at Redstar Plc. using 66 (sixty-six) respondents in order to sample their opinions about the study before embarking on the main study.

Data collection Procedures

Data was gathered with questionnaires designed. The questionnaires were distributed via google survey form, electronic mail and hand to hand delivery with the help of research assistants

Method of Data Analysis

Descriptive statistics analysis used in the study includes tables, frequency distribution and simple percentage. The cordinal regression analysis was utilized to proof the hypotheses aided by SPSS statistical software version 23.

Model Specification

The research investigated how green logistics affect organizational performance of selected companies in Lagos State, Nigeria. Green logistics (GL) is a function of organizational performance (OP). Greening process in packaging practices (GPP) and greening process in technology (GPT) was used to proxy green logistics (GL) while organization performance (OP) is a dependent variable

The function is represented as follows:

$$OP = f(GL) \dots\dots\dots(iii)$$

$$OP = \beta_0 + \beta_1 GPP + \beta_2 GPT + \mu t \dots\dots\dots(iv)$$

Where: OP= Organization performance, β_0 = Constant
 β_1 GPP= Greening process in packaging, β_2 GPT= Greening process in technology

$\beta_0 \dots \beta_2$ = Regression coefficients of the model,

A priori expectation: $\beta_0 > 0$ and $\beta_2 > 0$

μt = error tab

Ethical Consideration

The study protects the privacy of individuals and corporate participants by anonymizing their personal

data and sensitive information. Purpose and benefits of the research was revealed to all the respondents and make them understand that they have the right not to participate. The study is for academic purpose and no potential negative consequences or reputational damage for participants.

The study carefully chooses methods and respondents to avoid bias and ensure equal chance. Data collected in this study was analyzed, and reported accurately and honestly without any bias or alterations. In order to

ensure fair ethical review process, the research topic and proposal was approved by the supervisor before conducting the research while the research was presented before panel of experts in the faculty for corrections before final approval.

Results

331 (three hundred and thirty-one) questionnaire was sent out, only 290 (two hundred and ninety) was filled which means 87.6% response rate.

Table 2: Personal Data of the study's participants

Variables	Level	Frequency	Percentage (%)
Sex	Male	220	75.9
	Female	70	24.1
Qualification	FSLC	67	23.1
	WAEC	98	33.8
	ND/NCE	109	37.6
	HND/B.Sc. & Others	16	5.5
Years of Experience	3-6 years	95	32.8
	7-10 years	116	40.0
	11 years and above	70	27.2
Departments	Finance	48	16.6
	IT	80	27.6
	Sales/marketing	136	46.9
	HR	26	9.0
Level of Workers	Top	30	10.3
	Medium	108	37.2
	Lower	127	43.8
	Others	25	8.6

Source: Field Study, 2024

Table 2 findings indicates that 220 (75.9%) respondents were male, while 70 (24.1%) respondents are female. This shows that large number of male participated in the study when compared with female. This interpret that the study is not gender biased.

Table 2 also, presents the academic qualifications of the participants. The results showed that 67 (23.1%) respondents had FSLC qualification, 98 (33.8%) respondents had WAEC certificate, 109 (37.6%) respondents had OND/NCE certificates and 16 (5.5%) respondents had HND/B.Sc. and above qualifications.

This interpret that the respondents are learned as such they are capable to provide the necessary information needed in this study.

Table 2 further, indicates the years of service of the respondents. The results show that 95 (32.8%) respondents had 3-6years service years, while 116 (40.0%) respondents had 7-10 service years. Additionally, 79 (27.2) respondents had 11years and above service years.

Table 2 demonstrates the departments where the respondents were working in the surveyed companies.

The results show that 48 (16.6%) respondents are working in finance department, while 80 (27.6%) respondents worked in Information Technology department. Additionally, 136 (46.9%) respondents are working in sales/marketing department. 26 (9.0%) respondents are working in Human Resources department of the surveyed firms.

Table 3: Pearson correlation analysis

Variables		
1.	GPP	.791**
2.	GPT	.268**
3.	OP	.500**

Key: ** $p < 0.01$; N = 290, GPP: Greening Process in Packaging practices; GPT: Greening Process in Technology
Source: SPSS version 25 output

Pearson correlation was computed for each of the variable as shown in Table 3 above and results shows the relationship between greening process in packaging practices and organizational performance. Findings from Table 3 showed that there is a significant relationship between greening process in packaging practices and organizational performance ($r = .791^{**}$; $p < .01$). This implies that greening process in packaging practices tends to increase organizational performance. Furthermore, Table 3 showed the correlation between greening process in technology and organizational performance. Result showed that there is a positive relationship between greening process in technology

Table 2 provides insight into level of workers in the surveyed organizations and signifies that out of the total respondents, 30 (10.3%) are top level staff, 108 (37.2%), were categorized under medium level staff. Additionally, 127 (43.8%) respondents were identified as lower-level staff and 25 (8.6%) respondents belong to others category.

Test of Hypotheses

and organizational performance ($r = .268^{**}$; $p < .01$), implying that as greening process in technology increases organizational performance tends to improve accordingly

It is worthy to note that, the above correlations test cannot explain causality. Hence, regression analysis was conducted in order to examine cause and effect

Test of Hypotheses

Hypothesis One

Ho₂: Greening process in packaging practices does not affect organizational performance of selected companies in Lagos State, Nigeria

Table 4: Model Summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate ²
1	.390 ^a	.152	.149	.49370

a. Predictors: (Constant), GREENING PROCESS IN PACKAGING PRACTICES

Source: SPSS version 25 output

Table 4 above showed the regression output of greening process in packaging practices and organizational performance of surveyed companies. Results from the table 4 showed a regression value ($R = .390^a$), this showed that greening process in packaging practices affect organizational performance of surveyed companies. Further result of the $R^2 = .152$ showed that greening process in packaging practices contributed 15.2% of the variance in organizational performance of

surveyed firms. Since, the value is greater than 0.5 this showed that the model is effective enough to determine the relationship between greening process in packaging practices and organizational performance of surveyed companies. This is a significant amount as such it is safe to conclude that greening process in packaging practices could predict organizational performance of companies covered in the study.

Table 5: ANOVA^a

Model		Sum of Squares	df	Mean Square	F	Sig.
1	Regression	12.600	1	12.600	51.697	.000 ^b
	Residual	70.196	288	.244		
	Total	82.797	289			

a. Dependent Variable: ORGANIZATIONAL PERFORMANCE

b. Predictors: (Constant), GREENING PROCESS IN PACKAGING PRACTICES

Source: SPSS version 25 output

Table 5 above showed the ANOVA output of the variables under consideration. Results from the table 5 showed $F(1; 289)=51.697$; $p=.000$) this indicates that the relationship between greening process in packaging practices and organizational performance is a good fit

and significant, given that the F- calculated is greater than 1. This is also a proof that greening process in packaging practices was a good predictor of organizational performance of sampled companies in Lagos state, Nigeria.

Table 6: Coefficients^a

Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	3.102	.155		20.016	.000
	GREENING PROCESS IN PACKAGING PRACTICES	.291	.040	.390	7.190	.000

a. Dependent Variable: ORGANIZATIONAL PERFORMANCE

Source: SPSS version 25 output

Table 6 showed the coefficient between the variables under consideration. Findings showed sig. value =.000 which is below the tolerable level of significance for the study (0.05). Based on the significant value which is .000 the null hypothesis is rejected and the study therefore accepted that greening process in packaging

practices affect organizational performance of selected companies in Lagos State, Nigeria.

Hypothesis Two

Ho₃: Greening process in technology has no significant effect on organizational performance of selected companies in Lagos State, Nigeria

Table 7: Model Summary

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.360 ^a	.129	.126	.50031

a. Predictors: (Constant), GREENING PROCESS IN TECHNOLOGY

Source: SPSS version 25 output

Results from table 7 above indicated a regression value ($R=.360^a$), this showed that greening process in technology has significant effect on organizational performance. Further result of the $R^2=.129$ showed that greening process in technology contributed 12.9% of the variance in organizational performance. Since, the result is less than 0.5 this showed that the model is

ineffective to determine the significant effect that exist between greening process in technology and organizational performance. This is insignificant amount as such it is not safe to conclude that greening process in technology could predict organizational performance of selected companies in Lagos State, Nigeria.

Table 8: ANOVA^a

Model		Sum of Squares	Df	Mean Square	F	Sig.
1	Regression	10.708	1	10.708	42.779	.000 ^b
	Residual	72.089	288	.250		
	Total	82.797	289			

a. Dependent Variable: ORGANIZATIONAL PERFORMANCE

b. Predictors: (Constant), GREENING PROCESS IN TECHNOLOGY

Source: SPSS version 25 output

Table 8 above showed the ANOVA output of the variables. Results from the table showed $F(1; 289)=42.779$; $p=.000$) this indicates that greening process in technology has significant effect on organizational performance. Also, it is a good fit and

significant, given that the F- calculated is greater than 1. This is a proof that greening process in technology was a good predictor of organizational performance of selected companies in Lagos State, Nigeria.

Table 9: Coefficients^a

Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	2.248	.299		7.511	.000
	GREENING PROCESS IN TECHNOLOGY	.466	.071	.360	6.541	.000

a. Dependent Variable: ORGANIZATIONAL PERFORMANCE

Source: SPSS version 25 output

Findings from table 9 showed sig. value =.000 which is below the tolerable level of significance for the study (0.05). Based on the significant value which is .000 the null hypothesis is rejected and agreed with assumption that greening process in technology has significant effect on organizational performance of selected companies in Lagos State, Nigeria is accepted.

Discussion

Findings from hypothesis one tested revealed that greening process in packaging practices has significant effect on organizational performance of selected companies in Lagos State, Nigeria. These findings are in view of Umair *et al.* (2019) whose research conducted indicates that stock, lead time and shipping positively associated with customer satisfaction. Furthermore, it was found from hypothesis two that greening process in technology has significant effect on organizational performance of selected companies in Lagos State, Nigeria. The findings align with Sorin *et al.* (2023) who found that automation and optimization of processes can be of great benefits for businesses to address customer satisfaction and organizational performance. The result is also supported by Shailendra and Supriyo (2020) who in their study discovered that internet of things (IoT) affect green logistics operations. Their study also support this study as it revealed that innovation adoption especially in information technology cannot be over look, same as this study found that technology play an important part in enhancing organizational performance

Conclusions

The study examined effects of green logistics on organizational performance of selected companies in Lagos State, Nigeria. The study concluded that greening process in packaging practices significantly relate with organization performance of surveyed companies in Lagos state, Nigeria. This was evidence in hypothesis one tested which agreed with assumption that greening process in packaging practices affect organizational performance of selected companies in Lagos State, Nigeria.

The study also concluded that there is significant relationship between greening process in technology and organizational performance of surveyed firms as

agreed by hypothesis two tested and findings of the study.

Recommendations

The study recommends that:

1. Corporate organizations and government should embrace greening packaging practices and technology
2. Government should enact laws to support greening process in technology
3. National Orientation Agency should organize seminar, workshops and programs in order to enlighten the populace about the benefits of green logistics concept

Limitations

The research was limited by inadequate literature materials especially on the total number of road transport and logistics users in Nigeria which was difficult to comeby, reason while the study adopted reports of annual returns and information on the website of the selected companies to make the study population. Lastly, resistance of some respondents to properly fill and return the questionnaires distributed to them constitute another huge barrier to this study in which the study consulted the respondents every two weeks before they were able to fill and return the questionnaires.

Publication Date: 2025/11/28

Abstract

Accountability is critical to every organisation as it forms the basis of transparency. Broadly, this paper explored the how digital governance initiative has influenced the enhancement of accountability and transparency in the Lagos State Civil Service. Specifically, it assesses the effect of digital governance on transparency and accountability initiative in Lagos State Civil Service and analysed the issues of accountability and transparency in the study area. A descriptive research design was adopted for this study using a simple random technique approach from a sample of 160 respondents. Findings shows that that application of digital governance initiative enhanced transparency, that there was enhanced auditing and monitoring practice through the application of digital governance initiative. However, digital governance application faced issues such as lack of modern digital tool, digital divide and digital literacy in securing sound accountability and transparency in the Lagos State Civil Service. The paper concluded that digital governance initiative has had fair positive effect on transparency and accountability in Lagos State Civil Service. The study recommends through increased transparency, digital governance can help make government operations more trustworthy by providing employees and citizens at large, with access to data on public finances, laws, and programmes. This increased transparency could help reduce corruption and promote accountability.

Key words: *Accountability, Transparency, Digital, Governance, e-governance, e-government.*

Introduction

Globally, when the main goal of the Millennium Development Goals (MDGs) in the twenty-first century, is to promote good governance through mutually beneficial state-citizen interaction, transparency and accountability in public sector management have become global concerns. Effective supervision of the government's administrative apparatus is essential. "Active disclosure" of governance information to important stakeholders, such as the general public, auditors, and any other organisation serving as a watchdog over public officials, is necessary for effective monitoring. Since the public now has such easy access to knowledge on governance, most involved and local people need to stay informed about issues pertaining to local, national, regional, and global governance and politics (OECD, 2023).

Digital Government for Development (2023) posits that an appreciable and acceptable degree of governments, globally embracing digital governance is fundamentally changing with the advent of digital governance. Worldwide, most governments are using information technological power in revolutionary

forms, particularly in establishing quantifiable administrative goals to enhancing the delivery of public services; from adopting evidence-based policies to making data-driven decisions, from guaranteeing increased transparency and accountability aimed at fostering higher public confidence. A framework for defining duties, responsibilities, and power of making decisions for an organisation's digital existence; that is, its mobile sites, websites, social media accounts, among other internet-based or web-enabled services is known as digital governance. Moreover, digital governance framework can also be viewed as a structure that transfers decision-making power for specific digital services from the organisational core to other organisational components (Welchman, 2014).

Information and communication technology (ICT) integration in the public sector that is purposeful is known as "digital governance," is becoming more widely recognised as a revolutionary strategy to improve governmental accountability and transparency (Lnenicka & Nikiforova, 2021). Despite the intense discussion surrounding information practices theory concepts like transparency, the use

of ICT has not demonstrated that algorithm systems inclusion into digital services that are provided by governments are transparent (Janowski, Janssen, & Matheus, 2021).

Numerous issues, including inadequate income data collection and analysis, opaque accounting, ineffective internal control, and financial reporting, plague the Lagos State Civil Service today (Eze et al., 2004). Technology has profoundly changed many facets of human existence, including how governments engage with the public and provide public services (Nkwe, 2012).

It is abundantly evident that the presence of moral principles and civil servant accountability in Nigeria is the primary way to guarantee the Nigerian government's adherence to the standards of responsible leadership and good governance (Rasheed, 1995). The hallmarks of successful government are accountability and ethics, which confer legitimacy and garner public support. It is impossible to overstate the importance of ethics and accountability in building a government that will be receptive to the desires and ambitions of the populace. The moral guidelines that govern a civil servant's actions are called ethics. It entails supporting and endorsing the notion of appropriate and inappropriate behaviour (Rasheed, 1995).

It is only possible to have Lagos State civil servants officials hired, not elected, to fulfil the government's statutory duty of providing services if they are aware of the codes of conduct designed to maintain accountability and efficient service delivery (Rasheed, 1995). This essentially means that the implementation of regulatory mechanisms which constitutes public service norms is necessary to ensure accountability in the study area. The people want accountability from those who are expected to provide services, both in terms of accomplishments and shortcomings, and from those who are entrusted with the management and distribution of public monies, regarding how those funds are used (Okigbo, 1999).

Establishing regulatory systems can facilitate the attainment of accountability in the study area. Many Nigerians on the right have expressed disapproval at the civil servants' lack of response to their constitutional duties. The actions of federal workers clearly reflect an accountability deficiency and an accountability issue. Their mercenary and self-serving interests dictate how they operate. Against this backdrop, this study analyses the effect of applying digital governance initiative to enhancing accountability and transparency in the Lagos State Civil Service.

Problem Statement

Nigeria's issue of inadequate accountability in the public sector has grown to be a major worry, resulting in pervasive corruption and inefficiencies in service delivery. Notwithstanding the inherent

potentials of e-government in improving accountability, efficiency, and transparency, its uptake in Nigeria is still restricted, particularly in the study area. The effective administration of e-governance projects in Nigeria faces an array of problems, which among others include lack of competent human resources, reluctance to change, and inadequate ICT infrastructure (Agwu, 2014). Regarding quality of services provided publicly to residents is negatively impacted by this circumstance, and public confidence in government institutions is decreased. Nigeria's public sector is rife with corruption and accountability issues, which has a serious negative effect on the country's growth and socioeconomic advancement. The constraint uptake of digital governance in Nigeria begs the question of whether it can enhance public accountability, especially in institutions that offers public services such as the Lagos State Civil Service.

Transparency concerns within the Lagos State Civil Service pertain to a situation when public personnel, acting alone or in concert, seem to misuse their positions in a way that undermines public trust. Anger (2002) pointed out that attempts to pursue some kind of personal benefit at the expense of the public might also give rise to such unethical actions. Conflicts of interest, allegiances, or ideals are also relevant. When enforcing policies, civil servants often transgress the ethical standards of neutrality, loyalty, respect, civility, and integrity. On the other hand, accountability is a persistent problem for the Nigerian Civil Service. Accountability issues can take various forms, such as corruption, red tape, nepotism, and the wastage of material and human resources. Among these issues, corruption stands out the most.

The civil service has a bad reputation due to the widespread and pervasive influence of unethical behaviour, such as tribalism, syphoning of public funds, corruption, bribery, and other fraudulent behaviours that the civil officers were portraying. The institutional framework for enforcing ethical and accountability standards is weak, which has made the previously mentioned ethical deficit actions in the civil service worse. Given the significance of accountability and transparency in government, particularly in the digital age, this research is highly relevant as it considers two specific objectives by evaluating digital governance initiative effect on accountability of civil servants and issues of transparency and accountability in the study area. It is anticipated that the findings of this study will give the public, policymakers, and government new perspectives on how e-government might be utilised to raise the standard of public services

Conceptual Nexus

Digital Governance

The foundation of digital governance is based on the sense that more access to information underscores

resultant increased public trust in government, better institutional accountability, and increased citizen involvement are enhanced (Ansell & Torfing, 2021). By implementing open data rules, Indonesia has made significant strides towards a more transparent and participatory governance model in response to persistent problems like corruption and bureaucratic inefficiency (Young et al., 2020).

Agostino et al. (2022) noted that digital governance implies the application of electronic means by governments to ensure proper administration of public services. This extensively leads to total transformations of service delivery through digital technologies. This however speaks volume of the growing importance attached to the use of Information Communication Technologies in providing significant varying public worth such as e-governance, digital technologies and e-government. In addition to increasing stakeholders' contributions to national and local development, digital government has deepened the governance process and increased the efficacy and efficiency of public sector service delivery (Cole, 2020).

e-Government

e-Government and "modernized/online/digital governance have been interchangeably used overtime when discussing the subject (Gil-Garcia 2005). The rising wave of internet services resulted to both the term " e-Commerce and e-Government " (Horan & Gronlund, 2004). Though the background of computers and ICTs in government organisations dates back to the early days of computers. Kraemer et al. (1978) noted that e-government initially surfaced in the late 1990s. While more current e-government literature emphasises on the outward use of IT, such as citizen services, historical e-government literature from the 1970s defined e-government as the application of information technologies within government. (Ho, 2002). Today's e-government goes beyond simple automation to address issues ranging from values, service processes and decision-making (Horan, 2004). Heeks (2003) views e-government as the introduction and use of information communication technologies to improve the operations of organisations in the public sector, offering the prospect of increased efficacy and efficiency. The utilisation of internet-based applications and other IT by the government, along with the procedures that put these technologies into practice. These include;

- a) Enhance the availability of government information and services to the general public, other agencies, and other government bodies, or;
- b) Make changes to government operations that will enhance their efficacy, efficiency, quality of services, or transformation.

Accordingly, the World Bank claimed that application of ICT technologies can aid wide range of purposes, including more effective government

management, better Increasing access to knowledge and improving connections with business and industry can empower citizens. Benefits that follow may include reduced corruption, higher public accountability and transparency, improved revenue or cost savings and increased convenience. This study's goal is to define e-government as the process by which governments allow people and companies the chance to communicate with the government and transact business using a range of electronic media, such as smart cards, fax machines, touchpad phones, email, and the Internet, by utilising ICT. It implies the internal organisation of government, including the rules, regulations, and frameworks that are put in place to carry out service delivery, coordinate, communicate, and integrate processes.

Information Communication Technology (ICT)

ICT includes a wide range of technological resources and tools that are used in creating, managing, storing, and sharing information. This study considers ICT as a collective name encompassing technologies utilised for information gathering, archiving, analysis, and sharing across a range of media. IT specialists manage all computer-related tasks, such as database management and data storage, in addition to handling all other facets of information processing, retrieval, transmission, security, and storage. Technologies that enable information access via telecommunications are referred to as ICT. As a result, ICT will be understood in this study as the use of communication technologies for information management.

Ethics

Ethics are the set of guidelines that specify moral behaviour based on a particular group's ideology. Ethics helps to make the public and the administration more accountable. Following a code of ethics guarantees that the public is served fairly and with necessities. It also gives the administration operational standards related to honesty. That integrity then serves to bolster the community's trust. By cultivating this feeling of trust, the organisational management aids the people in realising that they are operating in their overall best interest.

A code of ethics also sets professional expectations among public sector colleagues, both from their bosses and from one another. Robust ethical codes for public administration give leaders the guidance they need to finish their work and inspire staff and committees to execute the law fairly and professionally. Moral standards of behaviour are known as ethics (Vittal, 2002). A central position in the art of governance was held by the idea of ethics. Every society needs to adhere to certain moral standards in order to develop and advance. Because of the use of concepts that are difficult to measure or quantify, such as duty, conflict of interest, morality, accountability, equity, honesty, and trusts, ethics is generally seen as an abstract subject (Ikotun, 2004).

Ethics is the study of moral obligation, act, attitude, or behaviour that conforms to generally accepted norms within a certain community, institution, or setting. Stated differently, different societies and environments have different ideas about what constitutes an ethical code or conduct.

Accountability

Accountability is the term used to describe the procedures and systems that hold people or organisations accountable for their deeds, especially when it comes to performance behaviour and conformity to rules or guidelines. Transparency, answerability, and responsibility are among of its many facets (Bovens, 2021). Policies enacted to control political management, moral behaviour, finances, performance, local democracy, community leadership, and collaboration are at the centre of accountability. It means accounting for, holding accountable for, and considering one's stewardship. Olowu (2002) averred that accountability is seen as a means of making one to answers for one's behaviours or actions. Accountability entails the creation of objective standards of appraisal to help organisation's owners assess how well its members, both as individuals and as units, are carrying out their duties. As a result, Olowu (2002) contended that accountability comprises essential components such as accountability, means of reporting, system of evaluation, incentives, and penalties.

Being held accountable for one's actions entails providing an explanation of the activities committed. The full and satisfactory report of officers who hold public office as well as their stewardship regarding the procurement and use of the resources entrusted to them in carrying out public policy and achieving the goals in compliance with current laws and regulations is known as public accountability. Innuigbo (2015) posited by stating differently that public accountability is keeping a public official responsible for the resources entrusted to him and making sure he provides an accurate report on his use of public resources.

Transparency

Transparency, according to Atuilik and Salia (2019), entails the methodical disclosure of government actions that affect government accounts. The reporting entities are required to provide all relevant information to stakeholders so that they can understand how their resources are being managed. This suggests that stakeholders and other interested parties are in the best position to comprehend and assess the financial performance of the relevant public entity when they have a comprehensive picture of what is happening in various public institutions. Arellano-Gault and Lepore (2011) discovered that when public organisations operate in a transparent manner, their efficiency is significantly raised. This aligns with Public Management Theory,

which mandates that public institution management act more transparently in carrying out their duties while keeping in mind that public stakeholders, such as citizens, development partners, and employees, are interested in their financial performance (2016). Understanding this, Mizrahi and Minchuk (2019) emphasised that having trustworthy and efficient transparency helps build public confidence and raise awareness of how well public institutions are performing. As a result, public sector organisations are given more responsibility for providing public services, even if they are aware that interested parties and public stakeholders are very curious about their financial and non-financial performance.

Methodology

Civil servants from various departments and units in the Public Service Office, and Lagos State Head of Service. The data collected from the field were analyzed in detail with a view to examining what the ethical behaviours in the Lagos State Civil Service are, examine the e-government initiative that enhances transparency and accountability of Lagos State civil servants and identified the disciplinary measures against civil servants' transparency and accountability in the State Civil Service.

To obtain the data required to understand the study's topic, primary and secondary sources were consulted. The study population, 1600 comprised senior, junior and management staff of Lagos State Civil Service in 5 selected ministries; works and housing, finance, local government and chieftaincy title, education and transportation. The sample size of the research study is made up of 160 civil servants using a sample fraction of 10% from the study population. The underlying reason is that respondents will be in a good position to mention the challenges of transparency and accountability in the Lagos State Civil Service despite e-government initiative.

Results

Frequency Distribution of Data on the basis of Respondents Socio-Demographic Characteristics Analysis

The respondents' sociodemographic information, including their sex, age, marital status, religion, educational background, occupation, and grade level, is presented in this section. These qualities are thought to be crucial for ensuring the validity of the information gathered from study participants. Table 1 revealed that of the respondents, 100 were male (representing 77.5%), and 29 were female (representing 22.5%).

According to the data's interpretation, there were significant differences between the study's male and female populations overall. But since this study is not gender-based, gender is irrelevant. According to table 1's presentation of respondent age categories as captured as follows: 20-30, 13.9%, 31-40, 31.1%, 41-50- 33.3%, while 51 above is 21.7%. Given that the

majority of respondents were between the ages of 31 and 40 and 41 and 50, which are regarded as productive ages, their comments were adequately mature and trustworthy. Table 1 displayed the respondents' marital status as indicated below: 42.6% of people are single, while 57.4% are married. This showed that, on average, all respondents were married, which makes them a valuable source of information for the questions posed in this section. Table 1 categories of the respondents are as follows: Christianity 50.4%, Islam 49.6%, of the respondents respectively. This implied a considerable and most appropriate category of respondents to offer insight to the study though the religion of the respondents never had any adverse effect on the study outcome. In table 1, educational background of the respondents

B.Sc/HND, 40.3%. This showed that the majority of respondents had at least a first degree, which made up a reasonable group of respondents who were thought to be sufficiently educated to provide accurate information and study responses.

The occupation of employees showed middle-level having 50.1% of the respondents having the highest. This implied that more of middle level employees participated in the survey thereby providing useful information as shown in the study. In table 1, grade level showed that 7-13 years of the respondents had 49.6%. This implied that most respondents have risen through level of 7-13 in service and are knowledgeable enough to provide useful information in the study area.

Table 1 Socio-demographics Characteristics of the Respondents

Demographic Characteristics	Category	Frequency (f)	Percent (%)
Gender	Male	100	77.5
	Female	29	22.5
	Total	129	100.0
Age	20-30years	18	13.9
	31-40years	40	31.1
	41-50years	43	33.3
	51years and above	28	21.7
	Total	129	100.0
Marital Status	Single	55	42.6
	Married	74	57.4
	Total	129	100.0
Religion	Christianity	65	50.4
	Islam	64	49.6
	Total	129	100.0
Educational Background	WASSCE/SSCE/GCE	28	21.7
	OND/DIP	47	36.4
	B.SC/HND	52	40.3
	MSC/MA/MPA/Ph.D	2	1.6
	Total	129	100.0
Occupation	Management	10	7.8
	Middle-Level	65	50.4
	Lower-level	54	41.8
	Total	129	100.0
Grade level	1-6years	42	32.5
	7-13years	64	49.6
	14-17years	23	17.8
	Total	129	100.0

Source: Field Survey, 2025

Objective 1: Digital governance initiative effect on accountability of civil servants in Lagos State Civil Service

This section uses a likert scale of measurement strongly agreed, undecided, disagree, and strongly disagree to analyse the respondents' opinions regarding the effect of digital governance on the accountability of civil officials in the Lagos State Civil Service on a scale of 1 to 5.

Table 2 indicates that 79.1% of the participants were of the view that application of digital governance

initiative enhanced transparency. This implied that there was high rate of transparency achieved in this respect as it applies to civil servants in Lagos State.

Moreover, 81.3% of the respondents noted an improved employees engagement as digital governance structure was deployed in the area of study. This implied that employees participation became better in the Lagos State Civil Service at large. In table 2, 58.1% of the respondents were of the opinion that there was reduced corruption and streamlined processes in the State Civil Service. This implied that services became modernised thus

depletion of corrupt tendencies was attained maximally.

Further, table 2 showed 60.3% of the respondents averred that there was enhanced auditing and monitoring practice in the Lagos State Civil Service. This implied that auditing and monitoring were well achieved via the instrumentality of digital

governance initiative spiralling civil servants transparency and accountability. In table 2, 58.1% of the respondents stated that real-time feedback mechanisms was evident. This implied that there was application of there was feedback apparatus in the Lagos State. Civil Service thus enhancing mutual intelligibility across strata of employees.

Table 3: Digital governance initiative effect on accountability of civil servants in Lagos State Civil Service
Source: Field survey, 2025

VARIABLES	STRONGLY AGREE		AGREE		UNDECIDE D		DISAGREE		STRONGLY DISAGREE	
	<i>f</i>	%	<i>f</i>	%	<i>f</i>	%	<i>f</i>	%	<i>f</i>	%
Enhanced Transparency	50	38.8	52	40.3	10	7.8	11	8.5	6	4.6
Improved employees Engagement	45	34.8	60	46.5	17	13.2	2	1.6	5	3.9
Reduced Corruption and Streamlined Processes	28	21.7	47	36.4	18	13.9	17	13.2	19	14.7
Enhanced Auditing and Monitoring	41	31.7	37	28.6	25	19.4	15	11.6	11	8.5
Real-time Feedback Mechanisms	15	11.6	60	46.5	15	11.6	24	18.6	15	11.6

Table 3 dealt with the study's second goal. It made an effort to analyse respondents' agreement or disagreement frequencies about issues relating to digital governance application on accountability and transparency in the Lagos State Civil Service: strongly disagree, disagree, uncertain, and highly agreed, with a range of 1 to 5.

Table 3 indicates that 83.7% of the respondents were of the view that there was lack of modern digital tool. This implied that transparency and accountability were discovered be marred by dearth of modern digital equipment to be administered in that regard. Thus, unethical cases ensued in the civil service of Lagos State. Additionally, table 3 showed 52.7% of the respondents held the that there was manipulation of digital tools to suit individuals' interest. This implied most a conspiracy to frustrate the system to suit personal gain was noted.

In table 3, 69% of the respondents were of the view that there was a case of the digital divide. This implied that by excluding certain groups of employees, unequal access to technology and internet connectivity can impede equitable access to the advantages of digital governance and give rise to new types of vulnerability. As shown in table 3, 65% of the respondents stated that there was digital literacy.

This implied that both employees and government representatives who lack digital literacy might find it difficult to use digital tools and platforms effectively, which will hinder their capacity to employ digital governance for accountability.

As presented in table 3, 72.1% of the respondents view showed that there was data security and privacy issue. This implied that strong cybersecurity measures are necessary when handling huge volumes of sensitive data in order to guard against illegal access and safeguard citizens' private information of Lagos State Civil servants were absent. Moreover, 75.9% of the respondents observed institutional capacity. This implied that there was dearth of strong political will, competent human resources, and suitable legal and regulatory frameworks necessary for the success of digital governance initiatives in Lagos state civil service.

Moreover, 66.6% of the respondents noted new vulnerabilities. This was impliedly shown in the percentage of agreement and disagreement of the respondents on the assertion raised in this part of the study. Dependence on digital systems creates new threats, such ransomware and cybercrime, which call for thorough risk management plans.

Major Findings

Additional discussion of the aforementioned study findings was given in this section. It brought the results of this study into line with similar empirical findings from other studies on the same topic. Nonetheless, it confirmed the degree of discrepancy between this study's conclusions and other empirical results.

Digital governance enhances service delivery. As noted by Meijer (2021), automating bureaucratic procedures, cutting down on paperwork, and enhancing citizen interaction through online platforms, e-governance has simplified the delivery of government services. Further, administrative expenses have been greatly decreased by the use of cloud computing, automated workflows, and AI-driven decision-making systems. Emerging technologies like artificial intelligence (AI), blockchain, and big data will become more and more important in determining the direction of governance as the digital transition progresses. This was affirmed by Chowdhury (2024) that to protect employees' rights, this change also necessitates strong legal and moral frameworks. Digital professional analytics has made a substantial contribution to supply chain stabilisation and enhanced financial risk management in public administration following economic disturbances brought on by global crises.

Findings also showed that issues regarding digital governance in Nigeria was a situation of low e-government index, placing the nation 137th out of 193 examined nations. This indicates that digital governance promise to improve public service delivery and accountability has not yet been completely realised by Nigeria's public sector., which has affected Lagos State Civil Service at the state level. An additional discovery indicated that the

Lagos State Civil Service continues to encounter several obstacles when putting e-governance projects into practice. For example, inadequate infrastructure—such as a steady supply of electricity and dependable internet connectivity—hinders the successful implementation of e-governance programmes. Building staff capacity is also necessary to help them use e-governance tools and technologies efficiently. To prevent unauthorised access to and use of private information, it is also necessary to address the issue of data privacy and security.

These programmes, nevertheless, have not yet been completely incorporated into the larger public administration structure and have a narrow scope. Because of this, there is still a big difference between how much e-governance has progressed in Nigeria and how much more it could do to enhance the delivery of public services. Moreover, the government, business community, civil society organisations, and the general public must work together to successfully implement electronic governance programmes in the Lagos State civil service and other governmental bodies. For e-governance to be implemented successfully, the Nigerian government must thus devote resources to policy frameworks, infrastructure development, and capacity building. To guarantee that e-government efforts align with the expectations and needs of Lagos State Government employees, it is equally of importance for more citizen involvement. Notwithstanding these difficulties, the Lagos State Civil Service has undertaken a number of noteworthy e-government projects. For instance, the Lagos State Civil Service has set-up an online portal where taxpayers can submit payments and complete their tax returns. As a result, the government of Lagos

State has made available a platform for the implementation of an online identity registration system for its personnel.

Conclusion and Recommendations

The study has explored dynamics of digital governance and how it impacts accountability and transparency in the delivery of public services. However, the Lagos State Civil Service can benefit from increased public accountability and transparency thanks to e-government. E-governance can aid in holding public servants responsible for their deeds and decisions by enhancing transparency and information access. Additionally, regarding infrastructure: The insufficiency of ICT infrastructure, encompassing inadequate power supplies, restricted internet connectivity, and restricted access to computers and smartphones, impedes the successful execution of e-government programmes, consequently impeding accountability and transparency. An other major obstacle is the State Civil Service's low financial resources allotted to e-government programmes. Because of this, government organisations have found it challenging to create and carry out e-government programmes that could enhance the provision of public services. Human capacity: One major obstacle facing Lagos State is the shortage of qualified personnel to create and carry out e-governance projects. This involves a deficiency in project management, data analytics, and software development knowledge. The study came to the conclusion that the Lagos State Civil Service's e-government programme had less of an influence on accountability and transparency due to the faults that were discovered with it.

Following a thorough examination and critical evaluation of digital governance initiative on accountability and transparency in the public sector, this study offers the following recommendations:

Increased transparency: Digital governance can help increase government operations' openness by providing citizens with access to data on laws, programmes and public finances. This enhances openness may aid in lowering corruption and fostering accountability.

Efficient Service Delivery: By cutting red tape and processing times, digital governance will assist the Lagos State Civil Service in providing public services more efficiently. This has the potential to enhance public confidence in government institutions and the government's capacity to fulfil its commitments.

Better Record-Keeping: Digital governance can aid in the public sector's record-keeping and information management, which can aid in the fight against corruption and fraud. Improved record-keeping can facilitate the detection and investigation of wrongdoing by making it possible to hold public authorities accountable for their actions. Furthermore, by helping the Lagos State Civil Service to gather,

store, and analyse data more effectively and efficiently, e-governance projects can enhance data management. This can lessen errors and inconsistencies in data and enhance decision-making. Real-time Reporting: Digital governance makes it possible to report on government actions in real-time, which can increase public accountability. Digital governance can encourage public officials to be more accountable by making it easier to monitor their actions and choices by giving timely and reliable information on government operations. The programme may be able to reduce unethical behaviour while fostering more public confidence.

Publication Date: 2025/11/28

Abstract

This paper considers the fiscal responsibility bill as an instrument for enthroning good governance and act as internal check mechanism for the public service fiscal management. It called for financial accountability and the prudent management of public resources by the leadership. Using the public choice theory, the paper argued that the personal aggrandizement of both the political and bureaucratic leadership, underlies the direction of policy making and implementation. That this self-centered attitude to public sector management has largely contributed to the unsuccessful outcome of what the leaders provide. This mismatch of what constitutes policy and how they positively or negatively contributes to the philosophy of governance, takes major consideration here. It was recommended that a new re-approachment be adopted by the leadership on issues of good governance such that the people would be served and properly too. And that it is only based on this mutual symbiotic relationship that good governance can be guaranteed.

Keywords: *Fiscal Responsibility, Governance, Development, Public Finance, Economy, Nation*

Introduction

The process through which government raises revenue, how the revenue is spent and the implications of mobilizing these revenue from diverse sources, and of expending them in the economy is what technically can be referred to as public finance. Instruments that constitute public finance are usually expressed in the yearly budgets and carried out through the use of fiscal policies of varying aggregates such as total government spending and total tax revenues in order to achieve certain macro-economic goals.

The classical economic theories with their laissez faire philosophy believed that government should play very minimal role in public finance, since the believe is that government expenditure is largely unproductive vis-à-vis the private sector. But the Keynesian economists believe that, apart from funds generated by governments, such funds can be used to curb inflation, unemployment, conspicuous consumption and redistribution of income. It follows therefore that increased government spending would go a long way to stimulating output and employment by bringing idle resources into use (Ladele, 1992). Government dominant position in the economy becomes inevitable

for the sustainable growth of a nation; especially in developing economies such as that of Nigeria.

This position of government however being at the commanding height of the Nigerian economy was disrupted in 1986 with the introduction of the Structural Adjustment Programme (SAP), that introduced some fiscal reforms (discipline) in line with the demands of International Monetary Fund (IMF) and World Bank dictates. The position of these international monetary bodies are outrightly not too draconian if benefiting nations can exercise fiscal discipline in their financial transactions (Mukoro; 2022).

This is the Crux of what this paper centres around. It believes that good governance, the stabilization pursuit and the sustainable development of Nigeria revolves around maintaining fiscal discipline through moderate and sustainable budget deficits, while the fiscal reforms strives to improve the structure and administration of government. It sets out to argue that the composition and control of public expenditure must be prudentially managed in order to enhance an efficient public finance mechanism (Teshihoro, 2018). The need for self check and to prevent the attitude of public profligacy and

financial indiscipline was ironically the reasons why the fiscal responsibility Act was put in place in 2007, by the Nigerian National Assembly (The Act, 2007). In line with the requirements of the fiscal responsibility Act, Several State's Houses of Assembly have domesticated their own version of their fiscal responsibility laws.

Statement of problem

The idea of a prudent fiscal management underlies the efficient deployment of state resources for the benefit of alleviating the living condition of the citizens and consistently sustaining a higher standard of living of the people. Governance in itself is all about selflessness, efficient services delivery and maintaining an acceptable standard of living index, where infrastructures are available and working to the satisfaction of the people, where the people's commonwealth is evenly distributed and properly allocated to promote development and where transparency becomes the common denominator for leadership.

Since state resources belongs to all, a transparent, accountable, and a knowledgeable leadership should inform the calibre of managers of this common treasure. That is the reason why national policies should not only be people centred, it should be anchored on an accountable and transparent justice system where the rule of law supersede personal aggrandizement and where equity, justice and the spirit of co-ownership should drive policy making and implementation. It is based on these ethical foundations that the fiscal responsibility bill was incubated into a workable document to guide the performance of public officers in the spirit of efficiency, transparency, accountability and the promotion of good governance.

Experience has proven that the spirit that gave birth to the fiscal responsibility bill is trite and proper. But the process of its managerial engineering is where the problems lies. In the face of this setback, Nigeria is known as a nation with an abundance of rules, regulations, institutions, and internal check mechanisms. The question therefore arises why all these in-built check phenomenon have not been able to obviate the prodigal tendencies toward the management of the nation resources for the benefit of all and sundry. This account for the missing link responsible for why corruption and miss-management of the public treasury still thrives and refuses to go away.

Fiscal Responsibility, Governance and Development

It is arguable that democracy has become the main buzz-word and activity in contemporary times. This is because development within the global world has made democracy to wear the toga of international a. Improvement in public policy outcomes and

inevitability. Nigeria in itself has become drawn into this votex at both theoretical and empirical dimensions. One can say that the end of colonialism ordinarily should signify the end to domination that opens up a pathway to freedom and independence. Sadly enough, it is painful to say that the colonial order has since given rise to a post-colonial order that is as authoritarian and insensitive to the general will (Olowu, Soremekun and Williams, 1995). This messianic characteristics comes to the fore when such issues as the relationship between the State and the society, democracy and the people, economic development, prospects and constraint of the democratization system itself are considered. What can not be denied is that governments are put in place to help the citizens, not to make citizens lives more difficult (Mukoro, 2007).

The project of establishing a specifically western form of political domination has not succeeded in Nigeria. Ake (1993), commented that "what the colonizers of Africa established in the cause of the state project was not so much a state in the western sense but an apparatus of violent repression". He went on to opine that most of the nationalist leaders who came to power at independence decided to inherit the colonial state rather than transform it in accordance with nationalist aspirations. This isolated them and they became increasingly dependent on force to suppress a population that was inclined to revolt against their betrayal and unimpressive performance in office; a performance now epitomized by an economic crisis so deep, it has become life threatening. On the realm of leadership, what is common to them is power and the interest which it serves in terms of capital and resources accumulation in order to continue to be relevant within the political system (Rourke, 2003, Simmons, 2024). Democratic societies are governed by the rule of law and the respect for the inalienable human right of the people. This is what Cranston (1984) quoted Locke as saying. He quoted, saying "The whole trust, power and authority of the civil ruler is vested in him for no other purpose but to be made use of for the good, preservation and peace of men in that society over which he is set....."

The main elements of governance according to Adamolekun (2002) are "rule of law, freedom of expression and association, electoral legitimacy, accountability and transparency and development oriented leadership". While governance should be seen as concern for the effectiveness of a state's institutional arrangements, decision making process and capacity for implementation, democracy expresses popular sovereignty, equality and representativeness. The proper practice of democracy, gives rise to good governance. And good governance can be summarized as;

- b. Implementation by all stakeholders of a set of principles and processes by means of which appropriate public policies will be designed and put into practice (Mukoro; 2008).

Theoretical Elucidation

The public choice theory is selected in this paper to explain the pattern of decision making by political and administrative leadership, based on microeconomic models. The theory focuses on how self-interest motivates politicians and bureaucrats to make certain decisions for the followership. The theory focuses on voting behaviours legislative decision making and bureaucratic behaviour often revealing how private interests can influence public policy.

The theory posits that majority of office holders are motivated by their own self-interest rather than pursuing what constitutes public interest in policy and decision making. The theory believes that individuals are rational actors, making choices that they believe will best achieve their desired outcomes. It can be argued that the public choice theory bridges the gap between political science and economics, by looking at how self-interest comes first and thus determine the collective good (Ostrom; 1971). Buchanan (2017), on his part considered the public choice theory from the perspective of political decision making as it applies to budgeting and fiscal deficit. Ostrom (2015) was able to bring about the understanding of the public choice theory as the application of the methodology of economics to the study of politics. The summary of this theory is that interest groups engage in rent seeking behaviour, using the political process to obtain economic benefits at the expense of the general will of the people. This is just as the political class behave in Nigeria, that puts personal aggrandizement first before service to the people.

Fiscal Responsibility and the Developmental Trajectory

Factually speaking, the major objectives of development includes the improvement in the lives and welfare of the citizens, eradication of poverty, elimination of inequalities in income distribution, providing access to basic needs such as shelter, food, clothing, health, education, creation of employment opportunities and popular participation in the formulation and implementation of policies and programmes (Okojie, 2003). All these lofty aspirations imbued developing nations to resort to development planning in order to achieve rapid growth and transformation of their economics.

The process of planning according to Okojie (2003) essentially involves setting goals and targets which

have to be pursued through policy and programme formulation as well as mobilization of financial, human and material resources for effective utilization. In line with keeping with this dream of economic prosperity after independence in 1960, Nigeria has embarked on four development plans, a Structural Adjustment Programme (SAP), National Rolling Plans, Vision 2010 and the National Economic Policy of 1999-2003.

Specifically, these perspectives for planning for Nigeria can be categorized into:

- (1) First National Development Plan, 1962-1968
- (2) Second National Development Plan 1970-1974
- (3) Third National Development Plan 1975-1980
- (4) Fourth National Development Plan 1981-1985
- (5) Structural Adjustment Programme (SAP) 1986-1988
- (6) National Rolling plan 1990-1992
- (7) Vision 2010; 1997-2010
- (8) Nigeria Economic Policy 1999-2003
- (9) The National Economic Empowerment and Development Strategy (NEEDS) 2003-2007

The NEEDS framework was essentially an articulation of planned policy actions of the federal government, which was expected to be complemented at the state level by state economic empowerment and development strategy (SEEDS) and at the local level by local economic empowerment and development strategy (LEEDS). After several decades of planning, the aspiration of Nigerians for a prosperous economy and stable polity have not been realized. Several socio-economic indicators show that the quality of life of Nigerians have worsened. A major reason for this malaise centres around the lack of good governance. Okojie (2003) captured it thus:

- (a) The promotion of personal interests by the ruling elite to the detriment of the collective needs of the people.
- (b) Bickering within the elite
- (c) Evoking emotive cleavages by the elite such as religion, ethnicity and statism to create disharmony and distrust among gullible citizens, thereby preventing the pursuit of common national goals.
- (d) The use of instruments of power to promote economic interests inimical to the progress of the nation, but which provide avenue for looting public funds often stashed in foreign accounts.

Other possible areas of disaffection concerns political patronage where appointments of all sorts are shared among party loyalist, irrespective of the quality of their contributions to the growth of the nation. In all of these, the commonwealth is frittered away in frivolities (Ake, 1993).

Arising from the various constraints inhibiting the attainment of National goals of development, the fiscal responsibility Act was put in place by the National Assembly in 2007. The major focus of the Act was to provide for “Prudent Management of the Nation’s Resources, Ensuring long Term Macro-Economic Stability of the National Economy, Secure greater accountability and transparency in fiscal operations within the medium Term fiscal policy framework, and the establishment of the fiscal responsibility commission to ensure the promotion and enforcement of the Nation’s Economic objectives: and for related matters”.

To facilitate the efficient performance and delivery on the core mandate of the fiscal responsibility Act, a fiscal responsibility commission was established to

- 1) Compel any person or government institution to disclose information relating to public revenues and expenditure and
- 2) Cause an investigation into whether any person has violated any provisions of this act
- 3) Monitor and enforce the provisions of this act and by so doing promote the economic objectives contained in section 16 of the 1999 constitution of the federal republic of Nigeria

Following this national desire for the national management of the nation fiscal resources is the challenge for every state to also enact their version of their state fiscal responsibility law. Consequent upon which for example, the Delta State House of Assembly enacted their fiscal responsibility laws that became a gazette on the 4th of September 2008 (Delta State of Nigeria gazette; 2008) This law was amended to become the Delta State fiscal responsibility (Amendment) law, 2020.

It is pertinent to state that Nigeria has never been in short supply of ethical requirements to enthrone public accountability in governance (Mukoro; 2021) Nigeria has bodies like the;

- 1) Public Complaints Commission (PCC)
- 2) The Public Service Rules
- 3) The Code of Conduct Bureau And Tribunal (CCB)
- 4) The Economic and Financial Crimes Commission (EFCC)
- 5) Independent Corrupt Practices and Other Related Offense Commission (ICPC)
- 6) Whistle Blowing Against Economic Sabotage and Financial Mismanagement
- 7) The Fiscal Responsibility Laws
- 8) The Money Laundry Act

Cognizance has to be taken of the fact that it is not government machineries that are bad, it is the people; the public officials and political leaders that employ the machinery for unethical purposes.

It is for this reason that governments all over the world are preoccupied with how to devise a very effective means for controlling public authorities over the perfunctory manner in which public officers and public agencies discharge their statutory duties, that Nigeria put in place all the above ethical check mechanism (Mukoro; 2023. Ngini, Mojekwu, Chioma and Elechi; 2025). With all the above instruments working perfectly as intended, the country’s development initiatives and roadmaps would no doubt work with that clear intentions to succeed. Several other countries also have this kind of initiative and they are working. Take for example the law of the budget and fiscal responsibility of Montenegro (2014) framework for fiscal responsibility and national development.

The traditional role of public Finance according to Anyanwu (1997), Musgrave and Musgrave (1989), majorly covers;

- a) Allocation functions
- b) Stabilization functions
- c) Distribution functions, etc

All these functions becomes transformational to an economy only if there is good governance. Governance itself involves;

- i) Responsible leadership in the public service
- ii) Accountability in the mobilization and utilization of public funds
- iii) Discipline in handling public responsibilities
- iv) Selflessness in service and
- v) Popular participation (Oshisami, K. and Dean, NP 1988)

Governance or good governance for that matter depends on responsible leadership. Sadly in Nigeria, governance has been diverted from the essential objectives of desirable and necessary service to the people. It has become a crudely parochial , personal and self-serving phenomena, where the citizenry have become so battered, demoralized, and become withdrawn and unconcerned in the process of governance. This is akin to a state where Nigerians have witnessed their rise to greatness and a decline in the state of a bewildered people.

Apart from the clear aberration of military rule, governance has become characterized by vandalism, banditry, plunder, the reign of incompetence and prebendalism. To therefore facilitate good governance, certain institutional and legal framework has to become inevitable in other to attain sustainability in development. These requirements according to Gray and LiAn (1988), Ladele (1992) are;

- 1) Adoption of prudent budget policies

- 2) Reduction of the costs of raising public revenue
- 3) Increasing the efficiency and effectiveness of public spending
- 4) Strengthening the autonomy and accountability of decentralized public entities
- 5) Ensuring consistency between public finance and poverty alleviation goals. Also see Backhaus and Wagner (2005).

Arising from the above positions of emphasis and to progress and develop, Nigeria has to have a crop of leadership that leads by example. Only such leaders can generate confidence in the people, reduce the citizens indifference to government and make the citizens to become actively involved and committed to the task of national socio – economic reconstruction to bring about sustained development. To prevent cynicism, skepticism and the popular consensus of Nigerians on the popular moral bankruptcy of it's leaders, it's macroeconomic policies has to be well and patriotically articulated (Mukoro, 2019). Good or bad governance which shapes the direction of any national aspiration, also defines it's context and regulates it's vitality and vibrancy. That is the reason why Nigerians have to replace bad leadership with a just , democratic, civil and egalitarian leadership that would enthrone a sustainable and desirable ideals of good governance. All these can manifest through instances of some of these measures;

- 1) Raising public revenue to promote greater economic efficiency since beneficiaries will weigh the economic costs and benefits of goods and services.
- 2) Simplicity in tax design and limited use of tax incentives to achieve particular social economic goals.
- 3) Public spending should follow the logic that scarce government resources implies prudent government spending, by considering what government do best and what markets do best. Government has to provide public goods and services that benefit the society at large, invest directly or regulate monopolies that have large returns to scale, relative to size of the market and subsidize goods and services consumed by the poor through accurate targeting.
- 4) Decentralizing public entities in respect of decision making and accountability can help to link costs and benefits and thus improve efficiency. Local decision takers are more flexible and responsive to the needs and preferences of their constituencies. Equally, citizens can best watch over local entities than over central ones (Ladele; 1992, Ngini, Mojekwu, Chioma and Elechi; 2025)
- 5) Government should profoundly reduce the cost of governance.

Reform of the Public Service Finance for Sustainable Development.

According to Iyoha and Itsede (2003), Nigeria is the most populous black nation in the world and has the second largest economy in Africa. Nigeria is naturally well endowed with fertile arable land and rich Forests. It also has large reserves of oil and gas, and currently ranks 6th among OPEC countries in oil exportation. Given it's population size and resources, there were high expectations at independence in 1960 that Nigeria would quickly develop and industrialize, and take it's place among the developed nations of the world. After years of independence, virtually all hopes have died, as Nigeria has failed to develop and today remains one of the poorest nations on earth. In other forums, Nigeria has been described as a pathetic paradox; so rich and yet so poor. So endowed and yet so mismanaged, so much potential and yet so prodigal (Igum 2008), Mukoro (2020), quoted Kofi Annan, who was then the secretary general of the united nations, as saying that; "good governance is perhaps the single most important factor in eradicating poverty and promoting development" In the realm of governance, Nigeria's performance has been abysmally low. This failure can be traced to amongst several reasons; a combination of uninhibited particularities such as corruption, incapacity to resolve social conflicts peacefully, external pressure and intervention, rapid technological outclassing, economic and political incompetence (Mukoro,2020). Several policy analyst for example have fore-casted that sustainable development of the nation can be hinged on the improvement in the welfare of the citizens, eradication of poverty, elimination of inequalities in income distribution, providing access to basic needs such as shelter, food , clothing, health, education, employment and popular participation in the formulation and implementation of policies and programmes (Okojie 2003), Ladele (1992), on his path was very categorical as he suggested an increased effort at sourcing for revenue outside of petroleum products by diversifying the economy, minimize the growth of public assets, complete on - going projects and undertake new projects only where they are clearly essential for the economic recovery process. He went on to advocate for the privatization and commercialization of some government enterprises and withdraw from the activities where it is believed the private market is more efficient in resource use.

Other sustainable areas that must be considered are the removal of subsidies whose gains should be ploughed back to the economy in a much more

sustainable manner. The lower levels of government and the communities should be involved in decision making and implementation. This is where the bulk of the country's human, natural and mineral resources abound, but also where poverty is prevalent and the living condition pathetic. Efforts have to be made to curtail the profligate spending of the leadership on security vote and constituency allowance that are largely unaccounted for. These are huge public monies voted for from the public treasury. They occupy a large portion of the public budget. And they are spent especially by the executive and the legislature, without a concern as to letting the people know how such monies were spent. There must be all efforts to reduce fiscal deficits through the cutting of expenditures for productive investment and infrastructure. Efficient management of public finance involves the adequate assessment of the effective means of exploiting and tapping the available as well as the potential sources of government revenue, proper accountability of public finance, constant monitoring of public revenue and expenditure and the curtailment of wasteful spending.

Prospects and Suggestions

The prospects for a sustainable public sector finance in Nigeria necessitate for the need to curb wastage in the use of government resources, expand the sources of government revenue and make government more flexible in policy formulation and implementation. It is pertinent to say that several socio-economic indicators show that the quality of life of Nigerians have worsened, especially since the SAP era, that led to the depreciation of the Naira. Implementation of about ten rolling plans has not led to any significant improvement in the quality of life of Nigerians (Okojie; 2003).

Interestingly, budget deficits could not be curtailed due to increasing debt servicing and some extra budgeting allocations. These large budget deficits had given room for the accumulation of huge domestic debts which invariably necessitated a reduction on expenditure on economic and social services with serious implications for the future growth and development of the country.

The absence of good governance captures a lot of the constraints on plan implementation in Nigeria. According to the National Economic Intelligence Committee (1996), the issue of governance constitutes the most primary element in any attempt to reorganize, reconstruct and transform the nation and its economy.

In general, the public sector has been subordinated to private political and economic interest group, which have pauperized the economy and

destabilized the polity. Governance is largely in the hands of elites, collaborative civil servants and their supporters at home and abroad.

Suggestions

When policies are made, they are supposed to be for the betterment of the citizens. Poor implementation therefore would continue to be a bane of growth trajectory in Nigeria. A policy or plan is of little use to the citizens if it is not faithfully implemented. That is the reason why a good prospect for growth and development would be hinged on several factors such as:

- (a) Political will to see projects and plans through.
- (b) Integration of the private sector into the mainstream policy objectives of government
- (c) An effective and efficient bureaucracy would serve as the engine house for translating government policies and programmes into concrete action. This is because, a result oriented bureaucracy creates an enabling environment for all participants and ensure that there is continuity.
- (d) Data availability is very important for the formulation, monitoring, implementation and evaluation of plans and programmes.
- (e) Effective monitoring and evaluations of government activities would bring about compliance and accountability. It will also help to avoid waste of public resources.
- (f) There must be policy continuity to create stability in governance. This will ensure confidence of foreign and domestic investors on the economic system.
- (g) Emphasis on debt servicing at the expense of productive sector should be avoided at all cost.
- (h) The non-oil sector should be critically explored as an alternative source of revenue to de-emphasize Nigeria's posture of a monocultural economy.
- (i) Security is key for overall development. The extensive and porous borders had to be effectively managed. All acts of brigandage, banditry and internal insurrections has to be fought headlong in other to guarantee peace and security.
- (j) Local government should be well funded and all their stationary roles and responsibilities, monitored to ensure that there is value for money.
- (k) Interest should be paid to the Education sector, the Health sector, Science and Technology in other to boost self-reliance and growth from within.
- (l) Strikes should become a thing of the past in all the sectors of the economy. Workers should be paid living wages and provided with productive incentives.
- (m) Policy making should become more of bottom up approach in other to respond to the yearnings of the people.

- (n) Importantly, Public Institutions and Agencies should be seen to be working and effectively too. This would restore public trust, ensure accountability and guarantee good governance.
- (o) States and local Government should de-emphasize on their reliance on the stationary allocation from the federation account which constitutes well over 80 percent of their funds.
- (p) The revenue sharing/allocation formulae should be restructured to favour the principles of derivation more, which in turn would promote the initiative and ingenuity of the states and local governance.

Conclusion and Recommendations

Public sector financial discipline will only be achieved where leaders are dedicated to the course of the society and poised to eliminate or drastically reduce official corruption. The journey for the overall socio-economic and political development of the Nigerian nation has been tortuous and topsy turvy.

On the attainment of independence in 1960, there were very high hopes of its potential for sustainable growth and development. According to Bello Imam (2010); “the hopes were based on its substantial natural resources endowment, the existence of a competent civil service, favourable growth rate and above all, one of Africa’s most educated elite”. But most unfortunately, this immense human, material and fiscal resources as well as potentials, failed to transmute into viable socio-economic growth and development. Instead, the huge and large petroleum oil driven national revenue and foreign exchange earnings were grossly mismanaged to the extent that Nigeria almost became a failed state (Bello Imam, 2010). These very pathetic reasons responsible for the failure manifested in unsustainable fiscal deficit profile, pervasive corruption in all sectors of the national economy, gross disregard for the rule of law and process, a systematic culture of impunity occasioned by the militarization of the political space and abject poverty of a majority of the citizenry precipitated by a persistent culture of Micro-economic Management among others.

There is no arguing the fact that man is at the centre of development. Therefore development should aim at alleviating poverty and generally improving the quality of life of the citizens. This is why developed nations embark on fiscal discipline in the management of their public assets. In like manner, the private sector which is largely dependent on government patronage for survival needs a large degree of government intervention, necessary for its harmonize authorities of both the public and private

sector in the context of a mixed economy, which Nigeria operates. It is suggested that government should divest from production and manufacturing. But it should provide the enabling environment for private sector participation in the economy. According to the World Bank (1989):

- (i). Human capital development, especially the provision of basic health, education, nutrition and technical skills.
- (ii). Restructuring public and private institutions to create a context in which skilled workers can function effectively and
- (iii). Political leadership

Creating an enabling environment requires the establishment of a productable and honest administration of the regulatory frameworks, (Obadan; 1997, Okolie; 2003)

In addition to capacity building as discussed above, Obadan (1997), recommended for,

- (a) Initiate policies which will stabilize the economy and provide a Macro-economic framework conducive for sustainable growth.
- (b). Make rules and regulations which will make the market work and intervene when there are market failures and
- (c). Put in place an institutional machinery to mobilize resources for development.

Considering the fact that the fiscal responsibility bill has been designed to facilitate prudent resource Management, Accountability and Transparency, Medium Term Framework, Revenue and expenditure Management, Debt Management and Macro-economic stability etc. can it be said that Nigeria has been able to achieve all these objectives, even with the establishment of the fiscal responsibility commission?

As good as the fiscal responsibility initiatives are, there is apparently a worsening effect on the standard of living of most Nigerians. This is attributable to the inability of the government to judiciously implement some of the policy measures arising from poor leadership and failure of governance. It is regrettable to state that the incidence of corrupt use of office, lack of integration, unlawful appropriation of public funds for private ends and weak institution are far too high in Nigeria. The quality to governance, especially by global standards, human rights, social justice, public accountability and democracy and necessary compliance for sustainable development. Today, instead of economic growth, Nigeria is living with economic decline and in the place of institutional vibrancy, she is weighted down by institutional decay (Mukoro; 2023).

Artificial Intelligent Potency and Firms' Value in Nigeria

ASHIBOGWU, Nze Kingsley

Department of Accounting,

Southern Delta University.

Ozoro, Delta State, Nigeria

ashibogwukings@gmail.com

Publication Date: 2025/11/28

Abstract

With the separation of ownership from control, shareholders are fast losing the firms' value. Thus, the search for a computer technique that both generate and interpret information in relation to accounting reporting led to the invention of Artificial Intelligent. In light of this, this study investigated the value of Nigerian enterprises and the potential of artificial intelligence. Panel Autoregressive Distributed Lag (ARDL) model with related Pooled Mean Group (PMG) and Mean Group (MG) were used to accomplish this goal. Artificial intelligent awareness (AIAW), artificial intelligent frequency (AIFQ), and artificial intelligent application (AIAP) are substantial and positively correlated with enterprises' value as measured by return on asset (ROA), according to the panel ARDL's long- and short-term estimates. Based on this discovery, the study suggests that artificial intelligence's capacity to increase return on assets and hence boost business value should be promoted./+96*/8*

Keywords: Artificial Intelligent, Firm Ownership, Accounting Reporting, Firms' Value, Value Maximization.

Introduction

With the separation of ownership from control, shareholders of firms become far and detached from daily firms' operations with a likely tendency of losing firms value. This usually generates conflict of interest between managers and shareholders as managers are motivated towards profitability while shareholders interest is on value maximization. Thus, the urge for increased value maximization has necessitated the commitments by many shareholders to invest in business. However, to maximize the firms' value, effective and efficient financial reporting becomes imperative (Mishra, 2023). Consequently, the actualization of firms' value via transparent financial accounting reporting has remained one of the most essential criteria to measure firms' performance.

Although, financial accounting reporting is seen as an essential means of ensuring firms value most of the existing financial accounting reporting techniques in business activities are traditional - human – knowledge based with several limitations (Kwarbai & Omojoye, 2021). These limitations ranging from accounting errors, fraud as well as over reliance on human expertise makes it imperative for a technique that stimulate the process of thinking and obtaining information. Therefore, while the traditional accounting system employs a computerized path

analysis tools to analyze accounting information generated by human experts, the search for a computer technique that both generate and interpret information in relation to accounting reporting led to the invention of Artificial Intelligent (Akinbowale, Mashigo & Zerihum, 2023). Consequently, Artificial intelligent which has the capacity to generate and interpret large data is wide spreading and its impact on every business ecosystem is virtually spread. Thus, accounting being a vital constituent of business environment is not insulated from this spread (Santos, Pires, & Alves, 2023). It is against this backdrop that this paper investigated the effect of artificial intelligent potency and firms value in Nigeria.

Statement of the problem

In most developing nations, accounting system has witnessed various and substantial changes recently. These changes are mainly ascribed to developments in information and communication technology, principally the speedy incorporation of Artificial Intelligence (AI) in almost all sectors (Guse & Mangiuc, 2022). The incorporation of AI into accounting system is a worldwide spectacle driven by the acknowledgement of its potency in reforming how financial data is managed, analyzed, and utilized (Bako & Tanko, 2022). Nigeria, as a major player in the African economy, is no exception to this drift especially the potency of artificial intelligent in

actualizing firms value. Hence, the predictability ability of artificial intelligent especially in accounting for errors in financial reporting has made its applications in all accounting practices as a matter of routine. It is to add value to existing studies that this paper investigated artificial intelligent potency and firms' value in Nigeria. The remainder of this work is structured as follows, in keeping with the introduction: The methodology is described in Section 3, the results are discussed in Section 4, the conclusion and policy implications are covered in Section 5, and Section 2 reviews pertinent existing studies.

Objectives of the study

- i. To investigate the effect of artificial intelligent potency on firms' value in Nigeria.
- ii. To examine the degree of correlation between artificial intelligent potency and firms' value in Nigeria.

Research Hypotheses

H0₁: Artificial intelligent potency has no impact on firms' value in Nigeria.

H0₂: There is no correlation between artificial intelligent potency and firms' value in Nigeria.

Literature Review

heoretical Literature

This paper is anchored on social learning theory, expert system artificial intelligent, Chaos System and cuckoo search model of artificial intelligent. The social learning theory as formulated by Albert Bandura in 1973, have it that individual acquire knowledge from one another mainly through reflection, mimicking and demonstrating. Because it integrates motivation, memory, and attention into learning processes, this theory is frequently referred to as a bridge between behaviourist and cognitive learning theories. People mostly learn by observing the actions, demeanours, and outcomes of others. According to Bandura (1986), the majority of behaviour is learnt through reflection and demonstration. One develops a notion of how new behaviours are achieved by reflecting on others, and this suggested contemplation serves as a guide for action in the future. Through a constant interaction between behavioural, cognitive, and environmental factors, social learning theory explains how people behave. The theory combined behavioural and cognitive theories of learning to offer an all-inclusive model that accounts for the wide choice of learning practices that take place in the real world. As posited by Bandura and Walters (1977), vital doctrines of social learning theory are thus: Learning is not merely behavioural but a cognitive progression that takes place in a social setting; Learning can take place by observing a behaviour and associated consequences of

such behaviour (reinforcement); Learning encompasses reflection, extraction of information from those reflections, and making informed decisions about the performance of the reflections. Thus, learning can take place without a noticeable change in behaviour; Reinforcement has a fundamental role to play in learning but is not completely accountable for learning; The learner is not an inactive beneficiary of information. Cognition, environment, and behaviour all jointly affect one another in the learning process.

The application of this theory to this paper is that artificial intelligent that mimics human reasoning is an evolutionary process in the form of invented technology that imitates human behaviour which is the central idea of this theory.

Similarly, expert system theory of artificial intelligent developed by Golro and Tighe in 2012 is one of the most efficient and effective theory of artificial intelligent that depends on human expertise as a set-up of knowledge system. This kind of artificial intelligent model imitates human expertise in resolving thoughtful problem procedures. The Expert System Theory is a sprout from Markvo chain method that combines human expert knowledge in resolving accounting issues. The theory or model is a combination of deterministic and stochastic procedure using value stimulation tool (Neshat & Adeli,2011). The Expert System Theory has the capacity of addressing questions relating to cost accounting and financial reporting that is most appropriate in influencing favorable firms' value in Nigeria.

The use of artificial intelligence in accounting, however, is approached in a particular way that implies the existence of disorder by the chaos system theory, which was developed by Lux, Clements, Croome, and Viljjanen in 2010. That is when there is a dispute between corporate managers and stockholders due to different goals (Kardasho, Einar & Okrent, 2006). Therefore, chaos theory is a dynamic and critical model that uses available signal processing to determine self-organization and the degree of disorder in corporate structures. Thus, the key components of corporate structure and how they interact to increase a company's value are captured by the chaos system theory. This is due to the fact that the financial reporting chaos system theory grows more intricate as the dispute between managers and shareholders intensifies over time. However, the theory has faced harsh criticism, highlighting the fact that the theory's creator did not adequately address the dynamics' complexity. The cuckoo search paradigm was created in an attempt to address this issue. As a result of the chaos system theory's limitations, Durgun and Yildiz developed the cuckoo search model in 2012. Because it can combine the stochastic exploration and exploitation capabilities of the orthogonal learning method, the Cuckoo Search

Model is mostly used to solve value optimisation problems in accounting systems.

Empirical Literature

Extant empirical literatures on adoption of artificial intelligent in accounting profession are basically divided into two strands. One strand concentrates mainly on the transformative potency of artificial intelligent as it boosts financial reporting, advance decision-making procedures, and grows the efficacy of accounting practices (Sani, 2022, Haasan, 2022, Ukpog, 2022, Das, 2021, Ukpog, Udoh, & Essien, 2019). The other strand focuses on the application of artificial intelligent and risk of unemployment by accounting professionals as artificial intelligent handle more accounting jobs than human accounting professional at lower operational costs and maximize profits (Nguyen,2021, Eren,2021, Kute,2021).

Sani (2022) examined the transformative potential of artificial intelligent in revenue generation and trials brought by the COVID-19 pandemic in Nigeria. The study by adopting qualitative research approach, found that the implementation of artificial intelligent in accounting systems is a serious cause of change that changes conventional methods and resolving long standing issues relating to incomplete taxpayer data and multiple taxation. The study by Ukpog, Udoh, and Essien (2019) used both qualitative and quantitative research approaches to examine the fundamental role of artificial intelligence in reforming proficient services and its potential implications for the banking, accounting, and auditing sectors in Nigeria. Based on this finding, the paper recommended removing all forms of barriers limiting the adoption of artificial intelligence in Nigeria's revenue generation practices. The study concluded that the transformational potential of artificial intelligence in Nigeria's banking, accounting, and auditing sectors should be enhanced by increasing awareness of the obstacles linked to its adoption in the nation. Das (2021) examined the effect of Artificial intelligent on accounting profession with emphasize on its possible implications and transformative power. By utilizing quantitative research approach, the study found that the application of artificial intelligent can boost accounting efficacy and provide greater business value. Based on this finding, the study recommended active partnership among accounting professionals, auditing professionals, and artificial intelligent specialists to adapt to the growing trend and protect the sustained importance of the accounting profession.

Hasan (2022) investigated the utilization of Artificial Intelligence in accounting and auditing professions. The paper by applying semi – systematic or narrative review method acknowledged the shortcomings posed by unsettling technologies associated with Industry.

Also, that in the period of swift technological developments, the accounting and auditing professions are expected to undertake a substantial change to catch up with the changing world efficiently. However, the paper found that while artificial intelligent offers considerable rewards, it also come with worries and accompanying reservations... Based on these findings, the paper recommended the need for multiple collaboration among disciplines about the applications of artificial intelligent in accounting and auditing professions.

Ukpog (2022) looked into how Nigerian banks were using artificial intelligence in their financial operations. The study included 143 accounting professors from public colleges and prominent bankers in Akwa Ibom State. Using descriptive statistics, the study discovered that Nigerian commercial banks can use artificial intelligence to manage credit risk.

Nigerian researchers Kwarbai and Omojoye (2021) looked at the fields of artificial intelligence and accounting. Artificial intelligence has had a significant impact on Nigerian accounting practice, according to the study, which employed a survey research design and recruited participants from the Big Four audit firms: KPMG, Deloitte, PricewaterhouseCoopers, and Ernst & Young. On the basis of this, the report suggested that professional auditing should include artificial intelligence.

Gheorghe (2012) conducted research on artificial intelligence with the primary goal of chronicling the development of AI across time. The study discovered that the primary objective of artificial intelligence is to create computational agents that replicate the potentials associated with human intelligence through the use of a themed experimental technique that documents several stages of the development of artificial intelligence. Based on its reasoning aspects, this imitated intelligent duplicates' internal representation of their outward surroundings.

According to the studied literature, while artificial intelligence has made significant strides, most of its applications focus on banking operations and auditing issues, with little to no research on how AI may improve the value of Nigerian businesses. Furthermore, there is a dearth of research on the existence or absence of the observed covariate between traditional human-based financial accounting reporting and artificial intelligence, which raises both theoretical and empirical concerns. Through an investigation of artificial intelligence and company value in Nigeria, this article aims to close all of these gaps in the field.

Methodology Research Design

Ex post facto research design, which makes use of secondary time series data, was used in this work. Because the study's scenario already exists or has already occurred, the researcher does not control or change independent variables in this methodical empirical investigation, which is why this research design was chosen. Since the data on the variables for intangible assets and the listed manufacturing businesses' value are clearly established in yearly

reports, the researcher is unable to change the independent variables. However, the researcher can design or fabricate an environment that will generate the data needed for analysis. The main reason ex post facto research is important is because it is a useful approach to behavioural science research. This is due to the fact that experiments frequently do not occur in real-world settings and may require some kind of study scenario contrivance.

Nature and source of Data

Variable	Definition / Measurement	Source
Return on Asset as proxy for firms' value	This is defined as the value/ earnings from invested capital. It is measured as the ratio of earnings to total assets.	Annual report for various years
Artificial intelligent digital awareness	This is defined as degree of awareness of artificial intelligent in the quoted firms. It is measured dichotomously as 1 for being aware and 0 for not	Author's computation
Artificial intelligent application	This is defined as the extent of the applicability of artificial intelligent. It is also measured dichotomously as 1 for applying artificial intelligent and 0 for otherwise.	Author's computation
Artificial intelligent frequency	The number of artificial intelligence-related terms that are referenced in each yearly report serves as a gauge for this.	Annual report for various years

Source: Author's computation, 2025

Technique of Data Analysis and model specifications

The paper's main credibility was established using the Panel Autoregressive Distributed Lag (ARDL) model's dynamic effect, Mean Group (MG), and Pooled Mean Group (PMG). This method is supported by the fact that the Mean Group (MG) and Poole Mean Group (PMG) of the Panel Autoregressive Distributed Lag (ARDL) model estimate independent regression for the value of each firm and estimate the coefficients as the unweighted mean of the estimated coefficients for the individual businesses. Although this allows all

coefficients to vary and be heterogeneous in the short and long run, the validity and consistency of this technique rely on having a large enough amount of data. Therefore, this study employed the pooled Mean Group to ascertain the short- and long-term relationship between artificial intelligence and the value of Nigerian businesses. Descriptive statistics were employed to ascertain the behaviour of the variables used in the estimation, panel unit root was carried out using Pesaran and Shin, Breitung, and Levin Linchu (1995), and correlation coefficients were employed to test for multicollnearity among the variables of interest in the study. The panel ARDL (pq) model in error correction is specified thus:

$$Y_{it} = \alpha_1 + \beta_i C_{it-1} + \lambda_i X_{it-1} + \varepsilon_{it} \dots\dots\dots(1)$$

Where Y_{it} = individual firm value and $i=1,2,3,\dots,n$. Then the long run parameter U_{it} becomes

$$\varepsilon_i = \frac{\lambda_i}{1 - \beta_i} \dots\dots\dots(2)$$

Given equation (2), the MG estimator for the panel ARDL becomes.

$$\varepsilon_i = \frac{1}{\beta} \sum_{i=1}^n \varepsilon_i \dots\dots\dots(3)$$

Equation (3) shows how the Mean Group (MG) formulated by Pesaran and Smith (1996) and Pooled Mean Group (PMG) model propounded by Pesaran (1999) is further, specified thus.

$$\Delta ROA_{it} = \alpha^{ROA} + \sum_{i=1}^K \beta_i^{ROA} \Delta ROA_{it-i} + \sum_{i=1}^K \gamma_i^{ROA} \Delta AIAW_{it-i} + \sum_{i=1}^K \delta_i^{ROA} \Delta AIAP_{it-i} + \sum_{i=1}^K \delta_i^{ROA} \Delta AIFQ_{it-i} + \varepsilon_t^{ROA}$$

..... (4)

Where ROA = Return on Asset, AIAW = Artificial intelligent awareness, AIAP = Artificial intelligent application, AIFQ = Artificial intelligent frequency and ε_t = Error term

Presentation and Discussions of Results

Correlation Matrix

To ascertain the degree of relationship between the firms' value proxied by return on asset and indicators

of artificial intelligent potency, the study conducted correlation coefficient matrix and the result is presented on table 1

Table 1. Correlation Matrix Result

Variable	ROA	AIFQ	AIAP	AIAW
ROA	1.00			
AIFQ	0.724*	1.00		
AIAP	0.621**	0.381*	1.00	
AIAW	0.472**	0.411*	0.541**	1.00

Source: Author's Computation, 2025 Note * =1% and ** = 5% level of significance

To determine whether there is a significant association between the variables of interest in the study at the 1% and 5% levels of significance, respectively, the correlation coefficient matrix was utilised. The findings showed that all artificial intelligence variables or indicators are significant and positively correlated with firms' value as measured by return on asset (ROA), with the strongest correlation being found between firms' value and artificial intelligence frequency (AIFQ). Furthermore, none of the inter-relationships

between the variables utilised in the estimation are greater than 0.7, according to the correlation coefficient matrix result. This suggests that the variables used in the estimation do not have a multicollinearity issue.

Panel Unit root test.

To determine the order of integration of the variables of interest and the suitability of the chosen panel ARDL technique, the study conducted panel unit root test and the result is presented on table 2.

Table 2 Panel data unit test Result

Level				First difference			
Pesaran and Shin	Biretung	Levin, Liu and Chu		Pesaran and Shin	Biretung	Levin, Liu and Chu	Order of Integration
ROA 3.81	-	-3.79**	-4.93**	-15.71**	-9.61**	-14.63**	1(0)
AIFQ 1.18	-	-1.02	-1.32	-3.60**	-2.01	21.07**	1(1)
AIAP 0.72	-	-5.02	-0.03	-22.30**	-17.50**	22.10**	1(1)
AIAW 6.71**	-	-3.01**	-6.03**	-28.01**	-18.60**	-26.01**	1(0)

Source: Author's Computation, 2025 Note * =1% and ** = 5% level of significance

The results of the panel root test revealed that while return on assets (ROA) and artificial intelligent awareness (AIAW) were stationary at levels, artificial intelligent frequency (AIFQ) and artificial intelligent application (AIAP) became stationary after first difference at 5% level of significance. This result gives a mix order of integration of purely 1(O) and 1(I). There are two statistical implications to the result's finding. First, it suggests that the variables of interest in the study may have long-term correlations. Second, it demonstrates that the panel Autoregressive Distributed Lag (ARDL) model is the best suitable estimation method for the study because the order of

integration of the variables permits the estimation of the error correction coefficient as well as the short- and long-term relationships.

Panel ARDL Results

To ascertain the effect of artificial intelligent potency proxied by tangible assets innovation proxied by artificial intelligent awareness (AIAW), artificial intelligent frequency (AIFQ) and artificial intelligent application (AIAP) on firms' value proxied by return on asset (ROA), the panel ARDL technique was utilized and the result of the long run and short run panel ARDL is presented on table 3 and 4

Table 3 Result of Long run Panel ARDL

ROA (Dependent Variable)	Poole Mean Group	Mean Group	Dynamic fixed effect
Independent Variables	Long run	Long run	Long run
AIFQ	0.085** (4.11)	0.018*** (1.97)	0.09** (4.22)
AIAW	0.041** (4.03)	0.050** (2.87)	0.03** (4.02)
AIAP	0.062** (5.82)	0.054* (4.96)	0.02** (4.53)
Constant	225** (2.56)	241** (2.66)	127** (2.61)
Observations	154	154	154
Hausmann test ¹			2.89(0.74)
Hausmann test ²			0.17(0.99)

Source: Author's Computation, 2025 Note * =1%, ** = 5% and * =10% level of significance**

Table 3 contains the result of the long run panel ARDL coefficients. The findings from the result of the long-run estimates of the panel ARDL shows that the coefficients of all variables of interest such as artificial intelligent awareness (AIAW), artificial intelligent frequency (AIFQ) and artificial intelligent application (AIAP) are correctly signed and confirmed to the anticipated expectations. This is because all the variables are significant and positively related to firms' value proxied by return on asset (ROA). That is a 1% increase in artificial intelligent frequency (AIFQ), artificial intelligent awareness (AIAW) as well as artificial intelligent application (AIAP brings about 9%,

3%, and 2% increase in firms' value proxied by return on asset in Nigeria. This study implies that in contemporary financial accounting operational contexts, artificial intelligence offers an extra signal for specialised technological knowledge and experience, enabling increased business value by reducing accounting expenses.

These results supported those of Ukpong, Udoh, and Essien (2019) and Sane (2022), who discovered that the use of artificial intelligence had a major impact on auditing systems. Additionally, the efficiency and consistency of the Mean Group and Pooled Mean Group in estimating the panel dynamic effect are confirmed by the Hausmann test.

Table 4. Result of Short run Panel ARDL

ROA (Dependent Variable)	Poole Mean Group	Mean Group	Dynamic fixed effect
Independent Variables	Short run	Short run	Short run
ECM	-0.86** (0.02)	-0.078** (0.051)	-0.084 (0.011)
AIFQ	0.035** (8.62)	0.042* (6.86)	0.006** (2.43)
AIAP	0.036** (2.16)	0.083** (2.81)	0.041** (3.42)
AIAW	0.083** (3.61)	0.032*** (2.02)	0.041** (6.02)
Constant	352** (2.24)	241** (2.34)	127** (2.61)
Observations	122	122	122
Hausmann test ¹			2.69(0.74)
Hausmann test ²			0.15(0.99)

Source: Author's Computation, 2025 Note * =1%, ** = 5% and *** =10% level of significance

Artificial intelligent awareness (AIAW), artificial intelligent frequency (AIFQ), and artificial intelligent application (AIAP) have short-term significant contributory influences on increasing the value of firms in Nigeria, according to the results of the Pooled Mean Group (PMG), Mean Group (MG), and short-term dynamic fixed effect. The error correction coefficient, which is negative and significant under all three short run models, supported the validity of these findings.

Conclusion and Policy recommendations

Relying on the findings, it can be concluded that artificial intelligent positively impacts on firms' value as evidenced by improved return on asset (ROA) as application of artificial intelligent caused a decreased total expense, suggesting that artificial intelligent is streamlining operational processes and reducing costs. Hence, the paper recommends that the artificial intelligent potential to drive firms' value by enhancing return on asset should be encouraged.

Mentorship and Performance of Organization

UBANA, Ubi, Ije¹, NKAMARE, Stephen Ekpo², ATIMBA, Oboko I³. & INIOBONG, Ephraim Ebong⁴

¹Department of Business Management,
University of Calabar, Nigeria

⁴Department of Business Management & Entrepreneurship,
Ebonyi State University, Nigeria

Abstract

The purpose of the study was to examine mentorship and performance of organization. A study of selected supermarket in Cross River State. The specific objectives were to: examine the influence of guidance and counselling on performance of organization; investigate the extent to which career support influence performance of organization; and to ascertain the extent of coaching on performance of organization. The study employed primary sources of data. Multiple regression was adopted in the study. Based on the analysis of the results, the findings revealed thus; guidance and counselling, career support, and coaching positively affected performance. The study recommended thus: Guidance and counselling is an enlightened process of facilitating development; therefore, counsellors should formulate new designs that bring positive changes in the behavior of learners. Career support focused on direction, aspirations and career options, mentors should focus more on skill development. Finally, there should be a collaborative partnership between the coach and the learner.

Keywords: *Mentorship, guidance and counselling, career support, coaching, performance of organization*

Introduction

In a contemporary knowledge economy, where the business environment is characterized by turbulence and complexity, knowledge is the main source of both innovation and sustainable competitive advantage. It is, therefore, necessary to appreciate the link between mentoring and knowledge identification, creation, transfer and application of knowledge to enhance organizational performance through the acquisition of relevant skills, knowledge and decision making strategies. Mentoring has immense benefits to an organization besides being the key to improving organizational capability (Olsen, Johannessen, & Olaisen, 2019). In a traditional sense, mentoring is a practice that brings together the inexperienced (mentee) and experienced (mentor) so that the mentee will gain knowledge, self-confidence, and skills from the mentor (Gershenfeld, 2015). Mentoring is a system of semi-structured guidance where one person or a group of people share their knowledge, skills and experience to assist others to progress in their own lives and careers (Allen, 2016). Over time, the definition of mentoring has evolved, with some theorists suggesting that mentoring must be a voluntary relationship of equality, openness, and trust between the mentor and mentee (Coppola & Ledlow, 2018). A mentor is a person who commands a certain degree of respect, either by holding a higher-level position or because of age, expertise or experience doing the job (Noe, Greenberger & Wang, 2017). It also refers to someone who takes a special interest in a person, and in teaching that person skills and attitudes to help

that person succeed. (Mathewman, Clutterbuck & Ragins, 2017) establish that mentoring has a large number of outcomes for the mentor, the protégé and the organization.

Protégé outcomes include career advancement, success and satisfaction whilst mentors can benefit from increased promotion rates, rejuvenation and the acquisition of useful information. Furthermore, organizational outcomes include increased employee motivation, better job performance and increased competitive advantage. Mentoring has the net effect of enhancing the competence of the mentee; providing psychological support, motivation and job satisfaction which enhances performance not only for the employee but the organization as a whole which may translate into a competitive advantage position to the organization (Clutterbuck & Klasen, 2015). Organizational performance is the ability to acquire and process human financial and physical resources properly to achieve the goals of the organization (Madella, Bayle, & Tome, 2015). In fact, organizational performance is the outcome of an organization so that it is measured based on its goals and objectives (Lee, 2018). Currently, due to increased competition among organizations as well as focus on organizational transformation and change, each organization wants to achieve effective performance. The concept of performance improvement has developed over the past two decades as a strategic, integrated process, which incorporates goal setting, performance appraisal and development into a unified and coherent framework with the specific aim of aligning individual

performance goals with the organization's wider objectives (Dessler, 2015). Consequently, it is concerned with; how people work, how they are managed and developed to improve their performance, and ultimately how to maximize their contribution to the organization (Sola, 2018).

However, one of the prevalent challenges faced by education sector in this contemporary business setting is achieving performance through mentoring. Today, the emphasis of managers is on creating conditions for mentors' enhanced skills, the ability to help someone else and the opportunity to learn and grow themselves as the concept of mentoring contributes to greater use of the endless human capacity to increase the performance of organizations (Reeves, 2015). However, being a good mentor or mentoring is supported by an organization there could be some problems that organizations can face throughout the process. These include motivation, goal-setting, matching, feedback and more. This situation could hurt the employees, hinder the achievement of the corporate goal and could incapacitate the profitability of an organization. Hence, it becomes crucial to survey the effect of mentoring on performance of organizations in Cross River State, Nigeria.

Mentoring is imperative in the current workplace where the business climate is rapidly fluctuating, and this is brought about by an expected movement of top executives, changing technology, and global competition. Strategies for developing the capabilities of employees are an important part of any organization's overall strategy. However, many organizations carry out mentorship training programmes without evaluating or measuring their impact on employee performance, and therefore, are not able to determine the effectiveness of these programs, and whether they should be continued or not. Where there are no mentoring approaches from top management; counselling, role modelling, and assignment given to the employees may not be transferred to them. This is specifically seen in the gap between knowledge transfer and employee accomplishing goals; poor one-on-one mentoring which drastically affects the employee's knowledge in carrying out his or her duties as demanded. This position could lead to the complete closedown of manufacturing organizations in the form of declining profit, and overall poor organizational performance.

Literature Review

Theoretical framework

This study is anchored on Mentoring theory. This theory was propounded by Levinson in the 1970s. The ground theory was the earliest theory explaining mentoring. The base of ground theory is symbolic interactionism, which infers that an individual's behaviour is formed by social interactions; individuals are active in this process, and they make conscious decisions about how they will act in a

given social setting (i.e. clinical interactions between clinical instructor can create a condition for personal action and perception).

Relating to this study, the social learning theory can be applied. Mentoring theory claims that the mentor can help the protégé develop a sense of competence, confidence and self-esteem through the provision of psychological support (Allen & Day, 2022). This view is clarified by the principles of social learning theory. According to Bandura (2017), "Learning would be laborious, not to mention hazardous, if people had to rely solely on the effects of their actions to inform them on what to do. Fortunately, most human behaviour is learned observationally through modelling: from observing others, one forms an idea of how new behaviours are performed, and on later occasions, this coded information serves as a guide for action" Simply put, the process of mentoring is facilitated by the protégé observing and modelling the behaviour of the mentor in the relevant social context.

Merriam and Carafarella (2019) further express the relevance of the social learning theory about mentoring by stating "Social learning theories contribute to adult learning by highlighting the importance of social context and explicating the process of modelling and mentoring". In the same vein, the social cognitive theory supports the understanding of the mentoring theory. It states that knowledge can be enhanced by a close identification between the observer and the model as obtained between a protégé and a mentor. With adequate identification a connection that enables imitation is initiated. Bandura (2019) explains that behaviour, cognition and personal factors interact to produce the desired behaviour. The mentoring relationship is thus a reflection of how observation, imitation and identification of the mentor by the protégé are directed expertly to bring about a change in attitude, outlook and values in the protégé.

Mentorship training

Typically, mentoring is a one-to-one correlation amid an experienced expert and a novice employee. It is based upon inspiration, positive explanations, honesty, reciprocated trust, amazement and enthusiasm to study. Amentor-mentee association concerns with the development of mentee professionally and personally. Consequently, the mentor does not appraise the mentee's existing job, conduct performance assessment and does not make available input to salary increases and elevations. The mentor acts as instructor, to aid acceleration of talents, and capacities, benefactor, to contribute in professional entry and improvement, host and lead, to familiarize the mentee with fundamental people and the organization culture in general. This may be one of the reasons why a mentor is not necessarily the mentee's direct supervisors as to generate an anodyne learning environment, where the mentee

feels legitimate to deliberate on matters acquiescently and in good conscience, devoid of harmful penalties in the discussions of the appraisal of performance.

Based on the roles of mentorship in training, other uses for developing mentoring competencies are that mentor and mentee proficiencies can be helpful to: elucidate the expertise set which individual mentor has to offer when contributing to a mentoring relationship, minimize the risk of error during the mentorship matching process, help identify career progression paths for the mentor and the mentee, help maintain standards within a formal mentorship program, involve the mentor and mentee in self-assessment and developing educational accomplishments. Training of mentor's competency can enhance the managerial roles and relationships between the mentors and the mentee. The boss / staff relationship centers on accomplishing the intents of the organisation. The mentor ascribes responsibilities, assesses the consequence, conducts performance evaluations, and suggests probable remuneration growths and promotions for the mentees. Because mentors/managers embrace noteworthy authority over employees' work existence, greatest number of staffs exhibit their strengths and rawhide their feebleness with in their workplace.

The roles of mentorship in training necessitate corporate harmony, which is built upon and fed into the existing framework and serve as a means of enhancing and reinforcing the existing competence development framework. It does not, on its own, involve the introduction of new corporate culture and values. Mentoring is a personal developmental relationship in which a more experienced or more knowledgeable person helps less experienced ones (Kram, 2019). Ojedokun (2018), while citing Galbraith (2017) views mentoring as a process by which persons of superior rank, and prestige instruct, counsel, guide, and facilitate the intellectual and/or career development of persons identified as protégées. Mentoring is a close, developmental relationship between two people in which a partner willingly avails him/herself of the full range of superior experience, knowledge, skills, or status of the other partner in all spheres of human endeavour (Okurame, 2017). Bilesanmi (2015) posits that mentoring is a set of tailor-made advice and incentives that a more experienced staff, in an innovative way can offer less experienced members in a plethora of ways and on a range of competencies. Mentoring is therefore a process in which mature and more experienced managers share their wisdom and experience with the younger employees on a one-on-one basis.

Mentoring is a method growing in use for establishing relationships between junior and senior employees, a method gaining popularity in facilitating both employee and management development in the organization (Russel, 2014). Arogundade (2016) define a mentor as the person who facilitates the personal and professional growth

of an individual by sharing the knowledge and insight that have been learned through the years. The mentoring relationship involves an exchange of wisdom, learning and development of skills and knowledge about the organization for the protégé's career growth (Akinbobola, 2018). Noe (2018), and Kram (2015) suggest two major dimensions of the mentoring relationship which are career support and psychosocial support functions. Career support functions include sponsorship, coaching, exposure to important contacts and resources, visibility, facilitating the protection of the mentee and assignment of challenging work to enhance the protégé's career (Noe, 2018; Kram, 2016). Psychosocial support functions embrace role modelling, friendship, counselling, acceptance, and confirmation of the mentee (Kram 1916). Knowledge transfer according to DeLong (2014), knowledge transfer is a key mechanism for an organization's success.

According to Nyamori and Serrainne (2015), workplace relationships such as mentoring should be fostered to promote the transfer of tacit knowledge. Wright (2018) stresses the importance of human resource development to an organization's success. Mentorship is such a factor in that it promotes guidance on career development and role modelling which both contribute greatly to employee development. While citing Nwakoby, and Ofobruku (2015) saw mentoring as helping the protégées work out personal problems and thereby enhancing the protégées' self-image. The existence of an interpersonal bond that fosters mutual trust enables the protégées to identify with their mentors to offer their support and counsel needed. The mentor applies active listening and rapport skills that enable both individuals to address their concerns. The mentor reinforces with the protégé that both of them are highly valued employees and contributors to their organization.

Mentorship is conceptualized as a process where the person (mentor) facilitates the professional growth of an individual (mentee) by providing career support, psychosocial support and knowledge transfer learned through the years. Family businesses, which bring together so starkly the economic and non-economic realities of organizational life (Ibrahim & Ellis, 2014), offer a particularly attractive site for understanding how the confluences of economic and noneconomic considerations affect strategic decisions. Akarak, and Ussahawanitchakit (2017), family business entrepreneurs are unique in that they seek to build businesses that are also family institutions. How founders of family businesses go about establishing and developing organizations to create enduring family legacies and economic value should be of interest to the field of entrepreneurship.

Perpetuating these legacies requires the venture to manage family succession, which besides necessitating the replacement of the founding

entrepreneur, often involves changes in strategy and/or structure. Such changes might re-invoke a liability of newness (Stinchome, 2017). The productivity of an employee is an effectiveness of his level of competence which can be improved upon by regular training. Stinchome (2017) defines competence as things which an individual staff in a given profession should be competent enough to do. In other words, competence is the combination of knowledge, skill and attitudes an individual requires to enable him carry out a defined job or task to the required standard (Stinchome, 2017). It is the obligation of a company to provide an enabling environment for employees to develop themselves; conversely, employees should be willing to, and take the accountability for their individual development.

Mentoring correlation concept has been in existence in management literature but it is not widely practiced in many organizations-both public and private in Nigeria. It is a training and learning programme which cost little or nothing in monetary value. It needs to be tried by organizations introducing mentoring programme, it should be treated as a project to which adequate resources (human, time and money) need to be committed. However, many organisations have discovered that it is problematic to employee and preserve erudite qualified and knowledgeable personnel due to competition from other organisations for the few available talented staff to fill strategic roles and critical positions in organisations. In the same way, companies are encrusting on intellect difficult since elderly managers are reticent and newer workforces are not willing to continue to be loyal to one firm and build long term career. Temporarily, organisations might be able to overcome these challenges by recruiting and training new employees. The concern is that skills gap might be present. The paramount techniques to decipher this age-related fissure could be by means of introduction of mentoring programme.

Mentoring would enable an experienced individual (the mentor) to assist another (the mentoree, mentee, or protégé) in developing skills and knowledge that will enhance the less-experienced persons' growth. In manner of speaking, organization may mean a corporate group or a group of people who work together. The Traditional Methods of Learning (Training) are becoming too expensive and time consuming. Employers are therefore devising more creative and effective means of achieving competence development at optimal cost. One key technique or tool embraced by many organizations, in addition to formal training and learning is mentoring (mentorship). Mentorship can, in practice, be summarized as a combination of emotional and practical support.

Mentorship denotes an individual evolving connection with an expert or more experienced individual aiding or guiding non-expert person. The

beneficiary of mentorship is referred to as a protégé (male), a protégée (female); an apprentice or, in recent years, a mentee. Mentoring is a process that always involves communication and is relationship based, but its precise definition is elusive. It can also be referred to as a practice of transmitting of knowledge, communal resources and societal sustenance perceived by the inheritance or as appropriate to profession, and competence development. Mentoring entails informal communication, usually face-to-face and during a sustained period of time, amid an individual perceived to have greater appropriate acquaintance, wisdom, or experience (the mentor) and a person who is perceived to have less experience (the protégé)".

Mentoring can be defined in terms of the expected results. It is a relationship between a junior/subordinate staff, often younger person (referred to as the Mentoree or the protégé) and a Senior/superior persons (the mentor) by virtue of which the mentor serves as a guide, counselor, confidant, adviser and role model to the protégé (mentoree). The mentor is also a source of knowledge, experience and inspiration to the Protégé (Mentoree). This definition emphasizes the association concerning the advisor and the mentoree. Stinchome (2017) describes the mentoring process and says: These young people will also have an older person in the organization to look after them in their early years to ensure that their careers get off to a good start. Out of these relationships it is hoped that the youths could absorb risks, accept a philosophical commitment to sharing and learn to relate to people in an initiative and empathetic ways. Mentor' has its origin from Greek mythology.

In the work place, a young employee sometimes finds an older, more experience person for whom he has a natural affinity or likeness and a relationship develops whereby the younger one is able to discuss matters that concern him with the older one and seek his adviser on various issues. This is what we may call "Godfatherism" in our local parlance and it is known as "informal mentoring". Informal relationships develop on their own between partners. Objectives of the affiliation are not specified and outcomes are not measured. Informal mentoring is a slackly structured Correlation amongst the counselor and mentee Mentoring lasts for a long time and the establishment gains circuitously. Conversely, formal mentoring denotes a designed process reinforced by the enterprise and addressed to target populations.

The management of the firm is accountable for calculatingly opt for and combining the mentee and the adviser with the aim of supporting to nurture and improve on definite competencies. In business prescribed mentoring is among talent management address to people mainly key workers, recently engaged graduates, high potentials and future leaders. There are many kinds of mentoring relationships

from school or community-based relationships to e-mentoring relationships. These mentoring relationships are diverging and can be predisposed based on type of mentoring affiliation. Different models have also been utilized to designate and scrutinize the sub-relationships that can ensue (Stinchome, 2017).

Guidance and Counseling

Guidance and counseling is described as an enlightened process whereby people help people by facilitating growth and positive adjustment through self-understanding. Guidance and counselling is a process of helping an individual become fully aware of himself and the ways in which he is responding to the influences of his environment. It further assists individual to establish some personal meaning for this behaviour and to develop and classify a set of goals and values for future behavior. Callanan (2019), sees counselling as a process which occurs in a one-to-one relationship between an individual, troubled by problems with which he cannot cope with and a professional worker whose training and experiences have qualified him to help others give solution to personal needs. He further explains that an interactional relationship designed to facilitate the personal development of information leading to effective decision making and awareness of them are gotten through counselling.

Counselling is a learning process in which a counsellor helps an individual or individuals learn, understand themselves and their environment and be in a position to choose the right type of behaviours that will help them develop, grow, progress, ascend, mature and develop educationally, vocationally and socio personally. In other words, counselling is a transformative process of helping people to learn all that are to be learnt both in and outside the school. It is interchanged with mentoring. Except that the former takes place between lecturers and students, and the latter is between higher and lower lecturers. Callanan(2019) describes teaching as a set of activities that are designed to bring about changes in the behaviour of learners. He viewed teaching as explaining, demonstrating, guiding and counselling by the teacher in order to effect a change in the learner.

Career support

In career support, formal mentoring relationship is spontaneously formed through people getting to know each other in the work environment. The difference in the status of the relationship between formal and informal mentoring relationship is that the communication in informal relationship is less formal as the name denotes. There are still hierarchies of status in this relationship in that the communication in formal relationship is less formal. The pairing in an informal relationship is often the

result of both the mentor and the protégé selection ship has been a recent development in literature.

Co-mentoring recognises the contribution that each person brings to the relationship and it is based on reciprocal benefit. In this relationship, the status of each person is equal and the communication pathway is one of reciprocity with each person mutually benefitting from the relationship. The relationship here should be a friendship of peers rather than a hierarchical relationship and that communication was dialogue rather than transmission of organisational information. Within this relationship, the individual's acts like partners, often complementing each other's knowledge and skills. The mentee can be a catalyst for the mentor's professional development, and for stimulating the mentor's personal self-reflection and providing an impetus for professional development.

Coaching

Coaching is an integral parts of every manager's job. Studies have shown that managers who provide regular ongoing coaching and feedback to help employees develop skills and improve performance, and define and realize career goals have more successful and productive teams. Successful coaches listen well and provide plenty of opportunities for learning and growth. Coaching is one of the best ways to develop and retain valuable employees. What is coaching? Experts describe coaching as on-the-job training. But it is a very special kind of training, it is not what a co-worker might do when showing someone how the database is set up, it is different from managing too, it is less about directing the work and more about helping someone succeed. Coaching is a way of working with people that gives them more competent and more fulfilled so that they are more able to contribute to their organizations and find meaning in what they are doing. The underlying goal of every coaching interaction is to help the other person succeed.

Coaching is about building relationships and that takes time. For coaching to work well, it has to happen regularly. It is important to remember to spend as much time coaching strong employees as weaker ones. Sometimes managers wind up concentrating on the employee who needs remedial attention to the detriment of stronger performers who don't seem to need any help. That is a misallocation of managerial resources. Managers must meet often with all the people he/she manage individually and as a team in order to establish trusting relationships, there may be unplanned meetings to discuss a specific problem that has come up on a project or more formal sessions that is schedule ahead of time.

Organizational Performance

Organizational performance refers to the degree to which the organization, with some informational, financial, and human resources, positions itself effectively in the business market. Organizational

performance involves analyzing a company's performance against its objectives and goals. In other words, organizational performance comprises real results or outputs compared with intended outputs (Gersick, Davis, McCollom, & Lensberg, 2017). Organizational performance comprises the actual output or results of an organization as measured against its intended outputs (or goals and objectives), some specialists in many fields are concerned with Organizational performance including strategic planners, operations, finance, legal and Organizational development. Organizational performance focuses on the evaluation, analysis and monitoring of activity in the context of the actual trends in the field.

This is how the organization behave in their different fields that is how well the performance of the organization was able to carry out their duties to meet the objective of the organization. It is the functioning of the organization and its outcome of operation to meet the objective and arm of the organization. Organizational performance cannot be over-emphasized, it also refers to how well an organization is doing in reaching its vision, mission and goals. Assessing organizational performance is a vital aspect of strategic management (Mundia & Bravo, 2015; Stinchome, 2017; Stinchome, 2017)

Empirical Review

Oladimeji and Sowemimo (2015) examined the effect of mentoring on employee job performance in the Nigerian service sector. The study seeks to evaluate job performance by considering the effect of mentoring on employee performance in the Nigerian service sector. Research focused on finding out the level at which exposure, counselling, and role modelling affect employee performance in the Nigerian service sector. They noted that the business world is changing due to the occupational climate and a large proportion of business executives are bound to retire shortly leading to an anticipated great loss of knowledge and performance. However, the study found that job rotation and mentoring did not have a significant effect on the performance of police in Nigeria.

Mundia and Bravo (2015) investigated the role of mentoring programs on employee performance in organizations, the study highlights that the mentoring program is an important employee development method practised in successful organizations. The ability of mentors either informally or formally to implement the mentoring program activities may lead to higher employee performance, stratified random sampling was used to select the subjects included in the sample. The data was analyzed qualitatively and quantitatively by use of descriptive and inferential statistics to measure the formulated objectives to establish the relationship between the independent and dependent variables. The study established that mentorship programs play an important role in

employee performance and are enhanced through knowledge transfer, career development guidance and skills enhancement in mentoring.

Okediji, Nnedum, and Enwongo (2015) carried out a research study on mentoring and work-related outcome constructs. The study deals with mentoring relationship relevance in the field of organizational behaviour. It explores the theoretical functionalism of effective mentoring ideology in the academic literature the plausible influence of mentoring relationship were underscored in the conceptual exploration of mentoring with core work-related outcome variables. Academic efforts to synthesize mentoring as the organizational catalyst that selectively enhances the integration of the individual into the focal work organization and improve human capital theory advocates that investment in the development of employees' knowledge, skills and competencies through employee training and career support from a very senior member of the organization will aid the increase of employees' productivity by exposing them to useful knowledge, skills and attitude that lead to better performance.

Srivastava and Jomon (2015) carried out a study on mentoring and performance: Implications for business organizations and noted that mentoring as a concept and as a practice existed for a long in organizations and its relevance is gaining momentum as years pass by. An extensive review of the literature indicated that the benefits of mentoring practice especially those relating to individual performance were not empirically studied and reported. This paper explores how perceptions of two forms of mentoring support, the traditional and relational, influence protégés' role-based performance outcomes. The study tested for the variance in performance outcomes due to the addition of relational mentoring support. The findings shed light on the role that protégé personal learning plays as a mediator in transmitting the effect of the two forms of mentoring support to his/her role-based performance.

Mundia and Iravo (2016) did a study on the role of mentoring programs on employee performance in organizations. The study highlighted that the mentoring program is an important employee development method practised in successful organizations. The ability of mentors either informally or formally to implement the mentoring program activities may lead to higher employee performance, stratified random sampling was used to select the subjects included in the sample. The data was analyzed qualitatively and quantitatively by use of descriptive and inferential statistics to measure the formulated objectives to establish the relationship between the independent and dependent variables. The study established that mentorship programs play an important role in employee performance and are enhanced through knowledge transfer, career

development guidance and skills enhancement in mentoring.

Methodology

The study employed survey design and primary sources of data. Questionnaire instrument was used to collect useful information on mentorship training and organizational performance. Ordinary least square of multiple regression statistical tool was used. The model of the study stated thus:

$$Y = f(x_1, x_2)$$

Where

Y = Dependent variable

X = Independent variables

The equation is stated in OLS model

$$PERF = b_0 + b_1GC + B_2CS + CG + U_t$$

Where b_0 = Regression constant, b_1 - b_2 = Regression parameters, PERF = Performance, GC = Guidance and counselling, CS = Career support, CG = Coaching, U_t = Statistic error term.

Test of hypotheses

H₀₁: There is no significant effect of Guidance and counselling on performance of organization

H₀₂: There is no significant effect of Career support on performance of organization.

H₀₃: There is no significant effect of coaching on performance of organization

Std. Predicted Value	-2.911	2.287	.000	1.000	151
Std. Residual	-2.824	2.124	.000	.983	151

a. Dependent Variable: Performance

The multiple regression analysis conducted above was to examine the effect of mentorship training on performance of organisation in Cross River State. The findings show that mentorship training such as Guidance and counselling, career support, coaching have positive significant effect on performance of organization in Cross River State and these remains evident as the overall model summary which produced an R of .527^a, and an R-square = .344. This implies that the independent variables have influence on the dependent variable. The above influence is further explained as follows: Guidance and counselling, (B = .213, P = .098 < 0.05), career support, (B = .127, P = .000 < 0.05) and coaching (B = .246, P = .064 < 0.05), proved to have significant influence on performance. Based on the above, it is concluded that mentoring training has a positive significant effect on performance of organization in Cross River State.

Discussion of findings

Based on the results, the findings are in line with the works of Kram (2019) who postulated that mentoring is a personal developmental relationship in which a more experienced or more knowledgeable person helps less experienced ones, while citing Galbraith (2017) views mentoring as a process by which persons of superior rank, and prestige instruct, counsel, guide, and facilitate the intellectual and/or career development of persons identified as protégées. Mentoring is a close, developmental relationship between two people in which a partner willingly avails him/herself of the full range of superior experience, knowledge, skills, or status of the other partner in all spheres of human endeavour. Bilesanmi (2015) posits that mentoring is a set of tailor-made advice and incentives that a more experienced staff, in an innovative way can offer less experienced members in a plethora of ways and on a range of competencies.

Findings also revealed that guidance and counseling is described as an enlightened process whereby people help people by facilitating growth and positive adjustment through self-understanding. Guidance and counselling is a process of helping an individual become fully aware of himself and the ways in which he is responding to the influences of his environment. It further assists individual to establish some personal meaning for this behaviour and to develop and classify a set of goals and values for future behavior. Callanan (2019) sees counselling as a process which occurs in a one-to-one relationship between an individual, troubled by problems with which he cannot cope with and a professional worker whose training and experiences have qualified him to help others give solution to personal needs.

In career support, formal mentoring relationship is spontaneously formed through people getting to know

each other in the work environment. The difference in the status of the relationship between formal and informal mentoring relationship is that the communication in informal relationship is less formal as the name denotes. There are still hierarchies of status in this relationship in that the communication in formal relationship is less formal. The pairing in an informal relationship is often the result of both the mentor and the protégé selection ship has been a recent development in literature.

Coaching is an integral parts of every manager's job. Studies have shown that managers who provide regular ongoing coaching and feedback to help employees develop skills and improve performance, and define and realize career goals have more successful and productive teams. Successful coaches listen well and provide plenty of opportunities for learning and growth. Coaching is one of the best ways to develop and retain valuable employees.

Conclusion

Thus the study examined mentorship training on performance of organisation. Empirical results from this study finding indicate that mentoring involved the attainment of acquaintance and skill related to one's competence on the job. The use of mentorship techniques has become a veritable means of developing competence in modern organization which Nigerian companies should experiment. There is no human relationship, structures and programmes that is perfect. It is always necessary to guide against abuses, otherwise, the credibility of such programme may be jeopardized. The mentoring programme is no exception. The study also deduced that workplace mentoring connection is a reciprocally valuable arrangement that benefits both parties to improve competencies. The experience gain by mentoring a protégé can facilitate the mentor's own specialized growth, making him/her more of an asset and a competent manager to the organization. It is pertinent to annotate that within mentoring relationships, individuals are learning by doing.

Consequently, mentees are capable to practice the knowledge they have acquired. Mentoring rapport upsurges professional improvement, helps in attracting and retaining talent, increases retention via decline in turnover, and paves tactic for level succession. When protégés acquire the benefits associated with mentoring, there is a high probability that experienced manager would spend much less time in managing crises and fixing problems, and the organization would be better for it.

Recommendations

The following recommendations are proffered:

1. Guidance and counselling is an enlightened process of facilitating development, therefore counsellors should formulate new designs that bring positive changes in the behavior of learners.
2. Career support focuses on direction, aspirations and career options, mentors should focus more on skill development.
3. There should be a collaborative partnership between the coach and the learner.

Effect Of Profitability Metrics on Sustainability Reporting: A Sectorial Analysis in Emerging Market Industries

FASUA, Kayode O.
ANAN University, Kwall, Plateau State
Kalovick1@gmail.com

Publication Date: 2025/11/28

Abstract

This study investigated the relationship between profitability metrics and sustainability reporting in emerging market industries, focusing on environmental, social, and governance disclosures. With growing pressure for companies to improve their sustainability practices, understanding the impact of financial performance on these disclosures is critical. The study used a panel dataset of 33 firms from emerging markets to analyze the effects of key profitability metrics, Return on Assets, Return on Equity, Earnings Before Interest and Taxes, and Earnings per Share, on three types of sustainability disclosures: environmental sustainability disclosure, social responsibility disclosure sustainability index, and governance sustainability disclosure index. The results revealed that profitability metrics do not significantly affect: environmental sustainability disclosure, social responsibility disclosure sustainability index, and governance sustainability disclosure index. The findings highlight the complexity of sustainability reporting, where financial outcomes may not always directly correlate with disclosure practices. For policymakers, businesses, and investors, the study provides important insights into the dynamics of sustainability reporting in emerging markets, emphasizing the need for broader regulatory frameworks that encourage comprehensive disclosure practices.

Key Words: Profitability Metrics. Sustainability Reporting, Environmental Disclosures, Social Disclosures, Governance Disclosures.

Introduction

Sustainability reporting has become an essential practice for companies globally, especially in emerging markets, as it provides transparency on a firm's environmental, social, and governance (ESG) activities. With growing attention on sustainability, companies are expected to report on their environmental impacts, social responsibility, and corporate governance structures to maintain legitimacy, attract investment, and ensure long-term profitability (Olatunde, et al. 2021). In emerging markets, where corporate transparency and sustainable practices are evolving, understanding the impact of sustainability reporting on profitability is crucial.

Emerging market industries face unique challenges in balancing profitability with sustainability. Companies in these regions often grapple with resource constraints, regulatory complexities, and heightened pressure to meet both national and international sustainability standards (Khan, et al. 2021). Environmental sustainability reporting, for instance, addresses the need for companies to disclose their energy consumption, carbon emissions, and waste

management practices. Studies show that such disclosures can influence consumer perception, regulatory compliance, and operational efficiency, all of which may positively affect profitability (Ali, et al. 2018; Al-Waeli et al., 2021). However, the relationship between these disclosures and financial performance remains complex and industry-specific.

Similarly, social sustainability disclosures (SDI), including reporting on corporate social responsibility (CSR) initiatives, employee welfare, and community development, have been found to impact a company's public image and customer loyalty, which may, in turn, affect profitability (Emeke, et al. 2021; Busru, 2021). Governance sustainability disclosures (SDI), which cover corporate governance practices, risk management, and ethical standards, are also believed to influence profitability by enhancing transparency, reducing risks, and building trust with investors (Moses, 2021; Erin, et al. 2022).

Given these dynamics, this study seeks to investigate the effects of profitability metrics on sustainability reporting practices, specifically focusing on environmental, social, and governance disclosures in

emerging market industries. The study aims to assess how these reporting practices influence company profitability, providing insights into the broader relationship between sustainable business practices and financial performance in emerging markets.

Problem of the Study

In recent years, the importance of sustainability reporting has grown significantly, especially within emerging markets. These markets are characterized by rapid industrialization, resource constraints, and an increasing need for firms to balance financial performance with environmental and social responsibilities (Khan, et al. 2021). Despite the growing interest in sustainability, the relationship between sustainability reporting and profitability remains underexplored in these regions. While existing literature highlights the positive correlation between sustainability practices and corporate financial performance in developed markets (Ikumapayi, et al. 2018), studies focusing on emerging markets are scarce and often yield mixed results. This creates a critical gap in understanding how environmental, social, and governance (ESG) disclosures influence firm profitability in these regions.

Emerging markets are often grappling with weaker regulatory frameworks, which results in inconsistencies in the implementation and quality of sustainability reporting. As a result, it becomes essential to understand how environmental sustainability reporting, social sustainability disclosures (SDI), and governance sustainability disclosures (SDI) contribute to profitability metrics like Return on Assets (ROA), Return on Equity (ROE), Earnings Before Interest and Taxes (EBIT), and Earnings per Share (EPS) in these regions. Companies in emerging markets may face higher challenges in reporting sustainability factors due to resource limitations and lack of structured frameworks (Kundayo, et al.2020).

While sustainability reporting has been shown to improve stakeholder trust and brand image in developed economies, the extent to which these benefits translate into financial gains in emerging markets is still uncertain (Freeman, 1984; Ndanafu & Ojodi, 2023). This study, therefore, seeks to explore the relationship between sustainability reporting and profitability in emerging market industries, providing insights into the broader implications of sustainability practices for financial performance. Particularly, the following the null hypotheses will be used for the Study:

- iv. **H₀₁:** There is no significant effect of profitability metrics on environmental sustainability reporting in emerging market industries.

- v. **H₀₂:** There is no significant effect of the profitability metrics on the social sustainability disclosures (SDI) of companies in emerging markets.
- vi. **H₀₃:** There is no significant effect of the profitability metrics on Governance sustainability disclosures (SDI) of companies in emerging markets.

Conceptual Review

Sustainability Reporting in Emerging Markets

Emerging markets are characterized by rapid industrialization, resource scarcity, and underdeveloped regulatory frameworks (Nuhu & Alam, 2024). These markets face unique challenges, such as limited access to sustainable technologies, lack of standardized reporting practices, and inconsistent enforcement of environmental regulations. Despite these challenges, the importance of sustainability reporting in emerging markets has risen, as companies seek to attract international investment, improve their environmental practices, and align with global sustainability goals (Nzekwe, et al. 2021). The growth of global supply chains and increasing consumer demand for ethical practices has placed additional pressure on companies in these regions to report on their sustainability efforts (Bose & Khan, 2022).

The evolution of sustainability reporting standards has been pivotal in shaping the practices of companies worldwide. The Global Reporting Initiative (GRI) and the Sustainability Accounting Standards Board (SASB) have developed frameworks that provide guidelines for companies to disclose their sustainability performance in a structured manner (A Practical Guide to Sustainability Reporting, 2013). These standards have facilitated greater consistency in reporting and have enabled companies to communicate their ESG performance effectively. In emerging markets, however, the adoption of these standards is often slow due to regulatory and infrastructure challenges (Adegboyegun, et al. 2020).

Environmental Sustainability Reporting and Profitability

Environmental sustainability reporting plays a critical role in shaping a company's financial performance. Companies that disclose their environmental impacts, such as carbon emissions, waste management, and resource usage, often experience improved financial performance due to enhanced stakeholder trust, regulatory compliance, and operational efficiency (Bose, et al. 2022; Al-Waeli, et al. 2021). Voluntary environmental disclosures can act as a signal to investors, signaling that the company is forward-thinking and prepared to manage environmental risks effectively (Friske, et al. 2023). Research indicates that

firms that adopt comprehensive environmental reporting practices often see better financial outcomes, such as improved stock performance and profitability, due to reduced operational costs and improved risk management (Igbinovia & Agbadua, 2023).

The impact of environmental disclosures on profitability is often industry-specific. For example, industries such as manufacturing and energy face higher scrutiny regarding their environmental practices due to their substantial ecological footprints (Emeke, et al, 2021). These industries are under significant pressure to report on their environmental practices and reduce their impact, which can present both challenges and opportunities. On the one hand, the need for regulatory compliance can drive up costs, but on the other hand, it creates opportunities for cost savings through efficiency improvements, innovative technologies, and access to green financing (Ali, et al. 2018; Nmer & Hass, 2021).

Exploring the Components of Social Sustainability Reporting

Social sustainability disclosures (SDI) encompass corporate social responsibility (CSR) initiatives, employee welfare programs, community engagement, and stakeholder relations (Emeke, et al. 2021; Sani, 2025). CSR reporting highlights how organizations contribute to societal development through charitable contributions, health and safety programs, and education support, while employee welfare disclosures communicate policies on training, fair wages, and work-life balance. These components provide a transparent framework for stakeholders to evaluate a company's commitment to social responsibility (Adegboyegun et al., 2020).

Transparent reporting of social sustainability activities strengthens stakeholder trust by demonstrating accountability and ethical business conduct (Whitt & Bournier, 2018). Firms that actively communicate social initiatives foster stronger brand loyalty, as customers, investors, and employees perceive them as socially responsible and ethical (Wilky & Cole, 2020). Studies show that positive stakeholder perceptions of social responsibility can translate into increased customer retention, higher employee engagement, and improved investor confidence (Suchman, 1995; Ali, et al. 2018; Omotola & Lambo, 2024).

Governance Sustainability Disclosures and Their Influence on Profitability

Governance sustainability disclosures encompass corporate governance structures, anti-corruption policies, and risk management practices that organizations communicate to stakeholders (Mohammed, 2018). These disclosures provide insight into board composition, internal control mechanisms,

compliance frameworks, and ethical guidelines that ensure accountability and mitigate operational and financial risks. Effective governance reporting reflects a company's commitment to regulatory compliance and sustainable business practices, which are particularly critical in emerging markets where institutional weaknesses and corruption risks are prevalent (Jyoti & Khanna, 2021; Nuhu, et al. 2024).

Transparent governance practices enhance operational efficiency and protect organizations from financial mismanagement and reputational damage (Friske, et al. 2023), while ethical governance also fosters internal trust among employees, reduces agency costs, and strengthens long-term strategic decision-making, which collectively contributes to sustained profitability (Omotola et al. 2024) as investors are more likely to commit capital to firms that provide clear, comprehensive governance reports, perceiving them as lower-risk and more likely to generate consistent returns. Consequently, robust governance sustainability disclosures play a critical role in enhancing both financial performance and market valuation in emerging economies.

Profitability Metrics in Emerging Market Industries

Profitability metrics such as Return on Assets (ROA), Return on Equity (ROE), Earnings Before Interest and Taxes (EBIT), and Earnings per Share (EPS) are critical indicators used to evaluate a company's financial health. ROA measures how efficiently a company uses its assets to generate profit, with higher values indicating better asset utilization (Freeman, 1984). ROE, on the other hand, gauges the profitability relative to shareholders' equity, signaling how effectively a company utilizes its equity base to generate earnings (Ali, et al. 2018). EBIT focuses on operational efficiency by excluding interest and taxes, providing a clearer view of a company's core profitability (Friske, et al. 2023). EPS, often a favorite among investors, measures the profit attributable to each share, offering insights into company performance from a shareholder's perspective (Al-Waeli, et al. 2021).

Profitability metrics are essential in assessing the financial health of a company, especially in emerging markets where companies face unique challenges such as fluctuating economic conditions and regulatory uncertainty (Bose, et al. 2022). These metrics help stakeholders, including investors and analysts, determine the sustainability and risk profile of a company. Strong profitability ratios can indicate a company's ability to weather economic volatility and sustain growth, which is crucial for long-term financial stability (Khan, et al. 2021; Ukaru & Onmani, 2024).

In emerging economies, there is a growing recognition of the relationship between profitability and sustainability. Companies that effectively integrate sustainability practices into their operations may experience enhanced profitability through improved efficiency, brand loyalty, and investor trust (Ali, et al., 2018; Kolawole, et al. 2023; Obinna & Onwe, 2024). Moreover, companies in these regions are increasingly using sustainability reporting to attract investors and comply with global standards, thus improving their financial outcomes (Nazim, et al. 2017; Oluwagbade, et al. 2023).

Theoretical Review

This study is grounded in several key theories that explain the relationship between sustainability reporting and profitability in emerging markets. The Stakeholder Theory (Freeman, 1984) posits that companies must consider the interests of all stakeholders, not just shareholders, and sustainability reporting helps build trust with various stakeholders, leading to improved financial performance. Signaling Theory (Spence, 1973) suggests that voluntary sustainability disclosures act as signals to the market, enhancing a company's reputation and investor confidence, which in turn influences profitability (Friske, et al. 2023). Resource-Based View (RBV) (Barney, 1991) also informs the study by highlighting how a company's internal resources, such as transparent governance and ethical practices, can provide a competitive advantage. Finally, Legitimacy Theory (Suchman, 1995) argues that companies disclose sustainability practices to gain legitimacy in society, which can enhance their market position and long-term profitability.

Empirical Review

Nzekwe et al. (2021) examined the impact of sustainability reporting on the financial performance of industrial goods companies in Nigeria from 2008 to 2019. Focusing on environmental, social, and economic reporting, the study analyzed data from eleven firms using purposive sampling. The results showed that each type of sustainability reporting positively influenced cash value added. The study recommended the adoption of stronger environmental policies and innovations to enhance financial performance. Panel data analysis methods, including regression and Granger causality tests, were used. Erin et al. (2022) explored the relationship between corporate governance and sustainability reporting quality among 120 listed firms in Nigeria. Governance was assessed using board variables (size, independence, gender diversity, expertise) and audit committee attributes (size, expertise, meeting frequency). Sustainability reporting quality was scored from 0 to 4,

with independent assurance receiving the highest score. The study, using ordered logistic regression, found significant links between governance variables and reporting quality, with external assurance enhancing this relationship. It highlighted implications for policymakers and managers, suggesting scope for cross-country research.

Friske et al. (2023) investigated the impact of voluntary sustainability reporting on firm value, using Tobin's Q as a measure. Analyzing panel data from reporting and non-reporting firms between 2011 and 2020, the study found that sustainability reporting initially had a negative relationship with Tobin's Q but became positive over time. The study, grounded in signaling theory, concluded that sustainability reporting, once seen as costly, enhanced firm value as investor understanding improved. External assurance was also found to positively impact Tobin's Q by increasing credibility.

Ferreira and Martins (2024) explored the relationship between integrated reporting and shareholder value creation in public companies across 39 countries between 2011 and 2018. Using propensity score matching, multilevel regressions, and difference-in-differences models, the study found that adopting integrated reporting enhanced shareholder value by reducing information asymmetry, improving stock price synchronicity, and increasing earnings predictability, especially in developed countries. The study concluded that the reporting process itself, rather than specific frameworks, drives value creation, positioning integrated reporting as a key tool for shareholder value.

Omotola et al. (2024) investigated the relationship between sustainability accounting, reporting, and public value creation in Nigeria's public sector. Data were collected via questionnaires from 2,730 respondents, including managers and senior personnel across Nigeria's six geo-political zones. Using Partial Least Squares Structural Equation Modeling (PLS-SEM), the study found a negative relationship between sustainability accounting and public value creation, highlighting the absence of mandatory sustainability reporting requirements. The study emphasized the need for stronger regulatory frameworks to foster sustainability practices in Nigeria's public sector.

Sani (2025) investigated the challenges and prospects of public value creation, sustainability accounting, and reporting in Nigeria's public sector. Through exploratory research, the study reviewed literature and published articles. Findings revealed key issues such as lack of political will, minimal citizen involvement, and insufficient skilled personnel, all of which hinder effective value creation and sustainability reporting. The study recommended stronger political commitment, increased citizen and stakeholder participation,

capacity building for public sector staff, and awareness campaigns on the benefits of sustainability practices and reporting.

Research Gaps

Despite increasing attention to sustainability reporting in emerging markets, several gaps persist in the literature. First, most studies emphasize environmental and social disclosures, with limited focus on governance sustainability disclosures and their direct effect on profitability in Nigerian firms. Second, while research links sustainability reporting to financial performance, empirical evidence on the interaction between governance practices, investor confidence, and long-term profitability in emerging economies remains sparse. Finally, the role of transparency and ethical practices as mediators between governance disclosures and firm performance has not been sufficiently explored, creating a need for context-specific studies in Nigerian listed companies to fill these gaps.

Research Methodology

Research Design and sample size

The study employed an ex-post facto research design to investigate sample units over a defined period, enabling the examination of changes, effects, and behavioral patterns over time. The population included 46 listed manufacturing companies on the Nigerian Exchange Group (NGX) as of December 2024, with a sample of 33 firms selected from sectors including Natural Resources, Industrial Goods, Consumer Goods, Conglomerates, Healthcare, and Agriculture. Secondary data, validated by external auditors, was used, and the pooled panel technique was applied to manage missing data and analyze relationships effectively.

Model Specifications

The model for this study will be stated in econometrics terms below as;

$$ESGSDI_{it} = \alpha_0 + \beta_1 ROA_{it} + \beta_2 ROE_{it} + \beta_3 EBIT_{it} + \beta_4 EPS_{it} + \beta_5 FSIZE_{it} + \varepsilon_t \quad \text{eq. I}$$

$$SRDSDI_{it} = \alpha_0 + \beta_1 ROA_{it} + \beta_2 ROE_{it} + \beta_3 EBIT_{it} + \beta_4 EPS_{it} + \beta_5 FSIZE_{it} + \varepsilon_t \quad \text{eq. II}$$

$$GOVSDI_{it} = \alpha_0 + \beta_1 ROA_{it} + \beta_2 ROE_{it} + \beta_3 EBIT_{it} + \beta_4 EPS_{it} + \beta_5 FSIZE_{it} + \varepsilon_t \quad \text{eq. III}$$

Where;

ESGSDI = Environmentally Sustainable Disclosure index (measured as Index score generated from the score of 1 or 0 for disclosures or otherwise on material, energy, water, biodiversity, emission/greenhouse gas, waste management, product services and compliance to laws.

SRDSDI = Social Sustainable Disclosure index (measured as Index score generated from the score of 1 or 0 for disclosures or otherwise on community, donation, employee, health and safety and customer/complaints.

GOVSDI = Governance Sustainable Disclosure index (measured as measures the extent of corporate Governance, Social, and Environmental (GSE) information disclosure by companies related to their GSE performance.

ROA = Return on Asset: measured as profit after tax divided by total asset (%)

ROE = Return on Equity: measured as profit after tax divided by total equity (%)

EBIT = Ebit Margin: measured as earnings before interest and taxes divided by sales (%)

EPS = Earnings Per Share: measured as net profit after tax divided by number of ordinary shares

FS = Firm Size (Measured as the natural logarithm of total assets of firm i in year t)

f = functional relationship between dependent and independent variables

ε_t = error term

i = firm identifier

t = time variable (10 Years)

α_0 is the intercept of the regression.

$\beta_1 - \beta_5$ are the co-efficient of the regression equation.

The Apriori expectation: $\beta_1 - \beta_5$ is lesser or greater than 0.

Analysis and Discussion of Results

Descriptive Statistics Analysis and Discussion

Table 1: Summary of Descriptive for ESGSDI SRDSDI GOVSDI ROA ROE EBIT EPS and FSIZE

VARIABLES	OBS	MEAN	STD. DEV	MIN	MAX
ESGSDI	330	.5404361	.5249065	-.9811688	3.484753
SRDSDI	330	.3212424	.1661745	0	.79
GOVSDI	330	.4002121	.1922217	0	.83
ROA	330	4.45339	15.88686	-71.3574	176.2669
ROE	330	5.906927	106.0372	-989.3803	905.423
EBIT	330	23.93526	315.4186	-624.4804	5655.464
EPS	330	4.141648	18.67017	-100.2626	202.5645
FSIZE	330	16.93317	2.079749	12.83807	22.09412

Source: Regression Output, 2025.

The descriptive statistics for the variables in the study provide an overview of the distribution and variability of the data. ESGSDI (Environmental, Social, and Governance Sustainability Disclosure Index) has a mean of 0.54 with a high standard deviation of 0.52, suggesting significant variability in the level of sustainability disclosures across the sample. The minimum and maximum values of -0.98 and 3.48 indicate a wide range in the degree of ESG reporting among firms. SRDSDI (Social Responsibility Disclosure Sustainability Index) shows a mean of 0.32, with a standard deviation of 0.17, implying moderate

variation in social responsibility disclosures, and the maximum value of 0.79 suggests a limited number of firms reporting extensively on social sustainability.

ROA, ROE, EBIT, and EPS display considerable variability, particularly ROE, which has a large standard deviation of 106.04, indicating significant profit fluctuations among firms. FSIZE (Firm Size) has a mean of 16.93 and a standard deviation of 2.08, suggesting moderate variation in firm sizes across the sample. Overall, these descriptive statistics indicate a diverse sample with substantial variation in both sustainability reporting and financial performance.

Normality Test

Table 2: Shapiro-Wilk W test for normal data for ESGSDI SRDSDI GOVSDI ROA ROE EBIT EPS and FSIZE

VARIABLES	OBS	W	V	Z	PROB>Z
ESGSDI	330	0.86244	31.896	8.165	0.00000
SRDSDI	330	0.99305	1.610	1.124	0.13057
GOVSDI	330	0.96681	7.697	4.812	0.00000
ROA	330	0.64588	82.108	10.394	0.00000
ROE	330	0.30626	160.855	11.980	0.00000
EBIT	330	0.07159	215.266	12.667	0.00000
EPS	330	0.39663	139.899	11.651	0.00000
FSIZE	330	0.97773	5.163	3.871	0.00005

Source: Regression Output, 2025.

The Shapiro-Wilk W test results for normality indicate that most of the variables, including ESGSDI, GOVSDI, ROA, ROE, EBIT, and EPS, significantly deviate from normality, as their p-values are below 0.05 ($p < 0.00000$). This suggests that these variables are not normally distributed. However, SRDSDI and FSIZE show p-values greater than 0.05 (0.13057 and

0.00005, respectively), with SRDSDI not significantly deviating from normality, while FSIZE also fails to meet the assumption of normality. The non-normality in many financial and sustainability variables may warrant transformations or the use of non-parametric tests in subsequent analyses.

Correlation Analysis

Table 3: Summary of Spearman Correlation Matrix for ESGSDI SRDSDI GOVSDI ROA ROE EBIT EPS and FSIZE, stats, stats(rho p) star(0.05)

	ESGSDI	SRDSDI	GOVSDI	ROA	ROE	EBIT	EPS	FSIZE
ESGSDI	1.0000							
SRDSDI	0.1633*	1.0000

Levin-Lin-Chu Panel Unit Root Test

Table 6: Diagnostic Tests Results for all the variables at First Differencing

Test	Variable	Level/1st Diff. [1(1)]	Unadjusted t	Adjusted t	p-Value	Stationarity Conclusion
ESGSDI	DESGSDI	First Difference	-12.6223	-3.9027	0.0000	Stationary
SRDSDI	DSRDSDI	First Difference	-12.1416	-4.0228	0.0000	Stationary
GOVSDI	DGOVSDI	First Difference	-14.1230	-6.6017	0.0000	Stationary
ROA	DROA	First Difference	-19.4847	-10.4046	0.0000	Stationary
ROE	DROE	First Difference	-17.3456	-8.6270	0.0000	Stationary
EBIT	DEBIT	First Difference	-17.6658	-9.0103	0.0000	Stationary
EPS	DEPS	First Difference	-16.3616	-6.7525	0.0000	Stationary
FSIZE	DFSIZE	First Difference	-13.6143	-6.6386	0.0000	Stationary

Source: Regression Output, 2025

The Levin-Lin-Chu (LLC) panel unit root test results indicate that ESGSDI, GOVSDI, ROA, ROE, EBIT, and EPS are stationary at level, as their p-values are below 0.05 (0.0000), suggesting they do not contain a unit root and are suitable for further analysis without differencing. However, SRDSDI, FSIZE, and EPS are non-stationary at level, with p-values of 0.3131 and

0.5110, indicating the need for first differencing to achieve stationarity. However, after first differencing, all variables, including SRDSDI, FSIZE, GOVSDI, ROA, ROE, EBIT, EPS, and FSIZE, become stationary with p-values of 0.0000, confirming that they are free from unit roots and can be used for further regression analysis.

Hypotheses Testing for the Model I

Table 7a: Summary PCSE for DESGSDI DROA DROE DEBIT DEPS and DFSIZE

DESGSDI	COEF.	Panel-Corrected STD. ERR.	z	P> z
DROA	-.0010466	.0008741	-1.20	0.231
DROE	.0000578	.000068	0.85	0.396
DEBIT	-.0000244	.0000263	-0.93	0.354
DEPS	.0001007	.0013209	0.08	0.939
DFSIZE	.1757749	.0724723	2.43	0.015
_CONS	-.012005	.023353	-0.51	0.607
N				297
R-squared				0.0147
Wald chi2(5)				9.24
Prob > chi2				0.0998

Source: Regression Output, 2025

The results from the panel-corrected standard errors (PCSE) for Model I indicate that the variables DROA, DROE, DEBIT, and DEPS do not significantly influence DESGSDI (Environmental Sustainability Disclosure Index) as their p-values are greater than 0.05 (0.231, 0.396, 0.354, and 0.939, respectively). This suggests that changes in profitability metrics such as ROA, ROE, and EBIT, along with EPS, do not have a strong relationship with environmental disclosures.

However, DFSIZE (Firm Size) has a statistically significant positive effect on DESGSDI with a coefficient of 0.1757 and p-value of 0.015, indicating that larger firms are more likely to report environmental sustainability disclosures. The R-squared value of 0.0147 suggests that the model explains a small portion of the variation in DESGSDI. The Wald chi-squared test ($p = 0.0998$) indicates that, collectively, the variables are not highly significant.

Hypotheses Testing for the Model II

Table 7b: Summary PCSE for DSRDSI DROA DROE DEBIT DEPS and DFSIZE

		Panel-Corrected		
DSRDSI	COEF.	STD. ERR.	z	P> z
DROA	.0001547	.0002616	0.59	0.554
DROE	.0000305	.0000224	1.36	0.175
DEBIT	3.90e-07	7.08e-06	0.06	0.956
DEPS	-.0001336	.0004612	-0.29	0.772
DFSIZE	.0347136	.0232946	1.49	0.136
_CONS	-.0006151	.0060337	-0.10	0.919
N				297
R-squared				0.0068
Wald chi2(5)				5.49
Prob > chi2				0.3592

Source: Regression Output, 2025

The results from the panel-corrected standard errors (PCSE) for Model II indicate that none of the profitability metrics (DROA, DROE, DEBIT, DEPS) significantly affect DSRDSI (Social Responsibility Disclosure Sustainability Index), as all p-values exceed 0.05 (0.554, 0.175, 0.956, and 0.772, respectively).

This suggests that changes in profitability do not strongly influence social sustainability disclosures. The R-squared value of 0.0068 suggests that the model explains very little variation in social sustainability disclosures.

Hypotheses Testing for the Model III

Table 7c: Summary PCSE for DGOVSDI DROA DROE DEBIT DEPS and DFSIZE

		Panel-Corrected		
DGOVSDI	COEF.	STD. ERR.	z	P> z
DROA	.0006196	.0006985	0.89	0.375
DROE	-.0000533	.0000377	-1.41	0.157
DEBIT	9.53e-06	.0000331	0.29	0.773
DEPS	.0004599	.0003977	1.16	0.247
DFSIZE	.0225629	.0299752	0.75	0.452
_CONS	-.0042591	.0104903	-0.41	0.685
N				297
R-squared				0.0142
Wald chi2(5)				9.10
Prob > chi2				0.1050

Source: Regression Output, 2025

The results from the panel-corrected standard errors (PCSE) for Model III show that none of the profitability metrics (DROA, DROE, DEBIT, DEPS) significantly influence DGOVSDI (Governance Sustainability Disclosure Index), as all p-values are above 0.05 (0.375, 0.157, 0.773, and 0.247, respectively). This indicates that profitability metrics do not have a strong impact on governance sustainability disclosures. DFSIZE (Firm Size) also does not have a statistically significant effect on DGOVSDI ($p = 0.452$). The R-squared value of 0.0142 suggests that the model explains a very small proportion of the variation in governance disclosures. The Wald chi-squared statistic of 9.10 ($p = 0.1050$)

further indicates that the model is not statistically significant, and the explanatory variables do not collectively influence governance sustainability disclosures in the sample.

Discussion of Findings

The results of the hypotheses testing across the three models indicate varied impacts of profitability metrics on sustainability disclosures. In Model I (environmental sustainability disclosure index, DESGSDI), profitability metrics such as ROA, ROE, EBIT, and EPS show no significant relationship with environmental disclosures, as indicated by their high p-values (0.231, 0.396, 0.354, and 0.939, respectively).

However, DFSIZE (firm size) has a significant positive effect on DESGSDI ($p = 0.015$), suggesting that larger firms tend to report more on environmental sustainability, possibly due to better resources and regulatory pressure (Khan, et al. 2021; Ali, et al, 2018). The R-squared value of 0.0147 suggests that the model explains only a small portion of the variation in environmental sustainability disclosures.

In Model II (social responsibility disclosure sustainability index, DSRDSI), none of the profitability metrics or firm size show a significant relationship with social disclosures, as all p-values exceed 0.05. The R-squared value of 0.0068 and the Wald chi-squared result of 5.49 ($p = 0.3592$) indicate that the model is not significant in explaining social sustainability disclosures.

In Model III (governance sustainability disclosure index, DGOVSDI), similar results are found, with no significant effects from ROA, ROE, EBIT, EPS, or DFSIZE on governance disclosures. The R-squared value of 0.0142 and the Wald chi-squared statistic of 9.10 ($p = 0.1050$) indicate that governance disclosures are not strongly influenced by profitability metrics in this study.

These findings align with previous research, which suggests that in emerging markets, profitability may not always correlate directly with sustainability reporting due to varying regulatory environments and organizational priorities (Bose, et al. 2022; Nmer, et al. 2021).

Summary, Conclusion and Recommendations

Summary of Findings

- iv. For Environmental Sustainability Reporting, the analysis shows no significant effect of profitability metrics (ROA, ROE, EBIT, EPS) on DESGSDI (environmental sustainability disclosure). Therefore, the null hypothesis is accepted.
- v. For Social Sustainability Disclosures, Profitability metrics and firm size have no significant impact on DSRDSI (social sustainability disclosure). The null hypothesis is accepted.
- vi. H_{03} (Governance Sustainability Disclosures): Profitability metrics and firm size do not significantly affect DGOVSDI (governance sustainability disclosure). The null hypothesis is accepted.

Conclusion

This study concludes that profitability metrics for the study which includes ROA, ROE, EBIT, and EPS, do not significantly impact environmental, social, or governance sustainability disclosures (DESGSDI, DSRDSI, DGOVSDI) in emerging market industries. The findings suggest that in emerging markets,

sustainability disclosures are influenced by factors other than profitability, particularly organizational size. These results highlight the complexity of sustainability reporting and the need for further investigation into other potential drivers within these markets.

Recommendations

- v. Policy-makers should develop clearer sustainability reporting standards to encourage greater transparency and uniformity in disclosures across industries.
- vi. Companies in emerging markets should invest in improving their sustainability reporting practices, particularly in the environmental sector, to align with global standards and attract investors.
- vii. Future research should explore other factors, such as regulatory pressures and corporate culture, that may influence sustainability disclosures in emerging market industries.
- viii. Investors should consider firm size and governance practices when assessing sustainability performance, as these factors appear more impactful than profitability metrics.

Abstract

This study examined the relationship between Eco-product packaging and sales performance of food and beverage firms in Yenagoa, Bayelsa State. Specifically, it investigated the relationships between biodegradable packaging, and recyclable packaging and customer patronage. The study adopted a descriptive survey design. A total of 20 food and beverage firms were selected, as obtained from the Bayelsa State Ministry of Commerce and Industry as of March 2025. The researcher purposively administered ten (10) copies of the questionnaire to customers in each of the 20 selected food and beverage firms in Yenagoa, Bayelsa State. This gave a total of two hundred (200) copies of the questionnaire. After data cleansing, 190 retrieved questionnaires were used for data analysis. Data were collected through a structured questionnaire and analyzed using the Pearson Product Moment Correlation Coefficient (PPMC) at a 0.05 significance level. The findings revealed a strong and positive relationship between biodegradable packaging and customer patronage ($r = 0.842$, $p = 0.012$), indicating that firms adopting biodegradable materials attract more environmentally conscious customers. Similarly, recyclable packaging showed a strong positive relationship with customer patronage ($r = 0.816$, $p = 0.017$), suggesting that customers are more likely to patronize firms that promote waste reduction through recycling. The study concludes that eco-friendly packaging significantly influences customer patronage in Yenagoa's food and beverage industry. It recommends that firms should integrate environmentally sustainable packaging strategies into their operations, not only to comply with environmental regulations but also to gain competitive advantage by appealing to the growing segment of eco-conscious consumers.

Keywords: Sales performance, biodegradable packaging, recyclable packaging, customer patronage, eco-friendly packaging

Introduction

The rising global concern for environmental sustainability has reshaped business practices, particularly in the food and beverage sector. A key element of sustainable operations is eco-product packaging, which involves the use of biodegradable, recyclable, or reusable materials. Eco-packaging has become a strategic factor influencing consumer purchasing behavior and sales performance, as it enhances brand image and fosters customer loyalty (Kumar & Prakash, 2023; Zhang et al., 2022). In Yenagoa, Bayelsa State, demand for eco-friendly products is increasing as consumers become more environmentally conscious. Many are willing to support businesses that demonstrate sustainability through packaging choices (Okafor et al., 2023). Eco-

packaging not only reduces pollution but also aligns with government policies such as those promoted by the National Environmental Standards and Regulations Enforcement Agency (NESREA), which seeks to curb plastic waste in Nigeria (Adebayo & Yusuf, 2023).

Sales performance in the food and beverage sector depends on product quality, pricing, and branding, but eco-packaging is increasingly recognized as a driver of customer preference. Studies show that businesses adopting sustainable packaging gain stronger brand reputation, customer retention, and higher revenue (Adegbite et al., 2023; Akinola & Okeke, 2022). Many consumers prefer products with biodegradable or recyclable packaging, viewing them as healthier and more responsible choices. However, challenges persist. Sustainable packaging materials often cost more than

conventional plastics, creating financial strain for small and medium-sized enterprises (SMEs) (Eze & Nwachukwu, 2023). Consumer awareness is also uneven, with some buyers still prioritizing affordability over sustainability (Ibrahim & Olayemi, 2023). These barriers call for strategic implementation supported by government incentives and consumer education to ensure affordability and adoption.

The environmental challenges facing Yenagoa, including flooding and plastic waste pollution, make eco-friendly packaging especially urgent. Plastic disposal contributes significantly to degradation, reinforcing the need for food and beverage firms to embrace sustainable alternatives (Nwankwo & Agbo, 2023). Beyond reducing waste, eco-packaging strengthens corporate social responsibility (CSR), enhances brand loyalty, and improves long-term sales performance.

Despite growing awareness of sustainability, limited empirical research exists on the impact of eco-product packaging on sales performance in Yenagoa's food and beverage industry. Most prior studies take a broader perspective, leaving a gap in understanding local consumer behavior and profitability impacts (Ogunleye et al., 2023). This study addresses this gap by examining how eco-product packaging affects purchasing decisions, brand perception, and sales growth in Yenagoa.

Statement of the Problem

The growing global emphasis on environmental sustainability has encouraged the adoption of eco-product packaging. However, in developing contexts such as Nigeria, its application in the food and beverage sector remains inconsistent (Kumar & Prakash, 2023). Although studies link eco-packaging to consumer purchasing behavior, little is known about its direct influence on sales performance in Yenagoa, Bayelsa State. One key barrier is cost. Many small and medium-sized enterprises (SMEs) face financial difficulties transitioning from conventional plastics to biodegradable or recyclable alternatives (Eze & Nwachukwu, 2023). The high cost of sustainable materials discourages adoption, reducing competitiveness (Adegbite et al., 2023). Additionally, consumer preferences differ: while some prioritize sustainability and are willing to pay more, others focus

on affordability, creating uncertainty for firms (Ibrahim & Olayemi, 2023). Weak regulatory enforcement further limits adoption (Adebayo & Yusuf, 2023). In Yenagoa, where plastic waste pollution threatens environmental health, the reluctance of firms to fully adopt eco-packaging raises sustainability concerns. Without empirical data on its impact on sales, firms may continue prioritizing short-term cost savings over long-term benefits (Nwankwo & Agbo, 2023). This study, therefore, investigates the relationship between eco-packaging and sales performance, offering insights to promote sustainable business practices (Ogunleye et al., 2023).

Objectives of the study

The main aim of this study is to investigate the influence of eco-product packaging and sales performance of food and beverage firms in Yenagoa, Bayelsa State. Specifically, the study seeks to;

1. To determine the extent of relationship between biodegradable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State
2. To determine the extent of relationship between recyclable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State.

Research Questions

The following research questions would guide the study;

1. What is the relationship between biodegradable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State?
2. What is the relationship between recyclable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State?

Hypotheses

- H0₁:** There is no significant relationship between biodegradable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State
- H0₂:** There is no significant relationship between recyclable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State

Literature Review

Conceptual Framework

Source: Adopted from the works of (Nwankwo & Agbo, 2023; Kumar & Prakash, 2023; (Zhang et al., 2022)

Fig 1.1: Conceptual framework on the relationship between eco-product packaging and sales performance of food and beverage firms in Yenagoa, Bayelsa State

Concept of Eco-Product Packaging

The growing global emphasis on sustainability has transformed packaging practices, especially in the food and beverage industry. Eco-product packaging involves using biodegradable, recyclable, and reusable materials to reduce environmental harm. It is a key element of green business strategies, helping firms minimize waste, conserve resources, and align with climate change goals (Kumar & Prakash, 2023). This shift is driven by consumer awareness, regulatory policies, and corporate responsibility initiatives (Adegbite et al., 2023). Biodegradable packaging, such as compostable wraps, plant-based plastics, and paper alternatives, decomposes naturally, unlike conventional plastics that persist for centuries. These solutions reduce pollution and improve brand perception, as consumers increasingly support firms committed to sustainability (Ibrahim & Olayemi, 2023).

Recyclable packaging also plays a central role by ensuring materials like glass, aluminum, and certain plastics can be collected and reprocessed into new products. This reduces landfill waste, conserves raw materials, and cuts production-related pollution and energy use (Adebayo & Yusuf, 2023). Firms adopting recyclable options benefit from regulatory compliance, cost savings, and enhanced loyalty among eco-conscious consumers (Ogunleye et al., 2023). Reusable packaging furthers sustainability by extending product lifecycles. Examples include refillable bottles, durable

shopping bags, and collapsible containers. These not only reduce disposable waste but also create long-term value for customers through cost-effective and sustainable use (Eze & Nwachukwu, 2023).

Government policies and environmental regulations also shape adoption. In Nigeria, the National Environmental Standards and Regulations Enforcement Agency (NESREA) has developed guidelines encouraging industries to adopt eco-friendly practices (Nwankwo & Agbo, 2023). Compliance strengthens consumer trust and enhances market competitiveness (Okafor et al., 2023). Despite its benefits, eco-packaging adoption faces challenges. Biodegradable and recyclable materials are often costlier, posing difficulties for SMEs (Akinola & Okeke, 2022). Moreover, consumer willingness to pay premiums varies, with affordability sometimes prioritized over sustainability. Nonetheless, as environmental awareness grows, more consumers are likely to support eco-conscious firms (Kumar & Prakash, 2023).

Dimensions of Eco-Product Packaging

Eco-product packaging encompasses various dimensions that contribute to environmental sustainability, waste reduction, and efficient resource utilization. The three primary dimensions of eco-product packaging include biodegradable packaging, recyclable packaging, and reusable packaging. These dimensions aim to minimize the environmental impact

of packaging materials while enhancing brand value and consumer trust (Kumar & Prakash, 2023).

Biodegradable Packaging

Biodegradable packaging refers to materials that decompose naturally when exposed to microorganisms, moisture, and heat, breaking down into non-toxic elements such as water, carbon dioxide, and biomass (Zhang et al., 2022). Unlike conventional plastic packaging, which takes hundreds of years to degrade, biodegradable materials decompose within a shorter period, reducing the accumulation of non-degradable waste in the environment (Adebayo & Yusuf, 2023). Common materials used in biodegradable packaging include cornstarch-based plastics, bamboo, palm leaves, and paperboard. These materials are designed to serve the same purpose as traditional packaging while ensuring minimal ecological harm. Businesses that adopt biodegradable packaging benefit from improved corporate social responsibility (CSR) ratings, enhanced customer loyalty, and regulatory compliance with environmental policies (Adegbite et al., 2023). However, a major challenge with biodegradable packaging is its production cost, which is often higher than that of conventional plastics, making it less affordable for small and medium-sized enterprises (SMEs) (Ibrahim & Olayemi, 2023).

Recyclable Packaging

Recyclable packaging consists of materials that can be collected, processed, and reformed into new products after use. This type of packaging helps to conserve natural resources, reduce waste generation, and lower greenhouse gas emissions (Ogunleye et al., 2023). Common recyclable packaging materials include glass, aluminum, cardboard, and certain plastics (marked with recycling symbols indicating their reusability).

Concept of Sales Performance

Sales performance refers to how effectively a business achieves revenue targets, market expansion, and customer retention through sales of products or services. It is a key indicator of business success, especially in competitive industries like food and beverages (Kumar & Prakash, 2023). Major determinants include product quality, pricing, brand positioning, and marketing strategies. Recently, sustainable practices such as eco-product packaging have emerged as significant contributors (Zhang et al., 2022). Customer patronage, measured by purchase frequency and volume, is a primary indicator of sales performance. Eco-friendly packaging often attracts sustainability-conscious buyers, enhancing loyalty and brand preference (Adebayo & Yusuf, 2023). Studies confirm that environmentally responsible packaging improves customer retention and stimulates word-of-

mouth referrals, thereby increasing sales (Adegbite et al., 2023; Ogunleye et al., 2023).

Sales revenue, the total income from product sales, is another vital metric. Eco-packaging can support premium pricing since many consumers willingly pay more for sustainable products (Akinola & Okeke, 2022). When combined with strong marketing, this approach fosters revenue growth. However, challenges such as high production costs and varying consumer awareness may reduce profitability (Eze & Nwachukwu, 2023). Customer retention also strongly influences performance. Firms that integrate affordability, quality, and eco-sustainability in packaging maintain long-term customer relationships (Ibrahim & Olayemi, 2023). In food and beverages, where loyalty is essential, eco-friendly packaging enhances reputation, minimizes churn, and boosts lifetime value (Nwankwo & Agbo, 2023).

Measures of Sales Performance

Customer Patronage

Customer patronage refers to the degree to which consumers repeatedly purchase products or services from a business. It reflects customer interest, preference, and loyalty towards a brand, often influenced by factors such as product quality, pricing, customer experience, and sustainability initiatives (Adegbite et al., 2023). In the context of the food and beverage industry, customer patronage is particularly important, as businesses in this sector rely heavily on repeat purchases to sustain operations and profitability (Ogunleye et al., 2023).

The adoption of **eco-product packaging** has been shown to positively influence customer patronage. Many consumers today are increasingly drawn to brands that align with their environmental values, leading them to favor businesses that utilize biodegradable, recyclable, or reusable packaging (Adebayo & Yusuf, 2023). Studies suggest that companies that integrate sustainable packaging experience a boost in brand reputation and customer engagement, ultimately driving higher levels of patronage (Ibrahim & Olayemi, 2023). However, for firms to fully capitalize on this trend, they must effectively communicate the benefits of their eco-friendly initiatives to their target audience.

Eco-Product Packaging and Sales Performance of Food and Beverage Firms

Eco-product packaging has emerged as a critical driver of sales performance in the food and beverage sector as consumers increasingly prioritize sustainability. Biodegradable, recyclable, and reusable packaging options not only reduce environmental pollution but also function as strategic marketing tools that enhance brand image, customer loyalty, and profitability

(Kumar & Prakash, 2023). By integrating eco-packaging, firms differentiate themselves in competitive markets, appealing to environmentally conscious consumers and boosting sales outcomes (Adebayo & Yusuf, 2023). Empirical evidence supports this trend. Adebite et al. (2023) reported that firms adopting eco-packaging experience stronger customer loyalty and higher purchase frequency. Ogunleye et al. (2023) similarly found that over 60% of consumers in emerging markets prefer eco-friendly packaged products. Such preferences provide firms with a competitive edge by strengthening brand perception, repeat patronage, and retention. Eco-packaging also enhances revenue potential through premium pricing. Many consumers are willing to pay more for sustainably packaged products, viewing them as healthier and ethically aligned (Zhang et al., 2022; Eze & Nwachukwu, 2023). Additionally, sustainable packaging fosters trust and repeat purchases, ensuring long-term revenue stability (Akinola & Okeke, 2022).

Biodegradable Packaging and Sales Performance

Biodegradable packaging, designed to decompose naturally and reduce waste, has gained prominence as food and beverage firms respond to consumer demand for sustainability. With growing concerns over plastic pollution, consumers increasingly prefer biodegradable alternatives, which strengthens brand reputation and drives sales performance (Kumar & Prakash, 2023). Research confirms that eco-conscious customers patronize brands adopting biodegradable packaging because they associate them with environmental responsibility (Adebayo & Yusuf, 2023).

Adebite et al. (2023) reported that firms using biodegradable materials experience higher customer patronage, while Akinola and Okeke (2022) observed that such firms enjoy stronger market positioning and improved brand recognition. Moreover, consumers often accept higher prices for biodegradable packaging, boosting sales revenue and profitability (Zhang et al., 2022). Nevertheless, SMEs face obstacles due to higher costs of production and concerns about packaging durability, particularly in preserving food quality (Eze & Nwachukwu, 2023). Despite these challenges, the long-term benefits of customer loyalty and positive brand perception make biodegradable packaging a valuable investment for sustaining competitiveness (Ogunleye et al., 2023).

Recyclable Packaging and Sales Revenue

Recyclable packaging, which allows materials to be reprocessed and reused, is another key driver of sales growth in the food and beverage industry. By reducing waste and conserving resources, recyclable packaging reinforces corporate social responsibility while shaping consumer preferences (Kumar & Prakash, 2023).

Evidence shows that consumers actively support brands using recyclable materials, with many willing to pay a premium for products reflecting environmental values (Adebayo & Yusuf, 2023). Adebite et al. (2023) found that recyclable packaging boosts demand and profitability by strengthening trust and brand loyalty.

Additionally, recyclable packaging enhances **market competitiveness**. By signaling environmental commitment, firms differentiate themselves from rivals and build lasting customer relationships that translate into repeat purchases and revenue growth (Zhang et al., 2022). Governments also encourage recyclable practices through incentives and compliance requirements, allowing firms to avoid penalties while tapping into eco-conscious markets (Eze & Nwachukwu, 2023). However, barriers such as limited recycling infrastructure and high material costs persist, especially for smaller firms (Ibrahim & Olayemi, 2023).

Theoretical Foundation

The Theory of Planned Behavior

The Theory of Planned Behavior (TPB) (Ajzen, 1991) explains human behavior through intentions, attitudes, subjective norms, and perceived behavioral control. It is relevant to understanding how eco-product packaging influences sales performance in the food and beverage industry.

Attitude reflects consumer evaluation of eco-friendly packaging. When consumers perceive biodegradable or recyclable packaging as beneficial to environmental sustainability, they are more inclined to purchase such products (Kumar & Prakash, 2023). Positive perceptions strengthen brand loyalty and customer retention (Adebayo & Yusuf, 2023). Conversely, if eco-packaging is seen as inconvenient or less durable, sales performance may decline. Subjective norms involve social pressures shaping behavior. In Yenagoa, Bayelsa State, growing environmental awareness and cultural expectations encourage eco-friendly practices (Okafor et al., 2023). Media campaigns, advocacy groups, and peer influence motivate consumers to adopt sustainable choices, thereby enhancing firm sales (Nwankwo & Agbo, 2023).

Perceived behavioral control considers how cost, accessibility, and convenience affect eco-friendly purchasing. High prices may discourage low-income consumers, limiting sales (Eze & Nwachukwu, 2023). However, firms offering affordable, innovative eco-packaging can expand their customer base and boost revenue (Ibrahim & Olayemi, 2023). Overall, TPB illustrates how attitudes, norms, and perceived control determine consumer willingness to purchase eco-packaged products. Food and beverage firms that highlight environmental benefits, leverage social influence, and reduce barriers to adoption can use eco-packaging as a competitive advantage. This alignment

with TPB principles can enhance sales performance and strengthen market presence (Ogunleye et al., 2023).

Review of Empirical Literature

Kumar & Prakash (2023) studied The Impact of Sustainable Packaging on Consumer Purchasing Behavior. This study examines the influence of sustainable packaging on consumer purchase decisions in the food and beverage industry. Using a survey of 500 respondents, the research finds that biodegradable and recyclable packaging significantly affects consumer preferences. The study highlights that environmental awareness and corporate social responsibility (CSR) initiatives positively impact brand loyalty and sales growth. The authors conclude that companies integrating sustainable packaging strategies experience higher consumer retention and long-term profitability.

Adegbite et al. (2023) worked on Eco-Friendly Packaging and Sales Performance in Nigeria's Beverage Sector.. investigate the relationship between eco-product packaging and sales performance among beverage companies in Nigeria. The study employs a mixed-methods approach, analyzing sales data and conducting interviews with industry stakeholders. Findings reveal that firms adopting recyclable and reusable packaging report increased market competitiveness and higher customer satisfaction. However, the study notes that high production costs pose a challenge for small and medium-sized enterprises (SMEs). The research suggests that government incentives could enhance the adoption of sustainable packaging solutions.

Akinola & Okeke (2022) examined Consumer Perception of Eco-Packaging and Its Effect on Sales Growth. This study explores how consumer perceptions of eco-friendly packaging influence purchasing decisions and sales growth in the food sector. A survey of 300 customers in urban Nigerian markets indicates that consumers are more likely to purchase products with sustainable packaging when they perceive them as high quality and environmentally friendly. The research also highlights that younger

consumers are more responsive to eco-packaging than older demographics. The authors recommend increased consumer education on the benefits of sustainable packaging to drive sales performance.

Methodology

This study adopted a descriptive survey design, suitable for examining the relationship between eco-product packaging and sales performance in the food and beverage industry (Creswell, 2022). The population comprised customers of food and beverage firms in Yenagoa, Bayelsa State. From a list of 20 firms provided by the Bayelsa State Ministry of Commerce and Industry, the researcher purposively administered 10 questionnaires to customers in each firm, giving a total of 200 respondents. Convenience sampling was employed to select participants readily accessible at the time of the survey (Ezejelue et al., 2008). Primary data were collected through a structured questionnaire divided into three sections: demographic information (age, gender, education, occupation), eco-product packaging dimensions (biodegradable, recyclable, reusable packaging), and sales performance indicators (customer patronage, sales revenue, retention). Secondary data from scholarly articles, policies, and industry reports supplemented the study. The instrument was validated through expert review and pretested with 20 respondents. Reliability was confirmed using Cronbach's Alpha, with coefficients above 0.70 indicating internal consistency (Bryman & Bell, 2022). Data were analyzed using SPSS, employing descriptive statistics and Pearson correlation. Hypotheses were tested at the 0.05 significance level (Hair et al., 2021).

Result and Discussion

A total of 200 questionnaires were distributed to respondents selected for the study. Out of these, 195 were returned, and 190 were properly completed and valid for analysis. This resulted in a usable response rate of 95.0%. The summary is presented in Table 4.1 above.

Table 4.1: Distribution and Retrieval of Questionnaire

Questionnaire	Frequency	Percentage (%)
Number Administered	200	100%
Number Retrieved	195	97.5%
Number Used (Valid)	190	95.0%

Table 4.2: Demographic Profile of Respondents

Variable	Category	Frequency	Percentage (%)
Gender	Male	80	42.1
	Female	110	57.9
Age	Below 20 years	10	5.3
	20–30 years	60	31.6
	31–40 years	70	36.8
	41–50 years	40	21.1
	Above 50 years	10	5.3
Educational Qualification	O’Level (GCE/WASSCE/SSCE)	30	15.8
	OND/NCE/TC II	40	21.1
	B.Sc/B.Ed/B.A	90	47.4
	M.Sc/MBA/M.A	30	15.8
Total Respondents		190	100

The demographic profile indicates a diverse sample. Females constituted 57.9%, compared to 42.1% males, likely reflecting firm structures or survey availability. Most respondents (68.4%) were within the productive 20–40 years bracket. The largest share was aged 31–40 (36.8%), followed by 20–30 (31.6%). Those aged 41–50 represented 21.1%, while respondents below 20 and above 50 years were least represented (5.3% each). Educationally, the workforce is well-qualified: 47.4% held bachelor’s degrees, 21.1% OND/NCE/TC II, and 15.8% each postgraduate and O’Level. Overall, the

sample is predominantly female, mostly within active career years, and relatively well-educated, enhancing the reliability and representativeness of the findings.

Hypotheses Testing

Hypothesis One

H0: There is no significant relationship between biodegradable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State.

Table 4.15: Statistical Analysis for Hypothesis One

	Biodegradable Packaging	Customer Patronage
Pearson Correlation (r)	1.000	.812
Sig. (2-tailed)	–	.000
N	190	190

From the analysis in Table 4.15, the Pearson correlation coefficient ($r = 0.812$) shows a strong positive relationship between biodegradable packaging and customer patronage. The coefficient of determination ($r^2 \approx 0.66$) indicates that 66% of the variation in customer patronage is explained by biodegradable packaging. With a significance value of 0.019 ($p < 0.05$), the relationship is statistically significant, leading to the rejection of the null hypothesis. This supports Magnier and Crié (2015),

who argued that eco-friendly packaging enhances brand perception, loyalty, and purchase frequency. Likewise, Prakash and Pathak (2017) found that customers prefer brands demonstrating environmental responsibility. For food and beverage firms in Yenagoa, biodegradable packaging not only supports sustainability goals but also strengthens competitiveness by attracting and retaining environmentally conscious customers.

Hypothesis Two

H0₂: There is no significant relationship between recyclable packaging and customer patronage of food and beverage firms in Yenagoa, Bayelsa State.

Table 4.16: Statistical Analysis for Hypothesis Two

	Recyclable Packaging	Customer Patronage
Pearson Correlation (r)	1.000	.795
Sig. (2-tailed)	–	.000
N	190	190

From the result in Table 4.16, the Pearson correlation coefficient ($r = 0.794$) shows a strong positive relationship between recyclable packaging and customer patronage. The coefficient of determination ($r^2 \approx 0.63$) indicates that 63% of the variation in customer patronage is explained by recyclable packaging. The significance value of 0.022 ($p < 0.05$) confirms statistical significance, leading to the rejection of the null hypothesis. This aligns with Dangelico and Vocalelli (2017), who observed that recyclable packaging strengthens consumer attitudes toward brands by reflecting environmental responsibility. Likewise, Pauer et al. (2019) found that eco-conscious consumers prefer products with recyclable packaging. For food and beverage firms in Yenagoa, recyclable packaging not only supports environmental sustainability but also serves as a strategic advantage to attract and retain customers, thereby boosting competitiveness and consumer loyalty.

Conclusion and Recommendations

Conclusion

The study concludes that eco-product packaging significantly boosts customer patronage in Yenagoa's food and beverage sector. Firms using biodegradable, recyclable, and reusable packaging attract and retain eco-conscious consumers by demonstrating sustainability commitment, fostering trust, and enhancing brand loyalty. Biodegradable packaging reduces pollution while appealing to health-conscious buyers. Recyclable packaging signals environmental responsibility and supports global waste reduction goals. Reusable packaging adds functional and ecological value, encouraging repeat purchases and long-term brand ties. These results align with green marketing principles, showing that packaging choices go beyond operations to serve as strategic tools that shape consumer behavior and strengthen competitiveness.

Recommendations

Based on the findings, the following recommendations are made:

1. Food and beverage firms should prioritize biodegradable materials in their product packaging to appeal to eco-conscious customers and strengthen their environmental brand image.
2. Businesses should invest in recyclable packaging designs and communicate recycling instructions clearly on product labels to encourage customer participation in environmental sustainability.
3. Firms should introduce reusable packaging initiatives—such as returnable
4. e containers or refill programs—to promote customer loyalty and repeat purchases.

Innovative Quality Control Management and Employee Productivity in Packaged Water Firms in Delta State

OMOYE, Ezie Israel

Department of Business Administration,
Faculty of Management Sciences,
Delta State University, Abraka.
Email: omoye-israel@delsu.edu.ng

Publication Date: 2025/11/28

Abstract

The study examined Innovative Quality Control Management and Employee Productivity in Packaged water firms in Delta State. The research investigated the extent to which innovative quality control mechanisms, technological applications, and employee competencies influence the purity of packaged drinking water through enhanced employee productivity, particularly focusing on employee error-free productivity (EEP). Three research questions were asked leading to the postulation of three hypotheses in line with objective of the study. A descriptive survey design was employed. The population is made of 650 workers in the water packaging firms with a sample size of 242 employees from randomly selected 10 firms using krecjie morgan (1970). The instrument for the study was a structured questionnaire validated by experts in measurements and evaluation, thereafter tested for Cronbach's alpha reliability at 0.82. the instrument were thereafter administered to the sample size and retrieval of 194 out of 242 without error were received. Extracted data were analysed using descriptive statistics, Pearson correlation, and multiple regression analysis. The findings revealed that QCP has a positive and statistically significant effect on EEP ($\beta = 0.253$, $t = 2.776$, $p = 0.006$), and TU has a large, positive, highly significant effect ($\beta = 0.814$, $t = 12.713$, $p < 0.001$). In contrast, RA produced a negative, non-significant coefficient ($\beta = -0.101$, $t = -1.066$, $p = 0.288$), indicating no evidence that resource allocation, by itself, improves error-free productivity in the sampled firms. The study recommends that packaged water producers adopt advanced quality assurance mechanisms, prioritize employee training in quality management techniques, and invest in cutting-edge purification technologies to sustained industry growth and product excellence.

Keywords: *Quality Control Practices, Resource Allocation, Technology Utilization, Employee Productivity, Packaged Water Firm*

JEL Classification: *D60, D62, H23*

Introduction

Quality control management has emerged as a pivotal aspect of employee productivity, particularly in manufacturing firms where production efficiency and product quality are critical to success. Quality control practices, such as regular inspections, adherence to standards, and employee training, play a significant role in minimizing errors and ensuring consistent product quality (Mokhtar & Yusof, 2022). These practices contribute to not only meeting customer expectations but also enhancing operational efficiency and reducing production costs. In water manufacturing firms, where safety and product purity are paramount, effective quality control management is essential to achieving employee productivity that is free of errors. Resource allocation is another critical factor influencing employee performance in manufacturing

environments. Efficient resource distribution ensures that employees have the necessary tools, equipment, and materials to perform their duties effectively (Okonkwo et al., 2021). Misallocation or inadequate resources can lead to errors, delays, and substandard production. In the water manufacturing industry, resource allocation encompasses investments in raw materials, modern machinery, and human capital. When properly managed, these resources enhance workflow efficiency and minimize errors, leading to increased employee productivity and overall workforce success.

Technology utilization has revolutionized the manufacturing sector, including water production firms, by automating processes, improving accuracy, and reducing human error. Advanced technologies, such as automated bottling systems, digital quality monitoring,

and real-time data analytics, enable firms to enhance productivity while maintaining high-quality standards (Afolayan et al., 2023). By integrating technology into their operations, organizations can streamline production, optimize employee output, and achieve error-free productivity. However, the extent to which employees effectively utilize these technologies depends on factors such as training, user-friendly designs, and management support.

In Delta State, Nigeria, the water manufacturing industry faces unique challenges such as inconsistent resource availability, inadequate technological infrastructure, and insufficient quality control measures. These challenges often result in errors, inefficiencies, and poor-quality outputs, affecting employee performance and customer satisfaction (Eze & Ugwuanyi, 2021). As competition intensifies in the industry, firms must prioritize effective quality control management, resource allocation, and technology utilization to ensure employee error-free productivity. This study aims to explore the interplay of these factors and their impact on employee performance in selected water manufacturing firms in Delta State.

Statement of the Problem

The increasing prevalence of substandard and contaminated water products in Delta State has raised concerns about the effectiveness of quality control management in water manufacturing firms. Many consumers report encountering dirt, particles, and poor packaging in bottled and sachet water, which compromises public health and undermines trust in these products. These issues often stem from inadequate quality control practices, poor resource allocation, and limited technology utilization. When employees lack the tools, materials, and technological support needed for efficient operations, errors become more frequent, leading to compromised product quality. Despite regulatory frameworks (such as National Environmental Surface and Groundwater Quality Control) Regulations, the Nigerian Standard for Drinking Water Quality, and various laws and agencies overseeing water resources and environmental protection aimed at ensuring water safety, many firms struggle to maintain consistent standards, resulting in reduced employee productivity and heightened consumer dissatisfaction. Addressing these challenges requires a thorough investigation into how quality control practices, resource allocation, and technology utilization impact error-free employee performance in water manufacturing firms in Delta State.

Objectives of the Study

The primary objective of this study is to examine the effect of quality control management on employee

error-free productivity in selected water manufacturing firms in Delta State. Specifically, the study seeks to:

- i. Evaluate the effect of quality control practices on employee error-free productivity in selected packaged water firms in Delta State.
- ii. Assess the impact of resource allocation on employee error-free productivity in selected packaged water firms in Delta State.
- iii. Investigate the influence of technology utilization on employee error-free productivity in selected packaged water firms in Delta State.

Research Questions

- i. How do quality control practices affect employee error-free productivity in selected packaged water firms in Delta State?
- ii. What is the impact of resource allocation on employee error-free productivity in selected packaged water firms in Delta State?
- iii. How does technology utilization influence employee error-free productivity in selected packaged water firms in Delta State?

Research Hypotheses

H₀₁: Quality control practices have no significant effect on employee error-free productivity in selected packaged water firms in Delta State.

H₀₂: Resource allocation has no significant effect on employee error-free productivity in selected packaged water firms in Delta State.

H₀₃: Technology utilization has no significant effect on employee error-free productivity in selected packaged water firms in Delta State.

Review of Related Literature

Conceptualization

Conceptualizing the relationship between innovative quality control management and employee productivity involves examining key variables that contribute to achieving workforce goals. Quality control practices, resource allocation, and technology utilization are fundamental independent variables that shape the operational efficiency of organizations. These elements significantly impact the dependent variable, employee error-free productivity, which is critical for ensuring quality outputs and customer satisfaction. This section reviews existing literature, focusing on the interplay of these variables to provide a theoretical and empirical foundation for this study.

Quality Control Practices

Quality control practices are structured activities designed to ensure that products or services meet defined standards of excellence. Mokhtar and Yusof (2022) emphasize the importance of quality control in maintaining consistency, reducing defects, and

achieving customer satisfaction in manufacturing processes. Common practices include inspection, testing, and adherence to industry regulations, which collectively help minimize errors and enhance employee performance. In water manufacturing firms, quality control practices are particularly critical due to the health implications of substandard water production. Studies have shown that effective quality control fosters employee commitment to error-free processes and promotes workforce excellence (Afolayan et al., 2023).

Additionally, weak implementation of quality control measures can lead to errors, inefficiencies, and reputational damage. Okonkwo et al. (2021) highlight that organizations with robust quality control frameworks experience fewer defects and greater operational efficiency. In water manufacturing, maintaining strict quality standards is necessary to avoid contaminants like dirt and ensure product safety. The presence of contaminants in water products indicates lapses in quality control, which can negatively affect employee morale and productivity. These findings underscore the necessity of implementing and monitoring quality control practices rigorously to sustain employee productivity and workforce reputation.

Resource Allocation

Resource allocation refers to the effective distribution of materials, finances, and labor to achieve workforce objectives. Okonkwo et al. (2021) identify resource allocation as a critical determinant of employee productivity, particularly in manufacturing firms. When resources are insufficient or poorly managed, employees face difficulties in executing tasks effectively, leading to errors and reduced productivity. In the context of water manufacturing firms, ensuring access to adequate raw materials, well-maintained equipment, and trained personnel is essential for achieving error-free productivity.

Inefficient resource allocation often results in delays, poor-quality outputs, and heightened employee stress. Eze and Ugwuanyi (2021) note that manufacturing firms in Delta State frequently grapple with resource shortages, which undermine operational efficiency and product quality. Addressing these challenges requires strategic planning and investment to optimize resource use. Adequate resource allocation not only supports employees in performing their roles efficiently but also minimizes errors and enhances employee productivity.

Technology Utilization

Technology utilization involves the integration of advanced tools and systems into operational processes to enhance efficiency and accuracy. Afolayan et al. (2023) highlight that technology adoption significantly improves productivity and reduces human error in manufacturing firms. Automated systems, digital quality monitoring, and data analytics are examples of technologies that streamline processes and support employees in achieving error-free productivity. In water manufacturing, the use of modern bottling systems and quality testing equipment ensures compliance with safety standards and reduces contamination risks.

However, the effectiveness of technology utilization depends on employee training and acceptance. Mokhtar and Yusof (2022), and Eromafuru and Omoye (2022) argue that inadequate training on new technologies can hinder their benefits, leading to errors and reduced productivity. Effective technology integration requires not only investment in advanced tools but also fostering a culture of innovation and continuous learning among employees. In water manufacturing firms, this approach ensures that employees are well-equipped to utilize technology effectively, thereby enhancing productivity and reducing errors.

Employee Error-Free Productivity

Employee error-free productivity is the ability of employees to perform tasks efficiently without mistakes, contributing to overall employee productivity. According to Okonkwo et al. (2021), error-free productivity is crucial in manufacturing firms where defects or contamination can result in significant financial and reputational losses. In water manufacturing, error-free productivity ensures the delivery of safe and high-quality products, meeting both regulatory standards and customer expectations.

The achievement of error-free productivity is closely linked to workforce practices, resource availability, and technological support. Eze and Ugwuanyi (2021) assert that a well-supported workforce, equipped with the right tools and knowledge, is more likely to deliver consistent and high-quality performance. In the water manufacturing industry, where precision and hygiene are paramount, fostering a culture of accountability and continuous improvement among employees is critical for sustaining productivity and quality standards.

Fig. 1: Conceptual framework on innovative quality control management and employee error-free productivity (Source, Researcher's construct, 2025)

Theoretical Review

This study reviewed Total Quality Management (TQM) Theory, which emphasizes the importance of continuous improvement, employee involvement, and customer satisfaction in achieving workforce success. TQM focuses on integrating quality control into every aspect of an organization's processes to ensure consistent outputs and minimize errors (Deming, 1986). The theory posits that quality is not merely a goal but a process that requires active participation from all levels of the organization, supported by effective resource allocation and technology utilization. In the context of water manufacturing business, TQM underscores the need for stringent quality control practices to produce safe and high-quality products, as well as the role of adequate resources and advanced technologies in enabling employees to perform tasks efficiently and error-free. By aligning workforce objectives with TQM principles, firms can enhance employee productivity, improve product quality, and gain competitive advantages in the market.

The Resource-Based Theory (RBT) and Human Capital Theory collectively provide a robust theoretical foundation for the study "Innovative Quality Control Management and Employee productivity: Drivers of Drinking Water Purity in Delta State's Packaged Water Industry." RBT posits that an organization's competitive advantage stems from the effective utilization of valuable, rare, inimitable, and non-substitutable resources (Barney, 1991). In this context, innovative quality control practices, advanced technology utilization, and strategic resource allocation represent critical internal resources that, when effectively harnessed, enhance operational efficiency

and ensure the consistent production of pure drinking water. On the other hand, Human Capital Theory emphasizes that employees' knowledge, skills, and competencies are pivotal assets that directly influence organizational productivity and performance (Becker, 1964). Applying this theory to the study's focus, workforce training in quality control standards, empowerment to leverage technology, and adequate resourcing contribute to reducing errors in production processes and enhancing employee error-free productivity (EEP). Together, RBT underscores the strategic value of quality control and technological resources, while Human Capital Theory highlights the necessity of investing in workforce capabilities. When integrated, these theories suggest that firms in the packaged water industry that effectively align resource optimization with skilled human capital development are better positioned to maintain high purity standards, sustain competitive advantage, and achieve superior employee productivity.

Empirical Review

A study conducted Anderson and Jessen (2021) on Total Quality Management (TQM) practices in beverage manufacturing firms in Lagos, Nigeria, revealed that implementing TQM practices, such as regular quality inspections and employee training, significantly improved employee productivity and reduced error rates. These findings emphasize the critical role that structured quality control systems play in enhancing operational efficiency and minimizing mistakes, particularly in manufacturing environments. Quality control practices are essential for ensuring high production standards, as poor quality control

contributes to errors and substandard products. Anderson and Jessen (2021) and Singh and Kumar (2020) highlight that firms that fail to implement effective quality control systems often experience reduced operational efficiency and an increase in product defects, which can result in customer dissatisfaction.

Another study Ghosh and Sinha (2019) examined the impact of quality control systems on employee productivity in water packaging industries in Nairobi, Kenya. The research found that effective quality control systems, including resource allocation and adherence to safety standards, were positively associated with improved employee productivity and customer satisfaction. However, challenges such as insufficient resource allocation impeded the optimal implementation of quality control practices, leading to persistent issues like contamination and substandard water products. Ghosh and Sinha (2019) and Kim et al. (2020) point out that resource allocation, particularly in regions where firms lack sufficient funding or infrastructure, hinders the ability to implement quality control practices effectively. This issue is particularly relevant in regions like Delta State, where firms often struggle with inadequate funding, leading to poor product quality and reduced employee performance.

In Okafor and Olaniyi (2020), resource allocation plays a critical role in improving employee performance within manufacturing firms. Studies have shown that inadequate resource allocation, such as insufficient equipment, training, and technology, can negatively impact employee productivity and increase the likelihood of errors. In water manufacturing firms, particularly in Delta State, where resource allocation is often insufficient, these challenges become more pronounced. Optimal resource allocation ensures that employees have the necessary tools, technology, and training to carry out their tasks efficiently, thus reducing errors and improving productivity. Mani and Verma (2019) and Okafor and Olaniyi (2020) highlight that without adequate resources, firms are unable to adopt necessary technologies and implement effective quality control practices, leading to high error rates and substandard water products.

Adegbite (2019) Technology utilization has been linked to improved productivity and error reduction in manufacturing environments. In water manufacturing firms, particularly in regions like Delta State, the adoption of advanced bottling systems and quality monitoring tools has shown promise in enhancing productivity and reducing errors. However, challenges such as inadequate training on technology and poor infrastructure hinder the full potential of technology adoption. Firms in Delta State continue to face issues related to the underutilization of technology, which contributes to low productivity and high error rates in

water production. Abubakar and Idris (2018) and Yusuf and Adegbite (2019) highlight that technology adoption is crucial for reducing human error and improving operational efficiency, but without proper training and infrastructure, firms remain unable to capitalize on technological advancements effectively.

Wilson (1995) Quality control practices, including regular inspections and adherence to safety standards, have been found to enhance employee productivity and reduce errors. In water manufacturing firms, particularly in Delta State, the lack of investment in quality control systems contributes to persistent challenges in maintaining high-quality production standards. These poor practices often lead to product contamination and substandard water, impacting customer trust and employee performance. Smith (1990) and Wilson (1995) emphasize that poor quality control management in manufacturing environments results in increased error rates and decreased productivity. Without proper resource allocation and adherence to quality control protocols, firms in Delta State are unable to meet production standards, leading to contaminated water and reduced employee performance.

Despite numerous studies highlighting the significance of quality control practices, resource allocation, and technology utilization in improving productivity within manufacturing firms, there remains a notable knowledge gap regarding their impact in water manufacturing firms, particularly in regions like Delta State, Nigeria. Previous research has largely focused on general manufacturing contexts, with limited attention given to the specific challenges faced by water manufacturing firms in underdeveloped regions, where poor resource allocation, inadequate infrastructure, and limited access to technology hinder effective quality control practices. Studies by Anderson and Jessen (2021), Ghosh and Sinha (2019), and Kim et al. (2020) have emphasized the importance of resource allocation and technology utilization, but they have yet to comprehensively address how these factors influence employee performance and the production of clean, error-free water in Delta State. Thus, there is a need for further research to explore these specific dynamics and fill this critical gap in the existing literature.

Methodology

The study adopted a descriptive research design, which is suitable for examining the relationship between quality control management practices and employee performance in water manufacturing firms. This design allows for the collection of both quantitative and qualitative data to assess the impact of the independent variables, Quality Control Practices, Resource Allocation, and Technology Utilization, on the dependent variable, Employee Error-Free Productivity.

The target population consisted 650 table water packaging firms registered with NAFDAC, Delta State, Nigeria. The sample size was determined using the Krejcie Morgan (1970) formula for finite populations, resulting in a total of 242 respondents from 10 selected firms. Data were collected using structured questionnaires, which were validated by experts and pretested to ensure reliability of 0.82. A combination of purposive and stratified random sampling techniques was employed to select the firms and employees. Purposive sampling ensured that firms with a history of quality control challenges were included, while stratified random sampling was used to ensure representation from various levels of employees within the firms.

To analyze the data, both descriptive and inferential statistics were employed. Descriptive statistics such as frequency and percentages were used to summarize the responses, while inferential statistics, including multiple regression analysis, were utilized to test the hypotheses and examine the relationships between the independent variables and the dependent variable. The regression analysis helped identify the extent to which quality control practices, resource allocation, and technology utilization influenced employee error-free productivity in the selected firms. The study ensured the use of recent and relevant references to provide a comprehensive understanding of the context. The model specification for this study is based on the independent variables, Quality Control Practices (QCP),

Resource Allocation (RA), and Technology Utilization (TU), and the dependent variable, Employee Error-Free Productivity (EEP). The model aims to investigate how these independent variables collectively affect employee performance in water manufacturing firms in Delta State, Nigeria.

The econometric model can be specified as follows:

$$EEP = \beta_0 + \beta_1 QCP + \beta_2 RA + \beta_3 TU + e$$

Where:

- EEP = Employee Error-free Productivity.
- QCP = Quality Control Practices.
- RA = Resource Allocation.
- TU = Technology Utilization.
- β_0 = Intercept term.
- $\beta_1, \beta_2, \beta_3$ = Coefficients to be estimated for each of the independent variables.
- e = the error term, capturing other factors not included in the model that may affect employee productivity.

Results and Discussion

This section presents the analysis of data extracted from the questionnaire distributed to respondents on the subject matter and their result are being visualized in the following tables:

Table 1: Analysis of questionnaire distribution

Questionnaire	Frequency	Percentage
Returned	194	80.17%
Not used	48	19.83%
Total Distributed	242	100%

Researcher's computation, 2025

The data in Table 1 shows that out of the 242 questionnaires distributed, 194 were successfully returned, representing 80.17% of the total distribution. This high return rate suggests a strong level of participation from respondents, which enhances the credibility of the data collected. However, 48 questionnaires, accounting for 19.83%, were not used due to reasons such as incomplete responses,

inconsistencies, or invalid entries. The overall response rate of over 80% is considered adequate for a rural-based study, as it exceeds the minimum benchmark generally recommended for survey research. This indicates that the findings drawn from the valid responses are likely to be representative of the target population in the study area.

Table 2: Mean Responses Rate

CODE	thematic question item	SA	A	D	SD	Mean	Std
QCP1	How often are quality control inspections conducted in your firm?	80 (41.2%)	54 (27.8%)	30 (15.5%)	30 (15.5%)	2.95	1.09
QCP2	To what extent are employee training programs focused on quality standards?	70 (36.1%)	60 (30.9%)	40 (20.6%)	24 (12.4%)	2.91	1.03
QCP3	How effective are the quality control procedures in preventing product defects?	90 (46.4%)	45 (23.2%)	35 (18.0%)	24 (12.4%)	3.04	1.07
QCP4	Are there regular quality checks to ensure compliance with safety standards?	85 (43.8%)	50 (25.8%)	35 (18.0%)	24 (12.4%)	3.01	1.06
QCP5	How often are customer feedback mechanisms used to improve product quality?	75 (38.7%)	55 (28.4%)	40 (20.6%)	24 (12.4%)	2.93	1.04
RA1	How adequate is the allocation of financial resources for quality control activities?	80 (41.2%)	50 (25.8%)	30 (15.5%)	34 (17.5%)	2.91	1.13
RA2	Do you have access to sufficient equipment and tools for quality control?	85 (43.8%)	60 (30.9%)	25 (12.9%)	24 (12.4%)	3.06	1.03
RA3	Are there enough personnel dedicated to quality control tasks?	78 (40.2%)	55 (28.4%)	35 (18.0%)	26 (13.4%)	2.95	1.06
RA4	How sufficient are the training programs provided to enhance resource allocation?	70 (36.1%)	58 (29.9%)	40 (20.6%)	26 (13.4%)	2.89	1.05
RA5	Is there adequate access to technology that supports quality control processes?	90 (46.4%)	45 (23.2%)	30 (15.5%)	29 (14.9%)	3.01	1.11
TU1	How frequently are advanced technologies used in the production process?	85 (43.8%)	60 (30.9%)	25 (12.9%)	24 (12.4%)	85	60
TU2	To what extent does technology help reduce human errors in your firm?	88 (45.4%)	50 (25.8%)	30 (15.5%)	26 (13.4%)	88	50
TU3	Are employees adequately trained to use technological tools effectively?	80 (41.2%)	55 (28.4%)	35 (18.0%)	24 (12.4%)	80	55
TU4	How often do you rely on automated systems to monitor product quality?	83 (42.8%)	55 (28.4%)	30 (15.5%)	26 (13.4%)	83	55
TU5	Do technological tools improve the accuracy of quality control outcomes?	82 (42.3%)	53 (27.3%)	35 (18.0%)	24 (12.4%)	82	53
EEP1	How often do you produce error-free products?	75 (38.7%)	60 (30.9%)	35 (18.0%)	24 (12.4%)	75	60
EEP2	To what extent does your firm's quality control practices contribute to reducing errors?	88 (45.4%)	55 (28.4%)	30 (15.5%)	21 (10.8%)	88	55
EEP3	How frequently are product defects identified and corrected?	90 (46.4%)	50 (25.8%)	30 (15.5%)	24 (12.4%)	90	50
EEP4	Do employees perform their tasks accurately and without errors?	85 (43.8%)	55 (28.4%)	35 (18.0%)	19 (9.8%)	85	55
EEP5	How satisfied are you with your firm's overall productivity levels?	78 (40.2%)	60 (30.9%)	35 (18.0%)	21 (10.8%)	78	60

Source: Researcher computation, 2025

The results in Table 2 present the mean responses and standard deviations for the thematic question items related to quality control practices (QCP), resource allocation (RA), technology utilization (TU), and

employee error-free productivity (EEP). Across the quality control practices items (QCP1–QCP5), mean scores range between 2.91 and 3.04, indicating a moderate agreement among respondents regarding the

presence and effectiveness of these practices in their firms. The relatively high proportion of “Strongly Agree” (SA) and “Agree” (A) responses, especially for QCP3 (mean = 3.04) and QCP4 (mean = 3.01), suggests that while quality control measures exist, their implementation may not be consistent across all areas, particularly in the use of customer feedback mechanisms (QCP5, mean = 2.93). Standard deviations above 1.00 in most cases indicate diverse opinions among respondents, possibly reflecting variations between firms in different rural locations.

For resource allocation (RA1–RA5), mean scores range from 2.89 to 3.06, with RA2 (access to sufficient equipment) recording the highest mean of 3.06, suggesting that some firms are relatively better equipped than others. However, RA4 (training programs for resource allocation) has the lowest mean of 2.89, pointing to a noticeable shortfall in human capital investment. The mixed distribution of responses, with a significant portion still in “Disagree” (D) and “Strongly Disagree” (SD), highlights resource inadequacies that may undermine effective quality control in rural water manufacturing firms.

In terms of technology utilization (TU1–TU5), the results reflect moderate agreement, with several items

showing high “SA” and “A” responses, especially in TU1 (use of advanced technologies) and TU2 (technology reducing human errors). However, the absence of mean and standard deviation values in the table for TU1–TU5 suggests incomplete computation, making it difficult to quantify the exact central tendency and variability. Nevertheless, the frequency data implies that while technology adoption is visible, it is not yet fully optimized, likely due to cost constraints or lack of technical expertise in rural settings.

For employee error-free productivity (EEP1–EEP5), the distribution of responses shows a tendency toward agreement, particularly in EEP3 (defect identification and correction) and EEP4 (task accuracy), both of which received high “SA” proportions. This suggests that despite limitations in resources and technology, employees in some firms maintain reasonable productivity levels. However, variability in the responses points to inconsistencies across the firms studied, reinforcing the notion that management practices and infrastructural conditions differ widely in the rural water manufacturing sector in Delta State.

Table 3: Correlation Matrix of respondents

Variable	QCP	RA	TU	EEP
QCP	1.0000			
RA	0.6201	1.0000		
TU	0.1473	0.2239	1.0000	
EEP	0.4141	0.6632	0.3753	1.0000

Source: Researcher computation, 2025

The correlation analysis in Table 3 reveals the strength and direction of relationships among the variables: Quality Career Planning (QCP), Resource Availability (RA), Training Utilization (TU), and employee error-free productivity (EEP). The results show a strong positive correlation between QCP and RA ($r = 0.6201$), suggesting that improved career planning is closely associated with better resource availability. This implies that in contexts where career planning is more structured, there is likely to be a parallel improvement in the provision of necessary resources. Similarly, RA exhibits a strong positive correlation with EEP ($r = 0.6632$), indicating that access to adequate resources significantly supports and enhances employee error-free productivity. The relationship between QCP and EEP is moderately positive ($r = 0.4141$), meaning that while effective career planning contributes to performance, other factors, such as resources and training, may amplify its impact. TU, however, shows weak positive correlations with QCP ($r = 0.1473$) and RA ($r = 0.2239$), suggesting that training utilization is

not strongly dependent on career planning or resource availability in the study area, possibly due to underdeveloped training structures in rural contexts. Nonetheless, TU correlates moderately with EEP ($r = 0.3753$), showing that when training opportunities are utilized, they can positively influence performance, even if such opportunities are limited. In the whole, the pattern of correlations indicates that resource availability plays a central linking role between career planning and employee performance, while training utilization remains an underleveraged tool in the rural setting studied.

Testing of Hypotheses

The hypotheses postulated for the study were tested and the analysis result are being presented in table 4 below:

**Table 4: Summary of Multiple Regression Analysis
result for Hypotheses 1 to 3**

Dependent Variable: EEP
Method: Least Squares
Date: 08/09/25 Time: 18:51
Sample: 242
Included observations: 194

Variable	Coefficient	Std. Error	t-Statistic	Prob.
C	0.127724	0.024782	5.153936	0.0000
QCP	0.253403	0.091274	2.776273	0.0060
RA	-0.100876	0.094671	-1.065541	0.2880
TU	0.813618	0.064001	12.71262	0.0000
R-squared	0.988194	Mean dependent var		3.034021
Adjusted R-squared	0.808008	S.D. dependent var		1.011579
S.E. of regression	0.110777	Akaike info criterion		-1.542200
Sum squared resid	2.331574	Schwarz criterion		-1.474822
Log likelihood	153.5934	Hannan-Quinn criter.		-1.514917
F-statistic	5301.302	Durbin-Watson stat		2.359775
Prob(F-statistic)	0.000000			

Source: EViews 9.0v output, 2025

The regression coefficients provide insight into the individual contributions of each independent variable to the dependent variable, Employee Error-free Productivity (EEP). The coefficient for Quality Control Process (QCP) is 0.2534, which is positive and statistically significant at the 1% level ($p = 0.0060$). This implies that a one-unit improvement in QCP is associated with a 0.2534-unit increase in EEP, holding other variables constant. On the other hand, Resource Allocation (RA) has a coefficient of -0.1009, which is negative and statistically insignificant ($p = 0.2880$). This suggests that changes in RA do not have a statistically meaningful impact on EEP in this model. Training and Upgrading (TU) exhibits the largest effect, with a coefficient of 0.8136, which is positive and highly significant ($p < 0.0001$), indicating that improvements in TU strongly enhance EEP.

The overall model fit statistics indicate that the independent variables collectively explain a substantial proportion of the variation in EEP. The R-squared value of 0.9882 shows that 98.82% of the variation in EEP is accounted for by QCP, RA, and TU combined, while the adjusted R-squared of 0.8080 corrects for the number of predictors and still indicates a very strong model fit. The F-statistic value of 5301.302 with a p-value of 0.0000 confirms that the model as a whole is statistically significant, meaning the predictors jointly influence EEP. The Durbin-Watson statistic of 2.36 suggests no significant autocorrelation in the residuals. The low standard error of regression (0.1108) and favorable information criteria (Akaike = -1.5422; Schwarz = -1.4748) further affirm the robustness of the model.

Discussion of Findings

The regression results revealed that Quality Control Practices (QCP) had a positive and statistically significant effect on Employee Error-free Productivity (EEP) ($\beta = 0.253$, $t = 2.776$, $p = 0.006$). This implies that for every unit increase in QCP, EEP increases by approximately 0.253 units, holding other variables constant. This finding aligns with the work of Adewale and Shittu (2022), who found that systematic quality management practices significantly boost employee performance in manufacturing firms. Similarly, Zhang et al. (2021) emphasized that well-structured quality control enhances both task efficiency and worker morale, leading to improved organizational output. However, contrary evidence from Osei-Tutu et al. (2023) suggested that QCP may not significantly influence productivity in settings where process monitoring is poorly implemented or lacks employee buy-in.

The results for Resource Allocation (RA) indicated a negative but statistically insignificant effect on EEP ($\beta = -0.101$, $t = -1.066$, $p = 0.288$). This suggests that changes in resource allocation, as measured in this study, did not significantly affect employee engagement and productivity. The finding contradicts the observations of Mensah and Boateng (2021), who reported a strong positive relationship between adequate resource allocation and improved staff output in public sector organizations. Conversely, it aligns with the findings of Idris and Lawal (2020), who noted that resource allocation alone is insufficient to enhance performance unless accompanied by proper training and capacity-building measures.

Training and Upskilling (TU) emerged as the most influential predictor of EEP, with a large positive and highly significant effect ($\beta = 0.814$, $t = 12.713$, $p < 0.001$). This indicates that a one-unit increase in TU

is associated with an approximate 0.814-unit increase in EEP, controlling for other variables. This finding is strongly supported by the work of Li and Zhao (2022), who reported that continuous professional development significantly improves workforce adaptability and productivity. Similarly, Adebayo and Onuoha (2023) found that targeted upskilling initiatives positively impact employee engagement levels, especially in knowledge-driven industries. On the contrary, a study by Khan et al. (2021) suggested that the benefits of training may be limited in organizations where acquired skills are underutilized due to structural inefficiencies.

The overall model fit was high, with an R^2 value of 0.988, indicating that approximately 98.8% of the variance in EEP was explained by the three predictors. The F-statistic (5301.302, $p < 0.001$) confirmed that the model was statistically significant. This suggests that collectively, QCP, RA, and TU provide a robust explanation of variations in employee engagement and productivity in the study context.

The theoretical implication of these findings lies in their contribution to the understanding of the determinants of Employee Error-Free Productivity (EEP) within the framework of resource-based theory (RBT) and human capital theory. The significant positive coefficients of Quality Control Practices (QCP) and Technology Utilization (TU), alongside the non-significant effect of Resource Allocation (RA), suggest that intangible capabilities, such as systematic quality management and technological competence, are more decisive in enhancing error-free productivity than the mere allocation of physical or financial resources. This supports RBT's proposition that sustained performance advantages stem from valuable, rare, and inimitable resources, and reinforces human capital theory's emphasis on skill and knowledge as primary drivers of productive efficiency. The results extend existing models by showing that in operational contexts, reducing errors depends more on process excellence and technological integration than on resource magnitude, thereby challenging capital-intensive productivity theories and calling for greater theoretical focus on process-driven and skill-based capabilities.

Conclusion

In conclusion, the study on "Innovative Quality Control Management and Employee productivity: Drivers of Drinking Water Purity in Delta State's Packaged Water Industry" revealed that innovative quality control practices and the strategic utilization of technology significantly enhance employee productivity, particularly in achieving employee error-free productivity (EEP), which is critical for ensuring drinking water purity. Conversely, resource allocation, while essential for operational support, did not significantly predict employee productivity, suggesting that efficiency and quality outcomes

depend more on process innovation and employee competence than on mere resource volume. These findings emphasize that maintaining water purity in the packaged water industry requires a deliberate focus on embedding cutting-edge quality control systems and fostering a technologically empowered, skilled workforce capable of minimizing production errors. This aligns with the industry's mandate to deliver safe, high-quality water to consumers while sustaining competitive advantage in an increasingly quality-conscious market.

Recommendations

The recommendations below are therefore proposed to guide industry stakeholders, managers, and policymakers in strengthening packaged water production practices for optimal employee productivity and product safety.

- i. Adopt and sustain innovative quality control mechanisms by integrating real-time monitoring systems, automated testing equipment, and data-driven decision-making tools to minimize production errors and ensure water purity.
- ii. Enhance workforce skills through continuous training and development programmes focused on quality management techniques, operational precision, and the use of emerging water purification technologies.
- iii. Prioritize the deployment of advanced technology over mere resource expansion by investing in process efficiency tools that directly impact employee error-free productivity (EEP) and overall product quality.

Effluence Disclosure and Financial Performance of Listed Consumer and Industrial Goods Firms in Nigeria and South Africa

MIESEIGHA, Ebipanipre Gabriel¹ & OKEWALE, Joel ADENIYI²

^{1&2}Olabisi Onabanjo University, Ago-Iwoye, Ogun State, Nigeria

Publication Date: 2025/11/28

Abstract

This study investigated the effect of effluence disclosure on financial performance of listed consumer and industrial goods firms in Nigeria and South Africa. Ex-post facto research design was used and secondary data were obtained from the audited yearly annual reports and accounts of selected consumer and industrial goods firms in Nigeria and South Africa. Data obtained were analyzed using descriptive, diagnostic and inferential statistics. The study found that high-quality effluence disclosure (waste management disclosure) is imperative for corporate transparency and accountability, especially for corporate firms operating in Sub-Saharan Africa such as Nigeria and South Africa. The implication of this finding is that investing in effluence or waste management practices and disclosing these efforts can lead to increased efficiency, reduced costs, and enhanced reputation, ultimately contributing to better financial outcomes. As such, firms are to consider integrating environmental sustainability into business strategies and ensure disclosure of these efforts to stakeholders. On the basis of the findings, the study recommends that consumer and industrial goods firms should focus more attention on waste/effluence management information disclosure because it can boost their corporate image and reduce industrial conflict with host communities

Keywords: Effluence disclosure; Financial performance; Return on equity; Return on asset; Waste management; Nigeria; South Africa

JEL Classification: M40; M49

Introduction

Practically, corporate organizations have been contending to increase their performance in numerous ways, despite the negative effects their activities may have on stakeholders within confines of their area of operations. These contentions as observed by Atube and Okolie (2024), has attracted interests of stakeholders such as the international organizations, national and international governments, together with the imperative roles of external dynamics like pressure from consumers, competitors, globalization, accounting regulators and researchers alike. For this reason and many others, companies are compelled to pay significant attention to social cost disclosures in financial statements (Nkwoji, 2021).

In light of this, companies do not contemplate corporate social responsibility (CSR) expenses as a cost (Adeyemi, et al, 2020), rather it is seen as a strategic tool to boost the efficiency, and retention of talented workforce and to inspire management to facilitate companies to gain a reputable corporate image. Accordingly, this study is directed to ascertain the effect of social accounting disclosures (particularly Effluence Disclosure) on corporate performance of listed consumers and industrial goods firms in Sub-Saharan Africa. Fundamentally, this

study was motivated by two (2) identified research gaps – Literature and Measurement Gaps. First, there is no single research examining how effluence disclosure interacts with financial performance of listed consumer and industrial goods companies in sub-Saharan Africa is relatively scarce. Therefore, it is critical to continue and step-up research into the relationship between effluence disclosure and financial results of listed companies in sub-Saharan Africa. Second, there have been measurement bottlenecks as to how effluence disclosure is measured.

Consequently, there was a need for a comprehensive method that provided a nuanced understanding of effluence disclosure and their relationship with corporate performance. Accordingly, this study used a multifaceted Global Reporting Index standard to measure effluence activities. So far, little is known about single research in Sub-Saharan Africa that has examined the relationship between effluence disclosure and financial performance using the recommended GRI index/indicators. This study addressed the deficiencies that were found after a comprehensive examination of how effluence disclosure affected the financial performance of publicly listed firms in the consumer and industrial

goods sectors of two (2) sub-Saharan Africa countries namely – Nigeria and South Africa.

Review of Related Literature

Effluence Disclosure

Cooper (2018) defines waste management, also known as effluence management, as the actions an organisation takes to reduce, eliminate, and ideally prevent any negative environmental effects that may result from its environmental activities. Managing waste includes all waste management-related operations and resources, such as maintaining garbage transport trucks and disposal sites and adhering to environmental and health regulations. Two elements of waste management methods are the collection and breakdown of solid waste.

Numerous activities that take place both within and outside of a company's primary operations may add to the total quantity of waste produced during the manufacturing or delivery of goods or services. Effective waste and residual material management necessitates a thorough understanding of the resource usage and recycling procedures that non-financial businesses employ in their manufacturing operations, as well as an understanding of how each step affects each stakeholder. The materials and waste management issue is influenced by organisational levels, operating cycles, and resource flow (Kurdve et al., 2017). Organisations and businesses collaborate to recycle materials from the many phases of resource recovery.

Financial Performance

The central role in gauging an entity's overall health and advancement rest on performance and the idea of corporate performance has remained a prominent thread in accounting literature (Adekunle & Adeyemi, 2013). The word "corporate performance" is used to describe the advantages that a corporation gets from its shares, operations, and functioning, which are often detailed in its financial statements. In order to measure how well a business is doing, analysts use a variety of profitability measures. These include operational profit, return on equity, return on assets, profit margin, profitability, turnover, and market-based indicators like Tobin's Q.

Herly and Sisnuhadi (2011) believe that the financial statement is a good tool for evaluating a firm's performance. It is believed that a high-performing firm would strengthen quality disclosure in its financial accounts. Financial ratios are a common way to assess an entity's performance since they reveal relationships between the variables included in the financial statements. According to Kabayeh, Nu'aimat and Dahmash, (2012), financial ratios may be a helpful tool for assessing company performance when contrasted with other relevant data, such financial ratios from the same company or related industries, both current and historical. This according to Arikewuyo, Adeyemi and Edu (2019) could aid strategic managerial planning.

Strategic management is centered on improving company performance (Al-Matari, Al-Swidi & Fadzil, 2014). Several related studies were directed to analyze different aspects of strategy and implementation of the concept of corporate performance. Accounting makes the significance of corporate performance clear by offering several recommendations to boost financial performance. Social accounting and the stated success of corporations are mostly reliant on accounting-based metrics revealed in empirical studies. When looking at the connection between social accounting and corporate performance, several researchers used accounting-based metrics or market-based metrics. Furthermore, an often-used accounting indicator for evaluating a company's performance is the benchmark rate of return also known as the risk-adjusted weighted average cost of capital. Metrics based on accounting might reveal a company's short-term performance from prior years. Profits earned by a corporation throughout an accounting period as a percentage of total assets, capital employed, net worth, turnover, etc. is called the corporate performance ratio, and it is a key indication of the overall efficiency of the organization. This is considered a sign of progress, achievement, and mastery. Creditors look at corporate performance ratios since they provide information to assess whether or not the firm can pay its interest bills.

By contrast, corporate performance ratios are of importance to shareholders because they reveal the development and return on investment of their capital (Al-Matarneh, 2009). The profit metric was panned by Kapopoulos and Lazaretou (2007) due to its inability to look forward and its reliance on depreciation and amortization to partially predict future occurrences. Various approaches to valuing physical and intangible assets place constraints on accounting profit margins due to rules imposed by the accounting profession. Wahla, Shah and Hussain, (2012) sees market-based assessment ratios as a mirror on shareholders' expectations for the entity's future grounded on past or present performance. Market-based metrics includes Tobin's Q, Market Value Added, Market Value to Book ratio, dividend yield, yearly stock return, among others.

Corporate Performance Measures of the Study **Return on Asset (ROA)**

A company's return on assets (ROA) can be calculated by dividing its total assets by its net profit after taxes. The ratio of operational income to total assets and the division of net income by total assets are the two most widely used techniques for calculating return on assets. Social and environmental costs significantly impacted enterprises' return on assets (ROA), according to earlier research by Nnamani et al. (2017), Muhammad, Faisal and Muhammad (2016), Jeroh and Okoro (2016), Gamble et al. (2015), Freedman

and Jaggi (2012), and Ingram and Frazier (2010). The literature has presented contradictory data regarding the relationship between corporate performance and social and environmental costs. While some research have found a favourable correlation, others have found the opposite. This draws attention to two issues with the empirical findings.

This study used operational performance dynamics, like ROA, to assess corporate performance while accounting for the submission of prior research. In an attempt to elucidate the claim in the accounting literature, this study focused on ROA and ROE as corporate performance variables in its empirical model because prior research has produced contradictory findings about the relationship between ROA and ESG. Therefore, it can be assumed that social accounting has no effect on the return on assets of some public companies in Sub-Saharan Africa.

Return on Equity (ROE)

Return on equity (ROE) is a metric that is typically used to analyse a company's performance over time, and investors are more concerned with ROE than with debt. From the standpoint of the shareholder, using retained profits is better than looking for outside investment. This is predicated on the notion that businesses would only resort to debt financing in the event that retained earnings were inadequate. As a proportion of the original equity invested, ROE calculates the portion of a company's net income that is distributed to shareholders. ROE, which measures how much profit shareholders receive from their investments, is calculated by dividing net income after taxes by total equity or capital employed.

Social and environmental accounting and return on equity (ROE) have a positive or negative correlation (Egbunike & Okoro, 2018; Nnamani et al, 2017; Ifurueze, Lydon, & Binglar, 2013). In light of the results of these empirical studies, the return on equity (ROE) is included in this study as a gauge of corporate performance. Therefore, it is assumed that the return on equity of some quoted consumers and industrial goods firms in Sub – Saharan Africa are unaffected by social accounting methods.

Theoretical Framework

This research used a combination of contemporary management theories; the Stakeholder and legitimacy theories are foundational ideas in this inquiry. Stakeholder theory and legitimacy theory are both intricate and related theoretical frameworks. In both views, the organization is seen as functioning inside a larger social system, having both external and internal influences. An essential tenet of legitimacy theory is the idea of an implicit agreement between an organization and the community in which it functions. Legitimacy theory takes societal

interactions into account, while stakeholder theory focuses on specific stakeholders.

Legitimacy and stakeholder theories both provide a comparable but somewhat different views on the factors that motivate managerial behavior. Legitimacy theory, which complements stakeholder theory, offers a suitable framework for studying corporate disclosure practices by shedding light on how companies comprehend and address evolving public and institutional demands and expectations. It also emphasized that corporate reporting and other organizational practices are tied to the values of the community in which a company works and the importance of preserving the legitimacy of the organization. Social accounting is an important concept in this field, legitimacy theory and stakeholder theory add to it by presenting more commercial reasons why companies should work towards disclosing information about the social component of the organization.

Methodology

This study used *ex-post facto design* in this inquiry; this approach was utilized because the aim was to identify factors associated with a particular event or behavior by examining similar events that have already occurred. Firms in four nations in sub-Saharan Africa that are openly traded on reputable stock exchanges made up the sample population for this research. The recognized stock exchanges were Nigerian Exchange Group (Nigeria) and Johannesburg Stock Exchange (South Africa). This was premised on the fact that they constitute the most liquid stock markets in Sub-Saharan Africa and complies with the provisions of International Financial Reporting Standards with regards to preparation of corporate financial reports. There were 312 companies listed on the Johannesburg Stock Exchange, and 173 on the Nigerian Exchange Group as of December 31, 2022.

Inclusion and exclusion criteria were used because data collected were from those companies that had incorporated effluence disclosure in their activities from 2012-2022. Consequently, the researcher chose its sample size using the inclusion and exclusion criteria. The researcher used this approach to evaluate data from consumer and industrial goods firms who had adequately disclosed effluence variables in their financial statements. Hence, excluded from the sample were consumer and industrial goods companies that had not traded on the Nigerian Exchange Group, and Johannesburg Stock Exchange during the eleven years period (2012–2022) as well as firms that had not disclosed effluence activities in their financial statements.

The study's sample size was made up of firms with available financial statements for the period of this research as of December 31, 2022; forty-one (41) were from consumer and industrial goods companies quoted on the Nigeria Stock Exchange, one-hundred

and sixty four (164) on the Johannesburg Stock Exchange. Secondary sources (yearly published annual reports and accounts) were used to gather data. Additionally, corporate performance metrics used were ROE and ROA (dependent variable) while the independent variable is effluence disclosure (waste management). Drawing inferences from these theories, statistic and dynamic regression models were developed to allow for country specific analysis and dynamic panel regression analysis for combined country analysis.

Linear Model:

$$ROE_{it} = (\gamma_0 + \beta_1 WD_{it} + \beta_2 FL_{it} + \beta_3 FS_{it} + \varepsilon_t) \dots\dots\dots (1)$$

Common Effect Model or Pooled Least Square (PLS)

$$ROE_{it} = (\gamma_0 + \beta_1 WD_{it} + \beta_2 FL_{it} + \beta_3 FS_{it} + \varepsilon_t) \dots\dots\dots (2)$$

Fixed Effect Model or Least Squares Dummy Variable (LSDV)

$$ROE_{it} = (\gamma_0 + \beta_1 WD_{it} + \beta_2 FL_{it} + \beta_3 FS_{it} + \varepsilon_t) \dots\dots\dots (3)$$

Random Effect Model or Generalized Least Square

$$ROE_{it} = (\gamma_0 + \beta_1 WD_{it} + \beta_2 FL_{it} + \beta_3 FS_{it} + \mu_i + \varepsilon_t) \dots\dots (4)$$

Where: ROE= Return on equity; WD=waste management disclosure (effluence disclosure); Financial Leverage= Firm Size; FS= Firm Size; i= number of individuals or cross section; t= number of periods; ε_t = white noise.

Table 1: Description and Measurement of Variables

S/N	Variables	Description	Measurement
1.	Return on Assets	The results derived from utilization of firms' assets.	This is calculated as the profit before tax divided by total asset; expressed as a percentage.
2	Return on Equity	A gauge of firms' profitability. It is a measure of net income by shareholders' equity.	This is expressed as the profit before tax divided by total equity; expressed as a percentage
3.	Waste Management Disclosure	The disclosure of amount expended on the management of corporate waste.	Presented as content analysis with a value of "1" when reporting waste management is active and "0" when not.
7	Financial Leverage	It is the percentage of debt-to-equity ratio of the organisation	It measured by dividing total debt from total equity of the organisation.
8	Firm Size	It is the value of the overall asset of the organisation	It is the Logarithms of the total asset in the organisation

Source: Author's Compilation (2025).

Using panel data covering 2012–2022, the study analysed four sub-Saharan African nations' consumer and industrial products companies (Nigeria, and South Africa) based on their effluence disclosure (waste management), and corporate performance. The countries were selected because they appear to be among the leading nations in sub-Saharan Africa in terms of recognized Stock Exchanges, regulation and having robust capital markets (Okoro & Ekwueme, 2021). Furthermore, another reason for the selection of Nigeria and South Africa as sampled countries for this study was premised on the fact that

they were among the first countries in Sub-Saharan Africa to join the league of nation in the implementation of IFRS as well as compliance to Global Reporting Index (GRI) on sustainability matters. Given the wide variation in currencies across the sub-Saharan African nations studied (e.g., the Naira of Nigeria, and the Rand of South Africa) and to prevent problems with scaling, the study's variables were converted to US dollars (USD) as the base value. The study used descriptive, regression diagnostic and inferential statistics in analyzing the data obtained in the study.

Results and Discussion

Table 2: Descriptive Statistics (Aggregate)

	ROE	ROA	WD	FL	FS

Author's Compilation (2025); Note: ROE (Return on equity), ROA (Return on Asset); WD (Waste management disclosure); FL (Financial Leverage) and FS (Firm size)

The average ROE is 1.47%, with a median of 0.13% and a standard deviation of 54.18. ROA has a mean of 1.35 percent, a median of 0.05 percent, and a standard deviation of 16.40 percent. The median value of WD (Waste management disclosure) is 1.00%, with a standard deviation of 0.50. The mean value is 0.53%. Financial leverage (FL) ranges from a mean of 0.93% to a median of 0.34% with a standard deviation of 2.80%. The median value of FS (Firm Size) is 7.02%, with a standard deviation of 0.93. The mean value is 7.05%. One example of a skew variable is return on equity (ROE), which has a negative skewness of -24.68. The following variables exhibit positive skewness: Return on Asset (ROA) at 36.49, Waste Management (WD) at -0.09, Financial Leverage (FL) at 18.72, and Firm Size (FS) at 0.07.

The following metrics are platykurtic: FS (Firm Size) is leptokurtic at 2.57, FL (Financial Leverage) is platykurtic at 587.6, WD (Waste Management Disclosure) is leptokurtic at 1.07, and ROE (Return on Equity) is platykurtic at 895.9. The Jarque-Bera test is an asymptotic test that shows that ROE (Return on Equity) is not normally distributed, with a value of 4125.4 at 0.0000 probability. At 0.0000, the ROA (Return on Asset) is 3801.0. Waste management disclosure, or WD, is not normally distributed, with a value of 436.64 at 0.0000 probability. The value of FL, which is not normally distributed, is 1261.3 at 0.0000 probability. FS has a value of 23.270 at 0.0000 probability which is not normally distributed.

Table 3: Correlation Analysis (Aggregate)

	ROE	ROA	WD	FL	FS
ROE	1				
ROA	0.4081	1			
WD	-0.0112	-0.0447	1		
FL	0.0102	0.0034	0.0023	1	
FS	0.0287	0.0115	0.1067	-0.0022	1

Author's Compilation (2025);

The dependent and independent variables' correlation matrices are shown in Table 3 above. Importantly, waste management (WD) disclosure and return on equity (ROE) reveal a negative correlation between

these variables, while financial leverage (FL) and firm size (FS) show a positive correlation. Return on Asset (ROA) is positively correlated with FL and FS, but negatively correlated with WD

Table 4: Variance Inflation Factor (Aggregate)

Variables	Centered VIF
WD	1.195985
FS	1.018973
FL	1.004631
C	NA

Author's Compilation (2025)

The variance inflation factor in Table 4, which is more resilient to the correlation matrix, aids in

examining the existence of multicollinearity between the independent variables. As a general rule, the

value that appears before the decimal point shouldn't exceed five. Multicollinearity is present when the value is greater than five, but it is absent when the number is less than five. Multicollinearity is absent

in the data, which suggests that the explanatory variables are suitable to define together in an econometric model.

Table 5: Pooled Regression Model

Variable	Coefficient	Std. Error	t-Statistic	Prob.
ROA (-1)	0.153186	0.019633	7.802624	0.0000

F-stat.	13.48127		D-W stat	2.106847
Prob(F-stat.)	0.000000			

Author's Compilation (2025)

The dynamic pooled effect model (upper limit) results show a positive and statistically significant influence on ROA. There is a negative but negligible relationship between WD (Waste Management Disclosure) and ROA, meaning that for every percentage point rise in WD (Waste Management Disclosure), ROA will drop by 1.25 points. The

relationship between financial leverage (FL) and ROA is negative and statistically significant; that is, for every percentage point rise in FL, there will be a -0.00 point increase in ROA. An increase of 1% in FS (Firm Size) results in a rise of 0.53% in ROA, suggesting that FS (Firm Size) has a positive but small impact on ROA.

Table 6: Fixed Effect Model

Variable	Coefficient	Std. Error	t-Stat.	Prob.
ROA (-1)	0.020985	0.020620	-1.017677	0.3089
WD	0.346926	1.148309	0.302119	0.7626

S.E. of reg.	21.87769		Sum squ.Resid	1095113.
J-stat.	59.45874		Instrument rank	49
Prob(J-stat.)	0.509843			

Author's Compilation (2025)

Table 7 above shows the difference GMM estimation. The lagged dependent variable of 0.13 coefficient which is above the (lower bound) fixed effect model lagged dependent variable of 0.02. It is therefore indicating that the model is correctly instrumented and the regressors could explain the dependent variable accurately in the long-run. It indicates a reasonable level of persistence significant below 0.05 probability level. The Hansen- Sargan test captured by the J-statistic shows probability value of 0.50 which is still within the boundary of ($0.25 < p\text{-value} < 1.0$). This indicates that all over-identifying restrictions are valid.

ROA is positively and significantly affected by WD (Waste Management Disclosure), suggesting that a 1% increase in WD would result in a 16.44% rise in ROA. A positive and statistically significant relationship exists between financial leverage (FL) and ROA, suggesting that for every percentage point rise in FL, there will be a 0.45% increase in ROA. A positive and statistically significant relationship exists between FS (Firm Size) and ROA, suggesting that a 17% boost to ROA may be achieved with a 1% rise to FS (Firm Size). The Arellano bound serial correlation test for objective 1 is presented in table 4.23:

Table 8: Arellano Bound Serial Correlation Test

Test order	m-Statistic	rho	SE(rho)	Prob.
AR(2)	-1.035312	-88538.962828	85519.096684	0.3005

Author's Compilation (2025);

The AR (2) statistics aid to indicates the presence of second order correlation in the model, but with an insignificant value above 0.05 probability level, it

indicates no presence of auto-correlation in the model.

Table 9: Pooled Regression Model

Variable	Coefficient	Std. Error	t-Statistic	Prob.

Mean dep.Var	0.329592		S.D. dep. var	66.87242
S.E. of reg.	92.53838		Sum squ. resid	19481627
J-stat.	41.70587		Instrument rank	51
Prob(J-stat.)	0.570436			

Author's Compilation (2025)

Table 10 above shows the difference GMM estimation. The lagged dependent variable of 0.02 coefficient which is above the (lower bound) fixed effect model lagged dependent variable of 0.00. It is therefore indicating that the model is correctly instrumented and the regressors could explain the independent variable accurately in the long-run. It indicates a reasonable level of persistence significant below 0.05 probability level. The Hansen- Sargan test captured by the J-statistic shows probability value of 0.57 which is still within the boundary of (0.25 < p-value < 1.0). This indicates that all over-identifying restrictions are valid.

ROE is positively but insignificantly affected by WD (Waste Management Disclosure), suggesting that a 3% drop in ROE may be achieved with a 1% rise in WD. The relationship between financial leverage (FL) and ROE is positive and statistically significant. This means that for every percentage point rise in FL, there will be a 0.73% increase in ROE. A positive and statistically significant relationship exists between FS (Firm Size) and ROE, suggesting that a 219.2% boost to ROE is possible for every percentage point rise in FS (Firm Size).

Table 11: Arellano Bound Serial Correlation Test

Test order	m-Stat.	Rho	SE(rho)	Prob.
AR(2)	-0.512866	-100350.20464	195665.430947	0.6080

Author's Compilation (2025)

The AR (2) statistics aid to indicates the presence of second order correlation in the model, but with an insignificant value above 0.05 probability level, it indicates no presence of auto-correlation in the model. The key distinction According to GMM estimate, ROA is positively and significantly affected by WD (Waste Management Disclosure), suggesting that a 1% increase in WD would result in a 16.44% rise in ROA. A positive and statistically significant relationship exists between financial leverage (FL) and ROA, suggesting that for every percentage point rise in FL, there will be a 0.45% increase in ROA. ROA is positively and significantly correlated with Firm Size (FS), suggesting that a 1% increase in FS would result in a 17.98% rise in ROA.

The findings indicate that Waste Management Disclosure (WD) positively affects ROA, highlighting that effective waste management practices can enhance profitability, likely due to cost savings and improved operational efficiency. These results underscore the importance of strategic resource allocation in sustainability efforts, where certain disclosures can either detract from or contribute to a firm's financial performance. Companies should carefully evaluate the financial implications of their sustainability initiatives to optimize their impact on profitability.

Theoretically, this finding conforms to legitimacy and stakeholder theories which offer comparable but somewhat diverse views on factors motivating managerial behaviour. For instance, both theories offered suitable frameworks for studying social accounting disclosure practices by shedding light on how firms comprehend and address public and institutional expectations. Accordingly, social accounting disclosure and other organizational practices are tied to values of waste management in which a firm operates and the imperativeness of preserving legitimacy of the firm. Empirically, finding of this study is consistent with Nkwoji (2021); Daferighe, et al (2019); Amran and Siti-Nabiha (2017); Jeroh and Okoro (2016); Magara, et al (2015)

Conclusion and Recommendations

This study concludes that consistent and high-quality effluence disclosure is vital for corporate transparency and accountability, especially for corporate firms operating in Sub-Saharan Africa. Firstly, the positive relationship between waste management disclosures (effluence disclosure) and return on assets suggests that firms can improve financial performance substantially. This implies that investing in waste management practices and disclosing these efforts to stakeholders can lead to increased efficiency, reduced costs, and enhanced reputation, ultimately contributing to better financial outcomes. As such, firms are to consider integrating environmental sustainability into business strategies and ensure disclosure of these efforts to stakeholders.

The findings also have implications for firms' human capital management practices. On the basis of the findings, the study recommends that consumer and industrial goods firms in Sub-Saharan Africa should focus more attention on waste management (effluence management) information disclosure because it will boost their corporate image and reduce industrial conflict with host communities. This may encourage external stakeholders to patronize firms' product.

Publication Date: 2025/11/28

Abstract

The emergence and introduction of electronic technology envisages a more result-oriented and effective service delivery system in Nigeria's public sector. With its attendant challenges, it has become debatable that the phenomenon of e-governance has recorded considerable improvement in service delivery in Nigeria's public service. The Nigerian judiciary which is an integral part of Nigeria's public sector has in recent time embraced electronic technology in its transactions towards achieving effective and efficient service delivery. It is envisaged that the introduction and adoption of electronic technology in Nigeria's judiciary would be of great significance to service delivery and dispensation of justice. The paper examines the effects of e-governance and electronic technology on Nigeria's jurisprudence; service delivery and dispensation of justice in Nigeria's judiciary. Also, the paper observes the likely challenges and hindrances in the application of electronic technology in Nigeria's legal system, measures to tackle the challenges and the prospect of achieving full scale digitalized jurisprudence.

Key words: e-governance, electronic technology, service delivery, judiciary, jurisprudence, legal system

Introduction

E-governance or electronic governance is facilitated by the aid of supersonic technology mainly for the purpose of improving on delivery of services in the public and private sectors. However, in recent times, the phenomenon of e-governance has been elevated essentially to enhance the delivery of government services and overall governance. E-government (known for electronic government) relies on the use of technology devices, such as computers and the Internet, and digital platforms like websites, portals, and mobile apps for faster means of delivering public services and to make information and services more accessible to citizens and businesses, ultimately aiming for greater efficiency, transparency, and citizen participation (Munir, Sadiq, Abbas and Rasul, 2024)

E-governance is believed to have been birthed when electronic government was initiated by the National Partnership for Reinventing Government (NPR) in 1993 during the Clinton administration in the United States. The NPR pioneered government innovation through information technology, distinguishing it from past administrative reforms. The U.S. concept of e-government, championed by the NPR, went beyond simple cost-cutting or downsizing. It focused on a broader government reform movement designed to improve public satisfaction and deepen democracy (Chung, 2020).

In Nigeria, the advent of e-governance coincided with the return of the country's return to democracy in 1999. This ultimately led to subsequent recognition of Information and Communication

Technology (ICT) as a policy of national importance in 2001; the development of government websites and the implementation of e-government strategies aimed at enhancing transparency, efficiency, and citizen participation in governance. In the early 2000s, the federal government of Nigeria announced the initiative of the government to go digital to enhance the operation of the government in providing public services in a transparent, effective and efficient means (Abdulkareem and Ishola, 2016). The evolution of e-governance in Nigeria has no doubt marked a turning point in the country's efforts to modernize and enhance administrative efficiency. An era where the Nigerian government leveraged information technology to streamline and modernize public service delivery. In the last few years, Nigeria has made significant strides in embracing e-governance, driven by the need to address challenges associated with traditional bureaucratic systems (Abdul, 2024)

The introduction of e-governance in public administration in Nigeria transcends beyond mere government effort towards effective and efficient service delivery. It has grown to encompass the broader concept of e-participation. Adegboyega and Iahad (2018) highlighted the potential of electronic platforms to facilitate citizen engagement in policymaking and decision-making processes. This shift towards participatory governance underscores the transformative impact of e-governance on the traditional dynamics which takes place in the relationship between the government and its citizens. Onuoha (2018) emphasized the role of e-governance

in overcoming bureaucratic bottlenecks, reducing corruption, and enhancing citizen engagement. The adoption of digital platforms has allowed for the automation of various government processes, optimizing time and resource usage for service delivery. Additionally, the integration of technology in government operations has contributed to a more transparent and accountable public administration. At various times, the Nigerian government has advocated and pushed for the enactment of a comprehensive e-Government Law and has initiated projects under the Digital Nigeria Programme to improve digital access and transparency. This includes public financial management initiatives, such as the Integrated Payroll and Personnel Information System (IPPIIS) and the Treasury Single Account (TSA) which are aimed at improving

Conceptualization

Three major concepts will be defined. They are e-governance, service delivery and Nigeria's judiciary

1. E-governance

- assign decision-making authorities, define how decisions are to be made, and establish the organization's strategic direction;
- oversee the delivery of its services; the implementation of its policies, plans, programmes, and projects; and the monitoring and mitigation of its key risks; and
- report on its performance in achieving intended results and use performance information to drive ongoing improvements and corrective actions (accessed @ <https://www.caaf-fcar.ca/en>)

Electronics however, is concerned with or using devices that operate on principles governing the behaviour of electronics. An electronic device has transistors or silicon chips which control and change the electric current passing through the device. Thus, an electronic process or activity involves the use of electronic devices. The function of an electronic device is to regulate the flow of electrical current to process and manage information, enabling functions like computing, communication, and automation. Unlike electrical devices that convert energy into heat or motion, electronic devices use active electronic components such as transistors and integrated circuits to perform complex tasks and make decisions (@ <https://www.collinsdictionary.com>).

efficiency and accountability within public institutions, indirectly impacting the legal system. Interestingly, the phenomenon of electronic governance has been deployed to various aspects of public administration in Nigeria even in Nigeria's judiciary. Since the advent of e-governance in Nigeria, the judiciary has embraced and continued to effectively utilize the instrumentality of e-governance particularly in the realms of providing evidence – electronic evidence, in the court. The paper takes a look at the application of Information Communication Technology (ICT) to public administration in Nigeria with emphasis on the Nigerian legal system and judiciary as a matter of primacy.

E-governance is somewhat an acronym for electronic governance and it will be expedient and more meaningful to clarify them separately.

Governance refers to the structures, systems, and practices an organization has in place to:

E-governance thus can simply be defined as provision of government services and information to the public using electronic means. Such means of delivering information is often referred to as Information Communication Technology (ICT). Use of ICT in government facilities is considered an efficient, speedy and transparent process for disseminating information to the public and other agencies, and for performing government administration activities, with varying emphasis: (Molla, @ (<https://www.academia.edu>))

Essentially, e-governance can be described as the process by which society, through the growing influence of ICTs fundamentally changes and affects how private enterprises and civil society organizations operate (<https://www.caaf-fcar.ca/en>). Computer is the pivot of ICT and computer simply put is a device that is used to perform tasks and stores and retrieves information and data. Computer simply follows instructions given to it hence the adage in computing parlance 'garbage-in- garbage-out'. ICT refers to processing of data via computer; the use of technologies from computing, electronics, and telecommunications to process and distribute information in digital and other forms. (Abubakar, 2018).

2. Service Delivery

Generally, service delivery is the provision of a service to a customer or client, encompassing all the activities and steps involved in fulfilling a customer's needs and expectations. It is a core function of businesses and organizations, especially those providing intangible services, and is crucial for customer satisfaction and building strong relationships. However, within the context of our discussion, service delivery involves the series of steps taken to provide a

service that will meet or exceed the expectation of the beneficiaries (general public) (Shittu, 2020). According to Ogunna (2004), effective public service delivery is the result of government efforts to satisfy the public by implementing sound policies, enforcing laws, and promoting public welfare.

Over the years, service delivery has remained critical and cardinal **to government institutions** and the desire to achieve effective and efficient delivery of service by successive governments in Nigeria has made the adoption of electronic device such as ICT inevitable. The introduction and utilization of ICT in the provision of public service has gained a global appeal and its introduction in Nigerian public sector is to facilitate the fair and transparent distribution of government services, ensuring equal treatment and justice for all citizens without prejudice (Shittu, 2020).

3. Nigeria's Judiciary

The *Black's Law Dictionary* defines the judiciary as the branch of government responsible for interpreting laws and administering justice through its court system and body of judges. (<https://thelawdictionary.org>). In Nigeria, and in many other democracies, the judiciary is the third arm of the realm of government. It is the only branch not made up of elected representatives, but of persons appointed to perform the very fundamental role of adjudication in society. The judiciary according to Nnamani, is the branch of government empowered to interpret, clarify, and apply the law. Justice Nnamani further described its crucial function, stating that it serves as the guardian of the constitution and the rule of law, while also protecting fundamental rights. These definitions illustrate the judiciary's role as the holder of judicial power, the scope of which varies between different societies (accessed @ <https://www.learnnigerianlaw.com>).

In a more explicit term, the judiciary in Nigeria pertains to the system of courts where legal processes take place. The judiciary pertains to the administration of justice which defines the primary functions of the judiciary and determines how fairly the laws are applied and interpreted in specific cases.

E-Governance and Justice Delivery in Nigeria

Unarguably, the technological changes of the 20th and 21st centuries, the growth of computer technologies, digital technologies and telecommunications have changed the way the state conducts its functions and delivers governance. Whether or not they have improved the welfare function of the state, the way governance is delivered has been altered. Thus we are going to look at the enhancements and the progress e-government has brought to the administration of justice in Nigeria and the hindrances therein.

Before the introduction and application of ICT to public service delivery in Nigeria, the judicial process and particularly the courtroom has been a place of formal and dignified conduct, conservativeness and the one that revolts against innovation. In the past two decades, Judges and Lawyers had pondered over the application of Information and Communication Technology in the judicial and legal processes and have asked questions on whether ICT could ever work or be applied in a court of law. Prior to the ICT era, when rendering decisions, judges consider a blend of factors: the case records, the legal briefs, the arguments presented by lawyers, and their own interpretation of the law and relevant policy. The Legal and Judicial Process essentially entails various levels of information gathering and communication between stakeholders and the conventional practices and procedures are prone to causing undue delays in justice dispensation. With the sheer volume of data and heavy workload in legal proceedings, integrating ICT into the judicial process is essential for improving efficiency and streamlining legal research, reduce if not eliminate inaccuracy, major and avoidable delays in justice dispensation, promote transparency and integrity, and allow for easier information retrieval and in the long run reduce stress and enhance the health of judicial officers. The advent of court room technology as a means for presenting evidence before everyone in the courtroom has put to fore the inevitability of technological revolution in the justice process and system. It has therefore become imperative for the Nigerian Judiciary and the entire legal system to embrace ICT in its goal of delivering quality services (Abubakar, 2018).

E-governance application in Nigeria's judiciary is in its nascent stages, with a few instances like virtual court sessions and e-filing attempts. Law, being an index of societal values depends greatly on the flow of information. Consequently, the form and content of law has continuously changed to conform to the communicative device available at any particular time. The legal systems and contemporary judicial structures in place today are the outcome of centuries of development, with the prevailing communicative structure of each era influencing both the form and content of law. The rapid development of technology opens up new opportunities that were unthinkable only a few years ago. To what extent has the ICT been applied in the judiciary and in the dispensation of justice in Nigeria?

A new era in public service delivery began with the emergence of Information and Communication Technology (ICT) toward the end of the 20th century. (Cerrillo and Fabra, 2008). The deployment of ICT has significantly improved labour productivity as well as processing and dispensing vital information particularly in the public service. Similarly, the utilization of ICT in Nigeria's jurisprudence is evident in many ramifications. For example, with the

introduction of electronic technology, judicial and law officers can now access various online legal research outlets which include MyLaw.ng - for in-depth legal research and content and direct legal assistance; aptResponse and LawPadi - connect users with verified lawyers and provide tools for legal guidance and document generation; LFN App - provide mobile access to Nigerian laws, while others such as Case Radar offer AI-powered legal advisory and document generation services (<https://www.google.com/search?client=firefox-b-e&q=online+legal+platforms+in+nigeria>).

Other legal internet outlets that have been boosted by the ICT are LawPavilion - an extensive online and offline legal research platform with case law, statutes, and analytical tools; Legalpedia - A legal research database providing access to Nigerian case law, statutes, and regulations; **PACER Nigeria** - An online database for accessing Nigerian court records, case information, and filings; vLex - A platform to search and access legal cases from Nigeria; Clio - A cloud-based software for case management, document automation, time tracking, billing, and client communication, adaptable for Nigerian firms; Trello or Notion - General task and workflow management tools for organizing legal work, tasks, and deadline (<https://www.google.com/search?client=firefox-b-e&q=online+legal+platforms+in+nigeria>), and the NigerianLawGuru.com - A resource center for legal scholars and practitioners with legal research materials; The NigerianLawGuru.Com is one of Nigeria's premier site designed to serve all legal research and reference needs. Also, the site is designed to project the legal profession in the right direction within the context of legal research, and to facilitate and stimulate measures to sustain the pragmatic ideals of continuing legal education in Nigeria (<https://nigerianlawguru.com/>).

The oldest Law report, and perhaps one of the most credible, popular and patronized legal materials in Nigeria, The Nigerian Weekly Law Reports (NWLRL) launched its online version around January 2020. Chief Ganiyu Oyesola Fawehinmi founded the NWLRL publication in 1985 while the online platform was introduced to increase accessibility for legal professionals and students. The online version of the Nigerian Weekly Law Reports became necessary with the advent of Information and Communication Technology and to provide lawyers, judges and law students easier access to the Nigerian Weekly Law Reports, often referred to as "the legal profession's bible," (<https://punchng.com/nigerian-weekly-law-report-goes-online/>)

No doubt, the creation and availability of the numerous online legal platforms mentioned above has significantly impacted on the legal profession and the justice system in Nigeria. Also, the availability of internet services has brought about the possibility of consulting online legislation and case

law, the use of electronic filing, the electronic exchange of legal documents and conducting virtual hearings or video conference around the world and particularly within Nigeria's legal system (Ibekwe and Onwuatuegwu, 2021).

Although there appears to be a consensus among stakeholders for the adoption and adaptation of electronic technology in Nigeria's jurisprudence, the measures taken so far towards the application of electronic technology in the administration and dispensation of justice in Nigeria remains vapid and unenthusiastic on the part of the drivers of the Nigerian judiciary (Olugasa and Davies, 2022). Considering Nigeria's global political standing particularly in Africa and the fast pace of technology, it is expected that the court system should dematerialize itself as evident in other activities (Sourdin, Li and McNamara, 2020). However, in an effort to introduce and apply electronic governance in Nigeria's legal system, several states in Nigeria have introduced e-payment in their judiciaries. For example, the state of Akwa Ibom in South East Nigeria became the first to introduce online e-payments in its judiciary arm for all legal fees. The state has procured an e-Judiciary Enterprise Resource Planning (ERP) system, a digital application designed to manage all court processes. In Akwa Ibom, electronic payments for court fees, fines, and judgment debts are now possible online. The state has also implemented an online system for filing cases, as well as a judiciary e-library for virtual research and studies, which is accessible for a small fee. (<https://paymentsafrika.com/nigerian-state-pioneers-e-payment-in-judiciary>)

The Lagos State Judiciary has enhanced its Electronic Filing System (EFS) by integrating an e-payment platform. This upgrade is designed to accelerate the filing and processing of cases and to reduce the number of physical visits lawyers and litigants need to make to the High Court Registry. (<https://infrastructuremag.com.ng/2020/06/17/lagos-judiciary-upgrades-electronic-filing-system-with-e-payment>).

In 2024, Ogun State in South West Nigeria launched a new E-Registry Platform to reduce backlogs and streamline case management; to make the process more effective and efficient, towards ensuring transparency of court processes in the State Judiciary. The E-Registry platform which was implemented as a key component of the Ogun State Chief Judge's seven-point agenda was meant to fully digitalize the state's judiciary. The platform includes features such as E-filing, E-service, E-payment, as well as Case assignment and Management profiles was for the purpose of enhancing the efficiency of court proceedings while bolstering the security of court processes, leading to faster delivery of justice. The Ogun State E-registry aims to enhance the safety of court processes and accelerate the delivery of justice.

By digitalizing the judicial process, it is expected to increase judicial independence and prevent undue interference and bribery between court officials and litigants or counsel. This eliminates opportunities for exploitation arising from loopholes in the manual system. The e-registry platform will enable the public, litigants, and legal counsel to remotely track the progress of cases, from initial filing to online assignment. This capability allows individuals to manage case processes from their homes or offices, mitigating the security (<https://ogunstatejudiciary.gov.ng/judiciary-launches-e-registry-to-avert-backlog>).

The Edo State Judiciary has been on a modernization drive, implementing various technological and structural reforms to enhance the administration of justice. This features of this modernization drive includes implementing online payments as part of a broader Edo State online payment system to facilitate service payments. The Edo state e-payment as it applies to the judiciary has been active and utilizing unique "IND" numbers for payments via POS terminals with debit cards (<https://edojudiciary.gov.ng>).

Although, the introduction and adoption of electronic technology and Remote Court Proceedings (RCP) in Nigeria's judiciary has resulted in significant development across jurisdictions, the Nigerian experience seems to be that of a crawling snail owing to a number of challenges. The challenges range from infrastructural deficit, poor funding and regulation. Indeed, various reasons were also given amongst commonwealth countries such as Canada, Australia and Kenya to explain the slow adoption of RCP in their various jurisdictions including the need to preserve the adversarial system, the cost of technology, lack of internet access, the likely impact on judges as they assess witnesses and their evidence, the need to preserve the posture and clarity of roles of the various parties to a suit. So far, it is noted that despite the identified challenges, some jurisdictions including Australia and Singapore continue to accept the promises of RCP and are looking to improve upon and make its adoption a permanent feature in their adversarial system (Olugasa and Davies, 2022).

Prospects and Challenges of Adopting Electronic Technology in Nigeria's Judiciary.

Since the advent of electronic technology within government institutions, there has been some appreciable level of enthusiasm and drive in its application to governance and public service delivery. In Nigeria, ICT is increasingly becoming indispensable in all fields of human endeavour and in all facets of life. This is to the extent that ICT is widely applied to simple tasks, such as scheduling a doctor's visit, booking a travelling ticket at the Airports and at the Train stations, or purchase of recharge card, to the most complex operations of

major organizations and governments (Abubakar, 2018).

The penetration of the judicial systems by Technology has redefined the way evidence(s) are obtained, changed ways of investigating crimes, gradually altering the legal climates around the world. Changes occasioned by the advent of technology are evident around the globe. Consequently, various legislatures altered their laws to include use of electronic evidence which formed part of the facts in dispute between litigants as evidence in legal proceedings. For instance, in 2000 India amended its Evidence Act 1892 to allow electronic evidence in legal proceedings. This development has served as an impetus to the Nigerian jurisprudence. As noted previously, some jurisdictions, such as Australia and Singapore have continued to accept the promises of ICT and Remote Control Proceedings (RCP) and are looking to improve upon and make its adoption a permanent feature in their adversarial system (Olugasa and Davies, 2022).

But what are the prospects of E-governance in Nigeria's judiciary? With what has been achieved so far in some the federating units as highlighted above, it is convenient to predict that E-governance holds significant promise for increasing efficiency, transparency, and accessibility through the adoption of ICT in judicial processes, including electronic filing, case management systems, and online collaboration tools. Key prospects include reduced procedural duration, enhanced record security, and improved communication between judicial stakeholders, ultimately contributing to a more accountable and responsive justice system. The application of ICT in courts can streamline administrative processes, speed up case management, and reduce the duration of legal procedures. E-governance facilitates easier access to case information and court schedules, which benefits litigants and lawyers. The introduction and application of electronic transaction in Nigeria's judiciary will engender electronic filing systems that protect court records and allow for their easy retrieval, minimizing the risk of data loss or damage. Technologies like videoconferencing and online collaboration tools can reduce the workload of judges and judicial officers. ICT can accelerate the flow and exchange of information between courts, prosecutors, and other stakeholders, helping to meet judgment deadline

(<https://www.google.com/search?q=on+the+prospects+of+egovernance+in+nigeria%27s+judiciary&client=firefox/>). Essentially, with the introduction of the E-payment of filing fees in some of our courts particularly in south Nigeria, the expansion of internet services and the possibility of consulting online legislations and case laws is anticipated. We are likely going to experience more of electronic exchange of legal documents that will spur the

judiciary in Nigeria into a more effective and efficient one (Ibekwe and Onwuatiegwu, 2021).

In Nigeria, the growing adoption of information technology in commercial and financial transactions has led to the tendering of electronically generated documents in court as evidence. The Evidence Act in Nigeria has been amended several times to promote the tendering and admissibility of electronic evidence in Nigerian courts. For example, the Evidence Act 2004 was repealed due to complexities arising from interpretations by the courts as to what constitutes electronic evidence. In its place, the Evidence Act 2011 was enacted. Under Section 84 of Nigeria's 2011 Evidence Act, electronically generated evidence is admissible in court. On 12th June, 2023, an Amendment Act on evidence was signed into law. Amongst other things included in the amendment are the admissibility of electronic records and computer simulations, authentication of electronic records, use and proof of digital signature, electronic oath taking, electronic gazette and also gives the Minister of Justice the right to create regulations governing admissibility when there appears to be a lacuna in the law (Oluwajobi and Fatimehin, 2024).

At present there is inadequate accessibility of internet services particularly in the rural areas. However, the tide is changing due to the influx of affordable smart phones and constant expansion of telecommunications companies and operations. With greater access to the internet, more individuals can educate themselves on their rights and the workings of the justice system.

Stakeholders and parties to suits are now able to participate in virtual court sittings from their comfort zones. The application of electronic technology and ICT in Nigeria's judiciary has enabled the development of online legal research tools like LexisNexis, LegalPedia and Law Pavilion. With the creation of these outlets, the burden of research has been reduced considerably due to easy accessibility of the internet (Abubakar, 2018 and Ibekwe and Onwuatiegwu, 2021).

Irrespective of the identified merits of the utilization of ICT in Nigeria's jurisprudence, the application of computers still presents difficult problems and challenges to the legal system. The challenges essentially have to do more with failure of the legal profession to fully embrace IT and deploy same towards the development of Nigeria's jurisprudence. Added to this is the challenge of inadequate legal framework to regulate the use and application of electronic technology in Nigeria's judiciary. The exponential growth of electronic usage in global transactions has created new challenges to existing laws. Some of the legal solutions still lag, because of the unique complexities attached to e-activities. Electronic evidence is dependent on the same evidentiary rigours as its paper-based counterpart. Electronic evidence as with other evidence, must be both material and relevant to the issues as defined by

pleadings, must not be subject to any other exclusionary rule and must ultimately possess greater probative value than prejudicial effect to be received. There exists no legislation on electronic signature in Nigeria which is vital for authentication of electronic evidence or digital evidence to determine its genuineness and reliability (Okeji, Adedoyin-Raji and Isa, 2024).

Furthermore, there are misgivings pertaining to the reliance regarding electronic evidence in Nigerian courts. This is mainly due to the contradictions in the judgments and rulings of the court whereby sometimes documents of this nature were admitted and sometimes rejected by the courts. The Apex Court once held obiter that the law cannot over look the mode of modern business transactions and that it will be in the best interest of the public if the law is amended to permit the use of electronic evidence in the court. Thus, the admissibility of electronic evidence became more like a matter involving critical thinking before the courts. While some Judges preferred to apply the law as it was others, in the interest of justice favoured interpretations that will permit the use of electronic evidence in courts. The courts then began to take judicial notice of electronically generated evidence as they saw its use in trial as an avenue of keeping up with modern-day commercial transactions. However, in *Federal Republic of Nigeria v. Fani Kayode*, the trial court did not admit computer printout as evidence, and neither did it take judicial notice of it even though it was relevant to the fact in issue. The appellate court in hearing the appeal permitted the use of the printout as it was duly certified and directly related to the matter at hand (Oluwajobi and Fatimehin, 2024). These contradictions form a critical aspect of the challenges inhibiting the application of electronic technology in Nigeria's judiciary.

Other inhibiting factors to the application of electronic technology in Nigeria's judiciary stem from the rules established in the Evidence Act of 2011. In Nigeria, the admissibility of computer-generated evidence is primarily governed by Section 84 of the Evidence Act 2011, which was later amended in 2023. To be admissible, a document generated by a computer must satisfy the four conditions outlined in Section 84(2), including frequent computer usage, regular information supply, proper computer functioning, and that the reproduced information is derived from that supplied information. This framework applies to both civil and criminal cases. **Section 84(1):** States that a statement in a computer-produced document is admissible if the conditions in subsection (2) are met. **Section 84(2)** states the Four Conditions as follows:

1. **Regular Use:** The computer must have been used regularly for information storage and processing.

2. **Regular Information Supply:** The information in the document must have been regularly supplied to the computer during the activities.
3. **Proper Operation:** Throughout the relevant period, the computer must have operated properly or any malfunctions did not affect the document's accuracy.
4. **Accuracy of Information:** The information reproduced in the document must accurately reflect the data entered into the computer (Evidence Act, 2011).

Intriguingly, these provisions have been subjected to various interpretations by the courts. The variegated interpretations are no doubt debilitating to the full scale digitalization of the Nigerian legal system. Consequently, the Nigerian judiciary has not fully adopted the use of ICT in its administration of justice either due to the non-existing comprehensive legal and institutional framework permitting the use of ICT, or due to the partial/non-application of electronics and modern information and communications technologies in our judicial institutions. The failure of the judiciary in Nigeria to embrace full scale electronic technology in its activities is blighted by the problem which arises from the admissibility/inadmissibility of electronically generated evidence, and the lack of proof of its authenticity. The greatest of which is the fact that the Independent Electoral Commission (INEC) card reader is not admissible even as against the mischief it was meant to suppress (Aniekwe and Oraegbunam, 2021)

Conclusion

There is already a consensus that e-governance and ICT is indispensable to government institutions in Nigeria and particularly to Nigeria's judicial system as the adoption and application of electronic technology is believed to be critical to service delivery and overall dispensation of justice. Interestingly, the introduction of ICT by the Federal Courts and few State Courts has shown the difference in service delivery, efficiency and transparency, it is therefore most appropriate to deploy ICT to all levels of courts for such positive impact to be felt. The general consensus drawn from the Practice Directions of Lagos, Ogun, River state and the Federal High Court of Nigeria, Abuja is that service is by email or WhatsApp or any other means directed by the court (Olugasa and Davies, 2022).

IT compliant judiciary will help Judicial Officers to access current global trends, share experiences and reach out globally. With the deployment of ICT, there is the possibility of establishing a Judicial Research Centre and Data Base. This would allow for easy research, access to legal authorities and interactive reach out along the court hierarchy in Nigeria (Abubakar, 2018).

However, to achieve an appreciable level of an ICT compliant judiciary in Nigeria, actions need to be taken to tackle some of the challenges militating against the expeditious application of electronic technology in Nigeria's legal system. There is the challenge of resistance and stiff opposition to the integration of ICT into national economies and societies such as Italy and Nigeria. This problem is a factor of the challenges of technophobia and the digital divide. The argument is that more adults will display fear for technology, hence an ICT compliant judiciary may not be easily welcomed by older judges or legal practitioners. Such fear, lack of skill, variation in income, age and education (or literacy level) can create a digital divide amongst users of technology leading to a decline in the usage of electronic technology..

Another argument against the application of electronic technology in Nigeria's judiciary is around the constitutionality of the proceedings. This argument rests heavily on the interpretation of Section 36 of the 1999 Constitution (as amended) that requires that all hearings by courts and tribunals must be held in the public. The view is that holding court sessions remotely or virtually would breach this constitutional requirement since members of public will not readily participate in the virtual court hearing. The Constitution is the supreme law and any law that is held inconsistent with the provisions of the 1999 Constitution (as amended) will be deemed to be null and void (Olugasa and Davies, 2022). Thus, an appropriate, unambiguous and enforceable legal framework needs to be established towards achieving a functional ICT compliant judicial system in Nigeria. The digitalization of Nigeria's judicial system is now a desideratum; it is a reality which has come to stay. It should be harnessed to improve the delivery of services and the administration of justice.

Abstracts

Innovation refers to the process of creating new ideas, products, services, or methods that bring about significant improvements or solve problems in novel ways. Various examples of innovation are available for an entrepreneurs to use in the business such as: Disruptive Innovation, Incremental Innovation, Architectural Innovation, Radical Innovation. Entrepreneurship and innovation are relate to each other as both serve as a vehicle or channels for the accomplishment of its tasks. To stimulate entrepreneurship and innovation during an economic downturn, governments and institutions should focus on reducing bureaucratic hurdles for startups entrepreneurs.

Keywords: innovation, entrepreneurship .enhancing, upturning, economic, downturn

Words count -103

Introduction

Entrepreneurship and innovation are closely linked concepts, with innovation often being a key driver of successful entrepreneurship. Entrepreneurship involves the process of creating, developing, and managing a business venture, while innovation refers to the introduction of new ideas, methods, or products. Essentially, entrepreneurs leverage innovation to identify opportunities, solve problems, and create value in the marketplace.

Entrepreneurship and innovation are increasingly important in all areas of business and government. Entrepreneurial start-ups galvanise the economy by identifying new opportunities and redirecting resources to them. Established firms innovate in order to outmanoeuvre or respond to their competition. And in the public sector, the need for effective policies to deal with new challenges and for increasing service delivery with declining budgets also places a premium on innovative thinking. The course focuses on the skills necessary for the planning, development and launch of entrepreneurial and innovative ventures. The material covered includes the foundations of entrepreneurship, techniques for creative thinking, and processes for developing, planning and launching a new venture including protecting intellectual property, evaluating markets, developing innovative business models, budgeting, and raising finance. The major piece of assessment is the writing of a comprehensive business plan.

Concept of Innovation

What is Innovation?

Innovative refers to the transformation of creative ideas in a business (Njeri 2017).

➤ Innovation refers to the process of creating new ideas, products, services, or methods that bring about significant improvements or solve problems in novel ways.

➤ It involves the application of creativity and knowledge to develop solutions that add value, enhance efficiency, or address challenges in unique ways.

➤ Innovation is key to progress in any field, driving advancements in technology, business, healthcare, and more

Innovation is the process of introducing new ideas, methods, products or services. It involves developing something new or significantly improving existing ones, often driven by new technologies or a fresh perspective on existing knowledge. Ultimately, innovation aims to solve problems, enhance efficiency, or create new opportunities. A firm's longevity in a highly competitive market place is determined by the level at which it introduces and executes its new ideas in products and services to meet change in customers' demands and expectation (Im, Montoya and Workman, 2013). Organisations continuously need to tackle the problem of changing market demands and meet changing customer needs, especially because the marketplace is said to be a war arena for firms but guided by ethical conduct; it is a highly competitive

environment. Therefore, according to Ellomen, Jantunen and Kuivalainen (2011) they have a continuously improve their existing processes and products, and develop new products that match market requirements and if necessary create new markets for existing or a new products that is, market innovation.

Examples of Entrepreneurial Innovation:

- **Disruptive Innovation:**

Introducing a new product or service that fundamentally changes the way things are done (e.g., ride-sharing replacing taxi services).

- **Incremental Innovation:**

Making small improvements to existing products or processes (e.g., a faster processor for smartphones).

- **Architectural Innovation:**

Applying existing knowledge to new markets or contexts (e.g., using 3D printing technology to create customized prosthetics).

- **Radical Innovation:**

Creating entirely new products or services that did not exist before (e.g., the invention of the internet).

In conclusion, entrepreneurship and innovation are intertwined concepts that are essential for economic growth and societal progress. Entrepreneurs leverage innovation to create new businesses, solve problems, and drive value creation, while innovation provides the foundation for entrepreneurial.

Characteristics of an Innovation Entrepreneur

Stoner J. A. et al (1999) states that an innovate entrepreneur should the following Characteristics:

- Conceptual fluency; He or She should have the ability to produce a large number of ideas quickly.
- He or She should learn to consider ideals on the basis of his merit and being motivated by problems.
- He or She should possess the ability to suspend judgement, get committed and spend time in analysing and explaining business facts.
- He or She is usually less authoritative and flexible; accepts his own impulse, and is disciplined in pursuit of his course of action
- He or She should have the ability for independent judgement, less conformity, and often be a deviant from accepted ideas.
- He or She should also be able to see himself as unique and different from others.

Enhancing innovation by an entrepreneur can only be possible if;

- If the financial means to test out his ideas
- Well trained to bring modern knowledge to bear up his tasks,
- Easily can get in touch with like-minded entrepreneurs

Reason for Innovation and upturning economic Downturn

- Desire to overcome labour shortages
- Desire to overcome material shortages
- Desire to meet excess demand
- Desire by customers for new quality of product.
- Desire to use the work of research and development departments.
- Constant pressure of competition

Areas of Innovation

- Process technology
- Market innovation
- Product innovation
- Process of distribution
- Factors of production (new products' input)
- New model/product differentiation

Concept of Entrepreneurship

What is meant with entrepreneurship and how does this relate to innovation?

Entrepreneurship and innovation are fuzzy concepts that have been given multiple meanings. Innovation and entrepreneurship are often regarded as overlapping concepts. This can be traced back to probably the most well known definition of entrepreneurship, by Schumpeter (1934: 74), who defines entrepreneurs as individuals that carry out new combinations (i.e., innovations). Schumpeter distinguishes four roles in the process of innovation: the inventor, who invents a new idea; the entrepreneur who commercialises this new idea; the capitalist, who provides the financial resources to the entrepreneur (and bears the risk of the innovation project); the manager, who takes care of the routine day-to-day corporate management. These roles are most often executed by different persons (see for example Kenney 1986). The literature on entrepreneurship recognises a variety of entrepreneurial roles in economic change, such as:

- the person who bears uncertainty (Knight 1921);
- an innovator (Schumpeter 1934);
- a decision maker (Casson 2003);
- an industrial leader (Schumpeter 1934);
- an organiser and coordinator of economic resources (Marshall 1890);
- an arbitrageur, alert to opportunities (Kirzner 1973; 1997);
- an allocator of resources among alternative uses (Schultz 1975).

These roles all implicitly carry with them an economically positive connotation.

However, if entrepreneurs are defined to be persons

who are ingenious and creative in finding ways that add to their own wealth, power, and prestige (Baumol 1990), then it is to be expected that not all of their activities will deliver a productive contribution to society (cf. Murphy et al. 1991). For

Who is an Entrepreneur

Entrepreneur is refers to as a person who undertakers and operate a new venture, and assumes some accountability for the inherent risks.

The concept of “entrepreneur” is a French word called “entreprendre” meaning to undertake. This concept was used to refer to a business organization in the 18th century who deals or buys and sells goods at uncertain prices. Richard Cantillon (1755) defines entrepreneur as the agent who buys means of production at certain prices in order to combines them into a new product. Say, J. B (1621) defines the entrepreneur as a person who is willing and able to convert a new idea or invention into a successful innovation. Ogundele (2000) defines entrepreneurs as the innovating individusl ,who initiatiates and nurtures to grow a new and on going business organization ,where none existed before

Relationship between Innovation and Entrepreneurship

1. Innovation as a Catalyst for Entrepreneurship:

- Entrepreneurs often identify unmet needs or inefficiencies in the market and develop innovative solutions to address them.
- Innovation can create new markets or disrupt existing ones, providing opportunities for entrepreneurs to establish new businesses.
- Examples include the development of new technologies, business models, or products that revolutionize existing industries.

2. Entrepreneurship as a Vehicle for Innovation:

- Entrepreneurs are often the driving force behind the commercialization of innovative ideas.
- They can take risks, mobilize resources, and build businesses around innovative concepts.
- This process of translating innovative ideas into tangible products or services is crucial for economic growth and societal progress.

3. The Importance of Innovation in Entrepreneurial Success:

- In today's dynamic business environment, innovation is essential for entrepreneurs to stay competitive and adapt to changing market conditions.
- Companies that embrace innovation are more likely to experience growth, generate profits, and create a lasting impact.

- Innovative entrepreneurs can also contribute to job creation, economic development, and overall societal well-being.

Important of Entrepreneurship and Innovation to the Nation Development

Entrepreneurship and innovation are crucial for national development as they drive economic growth, create jobs, and foster societal progress. They lead to increased productivity, competition, and the development of new technologies and markets. Furthermore, entrepreneurship and innovation can help address societal challenges and improve living standards.

Here's a more detailed look at the importance:

1. Economic Growth:

• Job Creation:

Entrepreneurs establish new businesses, generating employment opportunities and reducing unemployment rates. Small and medium-sized enterprises (SMEs) are particularly significant in this regard, according to a study by journalwjarr.com.

• Wealth Creation:

Entrepreneurship facilitates wealth accumulation through business profits, investments, and increased economic activity.

• Increased Productivity:

Innovation, often driven by entrepreneurs, leads to more efficient production processes and the development of new products and services, boosting overall productivity.

• Market Competition:

Entrepreneurs introduce new products, services, and business models, challenging existing firms to innovate and improve, leading to a more dynamic and competitive market.

• Attracting Foreign Direct Investment:

A vibrant entrepreneurial ecosystem can attract foreign investment, further fuelling economic growth.

2. Social Development:

• Addressing Social Problems:

Entrepreneurship can provide solutions to social issues like poverty and unemployment by creating income-generating opportunities and improving living standards.

• Cultural and Social Advancement:

Innovation and entrepreneurship can lead to new cultural expressions, social norms, and improved access to essential services like healthcare and education.

• Skill Development:

Entrepreneurship provides opportunities for individuals to acquire new skills and knowledge, enhancing their

capabilities and contributing to human capital development.

3. Innovation:

- Technological Advancement:

Entrepreneurs are often at the forefront of developing and adopting new technologies, driving technological progress and societal transformation.

- Product and Service Innovation:

Entrepreneurship encourages the creation of new and improved products and services, meeting evolving consumer needs and preferences.

- Process Innovation:

Entrepreneurs can also innovate in business processes, making them more efficient and cost-effective.

4. Sustainable Development:

- Environmental Sustainability:

Entrepreneurship can drive the development of green technologies and sustainable business practices, promoting environmental protection and resource efficiency.

- Social Sustainability:

Entrepreneurship can contribute to social equity and inclusion by providing opportunities for marginalized communities and addressing social inequalities.

- Economic Sustainability:

By fostering innovation and productivity, entrepreneurship can create a more resilient and sustainable economy that can adapt to changing circumstances.

In summary, entrepreneurship and innovation are vital for national development, contributing to economic prosperity, social progress, and a more sustainable future.

Conclusion

It is believed that this paper that there is some degree of relation between Entrepreneurship and innovation as a ripe for Upturning Economic Downturn where all barriers and disruption in Entrepreneurship and innovation is totally eliminated for the effective and perfect economic growth in our Nation particularly Nigeria’.

In conclusion, if all the process of entrepreneurship and innovation is well routed the economic downturn that we are facing in our Country can be surmounted and reduce drastically to the barest minimum.

Recommendation

The thrust of this paper is that Nigeria has the great potentials to be at fore-front in terms of stability economic growth and development. Based on the findings of this study, the following recommendation are made:

To stimulate entrepreneurship and innovation during an economic downturn, governments and institutions

should focus on reducing bureaucratic hurdles for startups, providing financial support through subsidies and grants, fostering a culture of innovation within businesses, and ensuring access to training and resources for entrepreneurs. Additionally, promoting digital technologies, emphasizing sustainability, and encouraging inclusive entrepreneurship can further bolster economic recovery.

Here's a more detailed breakdown:

1. Streamline Regulations and Reduce Bureaucracy:

- Lower administrative burdens:

Simplify the process of starting and running a business by reducing the number of bureaucratic steps, regulations, and fees for startups.

- Provide clear and consistent legislation:

Avoid conflicting laws and regulations that create uncertainty and discourage business activity.

- Protect intellectual property:

Ensure entrepreneurs have clear legal rights to their inventions and creations to encourage innovation.

2. Provide Financial Support:

- Start-up subsidies and grants:

Offer financial assistance to new businesses, particularly those with innovative ideas or those targeting underserved markets.

- Access to funding:

Ensure entrepreneurs have access to various funding options, including venture capital, angel investors, and microfinance.

- Tax incentives:

Provide tax breaks or other financial incentives for businesses that invest in research and development or create jobs.

3. Foster a Culture of Innovation:

- Encourage risk-taking:

Create a work environment where employees feel empowered to experiment and innovate without fear of failure.

- Promote collaboration:

Facilitate collaboration between businesses, research institutions, and universities to foster knowledge sharing and innovation.

- Invest in education and training:

Provide access to training programs that equip entrepreneurs with the skills they need to succeed, including digital literacy and sustainable business practices.

4. Embrace Digitalization:

- Leverage digital technologies:
Encourage the adoption of digital technologies to improve efficiency, reduce costs, and reach new markets.
- Support digital entrepreneurship:
Foster the growth of digital businesses, particularly those that can address social and environmental challenges.
- Promote digital infrastructure:
Invest in digital infrastructure to ensure that all entrepreneurs have access to the internet and other essential digital tools.

5. Emphasize Sustainability:

- Promote sustainable business practices:
Encourage businesses to adopt environmentally friendly practices and develop sustainable products and services.
- Support green entrepreneurship:
Provide resources and support for entrepreneurs who are developing innovative solutions to environmental challenges.
- Integrate sustainability into business models:
Help entrepreneurs understand the long-term benefits of sustainability for their businesses and the economy.

6. Promote Inclusive Entrepreneurship:

- Support underrepresented groups:
Focus on creating opportunities for women, minorities, youth, and other underrepresented groups to participate in entrepreneurship.
- Provide tailored support:
Offer mentorship, training, and financial assistance that is specifically designed to meet the needs of these groups.
- Promote diversity and inclusion:
Encourage diversity within the entrepreneurial ecosystem to foster creativity and innovation.

By implementing these recommendations, governments and institutions can create a more supportive environment for entrepreneurship and innovation, which can help to mitigate the negative impacts of an economic downturn and pave the way for sustainable economic growth.

Publication Date: 2025/11/28

Abstract

This paper examined ethical leadership and accountability in Nigeria's public service. It focused specifically on the role of ethical leadership on accountability in Nigeria's public service. The data utilized for the study were based on qualitative research which includes the secondary data information gathered through online materials, academic journals and so on. Findings from the study revealed that accountability mechanisms which include the Public Service Rules, Public Complaint Commission, EFCC, ICPC, Code of Conduct and so on have not arrested the culture of unaccountability in the public service. The opaqueness and lack accountability has remained unabated despite the efforts to contain it. The study concluded that the role of the accountability mechanisms is not adequate enough to contain the culture of lack of accountability in the public service, rather the Government should promote ethical leadership in the public service which in turn will engender an accountability culture in the public service.

keywords: Accountability, Ethics, Leadership, Ethical leadership, Public Service, Corruption

Introduction

Existing studies in literature revealed that leadership which practice the principle of accountability is pivotal to effective and efficient public service (Gberevbie, Shodipo and Oviasoghie, 2013; Adejuwon, 2014). Consequently, there is an increasing advocacy for improvement of public sector accountability over the years (Adejuwon, 2014; Etim, Jeremiah & Jeremiah, 2020). This is imperative because the lack of accountability in the public sector creates room for corruption with dire consequences (Ejere, 2012). The culture of accountability mandates the public office holder to render a full account of their activities to the public. Similarly, Agba et. al. (2008) posits that "accountability demands that the public should know when money came into government treasury and how the money was used."

In Nigeria, the call to strengthen accountability mechanisms in the public service is not a contemporary public outcry. This is mainly because it has been identified as a constant cause of concern in the public sector (Ejere, 2012; Etim et al., 2020). Buhari (1999) observed, "it is an understatement to say that there has been a clear lack of accountability in the conduct of public affairs in this country". However, despite the importance of promoting and strengthening accountability in the public sector, there is a

compelling necessity of virtually equal magnitude to emphasize the principle of ethical leadership in public affairs.

Scholars have established that there is a strong influence of leadership on proper accountability in the handling of public affairs (Edoho 2007; Kuada 2010). The role of leadership in achieving organizational goal and objectives is considered vital and imperative (Ujo 1995; Klenke 2007; Kuada 2010). It is also unarguable, particularly in developing countries that the absence of accountability fuels various unethical public sector practices (Etim et al, 2020). The foregoing implies that the nature of leadership that superintends over accountability process in the public sector is significantly consequential. Menzel (2007) argued that for there to be good outcomes in the public sector ethical leadership is a necessity in this regard.

Since existing literature has affirmed that leadership performs extensive role in fostering proper accountability in every organizations (Edoho 2007; Kuada 2010), it is imperative to commit substantial attention to the force that drives accountability process and not just the framework from which enforcement is implemented. In the light of the aforementioned, the central argument of this paper is that ethical leadership should occupy our prioritization as we pursue the course of strengthening accountability in the public

sector. This paper seeks to encourage policy makers to initiate strategies that can promote ethical leadership in the public service, which consequently galvanizes an environment of accountability and integrity.

Methodology

The paper adopted qualitative research design. As a result, secondary data from journals, relevant books, magazines, the internet and newspapers were analyzed to determine the relationship between ethical leadership and accountability in Nigeria's public service. The qualitative method affords the opportunity of eliciting in-depth knowledge of how ethical leadership foster accountability culture. The study specifically collates data from academic literature and other relevant materials that focused on ethical leadership, accountability and transparency, the public service and so on. The secondary data were gathered through a review of peer reviewed journals, books, and reputed institutional publication.

Theoretical Perspective

This paper adopted the authentic leadership theory to analyse the role of ethical leadership as a driver of accountability practices in organizations either in the public or private. The rationale behind the choice of this theory hinges on the fact that every organization requires the leadership that fosters the culture of accountability, transparency and probity for smooth sailing of the organisation.

According to Walumbwa et al (2008) authentic leadership theory is a positive leadership theory that concentrates on developing the psychological and the ethical climate of managers and followers. The framework of analysis of authentic leadership theory specifically centres around four major characteristics which are self-awareness, internalized ethics, balanced information processing and relational transparency. In general, these elements form the basic traits, tendencies and behavioural pattern of authentic leadership theory. Lehmana et al (2019) argued that authentic leadership provides the intersection between organisations internal values and its external expression. It centres around behavioural tendencies, meaningful social relationship and qualities that is considered valuable, in high demand and are considered uncommon practices. Jiewen, Ahmad & Xiaoyang (2024) expressed the fact that the "authentic leaders use their own positive moral values to inspire and influence their followers". By virtue of this of leadership style, the authentic leader fosters a culture of ethical behaviour, authentic leaders motivate their followers to not only follow but also to develop themselves, ultimately contributing to the overall success of the organization (Zhang et al., 2021).

The theory posit that authentic leaders, whether in the public or private organisation, possess the attributes of transparency and in addition they exhibit proper ethical behaviour that centres on probity, which is required to engender accountability culture in the organization (Avolio et. Al. 2009; Kuada 2010). There are certain leadership traits that can drive and encourage the practice of accountability. These trait include and not limited to transparency, honesty and integrity. These attributes produce a work environment that voluntarily submits to checks and balance mechanisms in existence (Kuada 2010).

There are a number of derivatives from the application of authentic leadership theory to the public organization, firstly, because of the trait of honesty, transparency, accountability inherent in authentic leaders, there is a trust built around such leadership from the subordinates. as a result of this foregoing, there is an environment where intrpersonal relationship is improved, there is collaboration and team work (Iszatt-White&Kempster, 2019)

Secondly, the authentic leader is able to create a positive work environment which is a fallout of the exemplary leadership, consistent value and behavior. This characteristics inspires the employees compels a sense of commitment from employees. In view of the aforementioned traits of the authentic leadership, the positive work environment which is a direct consequence increases employee engagement, accountability which in turn improves organisation outlook.

Furthermore, the authentic leadership gives attention to practise of transmitting values and provide a guide to team members to foster the ethical values and acceptable codes of conduct. through the principle of reproducing the right values in team members, a culture of ethical standard and right values is created in the work environment. By virtue of this, authentic leadership becomes a solution to leadership unethical issues in society (Corriveau, 2020).

Accountability In Nigeria's Public Service

From the period of independence to the contemporary Nigerian society, the state of accountability in the public sector leaves much to be desired (Thovoethin, 2003). The Nigerian post-independence experiences aptly provide ample evidences to buttress the foregoing claims, as public accountability has been very weak since the first republic (Adejuwon, 2015). The Nigerian public sector has been confronted with inefficiency and in-effectiveness partly because the administrative measures established to enhance public sector accountability are ridden with corrupt practices to the extent that it prevents exposure of misconducts and summoning of culprits to account (Ijeoma, 2013).

According to Ogara and Olarinmoye (2018),
 “the tradition of question time in parliament which had been an effective instrument for turning the searchlight on the public service and for probing the conduct of administration in the inherited British model was the first to be stifled. The reasons for this are as numerous as they were personal to the politicians who were interested in killing everything that would have hindered them from their primary preoccupation of self-perpetuation and enrichment. Consequently, the absence of these parliamentary methods which would have called the civil service to order through the political ministers in charge of them paved the way for the abuse and misuse of bureaucratic power and subsequently corruption”.(Agara and Olarinmoye, 2018)

The above highlights one of the numerous pointers to absence of public accountability in the first republic. In their argument, Ogara et al (2018) maintain that the question time presented an opportunity for inquisition, a time by the opposition to challenge and expose the inefficiencies of government in power. As a result, the ministers would do everything to avoid such engagement by constantly staying away from such sessions.

In addition, the Public Account Committee (PAC) was subjected to similar fate. Adamolekun (1974) stated that
 “between 1960 and 1965, the effective functioning of the PAC was hampered by the uncooperative attitude of the senior public servants, the limited knowledge of the members concerning their responsibilities, the high turnover rate of membership and more importantly the preponderance of pro-government members on the committee including the chairman”. (Adamolekun, 1974).

The military incursion into the Nigerian Public sector further deepens the crisis of public accountability in Nigeria. The takeover of power by the military in 1966 further plunged the country into state with total disregard public sector accountability. Part of the claim by the military to grab power was to rid the country of corruption. On the contrary reports showed that subsequent military regime was more corrupt than their predecessor. The declension in public sector accountability was at its lowest ebb under the military era (Omolehinwa, 2005). Adejuwon (2014) submitted that “each military government was known for its abuse of power, lack of transparency and accountability. Since the governments were being controlled by the military, there was no system of checks and balances”. The military created a system of corruption in Nigerian public service where officials need not be accountable for their actions and the citizens do not have the right to question them (Owolabi, 2007).

The height of corruption in the military was notably under the regimes of General Ibrahim Babangida and General Sanni Abacha (Adejuwon, 2014). General Babangida, upon assuming office disregarded all the

The event following the death of General Sanni Abacha revealed the grand corruption that dominated the regime. Initially the government claimed to institute accountability mechanisms especially with the setting up of Petroleum Special Tax Fund headed by General Buhari. There were records of successes with the PTF

anti-corruption effort of his predecessors. Public officers dismissed for corruption related issues were reinstated back to their offices with full complements of lost benefits, especially the Governors. Under the regime, accountability culture was at its lowest ebb as terms such as settlement and embezzlement were the order of the day (Oyediran and Nwosu, 2005).

Corrupt practices under the Babangida regime include:

- Misappropriation of \$2 billion Gulf war windfall in 1991
- 30% of oil revenue diverted to frivolous uses throughout the time.
- Huge extra-budgetary spending: 1989 = = N=15.3b, 1990= N23.4b, 1991= N35b, 1992=N44.2b, 1993 (by August) = N59billion.
- \$200 million siphoned from the Aluminium Smelter project.
- =N= 400million wasted on Better life project
- Colossal Corruption at the NNPC, e.g. \$101 million for the purchase of strategic Storage facilitation (Lawal and Ariyo, 2006).

notably in the area of infrastructural development. Nonetheless, the death of Abacha revealed the depth of corruption and absence of accountability in the government (Ali, 2013). The finance Minister to the Government refunded a sum of \$45million allegedly given to him by his Principal. The extent of corruption

under the government became manifest following his death.

Abacha's Loot from the Nigerian Economy

Break Down	Amount	Bank
February 6, 1995	\$4 million & £2 million	Australia, New Zealand, London Branch Banking group
February 27,	1995 \$4 million & £2million	ANZ, Frankfurt

Source: Adejuwon, (2014): Enhancing Public Accountability and Performance in Nigeria: Periscoping the Impediments and Exploring the Imperative Measures

According to Etim et al (2020), the failure of the successive military regimes in the area of accountability partially prompted the agitation for the return of democratic rule in Nigeria. However, the call for public sector accountability despite the democratic governance has remained a mirage even after over 20 years of democracy since 1999 (Etim et al, 2020). The trend of unaccountability in the public service continued in the fourth republic. No arm of government was immune from the scourge.

The legislative arm in the fourth came under public condemnation several times due to lack of transparency and accountability. The leadership of the National Assembly from Chief Enwerem, Chuba Okadigbo and Wabara were all removed owing to acts of corruption and lack of accountability leveled against them (Ogundiya, 2012). Madam Patricia Etteh, the first female speaker of the House of Representatives was forced to resign on allegation of misappropriation of public funds. Senator Iyabo Obasanjo was also involved in mismanagement of funds in the health ministry while she superintends.

The Vice President Alhaji Atiku Abubakar was not left out of the circle of corrupt tendencies. He was alleged to have diverted funds meant for Petroleum Technology Development Fund (Mohammed 2013; Ogundiya, 2012). The lack of accountability and transparency is further evident in the management of public fund under the administration of Chief Obasanjo, when the Federal government gave USD2 billion to the National Political Reform Conference (NPRC) without following constitutional procedure through seeking the approval by the National Assembly (Yunusa, 2009).

Under the Yar Adua Administration, there was a strong resolve to combat corruption and adhere to the rule of law and due process. On the other hand, the events that transpired under the regime betrayed that resolution. Nwankwo et. al, (2015) noted the case of the former Governor of Delta State, James Ibori, who convicted in the United Kingdom for an offence he was declared innocent by the Nigerian Judicial system was a dent a on the judicial system in Nigeria. The Speaker of the house representative, Oladimeji Bankole also came under the spotlight of investigation by the EFCC, for allegedly mismanaging public funds (Mikai and Yusuf, 2014). Nwankwo (2015) stated that despite the effort of the EFCC to bring the high profile cases to justice the whole process proved abortive. In addition, the award of public contracts did not follow due process while the civil servants aided and abetted the unscrupulous practices by falsifying reports and impeding the implementation of development agenda (Eneanya, 2010).

The trend of unethical practices and lack of accountability continued with Jonathan administration. Ijewereme (2015) harped on the weakness of the Jonathan administration to confront corruption the allegations against public officials. Mikail and Yusuf (2014) observed different attempt by the Jonathan administration to cover up prominent corruption cases, especially the case of Arumah Otteh reinstatement as Director General of Security and Exchange Commission following her suspension by the Federal Legislative house for allegations of financial mismanagement. The pardon granted Alamieyeseigha, the former Governor of Bayelsa in the face of corruption charges generated widespread criticism of the administration.

The Buhari administration appeared to have been elected solely for the purpose of fighting corruption (Sawyer, 2025). It introduced a number of measures to address the lack of accountability which included the Treasury Single Account (TSA), Bank verification Number (BVN) and a number of other mechanisms. According to Malami (2017), the administration was able to exit about 23000 ghost workers from the payroll, which should cost the Government billions of naira.

Despite the effort to stamp out the perennial culture of unaccountability, the administration continued to battle with the problem of lack of transparency and accountability in the civil service. By 2018, the phenomenon of ghost workers had continued unabated despite the biometric verification introduced to address the problem. Thousands of ghost workers continued to benefit from the payroll costing the nation billions of naira (Inuwa, 2021).

Sawyer (2025) noted the inefficiencies of the mechanisms set up to address the challenge and the compromise on the part of the civil servants. In addition to the ghost worker scandal, the problem of procurement fraud also dented the administration

Enforcement of Accountability In Nigerias Public Service

Agara and Olarinmoye (2018) emphasize the fact that in view of the power inherent in the public service and possibility of abuse of that power by state officials in relation to the citizens, a number of measures are put in place to check the powers of the service and one of which is the public complaint commission usually refer to as the ombudsman. The ombudsman serve as accountability mechanisms to check the relationship between the public institutions and the citizenry, and to ensure there is compliance with the public service rules. The return of Nigeria to democracy heralded institutions such as the Code of Conduct Bureau (CCB),

image. Contracts were inflated and awarded to unqualified firm linked to powerful officials (Sawyer, 2025). Budget padding became major highlight of the administration especially in the legislature.

President Buhari accused the National Assembly of increasing the budget by 90billion with projects without justification. Similarly, the 2020 budget was said to have been increased by 264 billion with projects considered unpatriotic by the National Assembly. The height of unaccountability was reported when billions of naira were mismanaged under dubious circumstances (“snake swallowed it”) creating a mess of the corruption effort (Inuwa, 2021).

Two years into the President Tinubu administration, the EFCC has revealed cases of irregularities in the awards of contracts, especially infrastructure. There are reported cases of inflation of contract and disregard of merit in the process (Nkpe and Akanle, 2023). In addition, appointments appeared to be influenced mainly by nepotism and family loyalties over competence (Sawyer, 2025).

independent Corrupt Practises and other related Offences Commission (ICPC), Economic and Financial Crimes Commission (EFCC) (Etim et al, 2020). Apart from many of the listed which were established under the Olusegun Obasanjo administration, there were more recent ones that were established under the Buhari Administration which include the Treasury Single Account (TSA) and the Integrated Payroll and Personnel Information System (IPPIS) (Adeyeye et al, 2020). Despite many of the institutions to enforce accountability among public officials, the outcome of their performance has generate mixed feeling amongst Nigerians (Ocheni, 2016).

Adejuwon 2014 stated that

“though Nigeria has formulated various legal instruments and established a number of watchdog institutions (like EFCC, ICPC, Code of Conduct Bureau) for regulating and monitoring the ethical behaviour of its public officials. However, despite the existence of a number of legal instruments and watchdogs institutions for regulating and monitoring the ethical standards of public officials, and the adoption of multipartysm, the management of public affairs and institutions by those who are entrusted with positions of authority in the country has not improved” (Adejuwon, 2014).

According to Transparency International's Corruption Perceptions Index (2023), it is obvious that Nigeria indicated a very low score on the matter of public sector accountability and transparency. This has created a huge deficit of trust between the people and the government.

Okoye (2025) averred that while several anti-corruption efforts have been made by the Government, the effectiveness of those institutions is under question due to lack of political and institution.

Role of Ethical Leadership In Fostering Accountability

According to Brown et. al. (2005), ethical leadership set the modus operandi for the entire work environment. Through this leadership style, employees feel empowered and encouraged to make ethical decisions. In addition, ethical leadership styles promote accountability and transparency which are highly essential to the public service. In a work environment where ethical behaviour is the hallmark of leadership, the leadership pattern becomes the culture that permeates all levels of the organization, ensuring that the employees strictly abide by ethical standards in their interaction with the public (Okorie et. al, 2025). Through this approach, trust is enhanced, corruption is reduced and there is greater citizens confidence in the public service (Wijekesera and Fernando, 2018)

Buye (2021) submitted that there are a lot of benefits with the enthronement of ethical leadership in public organisations. As a result of the qualities inherent in ethical leadership, certain virtues of honesty, integrity, impartiality and transparency which promote improved results, suffuses the work environment. These virtues, if allowed to prevail in the work environment build confidence and enhance reputation of employees. Furthermore, ethical leadership negates dishonesty, corruption and attributes that negatively affects the morale of workers. through ethical there is prudent management of resources as a result of the accountability that prevails. buye concluded by emphasizing that ethical leadership is required at all times to ensure that ethical principles and values documented as codes of conduct are adhered to.

In addition, Buye (2021) put it that the concern of public institution is to create ethical leadership. By so doing, ethical culture is promoted in the public organization. This will become evident through subjecting to ethical codes of conduct, ethical training. Ethical leadership attempt to proffers solutions and give meaning to employee work by ensuring decisions are based on moral values (Avolio et al, 2011). Ethical leadership promotes progressive ethical culture in the organization. Ethical leadership devotes attention to reproducing leadership of like minds, for instance, a square peg in square hole rather than personality or political considerations but creating a work environment governed by fairness and articulated set of rules. (Buye, 2021)

Okoye (2025) conducting a research on ethical leadership in public administration in Nigeria, discovered that ethical leadership is a critical factor in balancing public trust and bureaucratic efficiency. the findings from the research revealed that ethical leadership significantly impact public trust directly and with similar effect on institutional credibility and bureaucratic efficiency. Ethical leadership contributes

significantly to enhance performance, public satisfaction and the reduction of corruption practices. Inherent in ethical leadership are virtues of integrity, transparency, accountability, and fairness, which are values that are often sidelined in the Nigeria's public service due to corruption and institutional framework that are not strong enough (Ezeani, 2012).

Omisore and Ezeani (2014) argued that the absence of ethical leadership has denied government the legitimacy it should enjoy from the citizenry because of frequent reports of bribery, nepotism, and misuse of public funds. This position is supported by Transparency international (2022), where it is emphasized that the introduction of ethical leadership in Nigeria's governance can combat the scourge of corruption and promotes good governance.

Okoye (2025) further maintained that the relevance of ethical leadership cannot be over emphasized in the contemporary Nigeria public service. With ethical leadership in Nigeria's public service, public servants can make decisions that are fair, transparent and accountable. Through ethical leadership in the public service, public trust is built and sustained. In another sense, the introduction of ethical leadership in governance compels citizens to submit to rules and the democratic tenets. Okoye (2025) added that ethical leadership and bureaucratic effectiveness are mutually reinforcing and this combination can catalyse a responsive, responsible and result oriented public service.

Adebayo and Ojo (2020) found out that ethical leadership enhances accountability in Nigeria's public service. This is a conclusion drawn from a study carried out on the public service. The study discovered that there is a significant correlation between ethical behavior and improvement in public trust and transparency. Through the survey conducted on federal civil servant, they reported that ethical leadership in the public service reduced corruption and improved compliance with due process. In the same vein, Okafor (2019) found out that where ethical leadership is practiced, employees demonstrate high morale, stronger commitment to serve, and greater respect for values that institutions hold dear. the study gleaned that ethical leadership reduced absenteeism, improved decision making and minimize the interference of politics.

Similarly, Odeh and Oladipo (2021) came out with a finding on the role of ethical leadership and public trust in public institutions from three states in Nigeria. the study discovered that lapses in ethics such as favouritism, opaque recruitment processes and selectivity in the administration of justice were mainly the cause of public distrust of government. The researchers recommended that strong ethical culture

with its enforcement is a necessary measure to bridge the gap.

In addition, Bello and Abubakar (2018) focused their research on the relationship between ethical leadership and performance of bureaucracy in Nigeria's health sector. The study came out with a finding that healthcare institutions that allow ethical leadership administer satisfactory services to patients and resources in such institutions are more efficiently utilized. On the other hand, their research proved otherwise where ethical practice is not allowed, which implies that administrative delays, resource mismanagement and staff demotivation dominate the environment where ethical standard is lacking.

Conclusion

The culture of unaccountability in the Nigerian public service is historical and has remained perennial and intractable despite the measures and mechanism by different administration to correct the anomaly. The problem irrespective of its persistence does not defy solution. The institutional mechanisms in place have continued to record batches of success in their effort, while the problem has gained ascendancy with the succeeding of administrations. This revealed that accountability mechanisms are yet to fully contain the menace before it. This paper as much as it recognizes and acknowledge the role of accountability institutions such as the EFCC, ICPC, Code of Conducts and other mechanisms in place to address the challenge of unaccountability in the public service, will however recommend that the attention of Government should shift to promotion of ethical leadership while at the same time nothing should undermine the support hitherto enjoyed by existing mechanisms in place to enforce accountability. Ethical leadership and its integration into the core governance process is a foolproof measure of sanitizing the public sector cum restoring integrity and transparency. This might require the government revisiting the criteria for recruitment and appointment into the public service. It is imperative that the Government takes bold steps towards infiltrating the public service with ethical leadership which will in turn deliver on the goal of engendering accountability culture in the public service. The government should initiate the policies and strategies that will promote the enthronement of ethical leadership in the public sector rather than totally relying on or strengthening the anti-graft laws.

Abstract

The aim of the study is to explore the influence of blockchain on transparency and reliability in digital financial reporting. The current study will help to fill these gaps by delivering a detailed empirical research on the efficacy of blockchain in financial reporting. This study employed a quantitative study as the research design, while data gathering was done through a survey approach used on professional accountants in Delta and Anambra States, Nigeria. The population that was targeted consisted of about 550 professional accountants who were employed in both the states. The research applied the multivariate regression model to investigate how Blockchain Distributive Technology (BDT) impacted the three dimensions of financial reporting quality, which are TRFR, RLB, and TIM. The study revealed that BDT impacted the three dimensions of financial reporting quality, which were the TRFR, RLB, and TIM. The result also shows that blockchain technology has a huge positive effect on transparency, reliability, and timeliness of professional accountants in Delta and Anambra States in Nigeria. Both hypotheses under test demonstrate that the null is rejected, which means that the adoption of blockchain can significantly improve the quality of reporting in various aspects. The study concluded that blockchain is not a new digital technology, but a disruptive service that can change the traditional financial reporting to a more transparent, trustworthy, and timely exercise. It was recommended that smart contracts and distributed ledgers are blockchain mechanisms that organisations should embrace to make sure that all financial records are invisible and traceable.

Keywords: Blockchain, Transparency, Reliability, Timeliness, Digital Financial Reporting

Introduction

Digital financial reporting is becoming more embracing and digitalized with blockchain that facilitates transparency, security, and automation. Its adoption minimises the fraud risks, removes the constraints of the centralised systems, and avails the operations with access to trusted data (Rawashdeh, 2024). In the worldwide economy, blockchain enhances the incorporation of computerized platforms, consistent auditing, and adherence to global criteria (Mohammad et al., 2025). Its application has an international nature, and this aspect is particularly valid because countries have varied approaches to integrating the technology in accounting systems (Ballantine et al., 2024).

Consequently, considering previous research on the effects of blockchain on financial reporting will indicate that there are gains and constraints. Rawashdeh (2024) focused on the trust gap bridging based on blockchain and smart contracts, whereas Anwar, et al. (2022) concentrated on the theoretical frameworks and did not provide empirical evidence. Fahdil et al. (2024) also talked about the transformative nature of blockchain in auditing, but did not suggest

how this could be applied in practice. The Bellucci article presents a literature review; however, the analysis of the literature was based on the theoretical side, without practical validation (Bellucci et al., 2022). The current study will help to fill these gaps by delivering a detailed empirical research on the efficacy of blockchain in financial reporting, such as reduction of costs, improvement of transparency, and enhancement of data accuracy. Nevertheless, even though there has been an increasing interest in the blockchain technology in the sphere of financial reporting, there is still a considerable knowledge gap on the all-encompassing impact of the technology on the financial reporting processes and the creation of the integration models with other digital technologies (Johnson & Okoye, 2023). In addition, the absence of standardised models of integrating blockchain in different financial systems across the world makes the process of attaining consistent and reliable reporting challenging (Cai et al., 2024).

This thus necessitates more studies to accomplish these gaps and offer practical recommendations to improve the effectiveness of blockchain in financial reporting.

The objective of the study is to explore how blockchain technology can transform financial reporting within the framework of digital accounting and to find out what opportunities might the implementation of blockchain technology in an international environment have.

Objectives

The main objective of the study investigate the impacts of blockchain technology on the transformation of financial reporting in the digital accounting era, with a focus on its international applications.

1. To examine how blockchain technology improves transparency in financial reporting.
2. To assess the impact of blockchain on the reliability of financial statements.
3. To evaluate how blockchain enhances the timeliness of financial reporting in the digital accounting era.

Research Questions

1. To what extent does blockchain technology improve transparency in financial reporting?
2. How does blockchain adoption impact the reliability of financial statements?
3. In what ways does blockchain enhance the timeliness of financial reporting in the digital accounting era?

Research Hypothesis

H₀₁: Blockchain technology has no significant effect on the transparency of financial reporting.

H₀₂: Blockchain technology has no significant effect on the reliability of financial statements.

H₀₃: Blockchain technology has no significant effect on the timeliness of financial reporting.

Literature Review

A growing body of literature has examined the influence of blockchain on financial reporting particularly on enhancing transparency and reliability. Rawashdeh (2023) highlights that smart contracts allow greater trust and transparency, yet does not explain how the two aspects can be integrated into greater digital reporting services. Another topic covered by Johnson et al. (2023) is the accounting procedures where the analysis is not empirically supported, yet the authors indicate the emphasis on automation. Other people have extended the discussion to the reliability and auditability of the data: Fahdil et al. (2024) research the accuracy of the financial data, and Bellucci et al. (2022) explain the potential of continuous auditing, yet both of the studies do not deal with the issue of regulatory and compliance challenge as suggested by Smith and Castonguay (2020).

Regarding the systems design, Amalia and Pratolo (2024) suggest conceptual models of blockchain-based

accounting systems, although their framework fails to consider the latest technological developments, which is criticized by Dyball and Seethamraju (2022), who indicate the effectiveness of blockchain in lowering the costs of reporting and fail to address the constant security threats. The analysis is also extended to the digital marketing and banking settings by Fayvishenko et al. (2023) and Prokopenko et al. (2022), but their results can be applied to the financial reporting only partially. Similarly, Gai et al. (2023) give an insight into the adoption of blockchain globally but does not take the interdisciplinary methodology that Sheela et al. (2023) pursue, yet the study still lacks empirical basis. Silva et al. (2022) present a research agenda in the future but neglect to interact with the changing state of regulation noted by Li and Juma'h (2023).

A number of researches concentrate on economic and technical advantages of blockchain. Zhang (2024), the impact of blockchain technology on financial markets and its future

trends: An economic perspective based on data analysis, whereas Danach, et al., (2024) examine the factors of adoption without empirical data. The idea of fraud detection is also not novel since Ajayi-Nifise et al., (2024), discuss the possibility of blockchain in addressing the problem of fraudulent reporting, yet they do not take into account the broader economic context.

Ghode, et al., (2022) highlight the hindrance of adoption at the early stage, contrary with Kitsantas, (2022), who explores the IT controls of private blockchains, but fails to consider how they can be integrated with the enterprise resource planning (ERP) systems.

Combined, the existing literature can be viewed as rather disjointed in its assessment of the role of blockchain in financial reporting. Some of them give emphasis on transparency whereas others emphasize on automation, accuracy, or cost minimization. Nevertheless, there are not many publications that strive to integrate these dimensions into a single model that would allow proving the overall efficiency of blockchain to achieve more transparency and reliability. This gap explains why an interdisciplinary, integrated, and empirically based analysis is needed.

The current research attempts to address this requirement by integrating statistical analysis with inter-disciplinary expertise in developing a comprehensive framework to evaluate the influence of blockchain on financial reporting. As far as the researchers can conclude, most of the previous research is mostly theoretical or situation-specific, the present research offers practical suggestions of how blockchain use could be enhanced in various financial systems. Comprehensive, the literature illustrates that blockchain has the potential of enhancing transparency,

reliability of data, timeliness to bolster trust in digital accounting, and at the same time, points to the dire need to conduct additional empirical and regulation-driven research.

Methodology

This study employed a quantitative study as the research design to find out the impact of the blockchain technology on the quality of financial reporting in the digital accounting era. Data gathering was done through a survey approach used on professional accountants in Delta and Anambra States, Nigeria. The population that was targeted consisted of about 550 professional accountants who were employed in both the states. From this population, the study utilised a convenience sampling technique, which ensured the participation of respondents who were available and willing to complete the survey. In total, 100 accountants were selected, representing 18.2% of the target population. This proportion was considered adequate since it exceeds the commonly accepted 10% rule of thumb for sufficient sample size in survey-based research.

A structured questionnaire was used to collect data on the basis of 5-point Likert scale. The questionnaire had questions that sought to evaluate how the respondents understand the concept of blockchain distributive technology (BDT) and its perceived influence on the quality of financial reporting with specific reference to transparency, reliability and timeliness.

The following regression models guided the data analysis:

$$BDTi = \alpha + \beta_1 TRFRi + \beta_2 BDTi + \beta_3 BDTi + U_i$$

Where:

BDT = Blockchain Distributive Technology (Dependent Variable)

TRFR = Transparency (Independent Variable)

RLB = Reliability (Independent Variable)

TIM = Timeliness (Independent Variable)

α = Constant

β_1 = Slope Coefficient

U_i = Stochastic Disturbance Term

i = Individual Respondent

The analysis involved descriptive statistics and multivariate regression techniques. Descriptive statistics summarised the mean responses and distribution patterns, while regression analysis tested the effect of blockchain distributive technology on the dependent variables of financial reporting quality. Each construct was measured by aggregating the mean responses of related questionnaire items.

Decision Rule

The decision rule was pegged at a 5 percent level of significance ($p < 0.05$). A value of 0.05 or more showed that the null hypothesis was not rejected whereas a value of 0.05 or less meant that the relationship between blockchain and financial reporting quality was statistically significant resulting in rejection of the null hypothesis and the validation of a significant relationship between blockchain and financial reporting quality.

Results and Discussion

The research sent questionnaires to professional accountants in Delta and Anambra States in Nigeria. All the 100 questionnaires were filled and returned and yielded a 100 percent response rate. The large response rate enhanced the accuracy of the results and provided a strong foundation on which to quantify them.

The average scores of responses to all items of the 5-point Likert scale have been calculated. These scores give information regarding the perception of the respondents on the use of blockchain distributive technology (BDT) in the transparency, reliability, and timeliness of financial reporting.

Table 1. Blockchain Distributed Technology and Financial Reporting Quality

S/N	Questions	SA	A	UD	D	SD	Mean	N
Transparency (TRFR)								
1	Blockchain distributive technology can enhance the security of financial transactions.	82	18	-	-	-	4.74	100
2	Blockchain distributive technology can reduce the risk of fraud and hacking in financial reporting.	77	23	-	-	-	4.68	100
3	Blockchain distributive technology can provide a decentralized and transparent platform for financial processes.	79	18	1	2	-	4.66	100
4	Blockchain can improve the openness and accessibility of financial data to stakeholders.	76	21	-	3	-	4.58	100
5	Blockchain can increase the transparency of financial reporting quality.	75	23	-	2	-	4.59	100
6	Blockchain can provide a tamper-proof record of financial transactions.	84	15	1	-	-	4.74	100
7	Blockchain can improve the audit trail and enhance external audit processes.	81	15	3	1	-	4.64	100
Transparency (TRFR)								
1	Blockchain distributive technology can enhance the security of financial transactions.	82	18	-	-	-	4.74	100
2	Blockchain distributive technology can reduce the risk of fraud and hacking in financial reporting.	77	23	-	-	-	4.68	100

20	I am willing to adopt blockchain technology to improve the timeliness of my financial reporting practices.	79	18	1	2	-	4.66	100

Source: Researchers Compilation and computation (2025)

Table 1 revealed the study investigated on the role of blockchain technology in enhancing financial reporting quality with emphasis on transparency, reliability, and

timeliness. A total of 100 valid questionnaires were analyzed, representing a 95.2% response rate from the targeted professional accountants. The mean responses

were used to evaluate the perception of respondents on the influence of blockchain distributive technology in financial reporting.

Transparency of Financial Reporting (TRFR)

Mean scores of the responses that have to do with transparency have a consistent high score of 4.58 to 4.74. The majority of the respondents highly concurred that blockchain makes financial transactions safer (M = 4.74), less prone to fraud and hackers (M = 4.68), and generates a record of financial transactions that cannot be tampered (M = 4.74). Also, blockchain was seen to enhance audit trails and external audit procedures (M = 4.64) and increase transparency of financial information (M = 4.58).

That means that the blockchain technology is generally considered a trust-increasing mechanism of financial reporting, as it allows it to be transparent due to its immutable decentralized registry. These results confirm earlier research which notes that blockchain offers a solution to manipulation prevention and real-time verification of financial records (Dai and Vasarhelyi, 2017; Schmitz and Leoni, 2019).

Reliability of Financial Reporting (RLFR)

The results in reliability are also high with the mean scores of responses varying between 4.41 and 4.74. It was found that the respondents concurred that blockchain improves the accuracy of the financial reporting (M = 4.74), the reliability of the financial reporting (M = 4.72), and the likelihood of manipulation or falsification (M = 4.68). It was also perceived that blockchain was significant in meeting regulatory standards (M = 4.41) and enhancing stakeholder trust (M = 4.67).

This implies that blockchain enhances the accuracy, completeness, and validation of the information of financial statements among all the users. The results align with the suggestion by Kokina et al. (2017) and Yermack (2017) that blockchain enhances the credibility of the accounting data because it eliminates discrepancies and the necessity to rely on third parties.

Timeliness of Financial Reporting (TIM)

The mean scores under timeliness also give high responses with a range of between 4.45 and 4.69. The respondents concurred that blockchain enhances efficiency of reporting practices (M = 4.69), increases timeliness of financial reporting (M = 4.65), decreases delays in verification of transactions (M = 4.52), and allows real-time access to financial information (M = 4.69). Another way in which blockchain was viewed to save the financial reporting cost and time (M = 4.67) and accelerate decision-making (M = 4.45).

These findings suggest that blockchain can revolutionize the rate at which financial data are prepared and shared which is a key aspect in the digital accounting age. This is in line with the works of PwC (2020) that observed that blockchain enabled non-stop auditing and virtually real-time reporting that enhanced responsiveness to the stakeholders.

The resultant mean scores show that the respondents have a strong perception of blockchain as an instrument of enhancing the quality of the financial reporting on all the three constructs. The strengths of blockchain in terms of providing better security of transactions (M = 4.74), providing more accurate reports (M = 4.74), and providing a tamper-proof record keeping (M = 4.74) received the highest ratings showing a massive support of using blockchain.

Regression Analysis

The research applied the multivariate regression model to investigate how the Blockchain Distributive Technology (BDT) impacted the three dimensions of financial reporting quality, which were the Transparency (TRFR), Reliability (RLB), and Timeliness (TIM). The measures of each construct were obtained by having five corresponding questions grouped together and the overall mean score of the respondents under each group used as the proxy of the dependent variables. Blockchain distributive technology was used as the independent variable.

Diagnostic tests like autocorrelation could not be used since the data which was used in this study are cross-sectional. On the same note, no multi-collinearity tests were carried out as a simple regression framework was used to undertake the analysis.

Table 2: Regression Result

Equation	Obs	Const.	BDT (Coefficient)	R ²	F-statistic	Prob.
TRFR	100	4.286367	0.0944939	0.0881	4.8719347	0.0352
RLB	100	3.645636	0.2286607	0.0469	4.819747	0.0305
TIM	100	3.437605	0.2816783	0.0709	7.481010	0.0074

Source: Researchers Analysis (2025)

In the research TRFR, RLB, and TIM, Table 2 regression analysis indicates that blockchain distributive technology (BDT) significantly and positively influences the three

dimensions of financial reporting quality with a significant effect on the quality of financial reporting.

Transparency (TRFR):

BDT has a coefficient of 0.0945, a significant p-value, and an R^2 of 0.0881. It means that blockchain has a positive impact on the transparency of financial reporting, but the explanatory power is rather low. The outcome proves the point that blockchain improves the security of transactions, their openness, and traceability, which are fundamental aspects of transparency.

Reliability (RLB):

To be reliable, the coefficient of 0.2287 has a greater positive relationship than transparency, with an R^2 of 0.0469 and significant p-value (0.0305). This is an indication that blockchain implementation enhances the level of accuracy and reliability of financial statements thus strengthening stakeholder confidence and regulatory standards.

Timeliness (TIM):

The coefficient of 0.2817 and R^2 of 0.0709 and a very significant p-value (0.0074) has shown the greatest positive influence amongst the three constructs. It means that blockchain contributes greatly to the timeliness of financial reporting, providing access to data in real-time, minimizing verification time, and making reporting more efficient.

The regression analysis proves that blockchain distributive technology has an important influence on the quality of the financial reporting in terms of transparency, reliability, and timeliness. Of these, blockchain has the most impact on timeliness, then reliability, and lastly, transparency. This can be linked to the latest research (Dai & Vasarhelyi, 2017; Schmitz & Leoni, 2019), where the authors state that blockchain helps to make reporting faster, reduce fraud, and have reliable and impeccable records. Therefore, the results emphasize the revolutionary nature of blockchain in the contemporary accounting practice, especially, the improvement of reporting in real time, fraud detection, and confidence in financial information.

Discussion of Findings

Regression analysis shows that blockchain technology has a huge positive effect on transparency, reliability, and timeliness of professional accountants in Delta and Anambra States in Nigeria. Both hypotheses under test demonstrate that the null is rejected, which means that the adoption of blockchain can significantly improve the quality of reporting in various aspects.

To be transparent, the 0.0352 p-value is insignificant, but the coefficient of 0.0945 indicates that blockchain has a statistically significant impact, although the value is moderate. The result is consistent with Anwar et al. (2022), who postulated that blockchain offers an irreversible, verifiable register that encourages transparency and transparency in the process of financial disclosure. This in practice implies that blockchain will raise the cost of manipulating financial data, improving investor confidence and minimizing information asymmetry.

With regard to reliability, the coefficient (0.2287, $p = 0.0305$) is used to show that blockchain will significantly improve the credibility of financial statements. This aligns with Putritama et al. (2025) who explain that blockchain reduces human error and fraud whereby all transactions are safely validated and time-stamped prior to being recorded in a financial ledger. Equally, Mohammad et al. (2025) point out that it enhances reliability since, with blockchain, there is no need to conduct redundant reconciliation and a centralised control will not be necessary, making the figures reported to reflect the actual economic reality.

The greatest effect lies in timeliness with 0.2817 coefficient and 0.0074 p-value that means that blockchain adoption is a factor that has a significant contribution to accelerated reporting. This is aligned with the observations made by Saheb et al. (2025), which stress that blockchain can be used to access financial information in real-time, simplify auditing, and cut delays in reporting. Almadadha (2024), goes on to reinforce this argument by emphasizing that integration of blockchain will enable stakeholders to track financial performance in real time, which will speed up the decision-making process and adherence to regulatory timeframes.

Although the positive results are achieved, the R^2 values between 0.0469 and 0.0881 also indicate that blockchain although important is not the only determinant of reporting quality. Also important in the overall effectiveness of financial reporting systems are other contextual elements that include regulatory frameworks, organizational readiness and the extent of digital infrastructure. This is in line with the argument of Putritama et al. (2025) that the adoption of blockchain should be enforced with the institution and proper training of accountants to realize the entire benefits.

Overall, the findings offer a solid empirical data that blockchain enhances the financial reporting transparency, reliability, and timeliness, which is consistent with a significant part of the existing literature. Nevertheless, the comparatively low explanatory value also indicates the necessity of combined solutions in which blockchain operates in collaboration with other technological and regulatory innovations to revolutionize the accounting practices in the digital age to the full extent.

Conclusion

The researchers investigated the impact of blockchain technology on transparency, reliability and timeliness of digital financial reporting as a regression analysis. The results showed that blockchain has significant positive impact on financial reporting quality in all three dimensions, which are statistically significant. Particularly, blockchain, according to the regression findings, increased the transparency ($p = 0.0352$), reliability ($p = 0.0305$), and timeliness ($p = 0.0074$) of the financial reports significantly. Based on this fact, the null hypotheses which included that blockchain technology does not significantly affect transparency, reliability, and timeliness of financial reporting were rejected. This affirmation verifies that blockchain makes financial

records more accurate, minimizes manipulation and increases the rate at which transactions get registered and report.

The findings are similar to the existing literature, which highlights the immutability of blockchain and decentralised validation as the primary tools to increase trust in financial. Thus, blockchain is not a new digital technology, but a disruptive service that can change the traditional financial reporting to a more transparent, trustworthy, and timely exercise.

Recommendations

Based on the objectives of the study, it is recommended that the following be implemented:

1. Smart contracts and distributed ledgers are blockchain mechanisms that organisations should embrace to make sure that all financial records are invisible and traceable. This will enhance transparency and reduce chances of fraud or inaccuracy.
2. The companies should be able to benchmark global practice in blockchain-based accounting, and take lessons on other nations and companies who are already implementing blockchain in their financial reporting. This will assist in coming up with strong models that are specific to Nigeria and such like situations.
3. Accounting firms and regulators are encouraged to work together and incorporate blockchain in their current reporting systems as it complies with the global financial reporting standards. This will not only be effective in improving compliance but also efficiency of financial reporting processes.

akpokerereco@dsust.edu.ng

Abstract

This study examined how financial intermediation affects economic growth in Nigeria, using key indicators such as bank credit to the private sector (BCPS), financial market development (FMD), interest rates (INTR), and money supply (M2). Gross domestic product (GDP) serves as the measure of growth. The research adopts an ex-post facto design, analyzing secondary data from 2001 to 2024 through multiple regression analysis to determine causal relationships. The results show that both BCPS and FMD have positive and statistically significant effects on GDP. This highlights the importance of access to private credit and the development of efficient financial markets in driving economic growth. Conversely, interest rates and money supply did not show any significant individual impact on GDP, suggesting that Nigeria's current monetary tools may not be effectively supporting growth. However, when analyzed collectively, all financial intermediation variables significantly influenced GDP, supported by a strong R-squared value (0.9952) and a high F-statistic, indicating a well-fitted model. The findings align with the Financial Intermediation Theory, McKinnon-Shaw Hypothesis, and Endogenous Growth Theory, and are consistent with earlier studies in Nigeria. The study recommends improving access to credit, deepening financial markets, revising monetary policy approaches, and advancing financial inclusion. It contributes to existing literature by reinforcing the crucial role financial systems play in fostering sustainable economic development and offers practical insights for policymakers, financial institutions, and researchers aiming to strengthen Nigeria's growth trajectory.

Key Words: *Financial Intermediation, Bank Credit to the Private Sector, Financial Market Development, Interest Rates, Money Supply and Gross Domestic Product*

Background to the Study

Financial intermediation plays a vital role in economic development, especially in emerging economies like Nigeria. It involves the movement of funds from savers to borrowers through institutions such as banks, supporting investment and consumption that drive GDP growth. This study explores the relationships between key financial indicators—bank credit to the private sector (BCPS), financial market development (FMD), interest rates (INTR), and money supply (M2)—and economic growth in Nigeria.

BCPS reflects the extent of credit available to the private sector, which is essential for expanding business operations and boosting productivity. Olowofeso et al. (2016) found that private sector credit had a significant positive impact on sectoral GDP in Nigeria, reinforcing the idea that credit access can stimulate economic activity. FMD also contributes significantly to growth by improving capital allocation, risk management, and liquidity. Efforts by the Central Bank of Nigeria (CBN), such as promoting financial inclusion and market reforms, have aimed to deepen Nigeria's financial markets. Odeniran and Udejaja (2010) found that financial development indicators, including private sector credit

and broad money stock, Granger-caused GDP growth, underlining the importance of FMD.

Interest rates influence the cost of borrowing and the incentive to save. High rates can restrict investment, while lower rates may boost borrowing and spending. Acha (2011) argued that lending rates in Nigeria often hinder growth, suggesting the need for rate policies that support investment without sparking inflation.

Money supply (M2) ensures liquidity in the economy, but its effectiveness depends on corresponding economic activity. Simply expanding M2 may not drive growth, as Odeniran and Udejaja (2010) observed no Granger-causal relationship between broad money and output.

The overall effectiveness of financial intermediation in Nigeria is shaped by institutional reforms, macroeconomic stability, and external shocks such as oil price fluctuations. Despite reforms, issues like high non-performing loans and limited infrastructure have constrained progress. Asiamah (2020) found mixed results in Ghana, emphasizing that the relationship between financial intermediation and growth can differ by context. In sum, enhancing financial intermediation—through improved credit access, deeper markets, and stable policies—remains key to Nigeria's long-term economic growth.

Statement of the Problem

Despite the recognized role of financial intermediation in driving economic growth, Nigeria continues to face slow economic expansion, persistent inefficiencies in its financial sector, and macroeconomic instability. Ideally, a sound financial system should mobilize savings, allocate credit efficiently, and support investments that boost GDP, yet this hasn't been Nigeria's reality. Bank credit to the private sector (BCPS) remains limited, as commercial banks often prefer lending to the government or large firms, sidelining SMEs due to high interest rates, strict collateral demands, and weak risk assessment practices. Financial market development (FMD) is also shallow, constrained by market inefficiencies, low financial literacy, and limited access to formal financial services. The capital market, which should offer long-term financing, suffers from volatility and investor skepticism. Interest rates (INTR) further complicate matters—high and unpredictable rates deter private investment, while low rates reduce incentives to save, disrupting the supply of funds. Similarly, Nigeria's management of money supply (M2) has struggled to balance liquidity with inflation control, often contributing to price instability and exchange rate fluctuations. These issues raise doubts about the effectiveness of monetary policy in supporting sustainable growth. While previous research has addressed parts of the financial intermediation puzzle, fewer studies have assessed the combined effects of BCPS, FMD, INTR, and M2 on GDP. This study aims to fill that gap by examining their collective influence on economic growth and identifying structural barriers limiting the financial system's ability to drive development, ultimately offering policy recommendations to improve Nigeria's financial sector and economic performance.

Objectives of the Study

1. To analyze the impact of bank credit to the private sector (BCPS) on economic growth (GDP) in Nigeria.
2. To examine the relationship between financial market development (FMD) and economic growth in Nigeria.
3. To assess the effect of interest rates (INTR) on economic growth in Nigeria.
4. To evaluate the influence of money supply (M2) on economic growth in Nigeria.

Research Hypotheses

1. **H01:** Bank credit to the private sector (BCPS) has no significant impact on economic growth (GDP) in Nigeria.
2. **H02:** Financial market development (FMD) does not significantly influence economic growth in Nigeria.
3. **H03:** Interest rates (INTR) have no significant relationship with economic growth in Nigeria.

4. **H04:** Money supply (M2) does not significantly affect economic growth in Nigeria.

Conceptual Review

Financial Intermediation

Financial intermediation is central to economic growth, as it enables the smooth transfer of funds from savers to investors through institutions like commercial banks and capital markets. In Nigeria, this process supports investment, encourages entrepreneurship, and drives productivity, all of which contribute to Gross Domestic Product (GDP) growth. Key components that influence the efficiency of financial intermediation include bank credit to the private sector (BCPS), financial market development (FMD), interest rates (INTR), and money supply (M2). These factors collectively shape the financial system's capacity to provide affordable credit, manage liquidity, and support long-term investment across economic sectors.

Despite its potential, Nigeria's financial system continues to face challenges that limit its ability to fully support economic expansion. High interest rates, regulatory bottlenecks, poor credit access for small and medium-sized enterprises (SMEs), and volatility in financial markets have constrained the positive impact of financial intermediation. Although existing research shows a meaningful link between financial development and economic performance, gaps remain in understanding how these core variables interact and affect GDP growth collectively. This study reviews the relationship between BCPS, FMD, INTR, and M2, using GDP as the primary indicator of economic performance, with the goal of offering insights that can inform better financial sector policies and improve Nigeria's economic outcomes.

Bank Credit to the Private Sector (BCPS): BCPS plays a key role in driving economic growth by funding business expansion and boosting productivity. In Nigeria, BCPS stood at 17.59% of GDP in 2023 (World Bank, 2023), reflecting limited credit access. While the Central Bank of Nigeria has taken steps to improve lending—reporting a 10.8% rise in broad money in 2022—challenges like non-performing loans persist. Studies by Toby and Dibiah (2022) and Abraham (2022) confirm a positive link between BCPS and GDP. To strengthen lending capacity, the CBN now requires international banks to hold a minimum capital of N500 billion by 2026 (Financial Times, 2024).

Financial Market Development (FMD): FMD in Nigeria focuses on strengthening institutions and instruments that mobilize and allocate capital efficiently. Reforms in the Nigerian Stock Exchange aim to boost transparency, expand investment options, and attract both local and foreign investors. A strong financial market offers businesses alternative funding sources beyond bank credit, enhancing economic resilience. Asielue (2022) notes that developed markets improve capital allocation and support growth. However, challenges like regulatory

hurdles, low financial literacy, and poor infrastructure limit progress. Addressing these barriers is essential to unlocking the full potential of Nigeria's financial markets in supporting sustainable economic development.

Interest Rates (INTR): INTR play a key role in financial intermediation by shaping borrowing, lending, and investment decisions. In Nigeria, high and volatile lending rates—driven by inflation, risk factors, and banking inefficiencies—have often discouraged productive borrowing, slowing economic growth. While the Central Bank of Nigeria (CBN) adjusts the Monetary Policy Rate (MPR) to manage inflation, tighter policies can raise borrowing costs. Empirical studies show mixed results: lower rates may boost investment, but risk inflation, while higher rates can ensure stability but limit growth. Striking a balance between encouraging economic activity and maintaining price stability remains a key policy challenge for Nigeria. (Akpokerere, Onojaife & Osevw-Okoroyibo, 2024)

Money Supply (M2): M2, which includes cash, demand deposits, and near money, plays a vital role in influencing economic activity. In Nigeria, M2 growth—shaped by government borrowing, foreign inflows, and CBN policies—can stimulate investment by lowering interest rates. However, if unmatched by output growth, it risks driving inflation. Oladipo and Akinwale (2023) found that a 1% rise in M2 led to a 0.4% GDP increase, highlighting its growth potential. Still, unchecked expansion can destabilize prices. As Manasseh and Charles (2023) note, maintaining an optimal money supply is essential to support economic growth without triggering inflation.

Gross Domestic Product (GDP) as a Measure of Economic Growth

Gross Domestic Product (GDP) is a key measure of economic performance, reflecting the total value of goods and services produced within a country. In Nigeria, GDP growth is shaped by multiple factors including oil prices, agricultural output, government policies, and financial intermediation. The link between financial intermediation and GDP is both dynamic and bidirectional: efficient financial systems mobilize savings and allocate credit to productive sectors, which drives economic activity and growth. In turn, a growing economy strengthens the financial sector by expanding opportunities for lending and investment. However, Nigeria's GDP growth has been inconsistent, impacted by external shocks, insecurity, and structural imbalances. These challenges highlight the need for economic diversification and stronger financial sector reforms (Akpokerere, Osevw-Okoroyibo, Alenzeder, Eyesan, & Meshack 2024).

Financial intermediation remains central to Nigeria's development strategy. Key components—bank credit to the private sector (BCPS), financial market development (FMD), interest rates (INTR), and money supply (M2)—work together to shape economic outcomes. Access to credit, stable and competitive interest rates, deep financial

markets, and a well-managed money supply can significantly influence investment levels and GDP growth. Despite efforts to improve financial inclusion and strengthen regulatory frameworks, obstacles such as limited SME financing, high borrowing costs, and shallow capital markets persist. This review examines how BCPS, FMD, INTR, and M2 impact Nigeria's economic growth, offering insights into how financial intermediation can be optimized to support sustainable development. Strengthening these financial levers is essential for unlocking Nigeria's full economic potential and building a more resilient and inclusive economy. (Ighoroje, & Akpokerere 2022).

Theoretical Review

Financial Intermediation Theory

The Financial Intermediation Theory (Schumpeter, 1911; Gurley & Shaw, 1960) highlights the essential role of financial institutions in efficiently channeling resources from savers to borrowers. By reducing transaction costs, spreading risk, and improving capital formation, financial intermediaries like banks and capital markets support economic development. In Nigeria, commercial banks serve as the primary source of credit to the private sector (BCPS), (Akpokerere & Edfafaje 2018)

enabling businesses to fund operations, invest in new technologies, and boost productivity. This flow of credit is crucial for stimulating economic activity and driving GDP growth. However, several structural challenges hinder the full effectiveness of financial intermediation in the country. These include high lending rates, stringent collateral requirements, and persistent information asymmetry between lenders and borrowers, which limit access to credit—especially for small and medium-sized enterprises (SMEs). As a result, many potentially productive investments remain unfunded, slowing down economic expansion. Strengthening the credit delivery system, improving risk assessment mechanisms, and enhancing transparency in financial transactions are necessary steps toward improving the efficiency of financial intermediation in Nigeria. By addressing these issues, the financial sector can better support private sector growth and contribute more meaningfully to long-term economic development.

Endogenous Growth Theory

The Endogenous Growth Theory (Romer, 1986; Lucas, 1988) argues that long-term economic growth is driven by internal factors such as human capital development, innovation, and financial market efficiency. Unlike traditional growth models that emphasize external inputs, this theory highlights the central role of financial intermediation in promoting productivity and technological advancement. In Nigeria, effective financial intermediation can mobilize domestic savings and direct them toward investments in education, infrastructure, and innovation—key drivers of sustainable growth. Financial market development (FMD) is particularly important, as it offers firms alternative access to capital beyond

traditional bank lending, enabling the funding of high-potential projects. A well-functioning capital market encourages entrepreneurship and continuous investment in technology, contributing to rising GDP. However, to fully harness the benefits outlined in the endogenous growth framework, Nigeria must overcome barriers such as weak regulatory oversight, low investor confidence, and limited public understanding of financial instruments. Addressing these challenges is essential for building a more dynamic financial system that supports inclusive and innovation-led economic growth. As financial markets mature and human capital investment increases, Nigeria stands to achieve more stable and internally sustained economic expansion aligned with the core principles of the endogenous growth theory.

Empirical Review

Oyadeyi (2023) examined how financial development affects Nigeria's real sector—specifically agriculture, manufacturing, and services—using Granger-causality and a financial development index. The study found a bidirectional relationship, indicating that financial development and real sector growth reinforce each other.

Adewole et al. (2022) used Vector Auto Regression (VAR) to assess the link between financial intermediation and GDP from 1981 to 2017. Their findings showed a strong positive relationship, emphasizing the role of financial intermediation in fostering Nigeria's economic growth.

Ukoh (2023) studied the effect of financial inclusion on Nigeria's economic development. The research showed that greater access to financial services positively impacts GDP, suggesting that promoting financial inclusion can significantly enhance economic performance.

Albert et al. (2022) found that real interest rates, gross domestic savings, and private sector credit positively influence GDP, using OLS analysis from 1980 to 2019. Their results underline the importance of financial development as a driver of economic growth in Nigeria.

Adewole et al. (2022) also highlighted the importance of banks' intermediation role in allocating funds to productive sectors. Their findings confirm that efficient bank lending practices are crucial to boosting economic activity.

A 2023 study in the *International Journal of Development and Economic Sustainability* examined Nigeria's monetary policy from 1990 to 2022. It found that inflation and exchange rates significantly influence GDP, indicating that sound monetary policy is key to economic stability and growth.

Umar et al. (2021) investigated the nonlinear effects of financial development on growth using data from 1980 to 2019. They found both positive and negative shocks in financial development significantly affect economic performance, pointing to the complexity of this relationship.

Akintola et al. (2020) analyzed quarterly data from 1981 to 2015 and reported that financial sector development has a positive influence on GDP growth. This supports the

idea that improving financial services contributes to long-term economic expansion in Nigeria.

Ani and Udeh (2021) studied exchange rate impacts on economic growth between 2009 and 2018 using OLS methods. Their findings showed a positive, significant relationship, suggesting that stable exchange rate policies are essential for Nigeria's economic growth.

Research Methodology

Research Design

This study uses an ex-post facto design and a quantitative approach, analyzing historical secondary data to assess the impact of financial intermediation on Nigeria's economic growth. Multiple panel regression is applied to explore causal relationships between key financial indicators and GDP growth over the study period.

Population and Sample of the Study

The study population includes all financial institutions in Nigeria, such as commercial and investment banks, along with regulatory bodies like the Central Bank of Nigeria (CBN) and the National Bureau of Statistics (NBS). It centers on macroeconomic data related to financial intermediation and economic growth. The study uses annual time-series data selected through purposive sampling, focusing on reliable and relevant financial and economic indicators.

Method of Data Collection

Secondary data is sourced from the CBN Statistical Bulletin, World Development Indicators (WDI), and Nigerian Stock Exchange (NSE) reports. It includes annual observations on bank credit to the private sector (BCPS), financial market development (FMD), interest rates (INTR), money supply (M2), and gross domestic product (GDP).

Method of Data Analysis

The study uses OLS regression to assess the link between financial intermediation and economic growth, ensuring model reliability through stationarity, multicollinearity, and heteroscedasticity tests. Data analysis is performed using EViews 10.0 econometric software.

Model Specification

The multiple panel regression model is specified as follows:

$$\text{LogGDP} = \alpha + \beta_1 \text{BCPS} + \beta_2 \text{FMD} + \beta_3 \text{INTR} + \beta_4 \text{M2} + \varepsilon$$

$$+ \beta_1 \text{BCPS} + \beta_2 \text{FMD} + \beta_3 \text{INTR} + \beta_4 \text{M2} + \varepsilon$$

Where:

- GDP = Gross Domestic Product (proxy for economic growth)
- BCPS = Bank Credit to the Private Sector
- FMD = Financial Market Development
- INTR = Interest Rate
- M2 = Money Supply
- α = Constant term

- $\beta_1, \beta_2, \beta_3, \beta_4$ = Coefficients of the independent variables
- ε = Error term

Results and Discussion

Time series data refers to observations collected at regular intervals over time, allowing researchers to analyze trends, patterns, and relationships across years. In this study, time series data from 2001 to 2024 is used to evaluate how financial intermediation affects economic growth in Nigeria. Ordinary Least Squares (OLS) regression is a statistical method employed to estimate the relationships between dependent and independent variables. Here, OLS helps quantify how indicators like BCPS, FMD, INTR,

and M2 influence GDP. The method identifies the individual and collective significance of these variables in explaining economic growth. The use of time series and OLS regression ensures that the analysis captures long-term effects and causality, this enhances the study's relevance for policymakers and financial sector stakeholders focused on sustainable economic development.

Descriptive statistics

The descriptive statistics consists of mean, standard deviation, minimum and maximum values associated with the variables under consideration. The descriptive statistics are summarized on Table 1 below;

Table 1: Descriptive Statistics

	LOG GDP	BCPS	FMD	INTR	M2
Mean	4.953971	17.08125	44.12458	15.00208	22.97625
Median	5.056992	17.71500	50.70000	14.75500	12.99500
Maximum	5.328019	21.27000	60.54000	18.09000	110.5000
Minimum	4.339670	10.23000	19.44000	11.31000	1.070000
Std. Dev.	0.328593	3.172143	14.56902	2.049267	27.08492
Skewness	-0.616634	-0.698673	-0.518256	0.131601	1.786637
Kurtosis	1.978466	2.464483	1.659281	1.786914	5.821914
Jarque-Bera	2.564484	2.239356	2.871884	1.540852	20.73148
Probability	0.277415	0.326385	0.237891	0.462816	0.000031
Sum	118.8953	409.9500	1058.990	360.0500	551.4300
Sum Sq. Dev.	2.483389	231.4373	4881.897	96.58840	16872.63
Observations	24	24	24	24	24

Source: E-VIEW 10.0 Output, 2025.

Table 1 presents summary statistics for the study variables. GDP has a mean of 4.95, moderate variability (SD = 0.33), is negatively skewed, platykurtic, and approximately normal ($p = 0.28$). BCPS averages 17.08, with moderate spread and similar distribution characteristics ($p > 0.32$). FMD shows higher variability (mean = 44.12, SD = 14.57), is negatively skewed, platykurtic, and normally distributed ($p = 0.24$). INTR has low variability (mean = 15.00, SD = 2.05), is slightly positively skewed and normally distributed ($p = 0.46$). M2 is highly variable (SD

= 27.08), strongly right-skewed, leptokurtic, and not normally distributed ($p \approx 0$).

Correlation Matrix

Correlation matrix actually shows the relation between independent and dependent variables. This tells the degree of correlation between the independent and dependent variables, whether there is moderate or low degree of correlation.

Table 2: Correlation Matrix for the Independent and Dependent Variables

	LOG GDP	BCPS	FMD	INTR	M2
LOG GDP	1.000000				
BCPS	0.680139	1.000000			
FMD	0.687851	0.646950	1.000000		
INTR	0.192587	0.145468	0.231135	1.000000	
M2	0.661265	0.609221	0.691669	0.626315	1.000000

Source: E-VIEW 10.0 Output, 2025.

GDP shows moderate positive correlations with BCPS (0.68), FMD (0.69), and M2 (0.66), indicating that increases in private sector credit, financial market development, and money supply are generally linked to

GDP growth. Its correlation with INTR is weak (0.19), suggesting a limited association. BCPS moderately correlates with FMD (0.65) and M2 (0.61), but weakly with INTR (0.15). FMD has a weak link with INTR (0.23)

and a stronger correlation with M2 (0.69). INTR and M2 also share a moderate relationship (0.63), indicating some alignment between interest rates and money supply changes.

Multicollinearity Test

Since the data for the study are annual time series, the multicollinearity test was conducted to ascertain if the data contained multicollinearity, this is presented in table 3 below;

Table 3: Variance Inflation Factors Multicollinearity Test

Variance Inflation Factors			
Date: 05/13/25 Time: 12:02			
Sample: 2001 2024			
Included observations: 24			
	Coefficient	Uncentered	Centered
Variable	Variance	VIF	VIF
C	0.005760	220.7121	NA
BCPS	2.78E-05	321.3058	10.27968
FMD	1.56E-06	128.4553	12.15100
INTR	1.25E-05	109.7170	1.927469
M2	1.28E-07	6.020960	3.438765

Source: Eview, 10.0 Outputs, 2025.

Table 3 shows that BCPS and FMD have centered VIFs of 10.28 and 12.15, respectively, indicating significant multicollinearity and potential redundancy in the model. INTR has a VIF of 1.93, suggesting minimal multicollinearity, while M2's VIF of 3.44 reflects moderate but acceptable correlation with other variables. The constant term (C) has a high uncentered VIF of 220.71, which is typical for intercepts and not a cause for concern. Overall, while most variables fall within acceptable multicollinearity limits.

Data Validity Test

Since the data are time series data, spanning for 2001-2024 (24years), the validity test was carried out using the Breusch-Godfrey Serial Correlation LM Test, Heteroskedasticity Test: Breusch-Pagan-Godfrey and Ramsey RESET Test in order to ascertain the validity of the data for the analysis. This is presented in Table 4 below;

Table 4: Data Validity Test

Breusch-Godfrey Serial Correlation LM Test:			
F-statistic	0.591418	Prob. F(2,18)	0.5645
Obs*R-squared	1.561256	Prob. Chi-Square(2)	0.4581
		Durbin-Watson stat	2.141178
Heteroskedasticity Test: Breusch-Pagan-Godfrey			
F-statistic	0.339253	Prob. F(4,20)	0.8481
Obs*R-squared	1.599857	Prob. Chi-Square(4)	0.8088

Table 4 shows no evidence of serial correlation, as indicated by the Breusch-Godfrey test ($p = 0.5645$) and a Durbin-Watson statistic of 2.1412. The Breusch-Pagan-Godfrey test confirms homoskedasticity ($p = 0.8481$), supported by a high p -value (0.9360) from the Scaled Explained Sum of Squares. The Durbin-Watson statistic of 2.3328 also suggests no autocorrelation. The Ramsey RESET test indicates no model misspecification ($p = 0.8311$), further backed by the likelihood ratio test ($p = 0.8028$). The Durbin-Watson value of 2.1817 confirms a well-specified model with reliable error terms.

Augmented Dickey-Fuller (ADF) Unit Root Test

Testing for the existence of unit roots is a principal concern in the study of time series models and co-integration. The rationale behind this test is to avoid the problem of spurious regression which is commonly associated with time series data. The presence of a unit root implies that the time-series data under investigation is non-stationary; while the absence of a unit root shows that the stochastic process is stationary. The unit root test was conducted using the Augmented Dickey-Fuller (ADF) Unit root test as presented in table 5 below:

Table 5: Augmented Dickey-Fuller Unit root Test

Group unit root test: Summary

Table 5 shows that GDP, BCPS, FMD, INTR, and M2 are non-stationary at level, as indicated by high p-values across the Levin, Lin & Chu, Im, Pesaran and Shin, ADF-Fisher, and PP-Fisher tests. However, after first differencing, stationarity is achieved. The ADF-Fisher test

($p = 0.0064$) and PP-Fisher test ($p = 0.0000$) provide strong evidence against the null of a unit root. These results confirm that the variables are integrated of order one, $I(1)$, becoming stationary after differencing and thus suitable for regression analysis in their differenced forms.

Table 6 above, showed the regression coefficients and the significance of the t-statistics for the independent variables; [BCPS, FMD, INTR, M2] and the dependent variable {GDP}. These results serve as the basis of discussing the findings.

The regression analysis shows a significant positive effect of BCPS sector on Nigeria's economic growth, with a coefficient of 0.044486 ($p = 0.0000$). This supports the Financial Intermediation and Credit Creation theories, highlighting banks' role in allocating funds to productive sectors. Empirical studies by Adewole et al. (2022), Albert et al. (2022), and G.A.S. Publishers (2023) also confirm that private sector credit boosts GDP growth by financing industries like manufacturing and services. These findings underscore the importance of policies that encourage bank lending to drive economic development.

The coefficient for FMD is 0.013143 with a p-value of 0.0000, indicating a strong positive impact on economic growth. This supports the McKinnon-Shaw Hypothesis and Endogenous Growth Theory, both of which argue that efficient, liberalized

financial markets enhance investment, innovation, and capital use. Empirical studies by Oyadeyi (2023) and Ukoh (2023) confirm that improved financial markets promote real sector growth. The result also aligns with the Supply-Leading Hypothesis, suggesting that financial development actively stimulates economic activity through better savings mobilization and resource allocation.

The INTR coefficient is negative (-0.000640) and statistically insignificant ($p = 0.8583$), indicating no notable impact on GDP during the study period. This supports the Liquidity Preference Theory, which sees interest rates as more relevant to short-term money demand than economic growth. The weak result may reflect interest rate rigidity or poor monetary policy transmission in Nigeria. Studies by Ani and Udeh (2021) and NDIC Quarterly (2022) also found limited effects of interest rates on growth. These findings suggest that interest rate changes alone may be ineffective without broader financial and policy reforms.

The regression shows a negligible coefficient (-0.0000114) with a p-value of 0.9748, suggesting

that M2 has no significant effect on economic growth. This challenges Monetarist Theory, which links money supply to output. The weak result may stem from structural issues in Nigeria, such as poor policy transmission, underdeveloped financial systems, and limited absorptive capacity. The International Journal of Development and Economic Sustainability (2023) also notes that without strong institutions, money supply growth may not boost real output. Umar et al. (2021) highlight nonlinear effects, where excess liquidity doesn't always support GDP growth under certain conditions.

Conclusion

The study concludes that financial intermediation, particularly through credit extension to the private sector and a well-developed financial market, plays a vital role in driving Nigeria's economic growth. While interest rate and broad money supply did not individually influence GDP significantly, the overall financial intermediation framework exerts a strong combined influence on economic performance. These results validate the Financial Intermediation Theory, McKinnon-Shaw Hypothesis, and Endogenous Growth Theory, all of which emphasize the essential role of financial systems in economic expansion.

Recommendations

The following recommendations are made:

1. Policymakers should implement strategies that promote accessible and affordable credit facilities for the private sector.
2. Strengthening market institutions and improving regulatory frameworks will boost investor confidence and deepen financial markets.
3. The ineffectiveness of interest rate and money supply in impacting GDP calls for a reassessment of monetary tools used by the Central Bank of Nigeria.
4. Expanding access to financial services will encourage broader participation in the economy and enhance the benefits of intermediation.

Financial Technology and Financial Performance: Evidence From Nigeria Firms

IDAMOYIBO, Hwerien Rosemary

Department of Accounting,

Delta State University, Abraka

idamoyibohwerien@gmail.com

Publication Date: 2025/11/28

Abstract

This study ascertain the impact of financial technology on financial performance of listed oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria. Quantitative data were sourced from the annual financial reports and account of the firms, point of sales data were obtained from the e-payment statistics and the annual bulletin of the central bank of Nigeria from 2014-2024. Panel unit root test was used to test the stationarity and the integration order of the variables. The ordinary least square analysis was employed to analyze the impact of the independent variable on the dependent variables. The study reveals that POS has no significant impact on ROA and DPS. While, POS has significant impact on ROE, ROCE and EPS. However, the moderating effect of firm size has no significant impact on the financial technology. The study concludes that, on the long run financial technology has significant impact on the financial performance of the listed oil and gas producing firms, oil and gas firms' service stations and the consumer goods firms in Nigeria. The study recommends that the firms' needs to improve on their financial technology services to enhance their ROA, DPS and firm size.

Keywords: Financial Technology, Financial Performance, Firm Size. Nigeria Firms

Introduction

Over the years the Nigeria oil and gas producing firms, oil and gas firms' service stations and consumer goods firms are the fastest growing and high-risk firm as shown in their audited published financial statements. The financial performance of oil and gas producing firms', oil and gas service stations and consumer goods firms over the years has increased rapidly. This makes consumer goods firms and oil and gas producing firms' service stations operation an important sectors that impact significantly to the Nigeria economy. As much as the growth of Nigeria economy is concern, other commodities are based on the price of premium motor spirit. However, one can state that, premium motor spirit is a major source of energy it accounts for 3% of the world's economy (Okonkwo & Ekwueme, 2022).

Premium motor spirit and gas stations are among the most visited facilities to fill up fuel or gas in vehicles and gas cylinders to ensure they function as desires. But the growing trends of technology have put up great competition in the market. oil and gas firms service stations are businesses that sells

premium motor spirit, diesels, lubricants for motor vehicles and gasoline for motor vehicles air conditioners, cooking cylinders, fridges and deep freezers air conditioners for cooling of waters, drinks, meats, fishes and preservation of foods. Every day, millions of people depend on premium motor spirit, gas and consumer goods (household goods). It is impossible to underestimate the significance of premium motor spirit and gas service stations including the consumer goods firms because they provide premium motor spirit that allow people to go to different parts of the nation and commodities for individuals'.

Like many other firms, oil and gas firms, oil and gas producing firms service stations and consumer goods firms are rapidly going digital. Customers demand easy, contactless payment options since they are becoming more tech-savvy. These firms can maintain their competitiveness, improve customer experience and care, and make sure that their businesses prospers in the digital age by adopting innovative payment technology and is a financial technology that drives financial inclusion and digital financial inclusion for which both

businesses, the poor and the rich people benefit from its services. The oil and the gas producing firms, oil and gas firm's service stations, and consumer goods firms were commonly known for businesses that when sales are made, payment are done by cash. The oil and the gas producing firms, oil and gas firm's service stations, and consumer goods firms has evolved, making the experience of payment on goods bought more efficient and pleasant, thereby introducing a self-serve attendant and mobile banking applications for payments by transferring money instantly instead of visiting the banks for such transaction, helping to automate practically every activities in these firms (Mustapha, 2020). The intense competition brought about by business growth makes it harder for them to outperform their rivals in the marketplace.

The oil and gas producing firms, oil and gas firms' service stations and consumer goods firms has been significantly and continuously impacted by financial technology. Over the past few decades, there has been a significant change in the manner that premium motor spirit, diesels and gas service stations and also consumer goods items are produced, distributed, marketed and sold. Consumers demand generally rises with growth in the economy, and these firms experience a rise in demand for higher quality goods and services. Financial technology refers to the use of technology to provide various financial services, such as online payments, financial planning, and peer-to-peer lending. It has disrupted traditional financial institutions and introduced new business models (Kyari & Akinwale, 2020).

The emergence of financial technology has affected the culture within organizations worldwide. Enemuo et al (2025) posit that financial technology opens access for financial inclusion, financial inclusion includes both traditional financial inclusion and digital financial inclusion which has been accepted nationwide as a focal driver of money transactions as a means of payment for goods and services purchased by the rich, poor and businesses, also bring about equality in terms of money transactions through the use of point of sales technologies by businesses, families and individual within any environment they finds themselves without being physically present in banks for such transaction that ought to cost them some amount of money for transportation cost (i.e., the leveraging of technology to dazed barriers of cost, distance, documentation and infrastructure that border financial access).

By increasing the access of financial services, financial technology permits people and businesses to save, invest, and engage in fruitful economic

activities by using automated tellers machine through the use of point of sales terminals. While it also promotes digital financial inclusion that permits mobile and internet technologies which in-turn increases access to financial services nationally (Enemuo et al., 2025). It encompasses technologies such as digital financial technology and innovation (i.e., the use of point of sales, automated teller machines, robo-advisors, crowdfunding, mobile banking, digital payments, blockchain etc.) which have transformed financial markets globally (Enemuo, et al., 2025). Consumer good firms and the oil and gas firms' service stations has been impacted by financial technology both through the appearance of financial technology firms and through the adoption of innovative technologies by traditional firms themselves.

Firms' financial performance exceptional kill, strength, expertise are substantially pretentious by cash flow management and the use of financial technology to determines the healthiness of firms (Idamoyibo et al., 2021). Firms' financial performance are crucial to sustainability and continuity of their operations. Whether a firm's performance is short-term or long-term (sustainable) is ultimately determined by how it manages its resources. Asen et al., (2021) assert that firms financial performance is calculated by their capability in generating optimal assets, maximize profits and shareholders wealth. Idamoyibo (2024) sees profits as financial gain corporations receives from transactions, investments or operations, after all liabilities have been settled.

Ironkwe and Wokoma (2021) opine that a company's financial performance affects investor interest and influences the public's perception of it. Still, potential investors, shareholders, employees, governmental bodies, and the public are attracted to a firm who has shown a strong positive profitability trend and huge liquidity. Joseph and Chuemeka (2020) posit that potential investors are willing to invest with a company that have strong track records of profitability, pay their employees, pay taxes to the government, and carry out their corporate social responsibility where their operations takes place. The Nigeria oil and gas producing firms, oil and gas firms' service stations and consumer goods firms are facing various challenges in terms of sales payments, but technologies innovations has being help to overcome these difficulties.

Customers of premium motor spirit, gas and consumer goods firms complains that the amount of time they spend at the companies and service stations were primarily because of long queues and network failures, which are brought on by

inadequate connectivity between the main server and contactless payments (such as point of sales and internet transfer). Notwithstanding, financial technologies also brought challenges to consumer goods firms such as regulation, security, privacy, competitive pressure and technological risks. To meet this challenges, oil and gas firms, oil and gas firms' service stations and consumer goods firms need to actively pursue technological innovation, optimise their business model, and strengthen regulations and compliance.

The major difficulties customers face in using financial technologies are poor network, literacy, concerns on risk and unreliable machines. The oil and gas producing firms', oil and gas firms service stations are expected to improve service delivery technologically, by providing smart gas station solution such as automated fuel dispensing systems that use sensors and algorithms to reduce wastage and optimize premium motor spirit, diesel and gas delivery, which is the key features of a smart gas station solution. Premium motor spirit, diesel and gas inventory levels can be tracked in real-time, predictive maintenance can catch and fix problems before they get critical, and loyalty programs can be integrated to improve customer experiences.

A number of empirical studies have studied financial technology and financial performance and economic growth, but they focus on banking and insurance sectors, manufacturing sectors and Small and medium scale enterprises with measure such as return on asset and return on equity, studies of Hogan and Okereke 2023; Zhao et al., 2023; Guo and Zhang 2023; Okonkwo, and Ekwueme 2022; Boot et al., 2021; and also, Nwakoby et al., 2020. None of these studies has used measures like return on capital employed, earnings per share, dividend per share and the moderating effect of firm size, which this present study included. This shows that, the results are mixed, more or less country-specific and limited in scope. Against this background this study tend to fill the gap by ascertain the impact of financial technology on financial performance of listed oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria.

In line with the objective of this study, the following research hypotheses were formulated and tested.

H₀₁: There is no significant impact of Point of Sale terminals revenue generated on Return on Assets of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria.

H₀₂: There is no significant impact Point of Sale terminals revenue generated on Return on Equity of consumer goods firms and oil and gas producing firms', firms' service stations in Nigeria.

H₀₃: There is no significant impact of Point of Sale terminals revenue generated on Return on Capital Employed of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria.

H₀₄: There is no significant impact of Point of Sale terminals revenue generated on Earnings per share of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria.

H₀₅: There is no significant impact of Point of Sale terminals revenue generated on Dividend per share of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria.

H₀₆: There is no significant impact of the moderating effect of Firm Size on financial technology revenue generated of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria.

Conceptual Clarifications

Financial Technology

Financial technology advancements, according to many scholars, have the potential to significantly change financial services by making them safer, easier, and more affordable through financial technology companies. These scholars have been drawn in by the financial technology sectors rapid development and global expansion (Chen, 2019). Financial technology companies has track record of dominating the field in which they specialize and are dedicated to providing excellent customer service. Financial technologies has greatly expanded the use of digital technology in the areas of payment systems, insurance, financial planning, and lending. These financial technology companies services are now frequently use for money transfer between different banks whether internally or externally amongst individuals and businesses. Technological Innovations in many sectors, especially banking and consumable goods, have been driven by global technological advancement. Financial technology has become more and more well-known across the globe, particularly in Nigeria. The public now has easy, convenient, and safe access to financial services this came into being

through widespread acceptance in the consumer goods sector (Medyawati et al., 2021; Abdillah, 2020).

An individual or customers can make payments from anywhere in the world and send money without having to go to the bank. New businesses entering the market through financial technology are trying to upend traditional methods of doing things by utilizing state-of-the-art technological channels in areas such as asset management and money transfer (Truong, 2016). One of the notable characteristics of financial technology is its capacity to maintain market efficiency while reducing transaction costs. Kim et al (2020), sees financial technology as a platform that enable the fusion of technology and finance.

Financial technology transforms conventional payment systems and makes long-distance transactions easier. Financial technology is habitually seen as a cutting-edge financial platform or application that improves community access to secure useful financial services that promotes economic expansion. To put it simply, information technology combined with financial services promotes financial service industry (Lee & Kim, 2020). Financial technology denotes a broad category of technologically supported financial innovations that can lead to the development of new services, business models, goods, procedures, and even institutions inside the financial system (IAIS, 2017).

Point of Sales (POS) Terminal

An essential tool for cashless policies is the point of sale terminal, which allows operators to easily handle customer payments and then record them for transparent accounting purposes (Iskakov & Yilmaz 2020). The vehicle rider first extracts the bank identification number when customers swipe their debit or credit card into the POS transactions terminals. By providing a salesperson-friendly interface, a point-of-sale system (POS) facilitates the selling process and permits the creation and printing of receipts. POS terminals increase convenience, more service options, reduced cash related crimes, cheaper access to banking services, and also increases bank Penetration thereby creating more fund in the bank investment purposes in order to enhance banks performance.

Theoretical Review

The foundation of this study is based on the Theory of Technology Acceptance Model and the Theory of Diffusion of Innovations.

Technology Acceptance Theory

This theory was developed by Fred in the year 1989, is an information system theory which shows how a person's adoption of technology and innovation is affected by other things, like subjective norm and its attitude towards the behaviour. Subjective norm simply refers to the belief of what others will think of the behaviour. Attitudes are those beliefs an individual accumulates throughout his or her life time. Fred, defines technology acceptance theory as the degree to which an individual believes that using a specific system would enhance his or her job performance, and perceived ease of use. Fred also sees technology acceptance theory as the degree to which an individual believes that using an exact system would made him or her be free from effort (Marikyan & Papagiannidis, 2025; Poi, 2024).

Diffusion of Innovations Theory

The diffusion of innovation theory is a theory that seeks to explain how, why, and at what rate new ideas and technology spread through cultures. This theory was developed by Gabriel in the year 1980, and it was popularized in the book of Professor, Everett Roger's "Diffusion of Innovations" who specialize in rural sociology in the year 1962. He explained diffusion as a process whereby an innovation is communicated through certain channels overtime amid members of a social system, this theory was employed by Idris and Dzugwahi (2025); Poi (2024); and Yao and Song (2021). This study is hinged on the theory of technology acceptance model and the theory of diffusion of innovations.

Empirical Review

A study conducted by Kolawole et al (2024) evaluates the causal association as well as short-term and long-term dynamic effects among digital financial service components on the performance of the quoted commercial banks. The findings show that agency banking shows a strong causal association on return on assets, automated teller machine banking has a weak influence on return on assets, while internet banking and mobile banking has significant impact on return on assets. A study by Poi (2024) assesses the connection amid financial technology proxies by internet banking and mobile payment innovation and business growth of small and medium-scale enterprises, the finding reveals that there is a positive and significant connection amid financial technology innovation and business growth. With the Established of findings, the study concludes that financial technology innovation is a business answer, a daunting management policy that small

and medium enterprises can use to increase the corporate growth.

Further, Adewuyi (2024) investigates the impact of financial technology on the economic development of developing countries, focusing on Nigeria nation, to understand its contributions and ascertain areas for improvement. The finding shows that the automated tellers machine, point of sales and mobile payments of financial technology services fluctuates, but there is a general upward trend in production and popularity peaking in the year 2020, likely due to the era of COVID-19 pandemic. Although, automated teller machines was the most popular among the variables, but post of sales and mobile payments transactions are the ones that have significant growth in the economic development of Nigeria from 2017 to 2019. The study conclude therefore, that financial technology has a partial impact on GDP per capita, financial technology has significant influence on consumer price index and the unemployment rate, showing its critical role in shaping Nigeria's economic landscape

A study carried out by Guo and Zhang (2023) examines how Chinese commercial banks financial technology affects the production of liquidity. The study found that banks with higher levels of financial technology development generate more liquidity through cost-efficiency, risk management and deposit inflow. For non-state-owned, unlisted banks, the study found lower level liquidity creation, the benefits of the bank financial technology were more noticeable. In line with previous literature, Ogbonna et al (2023) determines the effect of financial technology on profitability of financial industry in Sub-Saharan African economies. Secondary data were gathered from central bank statistical bulletin and World Bank development indicator of the selected nations. The finding shows that there is a strong and significant impact of financial technology on the profitability of the financial industry in the Sub-Saharan African economies.

Similarly, a study conducted by Enemu et al., (2025) evaluates the interplay among digital financial inclusion and environmental sustainability in Nigeria, looking at the role of industrialization, urbanization, and energy consumption. Also, the study ascertains whether digital financial inclusion promotes environmental degradation through renewable energy adoption or contributes to environmental degradation through increased energy consumption. The findings shows that the n-shaped environmental kuznets curve, where inclusive economic growth at first degrades the environment, improves at higher income levels, yet ricochets once more at very high incomes. The

industrialization decreases emissions excluding mobile money accounts per capita, indicating the environmental costs of digital financial inclusion infrastructure. Trade openness at first increases emissions, yet drops them in the long term. While foreign direct investment decreases emissions, renewable energy at first also decreases environmental degradation, yet increases environmental degradation in the long term. The error correction terms indicates quick convergence to stability.

A study conducted by Adewumi et al (2023) ascertains how financial technology affects Nigerian banks' performance, using Zenith Bank and United Bank for Africa as a stud. The finding reveals that, traditional and market-based performance metrics has positive impact on financial technology. Similarly, a study conducted by Zhao et al (2023) evaluates the impact of financial technology on bank risk-taking on deposit money banks in Nigeria. The study found a positive liaison among bank risk-taking and financial technology in Nigeria. Also, the study found that payment and settlement technology, capital-raising technology, and investment management technology has positive linked with bank risk-taking, while market facility technology has a negative linked with bank risk-taking.

A study by Omole et al (2023) assesses the effect of financial technology on Nigerian deposit money banks' financial performance for the period of five years (2018-2022). Financial technology was proxy by post of sale and financial performance was measured by return on assets. The result displays a positive and significant impact of point of sale with the return on asset of the selected banks in Nigeria.

A study carried out by Mbagwu and Obonofiemro (2023) investigates the correlation among technological disruption and deposit money banks financial performance in the pre and post covid-19 pandemic in Nigeria. The finding shows that automated teller machine, internet banking, point of sales and mobile tellers has positive and significant effect on return on assets of deposit money banks in Nigeria.

A study conducted by Bussoli et al (2023) investigates whether banks that engaged in a financial technology merger experience better financial performance. The result indicates that financial technology merger operation boosts international banking financial performance. A study carried out by Adiga et al (2022) evaluates the effect of financial technology on return on assets, return on equity, interest income and non-interest income of deposit money banks in Nigeria. The finding shows that financial technology

significantly affect the return on assets, return on equity, interest income and non-interest income of deposit money banks in Nigeria.

A study carried out by Idris and Dzugwahi (2025) ascertains the impact of financial technology on Nigeria's economic growth analyzing the impact of real gross domestic product on mobile money transactions, automated teller machine usage, and point-of-sale transactions. The finding shows a steady long-run impact of financial technology variable on economic growth. Conversely, mobile money transactions, automated teller machine usage, and point-of-sale transactions exhibit negative and positive long-term impact with real gross domestic product, their effects are statistically insignificant. The high R-squared value and F-statistic and probability values, avow the model's robustness in the short-run.

A study by Islam et al (2022) examines the impact of financial technology on financial service delivery of deposit money banks in Nigeria, the findings reveals that mobile banking, internet banking and point of sales banking has significant impact on the financial service delivery of deposit money banks in Nigeria. A study conducted by Akanbi et al., (2022) examines the impact of financial technology usage on the financial and non-financial performance of small the medium enterprises in Nigeria. The finding indicates a significant association among financial technology usage and small and medium enterprises customer satisfaction, customer retention, turnover, and profitability in Nigeria. The study concluded therefore, that financial technology has significant impact on the financial and Non-financial performance of small and medium enterprises in Nigeria.

Similarly, the study of Filipa (2022) examines how stock prices of publicly listed traditional banks responds to the statement of financial technology firms funding deals. The study finding reveals that financial technology firms do not displays significant abnormal performance for any of the event windows considered on traditional banks. The parametric test used in the study found a significant negative results, and the results were disallowed

Model Specifications

The study adopt and modify the model of Idamoyibo (2025) to suit the peculiarity of the study.

Mathematically, the model is expressed thus:

$$ROA = f(NLPOS)$$

$$ROE = f(NLPOS)$$

$$ROCE = f(NLPOS)$$

$$EPS = f(NLPOS)$$

$$DPS = f(NLPOS)$$

$$LFMS = f(NLPOS)$$

equ I

equ II

equ III

equ IV

equ V

equ VI

due to the non-normality of the data. The analysis was conducted on sub-sampling events into diverse kinds of financial technology groups and the finding reveals that the stock returns of traditional banks respond negatively to digital lending funding events, signifying a swap effect, and positive to the funding of digital payments firms, suggesting a balancing effect. The findings for digital capital raising firms propose that banks' stock returns firstly react negatively to these events but that the finding was inverted in the following days, signifying a total balancing effect.

A study conducted by Lionel and Samuel (2020) examines the effect of financial innovation on economic growth in Nigeria, the study employed qualitative data for the analysis. The finding reveals that there is a positive and significant effect of financial innovation on small and medium scale enterprises' productivity in Nigeria.

Methods

The study used of quantitative data that was generated from the annual financial statement reports and accounts of the firms, point of sales data were obtained from the e-payment statistics and the annual bulletin of the central bank of Nigeria from 2014-2024. The population comprises oil and gas producing firms, oil and firms who engage in service station operations and consumer goods firms listed on the floor of the Nigeria Exchange Group who are involves in e-payments for business transactions. A sample of five firms each was chosen from the oil and gas producing firm, oil and gas firms' service stations and the consumer goods firms making it ten sampled firms using judgmental sampling techniques. The firms includes Cadbury Nigeria Plc., Honeywell Flour, Larfage Nigeria Plc., May and Baker, Giuness Nigeria Plc., Conoil Plc., Oando Plc., Mrs Oil, Seplat Energy and Total Energies. The justification of using these firms was based on the reasons of using point of sales e-payment in their business transactions. The study employed a simple linear regression method to test the hypotheses and analyse the data.

Econometrically, the equation I to VI above can be restated as:

$$\begin{aligned}
ROA &= \beta_0 + \beta_1 NLPOS + U_i && \text{equ VII} \\
ROE &= \beta_0 + \beta_1 NLPOS + U_i && \text{equ VIII} \\
ROCE &= \beta_0 + \beta_1 NLPOS + U_i && \text{equ IX} \\
EPS &= \beta_0 + \beta_1 NLPOS + U_i && \text{equ X} \\
DPS &= \beta_0 + \beta_1 NLPOS + U_i && \text{equ XI} \\
NLFMS &= \beta_0 + \beta_1 NLPOS + U_i && \text{equ XII}
\end{aligned}$$

Where: NLPOS (Natural Logarithm of Point of Sales), ROA (Return on Assets), ROE (Return on Equity), ROCE (Return on Capital Employed), EPS (Earning per Share), DPS (Dividend per Share), NLFMS (Natural Logarithm of Firm Size), β_0 (Constant Term), β_1 (Coefficient of the explanatory variable), and U_i (Stochastic Error Term).

Method of Data Analysis

The study used econometrics models to accomplish the objectives of the study. Firstly,

the econometric model determines the Panel unit root test for the stationarity of the variables using Levin, Lin and Chin root test and secondly is the OLS tests.

Panel Unit Root Tests

Confirming the order of integration of the data series appropriateness for a linear combination in the form of a model, the panel unit root test following the form stated as Levin, Lin and Chin.

Table 1: Summary of Panel Unit Root Test

Study Variables	Statistics	Probability Value	Order of Integration	Remark
NLPOS	-1.67918	0.0466	1(0)	Stationarity
ROA	8.29100	0.0000	1(0)	Stationarity
ROE	-22.9117	0.0000	1(0)	Stationarity
ROCE	2.76833	0.9972	1(1)	Stationarity
EPS	3.17365	0.9992	1(1)	Stationarity
DPS	-34.7593	0.0000	1(0)	Stationarity
NLFMS	1.43534	0.9244	1(1)	Stationarity

Source: Author's Computation (E-View 9.0)

The result table 1 above shows that, NLPOS, ROA, ROE, DPS are stationary at 5% level of significance since their respective p-values at their natural levels are less than 5% level of significance. While ROCE, EPS and NLFMS are stationary

at 10% level of significance since their respective p-values at their natural levels are 10% and 9% level of significance. It can be conclusively stated that the variables under study do not possess unit roots and are integrated at their 1st and 2nd differencing of 1(0) and 1(1)) as shown in table above.

Table 2: Result of Model I: ROA = f(NLPOS)

Source: *Source: Author's Computation (E-View 9.0)*

In table above, the result displays the coefficient estimates value of POS on ROA model of the OLS analysis to show the contribution of POS in ROA. The result shows that POS has a significant positive impact on ROA with the probability value of 0.1947 and coefficient value of 0.031007. The coefficient of determination, R-squared (R^2) value is 0.015523 and indicates that 1.6% of the changes in ROA are explained by the variation in financial technology. The F-statistic explains the overall significance of the performance of POS in the

model. The F-statistic value is 1.702932 with a probability value of 0.194679 greater than 5% level of significance. The coefficient of Durbin-Watson value is 0.813652 and indicating 81%. This shows that the model is free of autocorrelation. Based on the probability value of F-statistic, the study concludes that POS has no significant impact on ROA of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

Source: *Source: Author's Computation (E-View 9.0)*

Table 3 above, displays the result of the coefficient estimates of POS on ROE model of the OLS analysis to show the contribution of POS in ROE. The result shows that POS has a significant positive impact on ROE with the probability value of 0.0016 and coefficient value of 0.149670. The coefficient of determination, R-squared (R^2) value is 0.088320 and indicates that 8.8% of the changes in ROE are explained by the variation by POS. The F-statistic explains the overall significance of the performance

of POS in the model. The F-statistic value is 10.46263 with a probability value of 0.001617 lesser than 5% level of significance. The coefficient of Durbin-Watson value is 0.473409 and indicating 47%. This shows that the model is free of autocorrelation. Based on the probability value of the F-statistic, the study concludes that POS has significant impact on ROE of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

Table 4: Result of Model III: ROCE =f(NLPOS)

Source: Source: Author's Computation (E-View 9.0)

In table 4, the result displays the coefficient estimates of POS on ROCE model of the OLS analysis to show the contribution of POS in ROCE. The result shows that POS has a significant positive impact on ROCE with the probability of 0.0000 and coefficient value of 0.230567. The coefficient of determination, R-squared (R^2) value is 0.188004 and indicates that about 18% of the changes in ROCE are explained by the variation in POS. The F-statistic explains the overall significance of the

performance of POS in the model. The F-statistic value is 25.00552 with a probability value of 0.000002 lesser than 5% level of significance. The coefficient of Durbin-Watson value is 0.497210, indicating 50%. This shows that the model is free of autocorrelation. Based on the probability value of the F-statistic, the study concludes that POS has significant impact on ROCE of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods sector in Nigeria.

Table 5: Result of Model IV: EPS =f(NLPOS)

Source: Source: Author's Computation (E-View 9.0)

Table 5 above, displays the result of the coefficient estimates of POS on EPS model of the OLS analysis to show the contribution of POS in EPS. The result shows that POS has a significant positive impact on EPS with the probability value of 0.0000 and coefficient value of 143.8361. The coefficient of determination, R-squared (R^2) value is 0.143035, indicates that 14% of the changes in EPS are explained by the variation in POS. The F-statistic is

18.02613 with a probability value of 0.000046 lesser than 5% level of significance. The coefficient of Durbin-Watson value is 0.747527, indicating 75%. This shows that the model is free of autocorrelation. Based on the probability value of the F-statistic, the study concludes that POS has significant impact on EPS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

Source: Source: Author's Computation (E-View 9.0)

Table 6, displays the result of the coefficient estimates of POS on DPS model of the OLS analysis to show the contribution of POS in DPS. The result shows that POS has a significant positive impact on DPS with the probability value of 0.3381 and coefficient value of 4.889241. The coefficient of determination, R-squared (R^2) value is 0.008498 and indicates that 0.84% of the changes in DPS are explained by the variation in POS. The F-statistic explains the overall significance of the performance of POS in the model. The F-statistic is 0.925702 with a probability value of 0.338131 greater than 5% level of significance. The coefficient of Durbin-Watson value is 0.209260 indicating 21%. This shows that the model is free of autocorrelation. Based on the probability value of the F-statistic, the study concludes that POS has no significant impact on DPS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

In table 7, the result displays the coefficient estimates of POS on the moderating effect of FMS model of the OLS analysis to show the contribution of POS in FMS. The result shows that POS has a significant positive impact on FMS with the probability value of 0.0000 and coefficient value of 0.145518. The coefficient of determination, R-squared (R^2) value is 0.227351 and indicates that about 22% of the changes in FMS are explained by the variation in POS. The F-statistic explains the overall significance of the performance of POS in the model. The F-statistic value is 31.77889 with a probability value of 0.000000 lesser than 5% level of significance. The coefficient of Durbin-Watson value is 0.241828 indicating 24%. This shows that the model is free of autocorrelation. Based on the probability value of the F-statistic, the study concludes that POS has no significant impact on the moderating effect of FMS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

Tests of Hypotheses

The study formulated six hypotheses and tested using the Ordinary Least Square OLS Analysis accomplish the objective of the study.

H₀₁: There is no significant impact of Point of Sale terminals revenue generated on Return on Assets of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria. The result of the analysis shows that POS has no significant impact on ROA of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

H₀₂: There is no significant impact Point of Sale terminals revenue generated on Return on Equity of

consumer goods firms and oil and gas firms', firms' service stations in Nigeria. The result shows that POS has significant impact on ROE of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

H₀₃: There is no significant impact of Point of Sale terminals revenue generated on Return on Capital Employed of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria. The result shows that POS has significant impact on ROCE of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods sector in Nigeria.

H₀₄: There is no significant impact of Point of Sale terminals revenue generated on Earnings per share of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria. The result shows that POS has significant impact on EPS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

H₀₅: There is no significant impact of Point of Sale terminals revenue generated on Dividend per share of oil and gas producing firms', oil and gas firms' service stations and consumer goods firms and in Nigeria. The result shows that POS has no significant impact on DPS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

H₀₆: There is no significant impact of the moderating effect of Firm Size on financial technology revenue generated of oil and gas producing firms', oil and gas firms' service stations

and consumer goods firms in Nigeria. The result shows that POS has no significant impact on the moderating effect of FMS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

Discussion of Findings

The study ascertain the impact of POS on the ROA, ROE, ROCE, EPS, DPS and the moderating effect of FMS of listed oil and gas producing firms', oil and gas firms' service stations and consumer goods firms in Nigeria. The findings shows that POS has no significant impact on ROA of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria. The of this study disagrees with the findings of Omole et al., (2023) who assesses the effect of financial technology on Nigerian deposit money banks' financial performance for the period of five years (2018-2022), found a positive and significant impact of point of sale with the return on asset of the selected banks in Nigeria.

Further, the findings disagrees with the findings of Mbagwu and Obonofiemro (2023) who determines technological disruption and deposit money banks financial performance in the pre and post covid-19 pandemic in Nigeria, found that point of sales has positive and significant effect on return on assets of deposit money banks in Nigeria. Again, the findings disagrees with that of Bussoli et al (2023) who assesses the impact of financial technology merge operation on financial performance: evidence from banking international sample, found that point of sales has positive and significant effect on return on assets of deposit money banks in Nigeria. Also, the findings of this study disagrees with the findings of Adiga et al., (2022) who ascertains the effect of financial technology and the banking sector performance in Nigeria, found that financial technology significantly affect the return on assets of deposit money banks in Nigeria.

The finding of this study shows that POS has significant impact on ROE of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria. Further, the findings of this study agrees with the findings of Adiga et al., (2022) who ascertains the effect of financial technology and the banking sector performance in Nigeria, found that financial technology significantly affect the return on equity of deposit money banks in Nigeria. Also, the findings agrees with that of Filipa (2022) who evaluates the impact of financial technology firms on the performance of traditional banks, and found a significant impact of financial technology usage on small and medium enterprises profitability in Nigeria. The finding of this study shows that POS has significant impact on ROCE of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods sector in Nigeria. The findings agrees with findings of Ogbonna et al., (2023) who evaluates the impact of financial technology on

firm's profitability in Sub-Saharan African economies from 2005-2021, found a strong and significant impact of financial technology on the profitability of the financial industry in the Sub-Saharan African economies.

The finding of this study shows that POS has significant impact on EPS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria. The findings agrees with findings of Ogbonna et al., (2023) who evaluates the impact of financial technology on firm's profitability in Sub-Saharan African economies from 2005-2021, found a strong and significant impact of financial technology on the profitability of the financial industry in the Sub-Saharan African economies. Also, the findings agrees with that of Filipa (2022) who evaluates the impact of financial technology firms on the performance of traditional banks, and found a significant association among financial technology usage on small and medium enterprises profitability in Nigeria.

The findings of this study shows that POS has no significant impact on DPS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria. The findings disagrees with findings of Ogbonna et al., (2023) who evaluates the impact of financial technology on firm's profitability in Sub-Saharan African economies from 2005-2021, found a strong and significant impact of financial technology on the profitability of the financial industry in the Sub-Saharan African economies. Again, the findings disagrees with that of Omole et al., (2023) who assesses the effect of financial technology on Nigerian deposit money banks' financial performance for the period of five years (2018-2022), found a positive and significant impact of point of sale with the return on asset of the selected banks in Nigeria.

The findings of this study shows that POS has no significant impact on the FMS of the listed oil and gas firms, oil and gas firms' service stations and the consumer goods firms in Nigeria.

Conclusion

The study ascertain the impact of financial technology on financial performance of listed oil and gas producing firms, oil and gas firms' service stations and the consumer goods firms in Nigeria. The study used POS to proxy financial technology, while ROA, ROE, ROCE, EPS, DPS were used to measure financial performance and FMS was used to the moderate the effect of financial technology. Panel unit root test was used to test the stationarity and the integration order of the variables. The ordinary least square analysis was employed to analyze the impact of the independent variable on the dependent variables. The study reveals that POS has no significant impact on ROA and DPS. While, POS has significant impact on ROE, ROCE and EPS. However, the moderating effect of firm size has no significant impact on the financial technology. The

study concludes that, on the long run financial technology has significant impact on the financial performance of the listed oil and gas producing firms, oil and gas firms' service stations and the consumer goods firms in Nigeria, but the firms' needs to improve on their financial technology services to enhance their ROA, DPS and firm size.

Abstract

This study examined the theme “From Margins to Mainstream: Women’s Entrepreneurship as a Catalyst for Sustainable Economic Development in Delta State”, with particular attention to the role of entrepreneurial training and skills development, cultural and social norms, and technology adoption and digital literacy. The study was guided by three research questions in line with three objectives, which informed the formulation of three hypotheses. The descriptive survey research design was adopted. The population of the study comprised 4,800 women entrepreneurs, from which a sample size of 370 was determined using Taro Yamane’s formula. A structured questionnaire served as the research instrument. The instrument was validated by experts and its internal consistency was confirmed with a Cronbach Alpha reliability coefficient of 0.83. Out of the 370 questionnaires administered, 348 were duly completed and returned, representing a 94.05% response rate, and were used for the analysis. The findings revealed that entrepreneurial training and skills development significantly influenced sustainable economic development in Delta State with a positive coefficient of 0.399 ($p = 0.0302$), indicating that access to training and skill enhancement improved business outcomes and economic sustainability. Cultural and social norms were also found to exert a significant positive effect with a coefficient of 0.716 ($p = 0.0410$), suggesting that supportive cultural values and family backing play a critical role in empowering women’s businesses to thrive. Furthermore, technology adoption and digital literacy demonstrated the strongest effect with a coefficient of 0.696 ($p = 0.0120$), underscoring the importance of digital tools, mobile banking, and online platforms in enhancing competitiveness and expanding women’s economic participation. The overall model showed an R-squared of 0.418, with the independent variables collectively explaining 41.8% of the variance in sustainable economic development. The F-statistic of 82.386 with a probability of 0.000 confirmed the robustness of the model. The study recommends stronger policy support, targeted training programs, and increased digital literacy initiatives to move women’s enterprises from the margins to the mainstream of economic development.

Keywords: *Women’s entrepreneurship, Sustainable economic development, Entrepreneurial training, Cultural and social norms, Technology adoption and Digital literacy.*

Introduction

Women’s entrepreneurship has increasingly been recognized as a powerful driver of inclusive and sustainable economic development globally. In developing economies, women entrepreneurs are viewed not only as income generators but also as catalysts for poverty alleviation, employment creation, and social transformation (Alonso-González et al., 2021; Olaoye & Olaleye, 2022). According to the World Bank (2023), women constitute nearly half of the global labor force, yet they remain underrepresented in entrepreneurial activities due to systemic barriers such as limited access to finance, unequal cultural norms, and restricted opportunities for capacity building. In sub-Saharan Africa, where unemployment and poverty remain persistent, women-owned enterprises have demonstrated significant resilience in sectors such as agriculture,

trade, and services, thereby making them critical to achieving sustainable development goals (SDGs).

Entrepreneurial training and skills development play a pivotal role in shaping the success of women’s entrepreneurship. Studies have shown that women entrepreneurs with adequate business training, mentorship, and vocational skills are more likely to establish enterprises that survive beyond the start-up stage and contribute to local economic growth (Eze et al., 2020; Chinomona & Maziriri, 2021). In Nigeria, however, entrepreneurial education and skill acquisition programs targeting women remain limited, poorly funded, or inaccessible to rural populations. This has created a knowledge and competency gap, which restricts women from fully exploiting business opportunities in a competitive market. Consequently, empowering women through structured entrepreneurial training is essential for

building their managerial capabilities and enhancing their contributions to sustainable economic development.

Cultural and social norms have also been identified as influential factors shaping women's participation in entrepreneurship. Patriarchal structures, gender stereotypes, and traditional expectations often discourage women from engaging in business activities or confine them to less profitable ventures (Adebayo & Ogundipe, 2021; UNESCO, 2022). In Delta State, cultural practices that prioritize male inheritance rights and limit women's access to land and property have further marginalized women entrepreneurs. Nonetheless, recent shifts in societal attitudes, advocacy for gender equality, and policy interventions have begun to challenge these constraints, enabling more women to embrace entrepreneurship as a pathway to empowerment. The interplay between entrenched social norms and emerging opportunities therefore requires closer examination, as it determines the extent to which women can transition from marginal roles to mainstream economic actors.

Another critical dimension influencing women's entrepreneurship is technology adoption and digital literacy. The rapid expansion of digital platforms, e-commerce, and financial technology (fintech) has created unprecedented opportunities for women to overcome traditional market barriers (Boateng et al., 2020; Nwosu & Ezenwafor, 2023). For example, mobile money services and online marketplaces provide women with access to financial inclusion and global value chains. However, disparities in digital literacy, inadequate access to internet services, and the high cost of ICT infrastructure continue to hinder many women in Delta State from harnessing these opportunities fully. Bridging this digital divide is therefore central to enhancing women's entrepreneurial performance and ensuring their enterprises contribute meaningfully to sustainable economic growth.

The nexus between women's entrepreneurship and sustainable economic development is particularly relevant for Delta State, Nigeria. Despite the state's rich endowment in oil and natural resources, unemployment, poverty, and environmental degradation persist, necessitating alternative pathways for inclusive growth (Okoh & Okwu, 2021; UNDP, 2023). Women entrepreneurs can play a transformative role in addressing these challenges by fostering local job creation, reducing economic dependency, and promoting environmentally sustainable business practices. By leveraging training, challenging restrictive social norms, and adopting digital innovations, women in Delta State can shift from the margins of economic activity to mainstream contributors to development. Hence, understanding how these factors collectively influence sustainable economic outcomes is vital for policy and practice.

Statement of the Problem

Despite growing recognition of women's entrepreneurship as a catalyst for inclusive development, women in Delta State continue to face multifaceted barriers that undermine their potential contributions. Entrepreneurial training opportunities remain inadequate, leaving many women without the managerial or technical competencies required for business success. Cultural and social norms rooted in patriarchal traditions continue to restrict women's access to resources and decision-making spaces, while digital exclusion limits their ability to exploit the benefits of technology in business. Consequently, women's enterprises often remain small-scale, underfunded, and confined to informal sectors, thereby reducing their impact on sustainable economic development. Although government and non-governmental organizations have introduced initiatives to support women entrepreneurs, the persistent gaps in training, cultural inclusivity, and digital adoption call into question the extent to which women's entrepreneurship has truly transitioned from the margins to the mainstream in driving sustainable economic development in Delta State.

Research Objectives

To examine women's entrepreneurship as a catalyst for sustainable economic development in Delta State. Specifically, the study objectives are to:

- i) determine the effect of entrepreneurial training and skills development on sustainable economic development in Delta State.
- ii) evaluate the influence of cultural and social norms on women's entrepreneurship and its contribution to sustainable economic development in Delta State.
- iii) assess the impact of technology adoption and digital literacy on sustainable economic development in Delta State.

Research Questions

The following research question were asked in line with the objectives:

- i) How does entrepreneurial training and skills development affect sustainable economic development in Delta State?
- ii) In what ways do cultural and social norms influence women's entrepreneurship and its contribution to sustainable economic development in Delta State?
- iii) What is the impact of technology adoption and digital literacy on sustainable economic development in Delta State?

Research Hypotheses

Based on the research questions the following hypotheses were formulated in null form:

H₀₁: Entrepreneurial training and skills development has no significant effect on sustainable economic development in Delta State.

H₀₂: Cultural and social norms do not significantly influence women's entrepreneurship and its

contribution to sustainable economic development in Delta State.

H03: Technology adoption and digital literacy has no significant effect on sustainable economic development in Delta State.

Study significance

This study is significant as it contributes to understanding how women's entrepreneurship can serve as a catalyst for sustainable economic development in Delta State by examining the roles of entrepreneurial training and skills development, cultural and social norms, and technology adoption and digital literacy. The findings will be valuable to policymakers in designing gender-sensitive policies that foster inclusive growth, to government and development agencies in structuring targeted interventions that empower women entrepreneurs, and to financial institutions in tailoring innovative support mechanisms for female-owned enterprises. Furthermore, the study will enrich academic literature by bridging gaps on the nexus between women's entrepreneurship and sustainable development in the Nigerian context, while also serving as a reference point for future researchers and advocacy groups committed to advancing gender equality and economic transformation.

Review of Related Literature

In order to provide a clear theoretical grounding and establish the foundation for empirical investigation, it is important to conceptualize the key variables underpinning this study. Conceptualization allows for an in-depth understanding of how entrepreneurial training and skills development, cultural and social norms, and technology adoption and digital literacy interact to influence sustainable economic development. Each concept represents a critical dimension of women's entrepreneurship, and their interrelationships highlight both opportunities and challenges faced by female entrepreneurs in Delta State. By systematically clarifying these constructs, this review not only situates the study within existing scholarship but also identifies how these variables have been defined, applied, and measured in prior research. This structured approach ensures that the study builds on established knowledge while addressing contextual gaps relevant to women's entrepreneurship and sustainable development in Nigeria.

Women's Entrepreneurship

Women's entrepreneurship in Delta State encompasses the diverse business ventures initiated and managed by women, ranging from informal trading to formal enterprises, with the potential to drive local development and reduce poverty. However, women entrepreneurs in the state continue to face several challenges that limit their effectiveness as catalysts for sustainable economic development. These challenges include restricted

access to finance and credit facilities (Alonso-González et al., 2021), inadequate entrepreneurial training and mentorship opportunities (Nwosu & Ezenwafor, 2023), cultural and social norms that reinforce gender stereotypes and limit property rights (Adebayo & Ogundipe, 2021), and a digital divide that hinders full participation in technology-driven markets (Nwosu & Ezenwafor, 2023). Consequently, many women-owned businesses remain small-scale, less competitive, and vulnerable to closure, necessitating an empirical study on how entrepreneurial training, cultural shifts, and digital empowerment can reposition women's entrepreneurship from the margins to the mainstream of Delta State's economic development (Okoh & Okwu, 2021).

Entrepreneurial Training and Skills Development

Entrepreneurial training and skills development are essential components in equipping women entrepreneurs with the capacity to establish, manage, and grow sustainable businesses. Such training encompasses technical knowledge, managerial competencies, financial literacy, and problem-solving abilities that enhance business resilience and innovation (Olawale & Adebayo, 2021; Abiola & Lawal, 2022; Urhibo, B. O., & Orhero, A. E. (2023)). In developing contexts like Nigeria, access to entrepreneurial training has been linked with improved opportunity recognition, competitive advantage, and the ability to sustain enterprises in volatile environments (Ihua et al., 2020). Moreover, structured skills development programs offered through vocational centers, incubators, and universities enable women to overcome business start-up challenges, particularly in navigating formal markets and regulatory frameworks (Fapohunda, 2021).

Beyond technical competence, entrepreneurial training also builds confidence, leadership, and negotiation skills, which are crucial for women entrepreneurs who often operate in male-dominated spaces (Chinomona & Maziriri, 2021; Afolabi et al., 2023). Evidence shows that women with continuous access to mentorship and professional networks exhibit higher enterprise survival rates and greater contributions to community development (Onyeiwu & Nwankwo, 2022). Training further enhances adaptability to market trends, enabling women entrepreneurs to diversify income sources and reduce vulnerability to external shocks such as economic downturns or pandemics (Eneh, 2020). Thus, entrepreneurial training is not only a tool for enterprise growth but also a strategic mechanism for fostering inclusive and sustainable economic development.

Cultural and Social Norms

Cultural and social norms significantly shape women's entrepreneurial participation and outcomes. In many African societies, patriarchal systems and traditional gender roles restrict women's access to

productive resources such as land, finance, and decision-making authority (Adebayo & Ogundipe, 2021; UNESCO, 2022). In Delta State, cultural expectations often confine women to domestic roles, thereby limiting their mobility, bargaining power, and ability to expand entrepreneurial activities beyond subsistence levels (Olowu, 2021). These restrictions create structural disadvantages, resulting in women's enterprises being smaller in scale, less profitable, and more vulnerable to closure compared to male-owned businesses (Alonso-González et al., 2021).

However, cultural and social norms are not static; evolving societal values, advocacy for gender equality, and exposure to global entrepreneurship models are gradually reshaping perceptions about women's roles in business (Okorie & Udeh, 2022; Ogu & Nwachukwu, 2023). Research indicates that communities that embrace more inclusive cultural practices witness higher levels of female participation in entrepreneurship and greater contributions to household income and local economic growth (Olaoye & Olaleye, 2022). Furthermore, supportive social networks, including women's cooperatives and associations, help female entrepreneurs navigate restrictive norms by providing solidarity, mentorship, and access to collective resources (Obi & Onwuka, 2020). Understanding the dual role of cultural and social norms—as both barriers and enablers—is therefore critical in assessing women's entrepreneurship and its link to sustainable economic development.

Technology Adoption and Digital Literacy

Technology adoption and digital literacy have emerged as transformative forces in women's entrepreneurship, enabling access to new markets, financial inclusion, and global value chains. Digital tools such as mobile money platforms, e-commerce websites, and social media marketing provide women entrepreneurs with low-cost and flexible avenues to expand business operations and reach customers (Boateng et al., 2020; Nwosu & Ezenwafor, 2023). In Nigeria, digital adoption has been shown to reduce information asymmetries, increase efficiency, and enhance competitiveness among women-owned businesses, particularly in urban areas where internet penetration is higher (Adediran & Oyebanji, 2022). However, limited access to ICT infrastructure, high costs of internet services, and gendered digital divides still constrain many women entrepreneurs in rural communities (Okeke & Nnamani, 2021).

Digital literacy, in particular, has been identified as a critical determinant of whether women can fully exploit the benefits of technological innovations. Women entrepreneurs with higher levels of ICT proficiency are better positioned to adopt fintech solutions, utilize online training programs, and develop innovative business models (Idris & Musa, 2020; Ogu & Eze, 2022). Conversely, inadequate digital skills often leave women dependent on traditional business practices that limit growth and sustainability. Addressing these challenges requires deliberate policies and training programs targeted at bridging the digital divide for women in Delta State. By strengthening technology adoption and digital literacy, women's entrepreneurship can become a more effective catalyst for sustainable economic development.

Sustainable Economic Development

Sustainable economic development refers to growth that meets present needs without compromising the ability of future generations to meet theirs, incorporating social equity, economic inclusivity, and environmental responsibility (UNDP, 2023; World Bank, 2023; Itiveh, & Omoye, 2023). In the context of Delta State, sustainable development is particularly urgent given the region's dependence on oil, which has led to environmental degradation, unemployment, and economic inequalities (Okoh & Okwu, 2021). Women's entrepreneurship provides an alternative pathway to economic diversification, as women-led enterprises often engage in sectors such as agriculture, services, and green innovations that promote community resilience and sustainability (Adewuyi & Olamide, 2022).

Moreover, research suggests that women entrepreneurs reinvest a significant portion of their income into families and communities, thereby fostering social development outcomes such as education, healthcare, and food security (Alvarez & Barney, 2020; Olaoye & Olaleye, 2022). When adequately supported through training, cultural inclusivity, and digital empowerment, women's entrepreneurship can contribute to job creation, poverty reduction, and more equitable income distribution in Delta State (UNESCO, 2022; Ogu & Nwachukwu, 2023). Thus, integrating women into the mainstream economy not only advances gender equality but also enhances the sustainability and inclusiveness of development in the state.

Conceptual Framework

Fig 1: Conceptual framework on women entrepreneurship and sustainable economic development (source: Researcher's construct, 2025)

Theoretical review

The study reviewed the following theory as it crucial to the study:

Sustainable Development Theory

The Sustainable Development Theory, rooted in the Brundtland Commission's definition of development that "meets the needs of the present without compromising the ability of future generations to meet their own needs," emphasizes a balanced integration of economic growth, social equity, and environmental sustainability. Scholars argue that sustainable development goes beyond mere economic expansion by incorporating inclusivity, resource efficiency, and resilience into developmental planning (Mensah, 2019; Purvis et al., 2019). In recent years, the theory has evolved to highlight the role of human capital and inclusive participation, stressing that marginalized groups, such as women, must be actively engaged in entrepreneurial activities for development to be truly sustainable (Sachs et al., 2022). This perspective underscores that empowering women entrepreneurs contributes not only to household welfare but also to long-term community prosperity, poverty reduction, and resilience in the face of global economic shocks (Kassie et al., 2022).

Anchoring this study on the Sustainable Development Theory is crucial because it provides a holistic framework for analyzing how entrepreneurial training, cultural and social reforms, and digital literacy among women can foster sustainable economic development in Delta State. Women's entrepreneurship, when strategically supported, aligns with the theory's call for inclusive growth by creating employment opportunities, promoting gender equality, and enhancing local innovation (Leal Filho et al., 2021). By focusing on women's empowerment, the study situates entrepreneurship as a transformative pathway to mainstream women into the productive economy, thereby reducing

inequalities and advancing the Sustainable Development Goals (SDGs), particularly Goals 5 (gender equality) and 8 (decent work and economic growth). Thus, the Sustainable Development Theory not only provides the philosophical foundation for the research but also justifies the investigation into how women entrepreneurs can serve as agents of sustainable development in Delta State.

Empirical Review

Authors who's work directly or indirectly linked to the study were reviewed and are being presented as follows:

Eze and Nwankwo (2021) investigated the role of entrepreneurial training in enhancing women's business performance in South-East Nigeria. The study adopted a descriptive survey design with a sample size of 420 women entrepreneurs selected using stratified random sampling. Findings revealed that women who participated in structured entrepreneurial training programs exhibited higher levels of innovation, competitiveness, and business sustainability compared to those who did not. However, the study was limited to South-East Nigeria and did not consider the peculiarities of Delta State, especially in relation to digital literacy and cultural barriers. This gap informs the current study, which focuses specifically on women entrepreneurs in Delta State.

Similarly, Chege and Wangari (2023) examined entrepreneurial education and women's enterprise growth in Kenya using a mixed-method design with 300 respondents. The study found that women who received entrepreneurial and financial skills training were more resilient during economic downturns and had a 40% higher survival rate than untrained counterparts. Although comprehensive, the study overlooked the influence of cultural and social norms in shaping women's entrepreneurial engagement. Hence, the present study integrates training with cultural and digital literacy factors in explaining

women's role in sustainable development in Delta State.

Okolie et al. (2020) explored how cultural norms affect women's entrepreneurship in Southern Nigeria using a qualitative case study approach with 50 in-depth interviews. Findings revealed that restrictive inheritance rights, domestic expectations, and patriarchal control over resources limited women's ability to scale their businesses. While rich in context, the study lacked quantitative analysis, making it difficult to generalize findings across larger populations. This gap necessitates a more comprehensive survey-based study in Delta State that combines cultural barriers with entrepreneurial training and digital adoption.

From another perspective, Urhibo and Orhero (2023) examined rural women empowerment and development in Nigeria using a descriptive survey design with a sample size of 280 women across rural communities in Delta and Edo States. Their findings revealed that women's empowerment through skills training and access to credit facilities significantly enhanced household income, children's education, and community development. However, the study focused broadly on empowerment in rural areas without explicitly integrating technology adoption or cultural norms as factors influencing women's entrepreneurship. This gap further justifies the present study, which examines how entrepreneurial training, cultural factors, and digital literacy collectively shape women's entrepreneurship as a driver of sustainable economic development in Delta State.

Agbam (2024), in her study on women's contributions to small-scale business development in Abraka, Delta State, highlights their vital yet often overlooked role in local economic growth. Surveying 370 women in sectors like petty trading, food vending, and agriculture, the study uses a functionalist framework to show how they foster socio-economic stability. Despite challenges like limited capital and family burdens, these women demonstrate resilience through communal savings, informal networks, and family support. Their efforts drive job creation and community cohesion. However, the study's narrow scope signals a need for policy-focused research to better integrate women into sustainable economic development frameworks.

In a quantitative study, Abubakar and Bala (2023) surveyed 250 women entrepreneurs in Northern Nigeria using a cross-sectional design. Results indicated that in communities where cultural norms shifted to support female entrepreneurship, women established cooperative societies that boosted household income and community development. Despite this positive insight, the study was limited geographically to the North and did not assess how social norms interact with digital literacy. The present research addresses this by examining how cultural and social norms interact with technology adoption to influence women's entrepreneurship in Delta State.

Nwosu and Ezenwafor (2023) conducted a survey of 310 women entrepreneurs in South-South Nigeria to assess the role of digital literacy in business growth. Using regression analysis, they found a significant positive relationship between digital skills and women's ability to expand market reach and improve profitability. However, the study focused only on digital literacy, neglecting other determinants such as training and cultural barriers. This creates a gap that the present study seeks to bridge by adopting a holistic framework combining training, culture, and digital adoption.

Chege and Wangari (2023) analyzed technology adoption among 280 Kenyan women entrepreneurs using structural equation modeling (SEM). The study revealed that women who adopted mobile banking and social media marketing achieved 35% more business growth compared to those relying on traditional methods. Nonetheless, the study did not account for regional differences in infrastructure challenges such as unreliable internet, which is a major issue in Delta State. This gap justifies the need for a localized study on women's technology adoption within Delta State's unique socio-economic environment.

Leal Filho et al. (2021) examined women's entrepreneurship and sustainable development across 10 African countries using a comparative panel analysis of 1,200 enterprises. Results indicated that women-owned enterprises contributed significantly to poverty reduction and job creation, especially in rural communities. However, the study's broad regional focus overlooked state-specific contexts such as Delta State, where cultural and infrastructural barriers remain strong. The present study narrows this gap by focusing on how women entrepreneurs in Delta State can drive sustainable economic development.

Okoh and Okwu (2021) studied the role of female entrepreneurship in economic transformation in South-South Nigeria using a descriptive survey with 370 respondents. Findings showed that states with higher levels of women's entrepreneurial participation experienced faster community development, especially in education and healthcare investment. Nevertheless, the study did not explicitly examine how entrepreneurial training, cultural norms, and digital literacy intersect to shape women's contributions to sustainability. This gap underscores the rationale for the current study, which integrates these independent variables to assess women's entrepreneurship as a driver of sustainable development in Delta State.

Research Methodology

The study adopted a descriptive survey research design, which was appropriate for examining the relationship between women's entrepreneurship and sustainable economic development in Delta State. This design was chosen because it enabled the collection of quantitative data from a large population, providing room for objective analysis

and generalization of findings. The design also allowed the researcher to investigate the influence of entrepreneurial training and skills development, cultural and social norms, and technology adoption and digital literacy on sustainable economic development using statistical techniques.

The population of the study consisted of registered women entrepreneurs operating in Delta State across various sectors such as trade, services, and small-scale manufacturing. According to the Delta State Ministry of Commerce and Industry, there were approximately 4,800 active women entrepreneurs as of 2023. This population was considered adequate because it represented a cross-section of women who were directly involved in entrepreneurship and potentially contributed to economic development in the state. The sample size for the study was determined using the Taro Yamane formula at a 5% margin of error, which produced a sample size of 370 respondents. A stratified random sampling technique was employed to ensure fair representation of women entrepreneurs across the three senatorial districts of Delta State. The use of this technique enhanced the representativeness of the sample by capturing the diversity of women engaged in entrepreneurship across urban, semi-urban, and rural areas.

Data for the study were collected primarily from primary sources. The researcher administered structured questionnaires to the selected respondents, with items designed in line with the study objectives and research questions. The questionnaire consisted of closed-ended questions measured on a 5-point

Likert scale, ranging from Strongly Agree (5) to Strongly Disagree (1). The main instrument used for the study was a structured questionnaire divided into two sections. Section A captured demographic information of respondents, while Section B focused on the independent and dependent variables of the study. Items in Section B were developed based on existing validated scales in entrepreneurship and development studies, which were adapted to suit the local context of Delta State. The instrument was subjected to both face and content validity by experts in entrepreneurship and development studies, who reviewed the items to ensure clarity, relevance, and alignment with the study objectives. Reliability of the instrument was tested using Cronbach's Alpha, and the overall reliability coefficient obtained was 0.83, indicating a high level of internal consistency and dependability of the instrument.

The data collected were analyzed using descriptive and inferential statistics. Descriptive statistics such as frequency distribution, mean, and standard deviation were used to summarize demographic variables and research questions. Inferential statistics including multiple regression analysis were employed to test the hypotheses and determine the extent to which entrepreneurial training and skills development, cultural and social norms, and technology adoption and digital literacy influenced sustainable economic development in Delta State. All analyses were conducted using the EViews Statistical Packages version 9).

The model of the study was specified as:

$$SED = \beta_0 + \beta_1 ETSD + \beta_2 CSN + \beta_3 TADL + \mu$$

Where:

SED = Sustainable Economic Development (Dependent Variable)

ETSD = Entrepreneurial Training and Skills Development

CSN = Cultural and Social Norms

TADL = Technology Adoption and Digital Literacy

β_0 = Constant term

$\beta_1 - \beta_3$ = Coefficients of the independent variables

μ = Error term

Result and Discussion

This section presents the results from the analysis of the questionnaire and the formulated hypotheses and

are being presented in tables of frequency, percentage, correlation matrix, vif and multiple regressions as follows:

Data presentation

Table 4.1 Analysis of Questionnaire Distributed

Questionnaire	Frequency	Percentage
Returned and used	348	94.05%
Invalid	15	4.05%
Not Returned	7	1.89%
Distributed	370	100

Source: Researcher's Computation, 2025

Table 4.1 shows the analysis of questionnaire distribution and retrieval. Out of the 370 questionnaires distributed, 348 were correctly completed and used for analysis, representing a high

response rate of 94.05%. This indicates strong participation and reliability of the data collected. Only 15 questionnaires, representing 4.05%, were found invalid due to incomplete or inconsistent

responses, while 7 questionnaires, representing 1.89%, were not returned at all. The high proportion of valid responses demonstrates that the data

gathered is robust and sufficient for meaningful statistical analysis, thereby strengthening the credibility and generalizability of the study's findings.

Table 2: Mean responses rate to question statements

S/N	Question Statement	Mean	Std	Remark
	Sustainable Economic Development (SED)			
1	My business has helped me to create jobs for others.	2.92	1.40	Disagree
2	My business has improved the wellbeing of my family.	3.11	1.49	Agree
3	Women's businesses help to reduce poverty in my community.	2.95	1.41	Disagree
4	Running a business has helped me earn steady income.	2.93	1.44	Disagree
5	My business supports practices that are good for the community and environment.	3.05	1.39	Agree
	Mean Aggregate	2.99	1.43	Disagree
	Entrepreneurial Training and Skills Development (ETSD)			
1	I have attended training that improved how I run my business.	3.01	1.45	Agree
2	Training has helped me know how to manage risks in business.	3.09	1.44	Agree
3	Skills I learned have made me more confident in my business.	3.00	1.38	Agree
4	Training has taught me how to handle money and plan better.	3.09	1.45	Agree
5	I have access to programs that help me improve my business skills.	2.99	1.43	Disagree
	Mean Aggregate	3.04	1.43	Agree
	Cultural and Social Norms (CSN)			
1	In my community, culture allows women to do business.	3.00	1.43	Agree
2	My family supports me in running my business.	2.86	1.44	Disagree
3	Cultural beliefs sometimes stop women from doing business.	3.13	1.36	Agree
4	Some people in society think women should not run businesses.	3.01	1.44	Agree
5	When women are recognized in the community, their businesses grow.	3.12	1.38	Agree
	Mean Aggregate	3.02	1.41	Agree
	Technology Adoption and Digital Literacy (TADL)			
1	I use phone apps (like WhatsApp or Facebook) to sell my products.	3.03	1.37	Agree
2	Mobile banking makes it easier for me to run my business.	3.00	1.45	Agree
3	Using technology helps me compete with others in business.	2.86	1.41	Disagree
4	I find it easy to learn and use new technology for my business.	3.07	1.41	Agree
5	Not knowing how to use technology is a problem for women like me.	3.04	1.42	Agree
	Mean Aggregate	3.00	1.41	Agree

Source: Researcher's Computation, 2025

The result from Table 4.2 indicates the mean responses and variability of opinions regarding Sustainable Economic Development. The aggregate mean score of 2.99 with a standard deviation of 1.43 shows that respondents generally disagreed that their businesses had made strong contributions to economic development. Specifically, the relatively low means of 2.92, 2.95, and 2.93 for job creation, poverty reduction, and steady income respectively, with standard deviations around 1.40, reflect weak consensus and limited economic impact in these areas. On the other hand, slightly higher means of 3.11 and 3.05 on family wellbeing and community-

friendly practices, coupled with standard deviations above 1.39, suggest that while there is agreement that women's businesses support households and social responsibility, the spread of responses indicates that the extent of this impact varies widely among participants.

For Entrepreneurial Training and Skills Development, the aggregate mean of 3.04 and a standard deviation of 1.43 indicate that respondents agreed that training has a positive effect on their business activities, though the level of agreement was moderate and responses were widely spread. Mean scores above 3.00 on areas such as risk management, financial

planning, and business confidence reflect the beneficial role of training, but the high standard deviations around 1.44 point to differences in the level of exposure and impact among women entrepreneurs. The lowest mean score of 2.99 on access to programs reveals that availability of consistent training opportunities remains inadequate, further supported by the relatively high variability across respondents.

Cultural and Social Norms recorded an aggregate mean of 3.02 and a standard deviation of 1.41, showing that respondents agreed that cultural and social structures play an important role in shaping women's entrepreneurship, but the variability suggests mixed experiences. The mean of 3.13 with a standard deviation of 1.36 on cultural beliefs limiting women, along with 3.12 on community recognition with a spread of 1.38, highlights that while recognition supports growth, entrenched cultural barriers remain significant. Family support, however, had a mean of 2.86 and a deviation of 1.44, showing disagreement and indicating that family structures are

less reliable in supporting women entrepreneurs, with responses differing widely.

Technology Adoption and Digital Literacy had an aggregate mean of 3.00 with a standard deviation of 1.41, reflecting general agreement that technology is useful but with moderate impact and wide response variability. For instance, the mean of 3.03 on the use of phone applications and 3.00 on mobile banking indicate positive use of basic digital tools, while the mean of 2.86 on competing with technology suggests that adoption is not yet translating into significant competitive advantage. Standard deviations around 1.37 to 1.45 imply that while many women are benefiting from technology, others still lag behind, particularly in advanced digital practices.

The means and standard deviations shows that while there is moderate agreement that women's entrepreneurship contributes to family welfare, social responsibility, training outcomes, cultural support, and digital adoption, the consistently high spread of responses across variables highlights uneven experiences and access, which limit the overall economic development impact in Delta State.

Table 3: Summary of Correlation Matrix for the Variables

Variable	ETSD	CSN	TADL	SED
ETSD	1.000			
CSN	-0.054	1.000		
TADL	-0.019	-0.018	1.000	
SED	0.395	0.198	0.450	1.000

Source: EViews 9v output, 2025

The correlation matrix shows the relationship among the study variables. Entrepreneurial Training and Skills Development (ETSD) has a moderate positive correlation with Sustainable Economic Development (SED) at 0.395, suggesting that training and skills significantly enhance women's contributions to economic growth. Cultural and Social Norms (CSN) has a weak positive correlation with SED at 0.198, implying that supportive cultural factors play a role, though less strongly, in fostering women's entrepreneurial impact. Technology Adoption and Digital Literacy (TADL) has the strongest positive correlation with SED at 0.450, indicating that the use

of technology is a key driver of women's businesses contributing to economic development. Interestingly, ETSD shows very weak negative correlations with CSN (-0.054) and TADL (-0.019), while CSN and TADL are also negatively but insignificantly related (-0.018), suggesting that training, cultural factors, and technology adoption may not directly reinforce one another, yet each independently relates positively to sustainable development. This highlights that while all three independent variables influence economic development, technology adoption appears to be the most critical contributor.

Table 4. Variance Inflation Factors

Date: 09/06/25 Time: 21:54

Sample: 370

Included observations: 348

Variable	Coefficient Variance	Uncentered VIF	Centered VIF
C	0.209199	82.90385	NA
ETSD	0.001561	6.571791	1.003320
CSN	0.016611	60.24741	1.003291
TADL	0.003841	14.69910	1.000700

Source: EViews 9v output, 2025

The Variance Inflation Factor (VIF) results in Table 4 indicate that multicollinearity is not a concern among the independent variables in the model. The centered VIF values for Entrepreneurial Training and Skills Development (1.003), Cultural and Social Norms (1.003), and Technology Adoption and Digital Literacy (1.001) are all very close to 1, which suggests minimal correlation between predictors and confirms that each variable contributes independently

to explaining Sustainable Economic Development. Although the uncentered VIF values are relatively high, particularly for CSN (60.25) and TADL (14.70), these are not relevant for assessing multicollinearity, as the centered VIF is the standard measure. Therefore, the results imply that the regression estimates are stable and reliable, with no inflation of standard errors due to collinearity among the explanatory variables.

Testing of Hypotheses

The following hypotheses were tested using multiple regression the result is being presented in table 5 hereunder:

H₀₁: Entrepreneurial training and skills development has no significant effect on sustainable economic development in Delta State.

H₀₂: Cultural and social norms do not significantly influence women's entrepreneurship and its contribution to sustainable economic development in Delta State.

H₀₃: Technology adoption and digital literacy has no significant effect on sustainable economic development in Delta State.

Table 5: Summary of Multiple Regression for hypotheses 1 to 5

Dependent Variable: SED

Method: Least Squares

Date: 09/06/25

Time: 21:49

Sample: 370

Included observations: 348

Variable	Coefficient	Std. Error	t-Statistic	Prob.
C	2.434663	0.457382	5.323038	0.0000
ETSD	0.399335	0.039513	10.10645	0.0302
CSN	0.716104	0.128882	5.556264	0.0410
TADL	0.696115	0.061973	11.23247	0.0120

Sum squared resid	302.0797	Schwarz criterion		2.763632
Log likelihood	-469.1676	Hannan-Quinn criter.		2.736982
F-statistic	82.38648	Durbin-Watson stat		2.045382
Prob(F-statistic)	0.000000			

Source: EViews 9v output, 2025

The regression results in Table 5 provide evidence on the effects of the independent variables on sustainable economic development (SED) in Delta State. Looking at the coefficients, ETSD has a positive and significant effect on SED ($\beta = 0.399$, $t = 10.11$, $p = 0.0302$), suggesting that improvements in women's training and skills significantly enhance their contributions to economic development. CSN also has a positive and significant effect ($\beta = 0.716$, $t = 5.56$, $p = 0.0410$), indicating that supportive cultural and social environments encourage women's entrepreneurial engagement in ways that foster sustainability. Similarly, TADL has the strongest positive effect ($\beta = 0.696$, $t = 11.23$, $p = 0.0120$), confirming that digital literacy and technology adoption are critical drivers of women's entrepreneurial impact on economic development.

The R-squared value of 0.418 indicates that about 42% of the variation in SED is explained jointly by entrepreneurial training and skills development (ETSD), cultural and social norms (CSN), and technology adoption and digital literacy (TADL), while the adjusted R-squared of 0.403 confirms that the model fits well after adjusting for the number of predictors. The overall F-statistic of 82.39 with a probability value of 0.000 shows that the model is statistically significant, meaning that the independent variables collectively predict SED effectively.

These results lead to the rejection of the three null hypotheses, as each independent variable showed significant positive influence on SED. Importantly, the Durbin-Watson statistic of 2.05 suggests no serious

autocorrelation problem, supporting the reliability of the estimates. In summary, the findings demonstrate that strengthening entrepreneurial skills, reshaping cultural norms, and enhancing digital literacy are crucial pathways through which women's entrepreneurship can serve as a catalyst for sustainable economic development in Delta State.

Discussion of Findings

The findings from the analysis are being discussed as follows:

Entrepreneurial Training and Skills Development and Sustainable Economic Development

The regression result revealed that entrepreneurial training and skills development (ETSD) had a positive and significant effect on sustainable economic development ($\beta = 0.399$, $p < 0.05$). This indicates that women who undergo training and acquire business skills are better positioned to grow enterprises that contribute to job creation, family welfare, and community development. This finding is consistent with the work of Ojong, Anuforo, and Akpan (2021), who observed that entrepreneurial training enhanced women's business resilience and innovation in Nigeria. Similarly, Akinwale and Akinbode (2020) confirmed that skill acquisition programs improved the survival rate of small and medium enterprises. However, other studies have cautioned that training alone does not guarantee business growth where there is limited access to finance and weak market linkages (Eze & Nnadi,

2022; Ali & Nwosu, 2021). From the Sustainable Development Theory perspective, this result emphasizes the importance of human capital development as a foundation for social and economic sustainability. By equipping women with relevant skills, training helps them to meet present economic needs while strengthening their long-term capacity to support sustainable community development.

Cultural and Social Norms and Sustainable Economic Development

The regression analysis further revealed that cultural and social norms (CSN) had a significant positive effect on sustainable economic development ($\beta = 0.716$, $p < 0.05$). This shows that supportive social structures and enabling cultural practices increase women's entrepreneurial participation and allow them to contribute more meaningfully to development. This finding agrees with Urhibo and Orhero (2023), who demonstrated that supportive rural cultural structures enabled women to expand their businesses and improve community welfare. In a similar vein, Kanu and Ugwu (2021) reported that cultural recognition and family support were critical for female entrepreneurship success in Southeastern Nigeria. On the other hand, Nwachukwu (2020) and Agbim (2021) argued that cultural constraints, such as discriminatory inheritance practices and patriarchal attitudes, still pose significant barriers that limit the scale of women's entrepreneurial activities. Viewed through the lens of Sustainable Development Theory, this result underscores the role of social inclusion, one of the key pillars of sustainability. Societal acceptance and supportive cultural attitudes toward women entrepreneurs not only improve economic outcomes but also ensure equity and fairness in development, helping women to balance present needs with long-term growth opportunities.

Technology Adoption and Digital Literacy and Sustainable Economic Development

The results also revealed that technology adoption and digital literacy (TADL) had the strongest positive effect on sustainable economic development ($\beta = 0.696$, $p < 0.05$). This shows that when women entrepreneurs use digital tools such as mobile banking, social media, and e-commerce platforms, they are able to expand market reach, improve efficiency, and generate greater community impact. This finding supports the work of Adesina and Ayo (2022), who reported that digital financial inclusion significantly improved women's entrepreneurial outcomes in Nigeria. Likewise, Nduka and Olayemi (2021) found that digital literacy increased women's competitiveness and participation in the formal economy. Conversely, Okafor (2020) and Musa (2021) found that infrastructural challenges, high internet costs, and the gendered digital divide limited

the extent to which technology could be leveraged by women entrepreneurs, especially in rural communities. In terms of Sustainable Development Theory, the positive effect of TADL suggests that technology strengthens the economic and social pillars of sustainability by improving productivity and inclusion. However, unless digital access is broadened equitably and infrastructural barriers are addressed, the full potential of women's entrepreneurship to contribute to long-term sustainable development will remain unrealized.

Conclusion

The findings of this study provide strong evidence that entrepreneurial training and skills development, cultural and social norms, and technology adoption and digital literacy significantly influence sustainable economic development among women entrepreneurs in Delta State. The results demonstrate that training equips women with vital skills for effective business management, while cultural and social support enhances women's participation in entrepreneurship despite existing gender barriers. Similarly, technology adoption and digital literacy emerged as powerful drivers of competitiveness and business growth, enabling women entrepreneurs to access wider markets and financial services. Collectively, these results highlight that sustainable economic development can be accelerated when structural, cultural, and technological enablers are integrated into women's entrepreneurial activities, reinforcing the relevance of Sustainable Development Theory in linking individual empowerment with broader economic transformation.

Recommendations

From the findings and conclusion, the following recommendations are being made:

- i) Government and development agencies should strengthen entrepreneurial training and skills development programs tailored to women, with a focus on practical financial literacy, risk management, and digital competencies, so that women entrepreneurs can enhance their confidence, competitiveness, and long-term business sustainability.
- ii) Community leaders, policymakers, and civil society organizations should actively challenge restrictive cultural and social norms by promoting gender-sensitive policies, awareness campaigns, and support networks that encourage family and societal acceptance of women's entrepreneurship as a driver of community-wide development.
- iii) Stakeholders in the private and public sectors should invest in affordable digital infrastructure and provide training opportunities that improve

women's digital literacy, enabling them to harness mobile banking, e-commerce, and online platforms to expand their markets, reduce transaction barriers, and contribute more effectively to sustainable economic development.

Abstract

This study examines the effect of fuel subsidy removal on consumer spending patterns in Etsako-west local government area of Edo state in perspective. The subsidiary objectives are to assess how factors such as fuel subsidy removal (FSR), consumer coping mechanisms (CCM), perceptions (CPR), adoption of alternative energy and transportation (AET), and inflation (INF) influence spending behaviour. A quantitative approach was used, with data collected using Likert-scale questionnaires administered across the region. Ordinal regression was employed for data analysis. Model fitting results showed that the full model significantly improved over the intercept-only model (Chi-square = 138.806, $p < 0.001$), with Pseudo R-square values (Cox & Snell = 0.431; Nagelkerke = 0.448) indicating moderate predictive power. The deviance goodness-of-fit test was satisfactory ($p = 1.000$), although the test of parallel lines was significant ($p = 0.000$), suggesting a violation of the proportional odds assumption. Among the predictors, only AET ($\beta = 2.272$, $p = 0.000$) and INF ($\beta = 1.209$, $p = 0.000$) were significant, indicating that inflation and the shift to alternative energy sources are key drivers of changes in spending patterns. FSR, CCM, and CPR were not statistically significant. The study concludes that economic constraints, not awareness or perception, drive consumer adjustment. It recommends government intervention to curb inflation and invest in accessible alternative energy and transport infrastructure. Future studies should explore income level as a moderating factor and consider alternative models for more robust analysis.

Keywords: *Fuel Subsidy, Fuel Subsidy Removal, Consumer Spending Patterns, Ordinal Regression, Etsako-west Local Government Area*

Introduction

Fuel subsidies, though intended to make energy affordable, impose heavy fiscal and social costs (Ovaga & Okechukwu, 2022). Global subsidy spending rose to \$1 trillion in 2022, exceeding aid allocations (International Energy Agency, 2022), with critics urging redirection to development (Couharde & Mouhoud, 2020; Ozili & Ozen, 2021). In Nigeria, subsidies introduced in the 1970s persisted despite failed removals in 1986 and 2012; by 2022, they consumed ₦4 trillion (23% of the budget), leading to their withdrawal in June 2023. While some studies highlight environmental benefits (Adekunle & Oseni, 2021; Asare et al., 2020), others stress corruption and economic instability (Omotosho, 2020; Umeji & Eleanya, 2021). The 2023 removal, lacking cushioning measures, caused fuel price hikes, inflation, and reduced household spending (Smith, 2016, as cited in Nwachukwu, 2023). Fuel subsidy removal (FSR) in

Nigeria has fueled inflation, reduced savings, and weakened SMEs, prompting coping strategies like carpooling (Francis & Lucas, 2023), and adoption of alternative energy e.g electric vehicles, solar powered electricity instead of fuel or diesel generators, etc.

Statement of the Problem

In Etsako-West Local government area, rising fuel costs strain households and businesses, cutting essential spending and deepening inequality. Despite its goal of fiscal stability, little research explores its local impact; this study examines how subsidy removal affects consumer spending patterns in the Etsako-west local government area.

Research Objectives:

The main objective of this research is to: examine the effect of fuel subsidy removal (FSR) on consumer spending patterns (CSP) in Etsako-west Local Government Area in perspective.

Specific objectives are to:

- i. determine the effect of consumer coping mechanisms (CCM) on consumer spending patterns (CSP) following fuel subsidy removal in Etsako-west Local Government Area.
- ii. assess the effect of consumer perceptions of fuel subsidy removal (CPR) on consumer spending patterns (CSP) in Etsako-west Local Government Area.
- iii. analyze how shifts to alternative energy sources and transportation (AET) affect consumer spending patterns (CSP) in Etsako-west Local Government Area.
- iv. evaluate the effect of inflation (INF) on consumer spending patterns (CSP) in response to fuel subsidy removal (FSR) in Etsako-west Local Government Area.

Based on the objectives provided, the researcher hereby posits the following hypotheses:

H₀₁: Fuel subsidy removal has no significant effect on consumer spending patterns in Etsako-West Local government area in of Edo state in perspective.

H₀₂: Consumer coping mechanisms (CCM) have no significant effect on consumer spending patterns (CSP) in Etsako-west Local Government Area.

H₀₃: Consumer perceptions of fuel subsidy removal (CFR) do not significantly affect consumer spending patterns (CSP) in Etsako-west Local Government Area.

H₀₄: Shifts to alternative energy sources and transportation (AET) have no significant effect on consumer spending patterns (CSP) in Etsako-west Local Government Area.

H₀₅: Inflation (INF) has no significant effect on consumer spending patterns (CSP) in Etsako-west Local Government Area.

Review of Related Literature

Concept of Subsidy: A subsidy is government financial support that reduces costs through direct payments, tax relief, or price controls to enhance welfare and affordability (Investopedia, 2015; Merriam-Webster, n.d.; Oxford Advanced Learner's Dictionary, n.d.). Subsidies may be direct, lowering prices immediately, or indirect, via regulations and investments (Alozie, 2009; Adebisi, 2011).

Concept of Fuel Subsidy: Fuel subsidy refers to selling petroleum products below production or importation costs, mainly Premium Motor Spirit (PMS) in Nigeria, as a market intervention to reduce public

burdens (Bakare, 2012; Gordon & Suzanne, 2023). These may take financial, labor, or consumption forms (Francis & Lucas, 2023).

Concept of Fuel Subsidy Removal (FSR):

Fuel subsidy removal is the withdrawal of government interventions that lower fuel costs, often sparking debate over its socio-economic implications (Centre for Public Policy Alternatives, 2012).

History of Fuel Subsidy Removal from 1973-2023

Since 1973, Nigeria has witnessed repeated subsidy removals and fuel price hikes under successive regimes, culminating in Tinubu's 2023 policy that raised prices to over ₦600 per litre (NNPC, 2024). The success of such reforms depends on phased implementation, transparency, and public trust, as poorly managed removals have fuelled protests, inequality, and corruption (CSEA, 2010; World Bank, 2010; Ikpeze et al., 2004). Nonetheless, potential benefits include fiscal savings for infrastructure and social services, as well as competition and investment in the petroleum sector (Oluwabukola, 2023; Civic Keypoint, 2023).

Fuel Subsidy Removal (FSR) and Consumer Spending Patterns (CSP):

Subsidy removal has reshaped consumption, particularly among low-income earners. Rising fuel and energy costs have encouraged shifts toward bicycles, electric vehicles, solar power, and compressed natural gas (Statista, 2024; Nwohu et al., 2023; Mutsaka, 2023).

Consumer Coping Mechanisms

Coping mechanisms include income diversification, cost-cutting, and carpooling, though these disproportionately burden poor households (Algorani & Gupta, 2022; Orluchukwu & ThankGod, 2024).

Fuel Subsidy Removal (FSR) and its effect on Inflation:

The policy has fuelled sharp inflation, reducing purchasing power and consumption expenditure, while increasing transport and production costs (Al-Awlaqi et al., 2018; Mohammed et al., 2020; Houeland, 2020; Ozili & Obiora, 2023). Although demand for petrol has declined, reliance on global oil prices suggests continued high costs, pushing consumers toward renewable alternatives (Raji, 2018).

Consumer Perceptions:

In areas like Etsako-West Local Government Area, consumers largely view subsidy removal as unfair and elite-driven, reflecting distrust in government and concerns over poor reinvestment of savings (Okereke et al., 2024). Households report significant erosion of purchasing power, forcing spending shifts toward

essentials (Salihu, 2023). Scepticisms persists regarding alternatives like CNG due to poor infrastructure (Mutsaka, 2023), while regional perspectives frame the

policy as deepening economic injustice in oil-producing communities (Meludu et al., 2024).

Table 2: Average Monthly Consumption of PMS (Petroleum Methylated Spirit) before and after Subsidy Removal

Month	Average Consumption	% Change
Jan., 2023	62.31 Million Litres	
Feb., 2023	66.44 Million Litres	↑6.63%
Mar., 2023	72.39 Million Litres	↑8.96%
April, 2023	69.62 Million Litres	↓3.83%
May, 2023	69.54 Million Litres	↓0.11%
June, 2023	49.84 Million Litres	↓28.33%
July, 2023	45.47 Million Litres	↓8.77%

Source: NMDPRA (Nigerian Midstream and Downstream Petroleum Regulatory Authority)

Data

Based on the data above, PMS consumption increased steadily from January to March 2023 due to economic activities and anticipated price changes, rising from 62.31 to 72.39 million litres. Demand stabilized from April to May, with minimal fluctuations, indicating market balance. However, subsidy removal in June led to a sharp decline (↓28.33%), followed by a further drop in July (↓8.77%) as consumers adjusted by reducing fuel usage. This decline impacts transportation, logistics, and overall economic activity. Policy interventions, such as public transport subsidies, could help stabilize consumption. The shift in consumer behaviour suggests a long-term reduction in fuel use unless prices are moderated.

Concept of Consumer Spending Patterns (CSP):

CSP refers to household purchasing behaviours shaped by income, prices, inflation, credit, consumer confidence, technology, and socio-cultural factors (Mankiw, 2019; Kotler & Keller, 2016). As the largest component of aggregate demand (Krugman & Wells, 2018), CSP shifts with economic cycles and social trends. Classical theories like Keynes' Absolute Income Hypothesis (1936) and Friedman's Permanent Income Hypothesis (1957) explain consumption behaviour relative to income levels.

Factors Influencing Consumer Spending Patterns (CSP):

Income determines consumption capacity (Case et al., 2020), while inflation reduces purchasing power and prioritizes essentials (Blanchard, 2021). Consumer confidence influences saving vs. spending (Deaton, 1992). Credit access stimulates but may later restrain consumption (Mishkin, 2016). Technology fosters online and impulse spending (Laudon & Traver, 2021), and socio-cultural shifts drive trends like eco-friendly purchases (Solomon, 2018).

CSP and Fuel Subsidy Removal (FSR):

Subsidy removal raises costs of fuel, transport, and goods, driving inflation and forcing households to prioritize basics over discretionary spending (World Bank, 2023; NBS, 2024; IMF, 2023). In Nigeria, the 2023 removal reduced purchasing power, triggered poverty, and shifted behaviour toward survival-focused consumption (World Bank, 2023).

Theoretical Framework:

Consumer Behaviour Theory (CBT) explains how price changes lead consumers to prioritize essentials, cut non-essentials, and seek alternatives (Howard & Sheth, 1969; Kotler & Keller, 2016). Rational Choice Theory (RCT) emphasizes cost-benefit decisions to maximize utility (Becker, 1976; Elster, 1989). This study adopts CBT for its focus on consumer responses to price shifts.

Empirical Review:

Studies show subsidy removal alters energy and transport choices, with households shifting to cheaper alternatives (Obinna, 2020; Lin & Kuang, 2020; Harring et al., 2023). In Nigeria, rising fuel prices increased reliance on public transport and ride-sharing (Akpan & Uford, 2024), while inflation eroded savings and widened inequality (Ogboru & Akinyotu, 2024; Abd Obaida et al., 2020). Evidence supports the inclusion of Alternative Energy & Transportation Shifts (AET) and Inflation Impact (INF) as key determinants of CSP post-FSR.

Methodology

This study adopted a descriptive survey design to examine the effects of fuel subsidy removal on consumer spending patterns in Etsako-west LGA. The population was 294,000 (NPC, 2022), and a sample size of 246 was determined using Freund and Williams' formula (1967) with parameters: $P = 0.8$, $Q = 0.2$, $Z =$

1.96, and $e = 0.05$ (Agbadudu, 2004). A pilot test 100 questionnaires (test-retest method) confirmed $P = 0.8$ and $Q = 0.2$. Respondents were selected via random sampling across towns and villages. Data were collected using a 5-point Likert questionnaire, and

analyzed with descriptive statistics (mean, SD) and ordinal regression, with hypotheses tested at $p < 0.05$. This approach ensured reliable assessment of subsidy removal's impact on consumer spending in the area.

Table 4.0: Presentation and Analysis of Data

Fuel Subsidy Removal (FSR)								
S/No	Questionnaire Item	SA	A	UD	DA	SD	STD	M
FSR1	The removal of fuel subsidies has led to a significant increase in my transportation costs.	246	0	0	0	0	105.1	49.2
FSR2	The prices of essential goods and services have increased since the fuel subsidy was removed.	235	7	4	0	0	99.95	49.2
FSR3	My household expenses have increased due to higher fuel prices.	230	8	0	8	0	99.87	49.2
Consumer Coping Mechanisms (CCM)								
CCM1	I have had to reduce my spending on non-essential items due to rising fuel costs	228	11	4	3	0	94.7	49.2
CCM2	I have switched to using more cost-effective transportation options	240	5	1	0	0	101.1	49.2
CCM3	I have adjusted my monthly budget to cope with the increased cost of goods and services.	223	15	2	6	0	94.7	49.2
Consumer Perception of Fuel Subsidy Removal (CPR)								
CPR1	I believe the removal of fuel subsidies was necessary for economic growth.	107	68	0	51	20	37.34	49.2
CPR2	I think the government made the right decision by removing the fuel subsidy.	82	30	2	78	54	30.08	49.2
CPR3	The fuel subsidy removal has had more negative effects than benefits for consumers.	230	15	1	0	0	90.58	49.2
Shift to Alternative Energy Sources and Transportation (AET)								
AET1	Due to high fuel prices, I am considering switching from fuel-powered vehicles to electric vehicles.	201	12	0	33	0	76.85	49.2
AET2	I have already adopted or plan to adopt solar power to reduce my electricity costs.	120	100	0	20	6	50.46	49.2
AET3	The use of electric vehicles and solar power is a viable solution to the current fuel crisis.	180	66	0	0	0	70.22	49.2
Impact of Inflation on Consumer Spending (INF)								
INF1	Inflation has significantly reduced my purchasing power	120	124	2	0	0	59.46	49.2
INF2	The high inflation rate has made it difficult for me to afford essential goods and services.	130	93	0	14	9	57.4	49.2
INF3	The rising cost of goods due to inflation has forced me to cut down on my savings and investments.	134	112	0	0	0	60.66	49.2
Consumer Spending Patterns (CSP)								
CSP1	Due to increased fuel costs, I have reduced my spending on essential goods and services.	190	50	0	6	0	72.85	49.2
CSP2	My monthly savings have decreased since the fuel subsidy was removed.	183	60	1	2	0	70.70	49.2
CSP3	I struggle to afford basic necessities due to rising living costs.	145	101	0	0	0	61.82	49.2
CSP4	My purchasing power has significantly reduced since fuel subsidy removal.	130	111	0	5	0	58.55	49.2

Source: Field survey, 2025

Descriptive Analysis of FSR, CCM, AET, INF, and CSP

Fuel Subsidy Removal (FSR): Findings show near-unanimous agreement that FSR raised transport costs, prices of essentials, and household expenses, with 100% confirming transport hikes and over 97%

acknowledging higher living costs. Mean responses (49.2) and SDs (99.87–105.1) confirm significant impact, highlighting need for policy support (World Bank, 2023). **Consumer Coping Mechanisms (CCM):** About 96% reduced non-essential spending, 99% shifted to cheaper transport, and 95% revised budgets,

indicating widespread behavioural adjustments to rising costs (NBS, 2024).

Consumer Perception (CPR): Public opinion remains divided—41% see FSR as necessary for growth, 29% disagree, and 53% oppose government’s decision. Yet 95% believe negative effects outweigh benefits, underscoring dissatisfaction and demand for mitigating policies (IMF, 2023).

Alternative Energy & Transport (AET): Many respondents consider solar power and electric vehicles as alternatives, signaling readiness for sustainable energy shifts, though affordability and infrastructure remain barriers (Harring et al., 2023).

Inflation Impact (INF): High inflation eroded purchasing power, curtailed access to essentials, and reduced savings/investments, worsening financial strain (Blanchard, 2021).

Consumer Spending Patterns (CSP): Rising fuel costs reduced savings, lowered purchasing power, and forced cutbacks even on essentials, reflecting declining financial stability in affected households (Akpan & Uford, 2024).

Demographic Analysis of the Respondents

Table 4.1: Gender Distribution Analysis

Gender	Frequency	%	Valid %	Cumulative %
Male	116	47.2	47.2	47.2
Female	130	52.8	52.8	100.0
Total	246	100.0	100.0	

Source: Field survey, 2025

The gender distribution analysis of respondents in Etsako-west local government area shows that 52.8% were female and 47.2% were male, indicating a slightly higher female participation. This suggests that women, who often manage household expenses, are more directly affected by rising costs due to fuel subsidy removal. Women may experience financial strain in budgeting for food, transportation, and healthcare, while men, especially in business and transport sectors,

may face income challenges due to increased operational costs. This highlights the need for gender-sensitive policies, such as transport subsidies for market women and financial support for male-dominated industries. Overall, both genders feel the impact, but women may bear a greater financial burden, necessitating targeted economic interventions to mitigate the effects of subsidy removal.

Table 4.2: Monthly household income

Source: Field survey, 2025

Income level	Frequency	%	Valid %	Cumulative %
Less than ₦50,000	141	57.3	57.3	57.3
₦50,000 - ₦100,000	34	13.8	13.8	71.1
₦101,000 - ₦200,000	22	8.9	8.9	80.1
₦201,000 - ₦500,000	27	11.0	11.0	91.1
Above ₦500,000	22	8.9	8.9	100.0
Total	246	100.0	100.0	

The analysis of monthly household income in the study indicates that 57.3% of respondents earn less than ₦50,000 per month, showing that the majority of households in Etsako-west local government are in the low-income category. Another 13.8% earn between ₦50,000 and ₦100,000, bringing the total percentage of respondents earning below ₦100,000 to 71.1%. This suggests that a significant portion of the population struggles with financial constraints, especially in light of fuel subsidy removal and rising costs. Only 28.9% of respondents earn above ₦100,000, with 8.9% earning

over ₦500,000. This small percentage of higher-income households suggests that a minority can absorb the economic shocks caused by subsidy removal. Given that most households have low earnings, the impact of fuel subsidy removal is likely severe, leading to reduced purchasing power, increased cost of living, and possible changes in spending patterns. Government interventions such as wage adjustments, price control policies, and social assistance programs may be necessary to support low-income earners.

Table 4.3: Means of Transportation

Means of Transportation	Freq.	%	Valid %	Cumulative %
Private Vehicle	53	21.5	21.5	21.5
Public Transportation	65	26.4	26.4	48.0
Motorbike/Tricycle	66	26.8	26.8	74.8
Walking/Cycling	62	25.2	25.2	100.0
Total Respondents	246	100.0	100.0	

Source: Field survey, 2025

The analysis of means of transportation among respondents reveals diverse commuting patterns in Etsako-west local government area. The most commonly used mode of transportation is motorbikes/tricycles, with 66 respondents (26.8%) relying on them. This suggests that these informal transport options play a significant role in mobility, possibly due to affordability and accessibility, especially in areas with poor road infrastructure. Public transportation follows closely, accounting for 26.4% (65 respondents). This highlights the reliance on buses and taxis for daily commuting, which may be influenced by fuel prices and public transport

availability. Walking or cycling is another significant mode, with 62 respondents (25.2%), indicating that a substantial portion of the population either prefers non-motorized transport or has limited access to motorized alternatives. Private vehicle ownership is the least common, with 53 respondents (21.5%) using their own cars. This relatively low figure suggests that the high cost of fuel and vehicle maintenance might be discouraging private car use. The findings align with the economic constraints affecting consumer spending patterns, as rising transportation costs could force individuals to adopt more cost-effective means of travel.

Table 4.4:

Tests of Normality						
Kolmogorov-Smirnova ^a				Shapiro-Wilk		
	Statistic	Df	Sig.	Statistic	Df	Sig.
CSP1	0.378	246	0.000	0.624	246	0.000
CSP2	0.403	246	0.000	0.591	246	0.000
CSP3	0.399	246	0.000	0.581	246	0.000
CSP4	0.403	246	0.000	0.604	246	0.000

Source: SPSS 25.0 Data Output

a. Lilliefors Significance Correction

All the four CSP variables significantly deviate from normality. This is because all the p-values (Sig.) are less than 0.05, leading to rejection of the null hypothesis for both tests. Therefore, the data is not normally distributed for any of the variables. This

implies that a non-parametric test will be appropriate for the analysis. It is therefore expedient for the researcher to apply ordinal regression which is also called ordinal logistic regression or PLUM in SPSS since it does not require normality of the independent or dependent variables.

Table 4.5: Test of Parallel Lines^a

Model	-2Log Likelihood	Chi-Square	Df	Sig.
Null Hypothesis	365.599			
General	287.864 ^b	77.735 ^c	40	0.000

a Link function: Logit.

Source: SPSS 25.0 Data Output

The p-value is significant (0.000), the parallel lines assumption is violated. This means the effects of

predictors are not constant across categories of CSP.

Table 4.6: Model Fitting Information

Model	-2Log Likelihood	Chi-Square	Df	Sig.
Intercept only	504.405			
Final	365.599	138.806	5	0.000

Link function: Logit

Source: SPSS 25.0 Data Output

Intercept Only -2 Log Likelihood = 504.405, this is the **baseline model** with no independent variables. It represents how well we can predict the dependent variable using only the average tendency (intercept). A higher -2LL value means poor fit — this model does not explain much. Final Model -2 Log Likelihood = 365.599, this model includes your predictors (independent variables — possibly CSP1 to CSP4). The sharp drop in the -2Loglikelihood value from 504.405 to 365.599 shows that: Adding the predictors has significantly improved the model's explanatory power. Chi-Square = 138.806 with df = 5, Sig. = 0.000. This

tests whether the final model is significantly better than the null model. Since $p = 0.000$, this is highly significant. **Interpretation:** There is strong evidence that at least one of your predictors significantly influences the dependent variable. We can reject the null hypothesis that "the predictors have no effect. The ordinal regression model significantly fits the data better than a model with no predictors. This means the independent variables (e.g., CSP1–CSP4) do help explain changes in the dependent variable (Likert-scale based), and the model is statistically valid for interpretation.

Table 4.7: Goodness-of-Fit

	Chi-Square	Df	Sig.
Pearson	937.117	418	0.000
Deviance	305.182	418	1.000

Link function: Logit

Source: SPSS 25.0 Data Output

Pearson Chi-Square: Chi-Square = 937.117, df = 418, Sig. = 0.000. This result tests whether the observed responses match what the model predicts. Because $p = 0.000$ (less than 0.05): It suggests a poor fit — that is, the model's predictions don't perfectly match the data.

Deviance Chi-Square: Chi-Square = 305.182, df = 418, Sig. = 1.000. This is a better indicator of model fit in

ordinal regression, $p = 1.000$ (greater than 0.05), this means the model fits the data well — the predicted responses are consistent with what was actually observed. This is the result that should be trusted when there is a conflict. Although the Pearson test flags a problem, the Deviance test confirms that the model is a good fit for the data.

Table 4.8: Pseudo R-Square

Cox and Shell	0.431
Nagelkerke	0.448
McFadden	0.171

Link function: Logit

Source: SPSS 25.0 Data Output

Cox and Snell $R^2 = 0.431$ **Suggests the model explains 43.1% of the variation in the dependent variable.** Nagelkerke $R^2 = 0.448$, this **adjusts Cox & Snell so that the maximum value can be 1.0. The model explains about 44.8% of the variation in**

the dependent variable (CSP), which is moderately strong. McFadden $R^2 = 0.171$ **suggests acceptable model performance.**

Source: SPSS 25.0 Data Output

Based on the table above, the key predictors shows that AET (statistically significant): Consumers shifting to alternative energy/transport strongly influences spending pattern. INF (statistically significant): Inflation has a powerful, direct influence on how consumers adjust their spending. Other variables (FSR, CCM, CPR) are statistically insignificant in this model context.

Fuel Subsidy Removal's Impact is Indirect, Not Direct. While fuel subsidy removal (FSR) is a critical economic policy change, the results indicate that its effect on consumer spending is not direct but rather manifests through other factors. The increase in fuel prices caused by subsidy removal has forced consumers to adapt in specific ways, primarily through changes in energy consumption and transportation choices (AET) and adjustments to inflation-induced price increases (INF). Shift to Alternative Energy and Transportation (AET) Captures Behavioural Adjustments. Rising fuel costs have compelled consumers to modify their spending

patterns by seeking alternatives such as public transportation, carpooling, or renewable energy sources for household and business use. This aligns with the study's objective of identifying how consumers adjust their spending priorities in response to policy-induced economic shocks. The removal of fuel subsidies has contributed to higher inflation, leading to an increase in the prices of goods, services, and overall cost of living. Since inflation reduces purchasing power, consumers are forced to reallocate spending, impacting their consumption habits across various sectors. The statistical significance of INF confirms that rising costs are a dominant factor shaping consumer spending decisions in the post-subsidy period.

Discussion of Findings

The findings of this study provide empirical support for the arguments and conclusions drawn by prior researchers regarding the impact of fuel subsidy removal on consumer spending patterns.

FSR (Fuel Subsidy Removal), CCM (Consumer Coping Mechanisms), and CPR (Consumer Perception of Fuel Subsidy Removal) from the study, were not statistically significant in influencing consumer spending patterns (CSP). Only AET and INF are the strongest and most reliable predictors, improving the explanatory power and robustness. The significant p-values (0.000) for AET and INF confirm that these variables have a strong, and have systematic effect on Consumer spending patterns (CSP).

Alternative Energy & Transportation Shift (AET) and Consumer Spending Patterns. The study reveals a strong positive relationship between shifts to alternative energy sources and transportation (AET) and consumer spending patterns. This finding is consistent with the work of Harring et al. (2023), who highlighted that socio-economic factors influence attitudes towards subsidy removal during energy transitions. Similarly, Lin and Kuang (2020) demonstrated that energy subsidy removal in China led to increased energy costs, forcing low-income households to adjust consumption behaviours. The significant effect of AET in the revised model underscores how Nigerian households and businesses are altering their spending priorities by adopting alternative energy sources e.g. fuel powered generators to solar powered electricity, fuel powered vehicles to Compressed Natural Gas (CNG) powered vehicles, and modifying transportation habits in response to rising fuel prices.

Impact of Inflation (INF) on Consumer Spending Patterns

The study also establishes that inflation has a statistically significant impact on consumer spending patterns. This aligns with Ogboru and Akinyotu (2024), who found that rising fuel prices reduce household purchasing power, leading to lower savings, limited access to

essential services, and increased poverty, particularly among vulnerable groups. Similarly, Akpan and Uford (2024) confirmed that inflationary pressures stemming from fuel price increases elevate the costs of consumer goods and services, affecting overall spending behaviour. The strong relationship observed in this study between inflation and consumer spending suggests that as prices rise, consumers are forced to prioritize essential goods while cutting back on discretionary expenditures, which mirrors findings in previous research.

Broader Economic and Social Implications

The study's findings reinforce Obinna (2020), who demonstrated that fuel subsidy removal in Maiduguri negatively impacted household livelihoods, with family size, dependency ratios, and education levels influencing the extent of the impact. The current study corroborates these observations by showing that inflationary pressures and shifts in energy use significantly reshape household financial decisions. Furthermore, Abd Obaida et al. (2020) explored how subsidy removal affects tax compliance behaviour among SMEs, which aligns with the present study's suggestion that businesses are experiencing operational cost increases, leading to changes in their financial planning and expenditure patterns. The findings of this study are in line with existing literature, reinforcing the argument that fuel subsidy removal significantly alters consumer spending behaviour through inflationary pressures and shifts in energy and transportation usage. These results confirm that Nigerian households and businesses are adapting by prioritizing essential expenditures, seeking alternative energy sources, and making adjustments to transportation choices to mitigate rising costs.

Conclusions and Recommendations

Conclusions

This study examined the impact of fuel subsidy removal on consumer spending patterns in Etsako-west local government of Edo state, Nigeria. The findings revealed that AET and INF significantly influence consumer spending behaviour, confirming previous studies that highlighted the economic strain caused by fuel price fluctuations and inflationary pressures. The results indicate that rising fuel costs drive consumers to seek alternative energy sources and modify their transportation choices, which in turn affects overall expenditure patterns. Furthermore, inflation exacerbates the financial burden on consumers, leading to reduced discretionary spending and altered consumption behaviour.

The study thus aligns with existing literature, which underscores the adverse effects of subsidy removal on low-income households, small businesses, and economic stability. The revised model effectively captures the essential drivers of consumer spending shifts in response to subsidy removal, emphasizing the need for targeted economic policies that mitigate these adverse effects.

Recommendations

Based on the study's findings, the following recommendations are hereby proposed:

1. *Government Policy Intervention:* Policymakers should implement cushioning mechanisms such as targeted subsidies for essential commodities, transportation support, and incentives for alternative energy adoption to reduce the economic burden on consumers.
2. *Investment in Alternative Energy Sources:* The government and private sector should invest in affordable and sustainable energy solutions, such as solar and compressed natural gas (CNG), to provide cost-effective alternatives to fuel-dependent transportation and household energy needs.

3. *Monetary and Fiscal Policy Adjustments:* Inflation control measures, such as stabilizing the exchange rate and reducing import duties on essential goods, should be prioritized to minimize inflationary pressures on consumer spending.

4. *Consumer Awareness and Adaptation Strategies:* Public awareness campaigns should be initiated to educate consumers on cost-saving measures, energy-efficient alternatives, and strategic financial planning in response to changing economic conditions.

5. *Support for Small and Medium Enterprises (SMEs):* Special financial aid programs, tax incentives, and low-interest credit facilities should be provided to SMEs to help them cope with rising operational costs due to subsidy removal.

6. *Further Research:* Additional studies should explore the long-term implications of subsidy removal on economic growth, household welfare, and business sustainability, considering regional variations and evolving policy landscapes.

These recommendations, if implemented, will help mitigate the adverse effects of fuel subsidy removal, promote economic stability, and support consumer resilience in Nigeria's dynamic economic environment.

Fuel Subsidy Removal and Cost Of Food Production in Akoko-Edo Local Government Area of Edo State.

¹ABOKHE, Victor Jesse, ²OGBEIDE, Frederick & ³OKE Chris

^{1,2&3}Department of Political Science and Public Administration,
Edo State University, Iyamho, Edo State, Nigeria.
ogbeidefrederick@gmail.com

Abstract

Following the policy change in 2023, this study looks at how the elimination of fuel subsidies affected the cost of food production in the Akoko-Edo Local Government Area in Edo State, Nigeria. Data were gathered via questionnaires utilizing a survey study methodology with a sample of 369 respondents chosen using Taro Yamane's formula. Descriptive statistics and Pearson's correlation coefficient were used for analysis. Removing subsidies is strongly positively correlated with higher food production costs, especially for inputs like seeds and fertilizers, and worse agricultural output ($r = +0.78$ to $+0.90$, $p < 0.001$). The report emphasizes Akoko-Edo's susceptibility to food insecurity because of its dependence on small-scale agricultural production and inadequate infrastructure. To reduce expenses, specific financial assistance for farmers and investments in renewable energy are suggested. This study highlights the need for initiatives to improve food security in the face of rising fuel prices and offers localized insights to Edo State's agricultural strategy.

Key words: Fuel Subsidy, Food Production, Food Security.

Introduction

Essentially, fuel subsidies are governmental interventions that lower the price of fossil fuels for end-users, allowing them to purchase these resources at a rate that is below the market value (Ovaga & Okechukwu, 2022). It Helps mitigate the impact of volatile global oil prices on domestic economies, stabilizing energy costs, which can have wide-ranging effects on various sectors, including agriculture.

Globally the financial strain of subsidy sustenance is expected to be \$1trillion in 2022 which towers above projected global aid of \$204 billion same year exceeding government revenue

of many developing countries and this underscores the sustainability of subsidies in long term (International Energy Agency 2022)

In Nigeria, the history of fuel subsidies dates back to the 1970s, following the oil price shock of 1973. Although partially removed in 1986 the most notable removal occurred in 2012 which led to widespread protests and social unrest forcing its reinstatement and by 2022 the fiscal burden had surged to ₦4 trillion representing 23% of the national budget. increasing to ₦6 trillion in the first quarter of 2023, reflecting a growing financial burden (National Bureau of Statistics, 2024).

There is a global focus on the removal of subsidy for reallocation of funds to other sectors (Couharde & Mouhoud, 2020; Ozili & Obiora 2023). In Nigeria, the inability of the government to sustain the high cost of subsidies has intensified debates about their removal. On one hand, some research suggests that eliminating fuel subsidies could lead to environmental benefits, such as reduced carbon emissions and fiscal relief (Omitogun et al., 2021; Adekunle & Oseni, 2021; Afriyie et al., 2020). On the other hand removing subsidies might lead to increased inflation and economic instability, as higher fuel prices could drive up costs across various sectors (Omotosho, 2020; McCulloch et al., 2021).

Given the close connection between energy prices and agricultural practices, the elimination of fuel subsidies may have a significant effect on food production. Fuel, for example, is necessary to run farm equipment, move cargo, and run storage facilities. Higher fuel prices have been shown to raise farmers' operating expenses which could lead to worsening food insecurity (Meyer & von Cramon-Taubadel, 2004).

Because of its mountainous surroundings and reliance on smallholder farming, Akoko-Edo Local Government Area is particularly susceptible to price increases in fuel for mechanized agriculture and transportation. As a result, the loss of fuel subsidies has a particular effect on the cost of food production in this area. This study closes this knowledge gap by examining how the loss of fuel subsidies affected the costs of food production in Akoko-Edo. It also offers localized insights to enhance food security and guide Edo State's agricultural policy.

Statement of the Problem.

With Akoko-Edo Local Government posited in a geographical location that supports agricultural production, the people living in this area possess agriculture as a major economic base of the society. In Akoko-Edo Local Government which

is a local government whose inhabitants are majorly farmers with agriculture playing a major economic role in the local government area, the food supply system was efficient in the consistent production and supply of food, ensuring production and distribution of food products in the region leading to a competitive market which creates a good level of affordability and attaining food security in the region. Contrastingly, the introduction of the policy eliminating fuel subsidies in 2023 has had a profound effect on economic and social activities in Akoko-Edo Local Government Area of Edo State, Nigeria, as it is observable that there have been increase in the price of fuel which has a bearing on other aspects of the society in the region with food security just as the International Food Policy Research Institute (2024) recorded that the increment in cost of fuel has also led to a decline in agricultural productivity, as farmers are unable to afford the increased costs of fuel and other inputs . The People have suffered greatly as a result of the elimination of gasoline subsidies because of the vitality of gasoline to agriculture which facilitates food security amongst the population of the region. As such the research delved into how the elimination of fuel subsidies affected the production of food in the Akoko-Edo Local Government Area of Edo State, Nigeria in 2024 in a bid to proffering recommendations that would help salvage the situation in Akoko-Edo Local Government Area

Empirical Review

Umar and Umar (2013) studied the "Impact of Fuel Subsidy Removal on Agricultural Production among Smallholder Farmers in Niger State, Nigeria" They looked at how the removal of gasoline subsidies by the Nigerian government will affect smallholder farmers, who are essential to the nation's agriculture industry. In order to choose 120 smallholder farmers from two local government areas (LGAs) recognized

for their contributions to agriculture, the research uses a multi-stage sampling technique. Structured interviews, focus groups, and in-depth interviews were used as data collection techniques. The study focused on the socioeconomic traits of farmers, the effect of transportation costs on the availability of agricultural products, and the marketing implications of the removal of fuel subsidies. Descriptive statistics and logit regression methods were used in the analysis to evaluate the connection between agricultural productivity and transportation expenses.

The results show that young farmers, aged 20 to 29, make up the majority of responders (64.2%), suggesting a youth-dominated agro workforce. Increased transportation costs as a result of the elimination of fuel subsidies have a negative impact on the accessibility and sale of agricultural products. Due to these growing costs, farmers reported major difficulties reaching markets, which hindered their capacity to sell goods profitably and decreased their income. The report also emphasizes the socioeconomic ramifications of eliminating subsidies, pointing out that even though numerous farmers have families and have modest households, the adverse consequences of the policy may limit their ability to expand and become more productive. There are calls for immediate intervention since the government is not doing enough to alleviate these detrimental effects.

The report makes a number of suggestions to help smallholder farmers overcome their difficulties. In order to lessen the hardships brought on by the elimination of subsidies, it highlights the necessity of reviewing subsidy policies and putting in place well-structured palliatives. In order to improve agricultural products' access to markets, the research also supports infrastructure improvements and transportation cost subsidies. To make sure that help reaches individuals in need, a variety of parties must be included in the distribution

process. In the end, the study emphasizes how crucial it is to carry out in-depth research on the ramifications of policies before to their implementation in order to prevent unjustly harming the populace, especially in the agricultural industry, which is crucial for Nigeria's supply of food and economic stability.

Akinyemi et al. (2017) investigated the performance of Nigeria's agriculture sector and the modeling of the elimination of fuel subsidies utilizing the dynamic computational general equilibrium technique. They came to the conclusion that the agricultural sector in Nigeria would be affected by the elimination of fuel subsidies in a number of ways. However, the agricultural sector would fare better in a scenario where the subsidies are removed completely, as most of the major macroeconomic variables—capital, imports, exports, and output—will increase. Then, despite the fact that there will be temporary price hikes, it is suggested that doing away with the fuel subsidy altogether will enhance the productivity and performance of the agricultural industry. The agricultural sector's performance and outputs are therefore advised to be strengthened by a one-time elimination of fuel subsidies, even if this will cause short-term price increases due to the costly nature of production, inputs, and transportation. When money is set aside for technological and infrastructure advancement, the industry would eventually profit, it would increase Nigeria's growth and food security.

Udoh et al (2023) focuses on the impact of fuel subsidy removal on the living standards of rural communities in the oil-producing Niger-Delta region, particularly in Akwa Ibom State, Nigeria. The research emphasizes the negative impacts of eliminating subsidies on these villages, whose residents mainly rely on petroleum goods due to inconsistent electricity, using ideas of community growth and empowerment. The results demonstrate that increases in fuel prices have dramatically increased living expenses,

especially for vulnerable rural people already confronting destitution and inadequate infrastructure. The elimination of fuel subsidies has increased the cost of necessities like food, transport, and energy, making the region's economic problems worse. As costs rise, communities that depend heavily on small-scale industries and fisheries have suffered a severe reduction in economic activity. The study points out that even while fuel subsidies were riddled with inefficiencies and corruption, communities suffer more when they are eliminated without sufficient safety nets or substitutes for employment. The report recommends that the government allocate the savings from the elimination of subsidies in a transparent manner to infrastructure, healthcare, and education, among other vital areas. Targeted initiatives are also advised in order to lessen the strain on the most disadvantaged groups. In order to prevent economic disparities from getting worse, the research highlights the necessity of policies that strike a balance between fiscal reforms and social protections.

Raifu and Afolabi (2024) emphasized the inflationary consequences of premium motor spirit price (PMS) and projected how much PMS Price will contribute to inflation in Nigeria. Demonstrating that while, there is a small variation in the inflationary impact in both urban and rural regions, premium motor spirit price primarily controls the path of inflation in Nigeria. The current gasoline subsidy has a long-lasting inflationary effect, which emphasizes the necessity to implement methods to lessen Nigeria's rising inflationary pressures. The Nigerian government ought to specifically redeploy the money saved from the elimination of subsidies toward modernizing the nation's refineries. Before renovating the other refineries, the nation should first make sure that the one with the lowest cost is completely operational. Moreover, specific financial transfers to...Before renovating the other refineries, the nation should

first make ensure that the refinery with the lowest cost is completely operational. In order to offset inflationary pressures and lessen the immediate impact of an increase in oil prices on living expenses, targeted financial transfers should be made to areas that are particularly vulnerable, especially those in rural communities. Adeoye (2024) looks into how Nigerian food prices are affected by the elimination of gasoline subsidies. The study investigates the relationship between gasoline and food prices using econometric analysis. The study's primary conclusions are: Food costs rise significantly as a result of the elimination of fuel subsidies; this increase is greater for staple commodities such rice, beans, and maize. The elimination of gasoline subsidies has a greater effect on food prices in cities than in rural areas. According to the study, a ten percent rise in fuel costs causes food prices to rise by 2.5%. Food security could decline as a result of the elimination of fuel subsidies, especially for low-income households. According to the study's findings, the elimination of fuel subsidies significantly affects food costs across the nation and may cause food insecurity, especially for disadvantaged groups. The author advises authorities to take steps to lessen the possible impact of eliminating fuel subsidies on food costs and to ensure food security. In summary, the research offers significant understanding of the correlation between gasoline and food costs in Nigeria and emphasizes the necessity for policymakers to take into account the possible consequences of eliminating fuel subsidies on food security.

Theoretical Review

This paper adopts the Price Transmission Theory (PTT) which is a crucial concept in understanding how changes in input prices affect output prices and ultimately food supply. The theory is built on the concept of price transmission, which refers to the process by which changes in prices are transmitted from one

market to another. Price Transmission Theory has been extensively studied and developed by various economists and researchers, and its applications are diverse, ranging from agricultural markets to international trade. One of the profound contributors to Price Transmission Theory is Alfred Marshall, who introduced the concept of price transmission in his book "Principles of Economics" (1920). Marshall explained how changes in input prices, such as labor and capital, affect output prices and ultimately influence the supply of goods. He argued that price transmission is a crucial mechanism that enables markets to adjust to changes in supply and demand.

Another significant contributor to Price Transmission Theory is John Maynard Keynes, who developed the idea of price transmission in his book "The General Theory of Employment, Interest and Money" (1936). Keynes emphasized the importance of price transmission in understanding how changes in aggregate demand affect output and employment. He argued that price transmission is a key mechanism that enables markets to adjust to changes in aggregate demand. Paul Samuelson, in his book "Economics: An Introductory Analysis" (1952), further developed the theory of price transmission. Samuelson explained how price transmission works in different markets, including agricultural markets, and how it affects food supply. He argued that price transmission is a crucial mechanism that enables markets to adjust to changes in supply and demand. In recent years, Price Transmission Theory has been applied to various areas, including agricultural markets, international trade, and food security.

The application of Price Transmission Theory to the removal of fuel subsidies in Nigeria is crucial in understanding the potential effect on food supply and food security. Nigeria is a significant producer and consumer of food, and policies that result in changes in input prices,

such as fuel prices, can significantly affect food prices and ultimately food security. The removal of fuel subsidy in Nigeria as a government policy action, will likely lead to increased transportation costs and attendant cost in price of food product affecting food security and supply. Price Transmission Theory examines how government policy resulting in changes of input prices such as fuel affect output prices food prices and ultimately food supply. The theory is built on the concept of price transmission, which refers to the process by which changes in prices are transmitted from one market to another.

Methodology

this paper adopts the survey research design to investigate the impact of fuel subsidy removal on food production. a design noted for its cost-effectiveness and simplicity (Obaze & Onosu, 2009). The target population is 371,942 residents of Akoko-Edo Local Government Area, as reported by the Edo State Atlas (2022), which includes business men and women, farmers, students, professionals, and other occupational groups which are all affected by food production and supply chain

To ensure manageability a sample size of approximately 400 was determined using the Taro Yamane's Formula with 5% margin of error to ensure statistical representativeness (Yamane 1967) The Formula is given as:

$$n = \frac{N}{1 + N(e^2)}$$

With n being the sample size, N being the population size (371942) and e, the margin of error (0.05) which resulted to

$$n = \frac{371,942}{1 + 371,942(0.05^2)} \approx 400$$

Simple random sampling was used to select respondents, ensuring that every individual had an equal chance of being included and enhancing generalizability within the study area (Obaze &

Onosu, 2009). Table 1 shows that a wide range of perspectives on the expenses of food production were represented in the sample, including those of farmers (28.45%), transporters (8.40%), businesses (20.59%), and students (19.78%).

Data was collected using a standardized questionnaire designed to assess how the cost of food production would change if fuel subsidies were removed. The questionnaire was divided into two sections: The biodata, such as gender, length of residency, and occupation, a 5-point Likert scale (Strongly Agree = 5, Agree = 4, Undecided = 3, Disagree = 2, Strongly Disagree = 1) was used to gauge opinions regarding cost increases in food production, production inputs (such as seeds and fertilizers), production methods, and energy sources. The questionnaire was previously tested with 20 respondents who were not incorporated in the sample to ensure maximum clarity and reliability. Good internal consistency is shown by its Cronbach's alpha of 0.82.

Data collection was conducted in-person by research assistants, ensuring high-quality data and notable response rates. A total of 369 valid

answers representing 92.25% of the total questionnaires distributed, were looked at. Descriptive statistics (frequencies and percentages) were used to produce the biodata and Likert scale responses, as indicated in Tables 1 and 2. By using Pearson's correlation coefficient to analyze the relationships between the removal of fuel subsidies and variables such as food production costs, production inputs, and levels of food production, the hypothesis H_0 : The removal of fuel subsidies has no significant effect on food production in Akoko-Edo L.G.A.) was tested. The analysis was conducted using SPSS version 23, and the significance threshold was set at $p < 0.05$.

Data Collection And Analysis

For the purpose of this study, data was collected to study the Nexus between the removal of fuel subsidy and food production and also test the hypothesis as stated below in gaining clarity on the subject matter:

H_0 the removal of fuel subsidy has no significant effect on food production in Akoko-Edo L.G.A.

H_1 the removal of fuel subsidy has significant effect on food production in Akoko-Edo L.G.A

Table1: Bio Data Presentation.

	ITEM	FREQUENCY	PERCENTAGE
Gender of Respondents	Male	204	55.28%
	Female	165	44.71%
	Total	369	100%
How Long Have You Resided in Akoko-Edo	2years	0	0%
	3years	5	1.35%
	4years	20	5.42%
	5years and above	344	93.22%
	Total	369	100%

Occupation of Respondents	traders	76	20.59
	Contractor	26	7.04
	Engineer	6	1.62
	Farmer	105	28.45
	Self employed	42	11.38
	Student	73	19.78
	Teacher	6	1.62
	Transporter	31	8.40
	Unemployed	4	1.08
	Total	369	100%

Source: field survey by researcher (2024).

The table presents bio data from respondents, revealing that 55.28% were male and 44.71% were female. The respondents' length of residency and occupation were also recorded. 0% lived in the area for 2 years, while 1.35% lived for 3 years, 20 for 4 years, and 93.22% lived for over 5 years. This indicates that respondents lived beyond the research period, providing valid information.

Occupations were also analyzed. 29.59% of respondents were into business, 7.04% were contractors, 1.62% were engineers, 28.45 were

farmers, 11.38% were self-employed, 19.78% were students, 1.62% were teachers, 8.40% were transporters, and 1.08% were unemployed. These responses reflect the entire society, broadening the perspectives covered by the responses. High-level responses were found from farmers, transporters, and business people who are stakeholders in the food production and supply chain. Overall, the data provides a comprehensive view of the respondents' experiences and perspectives.

Table2: Cost of Food Production in Akoko-Edo

Respondents' Responses on the Impact of Fuel Subsidy Removal on the Cost of Food Production in Akoko-Edo.

S/N	Items	SA (%)	A (%)	UD (%)	D (%)	SD (%)
1	Removal of fuel subsidy has increased the cost of food production in Akoko-Edo	37(10.2%)	244(66.12%)	88(23.84%)	0(0%)	0(0%)
2	The removal of fuel subsidy has led to the increase in cost of food production inputs such as seeds, fertilizers, pesticides etc in Akoko-Edo.	81(21.95%)	219(59.34%)	69(18.69%)	0(0%)	0(0%)

3	There has been changes in food production methods in Akoko-Edo, as result of the increased cost associated with production due to the removal of fuel subsidy	102(27.64%)	258(69.91%)	9(2.43%)	0(0%)	0(0%)
4	Do you agree that Fuel subsidy removal has negatively affected the energy sources required for food production in Akoko-Edo	84(22.76%)	249(67.47%)	26(7.04%)	10(0.27%)	0(0%)

Source: field survey by researcher (2024)

The study reveals that the removal of fuel subsidies has significantly increased the cost of food production. The majority of respondents, 10.02 percent, strongly agree that the removal of fuel subsidies has increased the cost of inputs such as seeds and fertilizers. The remaining respondents, 23.84 percent, are undecided on the issue.

The removal of fuel subsidies has also led to an increase in the cost of production inputs. 81 respondents, 21.95 percent, agree that the removal of fuel subsidies has led to an increase in production inputs. 59.34 percent of respondents agree that the removal of fuel subsidies has led to an increase in production inputs.

The removal of fuel subsidies has also resulted in a reduction in food production. 69.91 percent of respondents agree that there has been a reduction in food production due to increased costs after the subsidy removal. 2.43% of respondents are undecided on the issue.

Fourthly, 84 respondents, 22.76 percent, strongly agree that the removal of fuel subsidies has affected the ability of residents to produce food. 67.4 percent of respondents agree that the removal of fuel subsidies has affected food production.

Summarily, the majority of respondents agree that the removal of fuel subsidy has increased the cost of food production by leading to increased cost of inputs such as seeds and fertilizers. A significant number of respondents

also reported that food production in the area has decreased due to increased costs.

Hypothesis Testing

Null Hypothesis (H_0): the removal of fuel subsidy has no significant effect on food production in Akoko-Edo L.G.A.

Alternative Hypothesis (H_1): the removal of fuel subsidy has significant effect on food production in Akoko-Edo L.G.A

To test this hypothesis, we performed a correlation analysis on the responses related to the cost of food production and the perceived effect on food production in Akoko-Edo L.G.A

Table2: Correlation Analysis

Variables	Correlation Coefficient (r)	p-value
Subsidy removal and cost of food production	+0.87	<0.001
Subsidy removal and increase in production inputs	+0.81	<0.001
Reduction in food production due to cost	+0.90	<0.001
Ability to produce food	+0.78	<0.001

Source: field survey by researcher (2024)

Interpretation: The correlation coefficients indicate a strong positive relationship between fuel subsidy removal and the cost of food production, as well as the overall effect on food production in Akoko-Edo. All examined correlations were statistically significant with a p-value <0.001 which enables us to reject the null hypothesis. Thus the results affirmed that fuel subsidy removal significantly increases food production cost and negatively impacts food production levels in Akoko-Edo.

Discussion of Findings

Subsequently at this point the study discusses the findings from the data that has been analyzed and hypotheses tested and this is as follows:

The removal of the fuel subsidy has led to a substantial increase in the cost of food production in Akoko-Edo, which means that there is increased costs of production, inputs (such as seeds and fertilizers), and fuel have negatively affected food production levels in the region. And this is consistent with the position of various other studies such as Oyinlola & Yusuf (2015) which stated that the removal of fuel subsidies has led to a significant increase in the cost of fuel, which has in turn increased the cost of production for farmers. Decreased irrigation: Fuel subsidies elimination has made it difficult for farmers to power irrigation systems, leading to reduced crop yields also in same vein FAO, (2020) stated that The increased cost of fuel has made it difficult for farmers to use mechanized farming techniques, leading to reduced productivity and Adebayo & Ojo (2020) made it known that Fuel subsidies elimination has led to higher transportation costs, making it more expensive for farmers to

transport their produce to markets also The increased cost of fuel has made it difficult for farmers to transport fertilizers to their farms, leading to reduced fertilizer use

Summary, Conclusion.

This study provides a novel analysis of how food production in the predominantly rural Akoko-Edo Local Government Area of Edo State is affected by the removal of fuel subsidies. In contrast to more general studies that focus on national or regional consequences (e.g., Udoh et al., 2023, on Akwa Ibom; Akinyemi et al., 2017, on Nigeria), this study highlights Akoko-Edo's specific problems, such as its dependency on smallholder farmers (28.45% of respondents) and its lack of infrastructure for mechanized farming. Strong correlations ($r = +0.78$ to $+0.90$, $p < 0.001$) between greater production costs and the elimination of subsidies demonstrate how Akoko-Edo's mountainous terrain raises fuel and transportation costs, limiting the market access of staple commodities like cassava and yam.

These findings contribute to Edo State's policy debate and mitigate the impact of subsidy removal by emphasizing the necessity for targeted interventions, such as fuel subsidies for farmers or investments in rural roads. Unlike oil-producing regions like Akwa Ibom, where petroleum availability may buffer subsidy effects, Akoko-Edo's non-oil-producing status enhances economic vulnerabilities (Udoh et al., 2023). Thus, this study informs Edo State's agricultural plan, which supports regional systems for support to sustain farmers' livelihoods and food security in Akoko-Edo.

conclusively, The study clearly demonstrate that the removal of fuel subsidies has had a significant negative effect on food production in Akoko-Edo Local Government Area. The findings align with the broader literature, and theoretical explanations which suggests that the removal of fuel subsidy leads to fuel price increase typically lead to higher cost of agricultural mechanization and other input costs. the results from the correlation analysis reveal that; Food production has been severely impacted by the increased cost of inputs such as seeds, fertilizers, and fuel for farm equipment which is as a result of the removal of fuel subsidy and This aligns with previous studies that show how increased fuel prices lead to reduced agricultural productivity (IFPRI, 2024).

Recommendation

Haven Observed the impact of fuel subsidy removal on food production it is recommended that Smallholder farmers in Akoko-Edo should be provided with financial and technical support to help them cope with the increased cost of production. Government both at the state and local level, and non-governmental organizations can provide subsidies, grants, or low-interest loans to farmers to purchase essential inputs and equipment.

Also In the long term, the government should explore sustainable energy alternatives such as renewable energy solutions to reduce the country's dependence on fuel. This will help stabilize fuel prices and reduce the volatility of production costs.

GIG Economy: A Paradigm Shift in Micro-Entrepreneurship, Implications for Growth of Small & Medium Scale Enterprises In Delta State, Nigeria

ODITA, Anthony Ogomgbunam¹ & OFILI, Peter Nkeonyeasua²

Department of Marketing & Entrepreneurship,

Faculty of Management Sciences,

Delta State University, Abraka

oditao@delsu.edu.ng

Abstract

This study examines the impact of gig economy on business growth of micro, small and medium-scale enterprises in Delta State, Nigeria. Gig economy, with specific focus on workforce composition (WC), talent sourcing and management (TSM), digital platforms (DP), and task and project design (TPD), and their impact on business growth (BG) among micro, small and medium-scale enterprises in Delta State, Nigeria. Using quantitative research methods, responses from the respondents were collected with the aid of five (5) likert scale questionnaire. A total of three hundred and sixty-three (363) questionnaires were administered to owners and managers of micro, small and medium enterprises in Delta State, Nigeria. However, two hundred and ninety-nine (299) were retrieved and properly filled while 64 (17.63%) were not properly filled. The useable questionnaire represents 82.37 percent of the total questionnaire administered, which shows that two hundred and ninety-nine (299) respondents is sufficient for the study. The research questions were analyzed with the aid of descriptive statistics and correlation matrix. The hypothesized relationships between variables of the study were validated using the multiple regression statistical tools with the aid of SPSS version 23. Findings revealed that workforce composition (WC), talent sourcing and management (TSM), digital platforms (DP), and task and project design (TPD) all significantly influence business growth (BG), with TPD having the most substantial effect, contributing a 38.4% increase in BG for every 1% improvement. WC, although positively correlated, exhibits a relatively lower impact compared to other variables, contributing 2.4% to Business Growth (BG). TSM and DP show substantial positive effects, with increases of 25.8% and 4.2% respectively for each percentage improvement. In conclusion, the gig economy offers immense potential for driving the growth of micro, small and medium enterprises in Delta State, Nigeria. The study recommends that enterprises should adopt inclusive recruitment and training practices to build a diverse and capable workforce. Businesses should prioritize strategies for sourcing, retaining, and developing skilled talent to enhance organizational efficiency and competitiveness. This study contributes to the understanding of gig economy dynamics in the Nigerian micro, small and medium enterprises' sector.

Introduction

The gig economy, characterized by short-term, flexible, and on-demand work engagements facilitated primarily through digital platforms, has emerged as a transformative force in the global labor market. This paradigm shift is underpinned by the interplay of workforce composition, talent sourcing and management, digital platforms, and task and project design, all of which have implications for business growth, particularly for small and medium-scale enterprises (SMEs) and other forms of micro enterprises. In the context of Delta State, Nigeria, the adoption and integration of gig economy frameworks

present unique opportunities and challenges, necessitating an in-depth exploration of the nexus between these factors.

Workforce composition in the gig economy is distinguished by its heterogeneity, encompassing freelancers, independent contractors, and part-time workers who contribute to various industries. This evolving composition is reshaping traditional employment patterns, with implications for micro enterprises and SMEs, which often lack the resources to maintain extensive full-time staff. The flexibility offered by gig workers allows SMEs to scale operations efficiently, aligning labor costs with demand

fluctuations. Studies have indicated that SMEs leveraging gig workers can enhance operational efficiency and adapt quickly to market dynamics (Kalleberg & Dunn, 2020; Wood et al., 2021). However, the absence of regulatory frameworks in many regions, including Nigeria, poses challenges related to worker rights and benefits, creating a precarious balance between cost-efficiency and ethical labor practices (Stewart & Stanford, 2021).

Talent sourcing and management have undergone significant transformation in the gig economy. Digital platforms serve as intermediaries, connecting SMEs with a global pool of skilled professionals. These platforms, such as Upwork and Fiverr, provide SMEs in Delta State with access to specialized skills that may be scarce locally, fostering innovation and competitiveness. Research highlights that effective talent management strategies, including clear communication, fair compensation, and performance monitoring, are critical to maximizing the potential of gig workers (Lepanjuuri et al., 2021). Despite these advantages, SMEs often face challenges in maintaining quality and consistency in service delivery, particularly when engaging remote gig workers from diverse cultural and professional backgrounds (Murray et al., 2022). Ensuring alignment between organizational goals and the capabilities of gig workers remains a priority for sustainable growth.

Digital platforms are the cornerstone of the gig economy, facilitating seamless interactions between employers and gig workers. These platforms leverage advanced algorithms and data analytics to match skills with tasks, optimize project timelines, and enhance transparency. In Delta State, where internet penetration and digital literacy are progressively improving, the adoption of such platforms is gaining momentum. Studies underscore the role of digital platforms in democratizing access to opportunities for SMEs, enabling them to compete in broader markets (Kenney & Zysman, 2020; Codagnone et al., 2022). However, the reliance on digital platforms also introduces vulnerabilities, including cybersecurity risks, platform dependency, and algorithmic biases that may affect fairness in worker selection and compensation (Aloisi & De Stefano, 2021). Addressing these issues is essential to ensure equitable and sustainable integration of digital platforms in the local gig economy.

Task and project design is a critical determinant of success in the gig economy. SMEs must strategically define and structure tasks to maximize productivity and efficiency while accommodating the diverse expertise of gig workers. Effective project design involves clear objectives, realistic timelines, and measurable deliverables, fostering a collaborative environment even in remote work settings. Research suggests that well-structured tasks contribute to higher job

satisfaction among gig workers and improve outcomes for businesses (Petriglieri et al., 2022). For SMEs in Delta State, understanding the nuances of task design in the gig economy can enhance their ability to harness the potential of a diverse and distributed workforce. Nevertheless, cultural and contextual factors, such as language barriers and differing work ethics, may influence the effectiveness of task execution, necessitating tailored approaches to project management (Osoba et al., 2021).

The relationship between the gig economy and business growth is multifaceted, with SMEs in Delta State uniquely positioned to benefit from this emerging paradigm. By leveraging the gig economy, these enterprises can access cost-effective labor, expand their service offerings, and respond agilely to market demands. Empirical studies have demonstrated that SMEs engaging with the gig economy often experience improved financial performance and increased innovation capacity (Katz & Krueger, 2021; Schömann et al., 2022). However, the full potential of the gig economy can only be realized with supportive policies and infrastructure, including reliable internet connectivity, affordable digital tools, and frameworks for fair labor practices. In Delta State, addressing these gaps is crucial to fostering an enabling environment for Micro- Enterprises and MEs to thrive in the gig economy.

Moreover, the gig economy's impact on SMEs extends beyond operational efficiency to include broader socioeconomic implications. For instance, the inclusion of marginalized groups, such as women and youth, in gig work can contribute to poverty alleviation and economic empowerment (Heeks et al., 2021). In Delta State, where unemployment and underemployment rates remain significant, the gig economy offers a viable pathway to job creation and skills development. However, the informal nature of gig work often excludes workers from social protection schemes, such as health insurance and retirement benefits, exacerbating vulnerabilities for the most disadvantaged groups (De Stefano et al., 2021). Policymakers and stakeholders must prioritize the integration of social safety nets to ensure that the benefits of the gig economy are equitably distributed.

Technological advancements are instrumental in shaping the trajectory of the gig economy. The proliferation of artificial intelligence, machine learning, and blockchain technology is redefining how tasks are assigned, monitored, and compensated. For SMEs in Delta State, embracing these technologies can enhance operational efficiency and competitiveness. Studies highlight that blockchain-based smart contracts, for example, can automate payment processes and ensure transparency in transactions, reducing disputes and fostering trust between gig workers and employers

(Sundararajan, 2020; Agrawal et al., 2022). However, the high costs associated with adopting advanced technologies and the limited availability of technical expertise in the region pose significant barriers to their widespread implementation. Bridging these gaps through capacity-building initiatives and strategic partnerships is essential for SMEs to fully leverage the potential of emerging technologies.

Cultural attitudes and societal norms also play a critical role in shaping the adoption and effectiveness of the gig economy in Delta State. Traditional perceptions of work and employment, which often prioritize stability and long-term engagement, may conflict with the flexibility and transience inherent in gig work. Studies have shown that cultural acceptance of gig work is a significant predictor of its success, influencing worker motivation and employer trust (Friedman, 2021; Anwar & Graham, 2022). In Delta State, fostering a cultural shift towards embracing gig work requires concerted efforts from educational institutions, industry stakeholders, and policymakers. Initiatives such as awareness campaigns, training programs, and success stories can help demystify the gig economy and promote its benefits to a broader audience.

The regulatory landscape is another critical factor influencing the growth of the gig economy in Delta State. While the absence of stringent labor laws governing gig work provides flexibility for SMEs, it also raises concerns about worker exploitation and job security. Comparative studies from other regions highlight the importance of balanced regulations that protect worker rights without stifling innovation and entrepreneurial activity (Huws et al., 2021; Vallas & Schor, 2020). For Delta State, developing a regulatory framework that addresses these dual objectives is imperative to creating a sustainable gig economy ecosystem. Collaborative policymaking involving government agencies, industry leaders, and worker representatives can ensure that regulations are both inclusive and contextually relevant.

Thus, the gig economy represents a dynamic and multifaceted phenomenon with significant implications for SMEs in Delta State, Nigeria. By examining the interplay of workforce composition, talent sourcing and management, digital platforms, and task and project design, this study provides a comprehensive understanding of how these factors can influence business growth. While the gig economy offers unprecedented opportunities for SMEs and micro enterprises to enhance their competitiveness and innovation capacity, addressing challenges related to regulation, technology adoption, and cultural acceptance is critical to realizing its full potential. Through targeted interventions and collaborative efforts, Delta State can harness the transformative

power of the gig economy to drive sustainable economic development and improve livelihoods.

Defining the Problem

The gig economy has increasingly become a focal point of global labor market transformations, offering unprecedented flexibility and access to specialized talent through digital platforms. However, despite its rapid adoption, significant gaps persist in understanding its implications for micro, small and medium-scale enterprises, particularly in regions like Delta State, Nigeria. Existing literature largely emphasizes the gig economy's potential for cost reduction and efficiency (Kalleberg & Dunn, 2020; Wood et al., 2021), yet the nuanced challenges SMEs face in effectively integrating gig work remain underexplored. For instance, issues such as inconsistent regulatory frameworks, limited access to digital infrastructure, and cultural barriers unique to local contexts have received scant attention (Stewart & Stanford, 2021; Osoba et al., 2021).

Furthermore, while studies have examined the role of digital platforms in talent sourcing and task management (Codagnone et al., 2022; Murray et al., 2022), there is limited empirical evidence on how SMEs in developing regions leverage these platforms to foster innovation and growth. The impact of workforce composition and project design on SME performance, particularly in relation to sustainability and scalability, also remains inadequately addressed in the literature (Petriglieri et al., 2022; Schömann et al., 2022). Additionally, the broader socioeconomic implications of the gig economy, such as its role in addressing unemployment and fostering inclusivity, are yet to be fully understood in the context of Delta State. This study seeks to bridge these gaps by examining the interplay of workforce composition, talent sourcing and management, digital platforms, and task and project design within the gig economy, with a focus on their collective impact on SME growth in Delta State, Nigeria. By addressing these variables, the study aims to provide actionable insights for policymakers, industry stakeholders, and SMEs to harness the potential of the gig economy while mitigating its challenges.

Literature Review

Conceptual Review

Gig Economy

The gig economy refers to a labor market characterized by short-term contracts or freelance work as opposed to permanent jobs. It is facilitated primarily by digital platforms that connect workers with tasks or clients on-demand. According to Aloisi and De Stefano (2021), the gig economy has become a significant component of global labor markets, offering flexibility to

employers and workers alike. However, its rise has also introduced challenges, such as job insecurity and a lack of traditional employment benefits (Wood et al., 2021). In developing economies like Nigeria, the gig economy is increasingly recognized as a solution to unemployment and underemployment, although its impact on long-term economic stability remains debatable (Osoba et al., 2021).

Workforce Composition (WC)

Workforce composition refers to the demographic, educational, and skill-based attributes of employees within an organization. In the context of the gig economy, workforce composition is dynamic and diverse, often involving individuals from various cultural and professional backgrounds (Heeks et al., 2021). SMEs leveraging the gig economy must adapt to this diversity to maximize productivity and foster innovation. Kalleberg and Dunn (2020) argue that effective workforce management within the gig economy requires balancing flexibility with inclusivity, ensuring that workers from varied backgrounds can contribute meaningfully to organizational goals.

Talent Sourcing and Management (TSM)

Talent sourcing and management involve identifying, recruiting, and retaining individuals with the skills needed to fulfill organizational objectives. In the gig economy, this process is often mediated by digital platforms, which enable access to a global pool of freelancers and contractors. Codagnone et al. (2022) highlight that effective talent sourcing in the gig economy requires robust digital tools and clear communication channels. However, managing gig workers presents unique challenges, including ensuring engagement and maintaining quality standards without the traditional structures of full-time employment (Petriglieri et al., 2022).

Digital Platforms (DP)

Digital platforms are the backbone of the gig economy, providing the infrastructure for connecting workers with clients and facilitating task execution. Platforms such as Upwork, Fiverr, and Uber have transformed how businesses operate by enabling cost-efficient access to specialized talent (Murray et al., 2022). These platforms also empower SMEs by reducing transaction costs and expanding market reach. However, their effectiveness is contingent on reliable internet access and user-friendly interfaces, which can be a limitation in developing regions like Delta State (Schömann et al., 2022).

Task and Project Design (TPD)

Task and project design in the gig economy involves structuring work to optimize efficiency, innovation, and worker satisfaction. Effective task design ensures clarity, achievable timelines, and fair compensation, which are critical in retaining gig workers and maintaining productivity (Friedman, 2021). Stewart and Stanford (2021) emphasize that poorly designed tasks can lead to dissatisfaction and high turnover rates among gig workers, undermining organizational performance. SMEs must therefore invest in developing well-defined and flexible project structures that cater to both organizational needs and worker preferences.

Business Growth (BG)

Business growth encompasses the expansion of an organization's operations, market share, and profitability. For SMEs, growth often hinges on the ability to innovate, adapt to market changes, and optimize resource utilization. Kenney and Zysman (2020) argue that the gig economy offers SMEs a unique opportunity to scale operations by accessing specialized talent on-demand. However, sustainable growth requires addressing challenges such as regulatory compliance, worker retention, and the integration of digital tools (Vallas & Schor, 2020).

Gig Economy and Business Growth

The interplay between the gig economy and business growth is multifaceted, offering both opportunities and challenges for SMEs. Digital platforms enable SMEs to reduce costs, increase efficiency, and expand their customer base, thereby fostering growth (Huws et al., 2021). However, the reliance on gig workers also introduces risks, such as inconsistent quality and limited worker loyalty (Wood et al., 2021). In the context of Delta State, Nigeria, leveraging the gig economy for business growth requires addressing systemic issues such as digital literacy, infrastructure gaps, and cultural barriers (Osoba et al., 2021). Schömann et al. (2022) emphasize that while the gig economy can drive innovation and scalability, its benefits are maximized when coupled with strategic workforce management and robust task design frameworks.

Theoretical Review

Theoretical frameworks provide essential perspectives for understanding complex phenomena. In examining the interplay between the gig economy and business growth, particularly in small and medium-scale enterprises (SMEs) in Delta State, Nigeria, two theories—Resource-Based View (RBV) and Transaction Cost Economics (TCE)—stand out as pivotal. These theories help elucidate how

organizational resources and cost structures can be optimized to harness the potential of gig work effectively.

The Resource-Based View (RBV) emerged in the 1980s through the works of scholars like Wernerfelt (1984) and Barney (1991). RBV posits that an organization's competitive advantage lies in its ability to acquire and utilize resources that are valuable, rare, inimitable, and non-substitutable (VRIN). This theory emphasizes internal capabilities and resources—such as human capital, technology, and organizational processes—as the foundation of sustainable business growth. In the context of the gig economy, RBV is relevant as it highlights how SMEs can strategically leverage the unique skills and talents of gig workers to drive innovation, productivity, and scalability. Workforce composition (WC), talent sourcing and management (TSM), and digital platforms (DP) align with RBV principles, as they enable SMEs to access specialized knowledge and skills, often unattainable within traditional employment structures.

The Transaction Cost Economics (TCE) theory, introduced by Coase (1937) and developed further by Williamson (1975), focuses on the costs associated with economic transactions. It examines the trade-offs between using market mechanisms and hierarchical organizational structures to execute tasks. TCE suggests that firms aim to minimize transaction costs, which include search and information costs, bargaining costs, and enforcement costs. In the gig economy, digital platforms (DP) play a critical role in reducing these costs by providing streamlined interfaces for matching gig workers with employers, enabling efficient task and project design (TPD). For SMEs, understanding these cost dynamics is essential to optimizing resource allocation and ensuring profitability.

Both theories offer unique lenses for analyzing how the gig economy impacts business growth. RBV emphasizes the strategic use of internal and external resources, aligning closely with workforce composition and talent management. For instance, SMEs in Delta State can capitalize on the diverse skill sets available in the gig economy to enhance their competitive edge. On the other hand, TCE provides a framework for understanding how digital platforms and effective task design reduce transaction costs, enabling SMEs to scale operations while maintaining efficiency. The theories are complementary in highlighting how SMEs can leverage gig economy dynamics for sustainable growth. The gig economy has reshaped traditional labor practices globally, offering SMEs in developing regions like Delta State a unique opportunity to address challenges such as limited access to skilled labor and

high operational costs. However, this integration also presents challenges, including managing a fragmented workforce and ensuring task alignment with organizational goals. By applying RBV and TCE, this study provides a nuanced understanding of how workforce composition, talent sourcing and management, digital platforms, and task and project design collectively influence SME growth. The findings will not only bridge theoretical gaps but also offer practical solutions for SMEs seeking to thrive in the dynamic gig economy landscape.

Empirical Review

Ifeanyi, Onwuka and Emaviwe (2024) explored the impact of customer service management on the survival of MSMEs in Asaba, Delta State, Nigeria. The researchers employed a descriptive survey research design, collecting data through structured questionnaires from MSMEs in Asaba. The data analysis was conducted using correlation analysis and OLS regression with SPSS version 25. The findings revealed that customer service significantly affects the survival of MSMEs. The study concluded that customer-related factors were crucial for MSME success and recommended investing in customer satisfaction programs, improving customer support systems, and developing strong retention strategies.

Oniku, Akpata and Abiodun (2024) examined the influence of the gig economy on millennial lifestyles and purchasing behavior in Lagos, Nigeria. An empirical approach was used to collect data from millennials in Lagos. The data analysis was based on empirical analysis techniques. The study found that the gig economy had a substantial influence on the lifestyles and purchasing behavior of millennials, particularly in urban areas. The study concluded that businesses should tailor their marketing strategies to accommodate the shifting behaviors of millennials in the context of the gig economy.

Ifeanyi, Nwaosu and Ezeanokwasa (2024) studied the effect of digital knowledge on market positioning of MSMEs in Asaba, Delta State, Nigeria. A descriptive survey research design was adopted, with data collected using structured questionnaires from MSMEs in the region. The data analysis employed arithmetic mean, correlation analysis, and OLS regression with SPSS version 25. The study revealed that e-commerce adoption and digital literacy had a positive impact on market positioning, while digital skill training had a positive insignificant effect in the short term. It recommended prioritizing e-commerce and digital literacy while managing cybersecurity efforts effectively and aligning digital skill training with long-term objectives.

Ajiboye, (2023) explored the role of digital platforms in transforming workforce composition and task

management in Nigerian SMEs. The study used a mixed-methods approach, combining both qualitative and quantitative research designs. Data were sourced from SMEs in Lagos and Delta States through surveys and interviews. The data were analyzed using thematic analysis and descriptive statistics. The findings indicated that digital platforms facilitated better workforce flexibility, leading to enhanced business efficiency and growth. The study concluded that the integration of digital tools could significantly improve task management in Nigerian SMEs and recommended increased investment in digital infrastructure.

Eze and Nwachukwu (2023) investigated the role of workforce composition in the gig economy and its effects on SME growth in Delta State, Nigeria. The researchers used a cross-sectional survey design, with data collected from 250 SME owners through structured questionnaires. The data analysis employed chi-square tests and regression analysis. The findings revealed that diverse workforce composition positively influenced the productivity and innovation capacity of SMEs. The study concluded that SMEs should prioritize workforce diversity as a strategy for fostering innovation and business growth in the gig economy, recommending policies to promote inclusivity and diversity in workforce composition.

Odita (2023) aimed to examine social media marketing strategies adopted by SMEs for business survival in Delta State, Nigeria. A descriptive survey research design was used, and data were gathered through a self-structured questionnaire from 398 registered SMEs in Delta State. Descriptive and inferential statistics, including frequency count, simple percentage, mean, standard deviation, and Pearson Product Moment Correlation, were used for data analysis. The study found significant relationships between cause marketing strategy and customer loyalty, relationship marketing and customer patronage, and scarcity marketing and sales volume. It recommended that SMEs enhance their marketing strategies to raise the standard of their businesses.

Akinmoladun and Olayinka (2022) studied talent sourcing and management strategies in SMEs within the Nigerian gig economy. The research employed a survey design, with data collected through questionnaires from SMEs in Abuja and Delta State. The data analysis used correlation and regression analysis. The findings highlighted that strategic talent sourcing and management practices are crucial for the scalability and growth of SMEs in the gig economy. The study concluded that effective talent management practices contribute to the long-term sustainability of businesses and recommended the adoption of more structured talent development programs within SMEs.

Enwukwe (2021) investigated the employment status of Nigerian workers in the gig economy, focusing on

Uber drivers as a case study. A qualitative analysis approach was employed, with data collected from Uber drivers across Nigeria. The analysis centered on qualitative data interpretation. The study identified challenges related to the lack of rights and proper employment status for gig workers, particularly in the ride-hailing industry. The conclusion proposed the introduction of a new employment category called "independent employees" to better address the status and rights of gig workers in Nigeria.

Okeke and Nwankwo (2021) focused on task and project design in Nigerian SMEs operating in the gig economy. They adopted a case study methodology, with data gathered from SMEs operating on digital platforms across Delta State. The data were analyzed using content analysis and thematic coding. The study found that task and project design, when optimized, played a significant role in enhancing business growth. The study concluded that SMEs should focus on task efficiency, flexibility, and scalability to succeed in the gig economy and recommended that SMEs invest in training programs for better project management skills. Clement (2020) assessed the impact of SMEs on economic growth in Nigeria. An empirical analysis was conducted using data sourced from government publications and reports. The data analysis involved statistical methods for understanding the relationship between SMEs and economic growth. The findings showed that SMEs significantly contributed to Nigeria's economic growth through employment generation, poverty alleviation, and income generation. The study concluded that SMEs play a vital role in national development and recommended establishing microfinance banks to enhance access to credit for SMEs.

Research Gaps

Limited Examination of All Gig Economy Variables:

While multiple studies examined individual components such as customer service (Ifeanyi et al., 2024) and social media marketing strategies (Odita, 2023), few studies integrated all gig economy components, including workforce composition (WC), talent sourcing and management (TSM), digital platforms (DP), and task and project design (TPD) in one comprehensive framework. This gap limits the understanding of how these factors interact to influence business growth.

Variables Gaps

Integration of Digital Platforms with Other Variables:

While studies like Ajiboye (2023) and Ifeanyi et al. (2024) emphasize the importance of digital platforms for SMEs, they fail to fully integrate digital platforms with other variables such as workforce composition (WC), task design (TPD), and

talent management (TSM). Research is needed to explore how the combined use of digital platforms and other gig economy components can drive business growth more effectively.

Methodological Gaps

Lack of Multivariate Analysis: While studies such as those by Ajiboye (2023) and Oditia (2023) used correlation and regression analysis, they did not fully explore the interactions between multiple variables. A multivariate approach that considers the simultaneous effects of workforce composition, talent management, digital platforms, and task design could provide a deeper understanding of the factors influencing SME business growth.

Sample Size Determination

The researcher constrains the research to a number of SMEs drawn from the research population and this is determined using the TaroYamani formula:

$$n = \frac{N}{1 + N(e)^2}$$

Where N = Population size

n = Sample size

e = level of significance (0.05)

$$\begin{aligned} & \frac{3976}{1 + 3976(0.0025)} \\ &= \frac{3976}{1 + 9.94} \\ &= \frac{3976}{10.94} \\ &= 363 \end{aligned}$$

The researchers in this study employed a simple random sampling strategy because it allows them to draw conclusions about a bigger population from a smaller subset of that population. A simple random sample method was used to select 363 SMEs from the whole population.

Research Instruments

In this study, a standardised questionnaire with predetermined answers is used. There are two parts to the survey: part A, which asks about the respondent's profile, and part B, which uses a closed-ended question format. In order to keep respondents focused on the study objectives, this helps to guide them to answer within the available choices. This is accomplished by

Research Method

A descriptive survey research design is chosen in relation to the research topic and study objectives. In contrast to longitudinal studies, which track participants throughout time, survey studies only track them at a single point in time. Given that these requirements align with the current investigation, a descriptive survey was selected as the method of data collection.

The population of this study consists of the total number of SMEs registered in Delta State which is given as 3,976 as at February, 2023, according to SMEDAN.

having respondents rate the degree to which they perceived each statement using a 5-point Likert scale that is provided to them.

Validation and Reliability of Research Instruments

This study's content validity assessment included having 10 management experts fill out the questionnaire and meeting with my dissertation advisor, who provided feedback on how well the indicators captured the study's concept. The feedback they provide is utilized to enhance the questionnaire.

This study's reliability is ensured by pre-testing the questionnaire on a subset of the population; this will allow for adjustments to different parts of the questionnaire. The study uses Cronbach's alpha, whose

value ranges from zero to one, to assess the dependability of the data (1). The degree to which a group of test items can be seen as measuring a single latent variable is indicated by Cronbach's alpha (α). Reliability of scales improves as this coefficient rises. At the very least, a value of 0.6 is excellent, and 0.7 is perfectly fine. For the purpose of this research, a result higher than 0.7 will be considered acceptable, SME owners and managers in Nigeria's Delta State filled out the survey. A high response rate was achieved by administering the questionnaire in person. Carrying out the reliability test follows the validity test. The table below displays the results of the reliability test:

Table 3.1: Reliability Statistics

Cronbach's Alpha	Cronbach's Alpha Based on Standardized Items	N of Items
.887	.888	5

Source: Author's computation 2024.

The table clearly shows that the five variables are dependable, with a Cronbach Alpha value of 0.887, which is greater than 0.7. The questionnaire used to measure the variable in this study is a good instrument because all of the items are trustworthy.

Data Analysis Technique and Model Specification

Descriptive statistics such as frequencies and percentages were used in answering the research question and the correlation analysis was used to determine the nature of relationship between the independent and dependent variables. The hypotheses was tested using the multiple regressions with the aid of SPSS version 23, to find the relationship between business growth (BG) and the independent variable gig economy. The sub variables are; workforce composition (WC), talent sourcing and management (TSM), digital platforms (DP) and, task and project

design (TPD). The multiple regression equation was as follows;

$$BG = f(WC, TSM, DP, TPD)$$

$$BG = \beta_0 + \beta_1 WC + \beta_2 TSM + \beta_3 DP + \beta_4 TPD + \varepsilon$$

Where; BG = Business Growth; WC = Workforce Composition; TSM = Talent Sourcing and Management; DP = Digital Platforms; TPD = Task and Project Design

β_0 = Intercept of regression line ; β_1 - β_4 = Partial regression coefficient of the Independent Variables; ε = error term or stochastic term.

Results and Discussion

A total of three hundred and sixty-three (363) questionnaires were administered to owners and manager of SMEs in Delta State, Nigeria, however, two hundred and ninety-nine (299) were retrieved and properly filled while 64 (17.63%) were not properly filled. This two hundred and ninety-nine (299) respondents represent 82.37 percent of the total questionnaire administered, which shows that two hundred and ninety-nine (299) respondents is sufficient for the study. This response was excellent and representative of the population and conforms to Cooper & Schindler (2014) stipulation that a response rate of 50% is adequate for analysis and reporting; a rate of 60% is good and a response rate of 70% and above is excellent.

Description of Variables

This section seeks to analyze the research question one by one and analyze the responses of the respondents and bring out the effect of the study for proper analysis. These were done with the aid of descriptive statistics. The descriptive statistics which comprises of the minimum, maximum, mean and standard deviation was employed proper and thorough description of the independent variables [WC, TSM, DP and TPD] and dependent variable (BG) for this study.

Table 4.1: Descriptive Statistics

	N	Minimum	Maximum	Mean	Std. Deviation
WC	299	8	20	16.55	2.492
TSM	299	4	20	16.06	2.739
DP	299	10	20	17.08	2.204
TPD	299	10	20	16.18	2.391
BG	299	8	20	15.80	2.766
Valid N (listwise)	299				

Source: SPSS Version 23 Output, 2024.

The descriptive statistics for workforce composition (WC) for Small and Medium Scales Enterprises in Delta State indicate a mean of 16.55, a standard deviation of 2.492 with the difference in the maximum and minimum values which stood at 12. This implies that the WC of Small and Medium Scales Enterprises in Delta State varies tremendously since the mean value is greater than the standard deviation, which also reflected in the variation of the business growth (BG) in Nigeria. Similarly, talent sourcing and management (TSM) has minimum value of 4 and maximum value of 20 leading to the mean and standard deviation of 16.06 and 2.739 respectively. This implies that the TSM for Small and Medium Scales Enterprises in Delta State varies tremendously since the mean value is greater than the standard deviation. Also, digital platforms (DP) has minimum value of 10 and maximum value of 20 leading to the mean and standard deviation of 17.08 and 2.204 respectively. This implies that DP for Small and Medium Scales Enterprises in Delta State varies tremendously since the mean value is greater than the standard deviation. More also, task and project design (TPD) has minimum value of 10 and maximum value of 20 leading to the mean and standard deviation of

16.18 and 2.391 respectively. This implies that the TPD offer by the Small and Medium Scales Enterprises in, Delta State varies tremendously since the mean value is greater than the standard deviation, which also reflected in the variation of the BG in Nigeria. Finally, BG indicates a mean of 16.90, a standard deviation of 2.000 with the maximum and minimum values of 8 and 20. The high discrepancy between the maximum and minimum value shows that BG is majorly influence by the measures of gig economy.

Analysis of Data

Correlation Results

The section presents the correlation result of the explanatory variables and the explained variable. The correlation matrix is used to examine the linear association between the independent and dependent variables and also between the independent variables. The study therefore adopted person correlation coefficient to assess the level of association between the variables concerned. The table below shows the correlation between the dependent variable which is BG and independent variables identified to be WC, TSM, DP and TPD (measures of gig economy).

Table 4.2: Correlation Output

	BG	WC	TSM	DP	TPD
Pearson Correlation BG	1.000				
WC	.407	1.000			
TSM	.497	.404	1.000		
DP	.402	.345	.327	1.000	
TPD	.581	.386	.403	.418	1.000

Source: SPSS Version 23 Output, 2024.

In Table 4.2, WC has a correlation coefficient of ($r=0.407>0.05$), which reveals that WC has strong positive correlation with BG, this implies that WC which has strong positive effects on BG in Delta State, Nigeria. Also, TSM has a coefficient of ($r=0.497>0.05$), which reveals that TSM has strong positive correlation with BG, this implies that when TSM is properly design and taken, it would have positive effects on BG in Delta State, Nigeria. More also, DP has a coefficient of ($r=$

$0.402>0.05$), which reveals that DP has strong positive correlation with BG, this implies that a well DP for SME's, would have positive effects on BG in Delta State, Nigeria. Finally, TPD has a coefficient of ($r=0.581>0.05$), which reveals TPD has very strong positive correlation with BG; this implies that TPD goes a long way in influencing BG in Delta State, Nigeria.

Table 3: Multiple regression analysis me Gig Economy on Business Growth Coefficients^a

Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
1 (Constant)	.091	.021		4.333	.000
WC	.026	.009	.024	2.289	.007
TSM	.260	.090	.258	2.889	.005
DP	.048	.010	.042	4.800	.000
TPD	.444	.106	.384	4.189	.000

a. Dependent Variable: BG

Source: SPSS Version 23 Output, 2024.

In Table 4.3 above, the regression coefficient of workforce composition (WC) is 0.024 with a t-value of 2.289 and associated p-value (sig. value) is 0.007. This suggests that WC has positive effect on BG. This implies that, the effect is significant given the fact that the p-value of 0.007 is equal to 0.05 (5%) level significance. The coefficient of WC is 0.024, which implies that WC has a positive trend with business growth (BG). One percent (1%) movement in WC would lead to 2.4% increase in BG. WC has a significant influence BG in Delta State, Nigeria. Workforce diversity, flexibility, and inclusivity play vital roles in fostering innovation and efficiency, which contribute to SME growth. From the perspective of the Resource-Based View (RBV), WC serves as a strategic resource that provides SMEs with unique competitive advantages. A diverse and well-composed workforce brings varied skill sets, perspectives, and experiences, enabling SMEs to respond effectively to market demands and innovate. Similarly, Transaction Cost Economics (TCE) theory emphasizes that an optimized workforce reduces transaction costs associated with recruiting, training, and managing workers, thereby enhancing productivity and business growth. Empirical studies such as Eze and Nwachukwu (2023) corroborate these findings, emphasizing that a well-composed workforce contributes to higher innovation capacity and productivity in SMEs. Consequently, improving WC through targeted recruitment and retention strategies can significantly enhance business performance in Delta State.

Also, the coefficient of talent sourcing and management (TSM) is 0.005 with a t-value of 0.258 and associated p-value (sig. value) is 2.889. This suggests that TSM has positive effect on business growth (BG). This implies that, the effect is significant given the fact that the p-value of 0.005 is lesser than that 0.05 (5%) level significance. The coefficient of TSM is 0.258, which implies that TSM has a positive trend with BG. One percent (1%) movement in TSM would lead to 25.8% increases in BG in Delta State, Nigeria. TSM has a significant influence BG in Delta State, Nigeria. This underscores the importance of effective TSM strategies in enhancing workforce productivity and organizational efficiency. Under the RBV, talent is viewed as a strategic asset that provides long-term competitive advantages. Skilled employees are difficult to imitate and contribute to innovation and operational excellence. Meanwhile, Transaction Cost Economics (TCE) theory posits that strategic talent management minimizes the transaction costs associated with hiring, training, and retaining high-performing workers, thus fostering growth. Empirical evidence, such as Akinmoladun and Olayinka's (2022) study, highlights that talent sourcing and retention are pivotal for sustaining competitive advantages in SMEs

operating within the gig economy. Ensuring proper management of talents not only improves efficiency but also attracts high-value clients, contributing to overall business growth.

More also, the coefficient of digital platforms (DP) is 0.042 with a t-value of 4.800 and associated p-value (sig. value) is 0.000. This suggests that DP has positive effect on business growth (BG). This implies that, the effect is significant given the fact that the p-value of 0.000 is lesser than that 0.05 (5%) level significance. The coefficient of DP is 0.042, which implies that DP has a positive effect on BG. One percent (1%) movement in DP would lead to 4.2% increase in business growth (BG). DP has a significant influence BG in Delta State, Nigeria. This result reflects the critical role of digital tools in enhancing communication, task management, and market access for SMEs. The RBV framework suggests that digital platforms are valuable, rare, and non-substitutable resources that enhance organizational capabilities and competitive positioning. In contrast, Transaction Cost Economics (TCE) theory highlights the role of digital platforms in reducing transaction costs by improving coordination, communication, and monitoring in business processes. Ajiboye (2023) provides empirical support, demonstrating that digital platforms improve task management and workforce flexibility in Nigerian SMEs, thereby boosting productivity and growth. These findings suggest that investing in digital platforms is not just a necessity but a strategic imperative for SMEs in Delta State.

Finally, the coefficient of task and project design (TPD) is 0.384 with a t-value of 4.189 and associated p-value (sig. value) is 0.000. This suggests that TPD has positive effect on business growth (BG). This implies that, the effect is significant given the fact that the p-value of 0.000 is lesser than that 0.05 (5%) level significance. The coefficient of TPD is 0.384, which implies that TPD has a positive trend with BG. One percent (1%) movement in TPD would lead to 38.4% increase in BG. TPD has a significant influence BG in Delta State, Nigeria. This finding highlights the critical role of well-structured tasks and projects in driving efficiency, innovation, and productivity in SMEs. Through the lens of the resource-based value (RBV) theory, optimized task and project designs constitute unique organizational capabilities that enhance operational efficiency and innovation. From the Transaction Cost Economics (TCE) perspective, effective task and project designs minimize transaction costs by improving coordination and resource allocation. Okeke and Nwankwo (2021) support these findings, emphasizing that SMEs with optimized task and project management systems experience improved productivity and business outcomes. These results underscore the importance of adopting agile project

management techniques to achieve better results in the gig economy.

Table 4.4: Model Summary^b

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate	Durbin-Watson
1	.967 ^a	.935	.921	2.104	1.279

a. Predictors: (Constant), WC, TSM, DP, TPD

b. Dependent Variable: BG

Source: SPSS Version 23 Output, 2024.

Also, The table 4.4 which is model summary table shows the correlation co-efficient (R) of the regression is 0.967(97%) which indicates a very strong positive relationship between the dependent variable business growth [BG] and the independent variables workforce composition (WC), talent sourcing and management (TSM), digital platforms (DP) and, task and project design (TPD)

. The co-efficient of determination (R^2) is 94% (0.935) showing that 94% of the variation in dependent variable (BG) has been explained by the independent

variables [WC, TSM, DP and TPD]. While 6% remain unexplained in the model. With an R^2 value of 94% showed that the strong positive relationship is further confirmed. The adjusted R^2 measures the goodness or fit of the model. This shows the goodness of fit of the model and also explains the dependent variable in relation to the independent variables in 92ways. The 8% left is known as the error term and other variables outside the model. From the above, there is conclusive evidence of serial or autocorrelation since the Durbin Watson calculated value of 1.279 is less than “2”.

Table 4.5: ANOVA^a

Model		Sum of Squares	Df	Mean Square	F	Sig.
1	Regression	330.086	4	82.521	18.635	.000 ^b
	Residual	411.833	93	4.428		
	Total	741.918	97			

a. Dependent Variable: BG

b. Predictors: (Constant), WC, TSM, DP, TPD

Source: SPSS Version 23 Output, 2024.

Lastly, the Anova in table 4.4.3 above, shows the overall significance of the significance of the model, has F(0.18.635) with p-value is estimated at 0.000. This

indicates that all the independent variables [WC, TSM, DP and TPD] jointly influence the dependent variable (BG) in Delta State, Nigeria.

Summary, Conclusion and Recommendations

Summary of Findings

i. Workforce composition (WC) significantly impacts business growth, with a 1% improvement resulting in a 2.4% increase in growth. Workforce composition is a critical determinant of business growth in SMEs. By leveraging the diverse skills and abilities of their workforce, SMEs in Delta State can achieve sustained competitive advantages and growth.

ii. Talent sourcing and management (TSM) have a substantial positive effect on business growth, contributing a 25.8% increase for every 1% improvement. Effective talent sourcing and management are integral to SME growth. By implementing innovative TSM practices, businesses can build a robust workforce that drives efficiency, innovation, and profitability.

iii. Digital platforms (DP) are essential for SME growth, driving a 4.2% increase in growth for every 1% improvement in their use. Digital platforms are transformative tools that drive SME growth by enhancing efficiency, communication, and market access. SMEs in Delta State must prioritize the adoption and effective utilization of digital technologies to achieve sustainable growth.

iv. Task and project design (TPD) are the most impactful factors, with a 1% improvement leading to a 38.4% increase in business growth. Task and project design are pivotal to SME growth. By adopting innovative and efficient task management practices, SMEs in Delta State can achieve significant improvements in productivity, profitability, and market positioning.

Conclusion

The findings of this study underscore the transformative impact of gig economy variables—workforce composition (WC), talent sourcing and management (TSM), digital platforms (DP), and task and project design (TPD)—on the growth of small and medium-scale enterprises (SMEs) in Delta State, Nigeria. Each variable significantly contributes to business growth, with TPD exhibiting the most substantial effect, followed by TSM, DP, and WC. These results highlight the evolving dynamics of SME operations in the gig economy, emphasizing innovation, flexibility, and resource optimization as critical drivers of success. The application of the Resource-Based View (RBV) theory highlights the strategic importance of unique resources, such as a well-composed workforce and innovative task designs, in achieving sustained competitive advantage. This perspective reinforces the need for SMEs to view their workforce and operational strategies as core assets that drive growth. Transaction Cost Economics (TCE) complements this understanding by emphasizing the cost-efficiency benefits of adopting digital platforms and streamlined task designs. Together, these theoretical frameworks provide a comprehensive lens for understanding the interplay between gig economy variables and business growth. The study's findings have several practical implications. First, workforce composition plays a pivotal role in SME performance, albeit with a relatively modest impact compared to other variables. SMEs should prioritize workforce diversity and inclusivity, leveraging varied skills and experiences to foster innovation. Second, talent sourcing and management emerge as significant determinants of growth, underscoring the need for strategic recruitment, retention, and development practices. Third, the adoption of digital platforms is shown to enhance operational efficiency and market access, making it imperative for SMEs to invest in technology-driven solutions. Finally, task and project design stand out as the most influential factor, highlighting the importance of agility and efficiency in business operations. In conclusion, the gig economy offers immense potential for driving SME growth in Delta State, Nigeria. By strategically leveraging workforce composition, talent management, digital platforms, and task design, SMEs can enhance their competitiveness and achieve sustainable growth in an increasingly dynamic business environment.

Recommendations

- i. SMEs should adopt inclusive recruitment and training practices to build a diverse and capable workforce.
- ii. Businesses should prioritize strategies for sourcing, retaining, and developing skilled talent to enhance organizational efficiency and competitiveness.
- iii. SMEs must embrace digital tools and platforms to improve communication, task management, and market access.
- iv. Implement agile project management techniques to enhance efficiency and productivity in business operations.

Abstract

The study departs from the pattern of previous studies which sorely focused on the common characteristics of good governance. To this end the purpose of the study is to take a novel insight into the provisions of chapter two of the 1999 constitution of Nigeria vis-a-vis other models of good governance by drawing the similarities and dissimilarities. The study further emphasized the drawbacks to the implementation of the constitutional provisions for good governance, democratic institutions. The study found that good governance for sustainable development is well intended in the grund norm. However, certain provisions limit the enforcement of the rights of the citizens to take legal actions against acts of bad governance. This study frowned at the ouster provisions, and encourages developing society not to tolerate such hindrances whether well intended. It is therefore strongly advised that the law- being an instrument for social engineering, good governance and sustainable development must be taken seriously by the Nigerian governments. The study equally suggest that since the objectives of good governance are streamlined into annual budgets, demands "spirit and letter" implementation. The study further recommended that, challenges such as corruption and electoral malpractices which affect the implementation of the tenets of good governance should be eradicated from the system. It is only credible persons who are elected and appointed through credible and transparent electoral process can implement any model of good governance for sustainable development. Furthermore , the weak institutions have to be strengthened through training and retraining, aggressive orientation and reorientation.

Keywords: Constitutional provisions, Governance, Good governance, Nigeria , Sustainable development, Strategies.

Introduction

Globally, good governance and sustainable development are at the front burner of international and national discourses. Such interplay between good governance and national development is key to policy discourse (Salifu *et al.*, 2025). It is pertinent to know that good governance birth sustainable development, and where there are no structures and strategies for good governance in a country , the citizens will be experiencing the scorch of bad governance - poverty and malnutrition, bribery and corruption, loss of investments and high rate of unemployment oppression and degradation, environment pollution, political

instability and civil unrest, protests and strikes, breakdown of law, criminality and insecurity, pervasion of justice, and many other vices.

Sustainable development is one of the paradigms designed to address the problem of underdevelopment in third world countries. It inculcates the views of economic growth, reduction of poverty, social development, equity and sustainability (Cheema, 2007 ; Abubakar and Sanusi, 2018). Good governance is associated with "efficiency, accountability, transparency, due process, rule of law, participation, justice and control of corruption (Noor, 2008). In addition, pluralism, solidarity, partnership and

provision of efficient service are instruments that ensure and institutionalize good governance (Abubakar and Sanusi, 2018). However, good governance has been a mirage in Nigeria due to multidimensional challenges inhibiting its institutionalization - human

development challenge, lack of connection between educational institutions and modern economy, leadership challenge, bad governance and corruption (Soyemi, Hammed and Yusuff, n.d), exemplifies as fig. 1 below:

Fig .1: Challenges to Good governance and sustainable economic development

Source: Soyemi, *et al.*, n.d).

It has been observed that good governance has been solidly entrenched in the developed world. For instance, in USA- California, its robust structures for good governance yielded consistent economic growth. Her tech- economy is valued over \$3.9 trillion in 2023 (Smith and Harris, 2023). In Lindberg (2022), welfare system in Sweden ranks among the best in the world. Also, in Asia, Singapore's model for good governance transformed her economy from developing state in the 1969s to an economy with per Capita GDP of \$72.794 in 2023(Lee, 2022). The transformation of South Korea through technology and industrial development is an indication of policy-driven innovation (Park and Choi, 2021).

Contrastingly, in Africa, there are very poor reports on good governance, national and sustainable development. Rwanda may have changed this narrative by achieving an economic growth rate of over 7% yearly from 2019 to 2023 basically on strengthened anti-corruption crusade and measures and provided investment friendly policies (Nkurunziza, 2022). With respect to Nigeria, it has been all about challenges or excuses (Salifu *et al.*, 2025). The country is faced with persistent governance deficit which hinders growth and sustainable development. Nigeria was ranked as 154th out of 180 countries in 2023 by the Transparency International Corruption Perception Index (Transparency International, 2023). The results from

failure of governance are economic stagnation and poverty standing at 63% in 2023 (NBS, 2023).

Indeed, political and economic governance in Nigeria are plagued with many challenges. Insecurity is one the prevalent critical challenge to governance. It is on record that the Boko Haram insurgents, and separatist agitations have displaced over 3.2 million people in 2024 (UNHCR, 2024). Other challenges are infrastructure deficit, poor road networks, power (electricity) failure, etc. The slow pace of administration of justice by the court system has been identified as a problem (Adigun, 2022).

There are literature on good governance and other connected concepts. Abubakar and Sanusi (2018) examined good governance and local government administration in Nigeria with emphasis on sustainable development and Soyemi *et al.*, (n.d) investigated good governance and sustainable economic development with reference to information technology as a platform. Salifu *et al.*, (2025) emphasized the challenges and prospects of good governance and Anthony (2024) focused on good governance and sustainable democracy, challenges and solutions. The impact of government institutions on good governance was done by Nwafor (2023), and Bukar, Hindatu and Umar (2025) analyzed the connection between good governance, sustainable development, peace, and security in Nigeria. Abdulganiyi, Gbate, and Kaita

(2019) worked on good leadership and good governance in Nigeria.

The review of previous studies revealed that the nexus between chapter two of the 1999 Constitution of the Federal Republic of Nigeria and other Models for good governance and sustainable development has remained uninvestigated. This is the knowledge gap that the study has tried to cover.

Governance and Good Governance

Meaning of Governance

There are several perspectives to defining governance however with a resolve to achieving a predetermined goal. Etymologically, governance is defined as “a system of administration and rule, practices and processes by which an organization, society or institution is organized, directed and controlled” (Chinnah, 2025). Lukman (2022) defines governance “as the process of governing societies where no single actor holds absolute dominance. Chartered Governance Institute (2022) describes governance as “the framework by which organizations are directed and controlled, encompassing decision-making authority, accountability and ethical conduct”. Also, Siyal and Hobbs (2023) defines “governance as the formation of policies and continuous monitoring to implement them properly by the governing body, highlighting the decision-making process and execution”. Governance has been defined as “the manner in which vested authority uses its powers to achieve institutional objectives including design, implementation, and stakeholders engagement, emphasizing accountability, transparency and predictability” (International Social Security, 2022).

The version of Institute of Directors (2023) is that “governance is characterized by structures and processes that ensure accountability, transparency, responsiveness, rule of law, stability, equity, inclusiveness, empowerment and broad-based participation, reflecting norms, values, and rules of public affairs management. Authors like Skinn (2023) sees governance as “the way rules, norms, and actions structured, and sustained, regulated and held accountable, likening it to the enforcement of law within an organization” and Ribeiro *et al.*, (2023) define governance from the aspect of artificial intelligence (AI) as “the practice of establishing frameworks, policies, and procedures to ensure a responsible, ethical, and safe development and deployment of artificial intelligence systems to promote transparency and accountability”. Edih (2020) considers governance as a function of leadership with

respect to community development. He juxtapositioned the concept of governance, good governance, and communal participation. The author further drew the meaning of Governance from the Oxford Dictionary, which states that “governance is managing resources of a country and the process of governing a nation”. Ogali (2014) cited the definition of governance as defined by the Commission of Global Governance (1995) as “the sum of the many ways individuals and institutions, public and private manage their common affairs”. In contrast, Hanatu (2014) posits that governance is the major problem in Africa. This calls for a thorough understanding of the ideology of governance by the so-called “Leaders’ in the continent of Africa.

It is observed that the series of definitions proffered by scholars are geared towards achieving predetermined objectives - short-term, medium-term, and/or long-term. Some considered governance as the function of a state while others see it from organizational or corporate ideology. The whole essence of governance is to achieve a collective, organizational or state objectives and goals. However, corrupt and wicked leaders disregard the purpose of governance to their shame. To their shame because there is “karma” if not now, it's not too long.

What is Good Governance?

Edih (2023) opines that good governance is the desire of all nations especially in the 21st century. This is evident as shown in the social media, recently it was NEPALI's revolution led by the youths, Bunkina Faso's radical transformation by Ibrahim Troare, EndSars protest championed by courageous youths at Lekki Toll, Lagos, Nigeria and so forth. These are examples of clamours for good governance in Africa. According to Peters *et al.*, (2022), good governance is seen from several dimensions, such as, one, as the rule of law and fair enforcement of inclusive and collaborative governance structures, two, as the control of corruption to prevent resource wastage, eradicate bribery and corruption (the twin devils), and efficient services and three, ensuring legal integrity and independence. The study of Khosrowyerdi (2022) which compared 117 countries arrived at the indices of good governance to include; democracy in real term, economic management, and public administration. These socioeconomic and sociopolitical indices are sound predictors of a transparent and accountable government. In the words of Lasky(2024), “good governance is an effective framework for how states, organizations, or businesses are governed in line with ethical representations.

The adjective “good” is deliberately attached to ‘governance’ to enrich its meaning and essence in the 1990s (Mohammed and Petri, 2016). Good governance is the “exercise of economic, political, and administrative authority to manage affairs of a country at all levels - the mechanisms, processes and institutions for articulating the interest of the state and satisfying the popular wish of the people (Edih, 2020 ; Ogali, 2014). Salih (2003) notes that good governance is all about economic liberation policies and reforms as well as reducing the influence of government in regulating the economy -deregulation programmes are essentials of good governance. In a similar postulation, Waziri(2009 as cited in Edih , 2020) states that good governance is standing on three pillars, namely; economic, political and administrative. Good governance has been surmised as the ultimate dimension of governance, meaning there diverse levels of governance (Edih, 2020). The contrast of good governance is bad governance and literature is painted with features of bad governance in Africa (Edih, 2022, p. 60 ; Hanatu, 2014). Good governance encourages inclusion by removing avoidable dichotomy while bad governance establishes gaps between the leaders and the led. Chapter two of the 1999 Constitution of Nigeria as amended is a template for good governance (Edih, 2022). Good governance is an exercise of biblical statement paraphrased as ” ... and God saw that it was good...” positing that every intended action should yield and end with good results.

Strategies for Institutionalizing Good Governance and Sustainable Development

Strategies for institutionalization of good governance and sustainable development are the elements, tenets, characteristics of good governance. Literature (Chinnah, 2025; Edih, 2022, 2020) highlighted some of them which are harmonized as follows;

1. **Existence of the Rule of Law :** The rule of law is the foundation of government whether democratic or military. Some may contest the existence of the rule law in a military regime (however, decrees and edicts are the laws in military era). Yes, some , not all, may be draconian hence you may experience continuous overthrow when consciences and consciences are deaden. The constitution must be upheld by the government in a constitutional democracy. Rule of law promote equality, fairness and justice according to Professor A.V. Dicey - a British jurist and philosopher. There is striking connection between or among constitutional

democracy, good governance and sustainable development. The law is regarded as supreme, government and the people are accountable to law, the judicial arm is independent and impartial, individual’s rights are protected, openness in government (Freedom of Information Act), absence of corruption and constitutional separation of powers and other measures that engender good governance.

2. **Citizens’ inclusion and participation:** good governance accommodates the participation of the majority, if not all the citizens in a country. Through credible democratic and electoral processes collective participation is encouraged either directly or through proxy (representation). Babangida (2010) acknowledges the participation of people in making policy and building consensus as pillars of good governance and sustainable development.
3. **Transparency, Accountability and Responsiveness:** In a constitutional democracy, the government is elected on the basis of credible and transparent electoral process. He is therefore accountable to the people by demonstrating transparency and responsiveness. The three co-equal arms of government are separated, though not a water-tight separation of power advocated by the french scholar, Montesquieu in his book entitled ”the Spirit of the Law” in 1748. However, they perform some distinct functions while checking on one another to curtail excesses or abuses. Moderate separation of powers and checks and balances promote transparency, accountability and responsiveness and other ethical conduct in governance. The results of the application of democratic governance is sustainable development. Abubakar and Sanusi (2018) argue that the foremost driver of good governance is accountability. We may differ at juncture because law should have been seen as the basic foundation for good governance and sustainable development. However, Mohammad (2003) classified accountability into; financial, political, administrative, social and ethical accountability.
4. **Vision and Governance structures and Service Delivery :** The import of good governance is to distribute the dividends of a democratic arrangement to the majority of the population. It amounts to efficient service

delivery. This can only be achieved by governance structures coded in a template called the vision of our founding fathers. It is stated as; “... *to live in unity and harmony as one indivisible and indissoluble sovereign nation under God dedicated to the promotion of inter-African solidarity, world peace, international cooperation and understanding...*” being the vision of the Nigerian State (see Preamble LL18, Constitution of the Federal Republic of Nigeria, 1999 as amended).

5. **Consensus Orientation :** Good governance promotes representation at different levels of government or governance. The purpose of election and appointment of officials are to ensure sufficient representation at the points , fora, and hierarchies of making decisions in the interest of the people. Consensus is usually sought in the making and approving and passing as well as assenting to the law by the governor or president, whichever level of government is been considered. Budgets which represents projects to be done is processed through several stages before assenting it into law, and every law is an instrument for social, political and economic engineering and integration and good of the majority- the postulation of Roscoe Pound.

Development and Sustainable Development

Definitions of Development

We intend to consider cross-section of perspectives to defining the socioeconomic and sociopolitical and sociocultural concept known as “development “. In the words of Chatterjee (2024) the concept “development is a contested phenomenon that has not been accurately defined by scholars rather it is better to fine an indigenous version of development. Chinnah (2025) states that development is centered on improving the lives of people, and measured with clear indices of assessment. Goldin (2023) defines development as “ the process of promoting the quality of human lives and capabilities by raising the level of living, self-esteem, and freedom “. Development in Levine and Michele (2023) is seen as “a multi-dimensional process that creates economic, technological, social and institutional changes and push for increased wealth for the nation and well-being of the people”

Now, how do you see sustainable development?

Sustainable development is intertwined with governance or good governance. In fact, sustainable development is at the front burner when discussing issues on good governance (Chinnah, 2025). Chinnah emphasized that governance without sustainability of development leads to myriad of challenges - endemic poverty, unabated unemployment, excruciating hunger and malnutrition, systemic institutionalization of corruption, weak institutions, pervasive civil unrest, unimaginable rate of criminality and so on. From this perspective it's inferable that good governance inculcates pillars of sustainable development. According to her, sustainable development has been a serious topic for policy formulators at both national, and international stages, at organizational level, especially with developing countries and NGOs. Swiss Federal Council (2024) describes development as the provision of the basic needs of the people and ensuring good quality life at all times. According to the United Nations (2023), Sustainable development is explained to mean how we must live today if we desire a better life tomorrow.

We can deduce that sustainable development is a progression that is evolving from the current state to a future better state. It touches the lives of people by improving their standard of living. It is that form of improvement that all round transformation of the human life - political, technological social, cultural as well as economic growth. That is why one can argue that development is broad while economic growth is singular and part of the development processes. Leonard (2000) provides a detailed and comprehensive definition or explanations of development and economic growth. The question is how do government sustain growth and development? We added growth because economic growth leads to development.

Theories on Good Governance and Sustainable Development

The study is hinged on two theories: good governance theory and collective stewardship theory of sustainable development.

Good governance theory

In line with Chinnah (2025), good governance theory is use to buttress issues on government and administration of the state. It is well entrenched in the field of political science, public administration and governance, policy and development studies and related areas. Good governance theory typifies a comprehensive framework or template that guides and directs policies and programmes of government. The

theory explains the principles, characteristics, institutions, structures, strategies and practices that propel and promote services delivery in effective and efficient manner. It provides institutions and structures that accommodate popular participation, responses, accountable and transparent decision-making process, due diligence and judicious spending of financial resources. In fact, good governance theory ensures that the laws are upheld and the court system are working to enhance justice. It upholds ethical and democratic principles by instituting constitutional democracy. These structures and institutions, strategies and practices are to promote sustainable development for the improvement of citizens' lives. Therefore, the end result of good governance is sustainability of the human life.

Collective stewardship theory of sustainable development

Collective stewardship theory of development states that everyone is a steward of all the resources on the earth or planet. Thus, It is expected that everyone will act in such a way to promote the good of everyone in the best interest of the earth or planet (Ozili, 2024). It is believed by some scholars that the resources of the earth or planet belong to everyone (Rosen, 2000; Dietz *et al.*, 2013). Other school of thought is of the view that the resources of the earth should be collectively protected, managed, and preserved for the benefit of all persons (Robinson, 2006; McAfee, 2019).

According to Ozili (2024), collective stewardship theory of sustainable development has some merits. First, all human beings are caretakers of the resources deposit on the earth or planet and they will strive to protect and manage them and second, the theory upholds ethical standards. So, it is believed that people will not be selfish because of their inbuilt moral and ethical behaviour expected of them. This is the area of weakness in the assumptions conceived by the collective stewardship theory of sustainable development. It has been observed that people especially in a plural, secular country like Nigeria, are bound to demonstrate different interests, preferences, and priorities. This is what is prevalent in a democratic arrangement where people on ideal ground vote for the candidates of his or her choice. There is freedom of association, and freedom of speech, freedom of information and the rest as guaranteed by the 1999 constitution of the Federal Republic of Nigeria as amended. The assumption some persons might be selfish is manifesting through the corrupt politicians in government. It is obvious that bad governance initiates obnoxious reforms against popular wish.

These theories will guide us in x-raying the tenets of good governance vis-a-vis the constitutional template for good governance enshrined in chapter two, and also, sought out the elements of bad governance in order to achieve sustainable development in the long run.

Examples of Frameworks for Good Governance and Sustainable Development

Figure 2a: good governance model using IT as a pillar. Soyemi et al.,(n.d)

Fig 2b: Framework for Good governance connecting the various strategies. Nwafor, 2023

Constitutional Provisions and Model For Good Governance in Nigeria

The 1999 constitution of the Federal Republic of Nigeria as amended, specifically in Chapter two provided a template or model for the purposes of good governance for sustainable development in Nigeria. The chapter is boldly entitled as “ **Fundamental Objectives and Directives Principles of State policy**”. This chapter consist of 12 sections, commencing from 13 to 24. We

will endeavour to state these provisions in seriatim as follows;

Section 13

“It shall be the duty and responsibility of all organs of government, and of all authorities and persons exercising legislative, executive or judicial powers to conform to, observe and apply the provisions of this chapter of the constitution”.

Section 14

1. The federal republic of Nigeria shall be a state based on the principle of democracy and social justice
2. It is hereby accordingly declared that
 - a) Sovereignty belongs to the people of Nigeria from whom the government through this constitution derives all its powers and authority
 - b) The security and welfare of the people shall be the primary purpose of government
 - c) The participation by the people in their government shall be ensured in accordance with the provisions of this constitution.

Section 15

1. The “motto” of the Federal Republic of Nigeria shall be unity, peace and progress.
2. Accordingly, national integration shall be actively encouraged whilst discrimination on the grounds of place of origin, sex, status, ethnic, or linguistic association or ties shall be prohibited....
3. The state shall abolish all corrupt practices and abuse of powers

Section 16

1. The state shall within the context of the ideals and objectives for which provisions are made in this constitution
 - a) Harness the resources of the nation and promote national prosperity, an efficient, a dynamic and self-reliant economy
 - b) Control the national economy in such a manner as to secure the maximum welfare, freedom and happiness of every citizen on the basis of social justice, equality and opportunity
- 2a. The promotion of a planned and balanced economic development....
- 2d. That suitable and adequate shelter, suitable and adequate food, reasonable national minimum living wage, old age care and pensions and unemployment, sick benefits and welfare of the disabled are provided for all citizens...

Section 17

1. The state social order is founded on ideals of freedom, equality and justice
2. In furtherance of the social orders ;
 - a) Every citizen shall have equality of rights, obligations and opportunities before the law
 - b) The sanctity of the human person shall be recognized and human

dignity shall be maintained and enhanced...

- c) The independence, impartiality and integrity of courts of law and easy accessibility thereto shall be secured and maintained.

Section 18

1. Government shall direct its policy towards ensuring that there are equal and adequate educational opportunities at all levels
2. Government shall strive to promote science and technology
3. Government shall strive to eradicate illiteracy and to this end government shall as and when practicable provide
 - a). Free, compulsory and universal primary education
 - b). Free secondary education
 - c). Free University education, and
 - d). Free adult literacy program

Section 19

The foreign policy objectives shall be

- a) Promotion and protection of national interest
- b) Promotion of African integration and support for African unity...
- d) Respect for International Law and treaty, obligations...
- e) promotion of a just world economic order

Section 20

“The state shall protect and improve the environment and safeguard the water, air and land, forest, and wildlife”

Section 21

“The state shall

- a) *Protect, preserve and promote the Nigerian cultures which enhance human dignity and are consistent with the fundamental objectives as provided in this chapter*
- b) *Encourage development of technological and scientific studies which enhances cultural values “*

Section 22

“The Press, Radio, Television and other agencies of the mass media shall at all times be free to uphold the fundamental objectives contained in this chapter and uphold the responsibility and accountability of the government to the people”.

Section 23

“The national ethics shall be Discipline, Integrity, Dignity of Labour, Social justice, Religious tolerance, Self-reliance and Patriotism “, and

Section 24

“It shall be duty every citizen to;

- a) Abide by this constitution, respect its ideals and its institutions, the national flag, the national anthem, the national pledge and legitimate authorities
- b) Help to enhance the powers, prestige and good name of Nigeria, defend Nigeria and render such national services as may be required...
- c) Declare his income honestly to appropriate and lawful agencies and pay his tax promptly.

Limitations To the Enforcement of Constitutional Model for Good governance

It has been identified that the two ouster clauses in the 1999 constitution of the Federal Republic of Nigeria as amended hinder the enforcement of the fundamental objectives and derivative principles of state policy (Edih, 2022). The two ouster clauses are sections 6(6) and 308. Accordingly, they are provisions that guarantee the non-justiciability of chapter two in a competent law court.

Section 6(6)

“provides that the judicial powers vested in accordance with the foregoing provisions of this section shall not except as otherwise provided by this constitution extend to any issue or question as to whether any act of omission by any authority or person or as to whether any law or any judicial decision is in conformity with the fundamental objectives and directive principles of state policy set out in chapter two of this constitution.

Section 308

“provides as follows

1. Not withstanding anything to the contrary in this constitution, but subject to subsection 2 of this section
2. a) no civil or criminal proceedings shall be instituted or continued against a person during his period of office
3. b) a person to whom this section applies shall not arrested or imprisoned or imprisoned during that period either on pursuance of the processes of any court or otherwise and
4. c) no process of any court requiring or compelling the appearance of a person to when this section applies shall be applied for or issued.

Challenges of Good Governance and Sustainable Development in Nigeria

Good governance is a mirage in Nigeria. It's likened to the statement “the more you look the less you see”. The actions of governance, whether during civilian government or military regime, in

reality do not conform to the template for good governance as adumbrated in literature and chapter two of the 1999 constitution. There are multiple challenges frustrating the envisioned good governance framework squarely enshrined as Chapter two of the 1999 Constitution of Nigeria as amended.

1. **Weak Institutions :** Institutions of are structures or agencies, ministries, parastatals, or organizations that deliver services to the people. Government set up institutions like the Judiciary, the legislature, the military, police, EFCC, ICPC, INEC, CBN, Educational bodies, NYSC , to mention but a few to execute its plans and programmes for the nation. These institutions are manned by both the public and civil servants. They are empowered to enforce the rules and regulations impartially. The problem of these institutions is weakness because of unabating corruption, and inefficiency. When an organization lacks the capacity, legitimacy and resources to deliver public services it is regarded as weak Institution (Cambridge University Press, 2022). According to Mthwakazi (2022), a weak institution is characterized by inability to enforce the rules, abuse of discretionary grace, and abrupt changes in the rules and regulations to suit personal gain.
2. **Flawed Electoral Processes :** The common statement in Nigeria during period of electoral transition is “go to court”. The basis of a credible and transparent election is credible and transparent electoral process. A corrupt system must necessarily produce corrupt results. It affirms the latin maxim , “ *Nemo dat non qua habet*” translated as you cannot give what you don't have. Therefore, a flawed electoral process is a disaster to good governance and sustainable development.
3. **Military incursion into politics for too long a time :** The political odyssey of Nigeria is not complete without talking about the incursion of the military into politics. In fact, we can say that the shortlived administration of Tafawa Balewa/Nnamdi Azikiwe, 1960-64 ; Yar'adua/Jonathan, 2007-2011; Jonathan/Sambo, 2011-2015; and Tinubu/Shettima, 2023-2025 were the civilian governments that ruled Nigeria for about 15 years which the military junta ruled for about 40 years. The invasion by the military is a breach to constitutional democracy. The Nigerian polity is suffering from the woes of

military regime because the constitution is suspended and the country is ruled by the Supreme Military Council through decrees and edicts.

4. **Endemic and systemic bribery and corruption :** Bribery and corruption are unnecessary evil. They are the twin devils that wrecked and weakened the sound institutions handed over to us by the former colonial master. The Judiciary which ought to be the hope of the common is no longer common. Election cases/petitions are won by the highest bidder. Their judgements cannot be predicted any longer because the order or sequence of precedence is never followed. The supreme court had overruled itself on several occasions. Conflicting judgements everywhere and it is worst with courts of coordinate jurisdiction issuing contrasting injunctions. The compromise of INEC is another terror during the conduct of elections in the country. Their officials are not neutral as expected but do their master's bidding and results are declared before completion of the voting process. It is a misnomer and great disservice to the Nigerian State.
5. **Failure of the Judiciary :** Good governance is established through an independent and impartial judiciary. Its absence contrast the principles of good governance and sustainable development.
6. **Compromise of the legislature :** The legislature makes and amend laws, performs oversight functions and weeps the executive if need be by impeachment. The legislature also approves the suspension of an elected state government where the conditions warranting it are obvious. Governor Sim Fubara of River State was suspended for six months and reinstated after its expiration on 18 September, 2025 for the breakdown of governance, law and order in the state. Where the legislature fails to carry out its constitutional functions and translates to a "rubber-stamp" chamber, good governance and sustainable development will only be seen on paper - budget and the constitution.
7. **Excesses of Executive Powers and rascality :** Scholars are canvassing for constitutional restructuring so as to wittle down the overbearing powers of the Executive Arm of the government. The President of Nigeria and the Governors of the 36 states are too powerful to safeguard the independence and impartiality of the Judiciary. In practice, the three arms of

governments are not co-equal but mere theoretical and academic ideology. There is that tendency to abuse the office at the expense of good governance and sustainable development.

8. **Poverty and Hunger in the Land :** Poverty and hunger have been weaponized by those in government to subjugate the vast population in the country. They are easily manipulated with crumbs by officials in power. Especially at election time, vote buying becomes the norm and the people no longer look at credible candidates but the "green envelope" that can only sustain a person for a day.
9. **Ethnic rivalry and religious inclinations:** Disunity due to entrenched ethnic rivalries and diverse religious inclinations are the major bane of good governance in Nigeria. The five major ethnic nationalities - Ijaw, Fulani, Hausa, Yoruba, and Ibo, are always at loggerhead base on political differences, religious beliefs and practices. The minority groups are crying wolf- marginalization and undevelopment.
10. **Illiteracy :** The population of Nigeria is summed to be about 120million people and over 70% is illiterate. Good governance is hardly practiced in a society that is majorly illiterate.

Conclusion and Recommendations

The study provided a novel insight into good governance and sustainable development by comparing chapter two of the 1999 constitution of the Federal Republic of Nigeria and other models or frameworks for good governance. It is posited that chapter two of the 1999 constitution is a model for good governance and that there are no dissimilarities except for inclusion of the good governance framework into the constitution of Nigeria. The study reaffirm that law is an instrument for social engineering, political restructuring and administration of justice in the society. Drawing the analogy between good governance and sustainable development, it is obvious that both ideologies can be achieved by tenaciously enforcing the tested theories, models and tenets of good governance in a modern state. Also, the study revealed that based on the impediments, institutionalization of good governance and sustainable development in Nigeria are mountainous and that the usual political jamboree and rhetorics during campaigns for change of government are mere political charades.

Thus, the study recommends the following as strategies for good governance and sustainable development ;

1. **The Law should be held supreme:** The institutions that enforce the laws, rules and regulations, policy and programmes of the government should be strengthened to uphold the law. The constitution is supreme and no government, and its officials are above the law. Chapter two of the 1999 constitution and the annual budget are part of the law(constitution) should be respected and implemented to the “spirit and letter”.
2. **Independence of the Judiciary is not negotiable :** The role of the Judiciary is to adjudicate on disputes between the federal government and state government, government and institutions and private persons, institutions and private persons, private person versus private person. Independence and impartiality of the Judiciary will guarantee the exercise of these sacred roles played to enhance social rejuvenation, peace and order in the society. In that respect, the independence and impartiality of the Judiciary is not negotiable.
3. **Credible and transparent election :**The foundation for credible and responsible government is a credible and transparent electoral process. Government should ensure that Independent Electoral Commission is truly independent and impartial and neutral in the discharge of her mandate. The provisions of the Electoral Act and the Constitution must be procedurally followed. This will restore the trust and reliance on the process and reduce election petitions after declaration of results. INEC personnel should undergo regular training and orientation on free and fair elections and anyone found culpable should be sanctioned according to the law.
4. **Responsible Electoral Umpires :** The institutions are the personnel that manned the process and executive policies and programmes, not the physical structures. There electoral umpires should play safe by being neutral before, during and after the elections. Any measure that will ensure their neutrality and regain public trust should be put in place.
5. **Neutrality of Law Enforcement Agencies :** The Army, Navy, Air force and Police should be manifestly neutral before, during and after election. Ordinarily, the military should not be part of elections because elections are not war time. The police should be trained and drafted and assisted by local vigilante where there is shortage of manpower.
6. **Credible candidates :** Political parties INEC , the government should ensure that candidates running for both elective or to be appointed must have clean records. Every necessary step should be taken to check and ascertain the credibility of the candidates featured by the parties.
7. **Demolition of the Ouster provisions’ mountain in the constitution :** The two ouster provisions in the constitution should be expunged to allow citizens whose rights are infringed by the government for failing to uphold chapter two of the constitution can seek for redress. The type of sanction to be meted on the culpable government officials should not be that of conviction but a moderated one like giving an award to the victim in this circumstances. This will make the government to be accountable and more responsible to good governance
8. **Strengthened Institutions :** Institutions are the frameworks for delivery of public services and executing projects to the people. A strong and virile institutions are pillars for good governance and sustainable development. This could be achieved by training and retraining, aggressive orientation and reorientation, and a better living wage and allowances as remuneration to motivate workers.
9. **Mass Education :** Education is a tool for governance. Policies and programmes are easily communicated in an enlightened society because literacy is the bedrock for sustainable development in advanced countries.
10. **Punishment of Persons involved in Electoral malpractices :** Punishment of criminal elements is part of the law. Every offence committed has corresponding punishment in the law that created the offence. Apart from electoral malpractices, those who perpetrate insecurity in the country should be dealt with according to law.
11. **Implementation of Budget :** Implementation of budgets will create job opportunities for the teeming unemployed population of youths in country. Constitutionally, security and welfare of the people is the primary function of government.

Good Governance and Strategies for Sustainable Development in Nigeria: Emphasis on Lagos and Delta States

ERUDE, Shalom Ufuoma¹, & MUKORO, Akpomuvire² & OKEREKA, Onofere Princewill³

Department of Public Administration
Delta State University, Abraka, Nigeria.

Abstract

Governance shortcomings—like corruption, fragile institutions, minimal citizen participation, and poor policy execution—persist in hindering sustainable development in Nigeria. This research explores methods to enhance governance in Lagos and Delta States following COVID-19, emphasizing accountability, transparency, citizen engagement, institutional capacity, and collaborative governance. A descriptive survey utilizing mixed methods was carried out, engaging 300 participants and 20–30 key informants, through structured questionnaires, interviews, and document analysis. Quantitative analysis utilized descriptive and inferential statistics, whereas qualitative data was subjected to thematic content analysis. Results show strong perceptions of accountability ($M = 4.20$) and sustainable development results ($M = 4.00$), while revealing moderate degrees of transparency ($M = 3.80$) and citizen involvement ($M = 3.90$). The findings indicate that governance elements profoundly influence sustainable development results and emphasize contextual difficulties in executing reforms. The research suggests utilizing AI-powered citizen engagement platforms, blockchain transparency systems, and state-level councils for monitoring sustainable development to improve governance efficiency. By combining empirical findings with actionable strategies, this study offers a framework for context-aware governance reforms that can promote sustainable development in Nigeria.

Keywords: Governance, Sustainable Development, Accountability, Transparency, Citizen Participation, Lagos State, Delta State.

Introduction

Effective governance — characterized by transparency, accountability, adherence to the law, participation, and responsiveness — is essential for attaining sustainable development. In Nigeria, ongoing governance issues (corruption, ineffective institutions, inadequate policy execution, and minimal citizen participation) have hindered advancements in essential areas like health, education, environment, and infrastructure. Recent research conducted by Nigerian academics indicates that these shortcomings diminish institutional performance, erode public confidence, and restrict citizens' capacity to hold officials accountable, ultimately hindering sustainable development initiatives. Issues in environmental and urban governance—ineffective regulation enforcement, inadequate urban planning, and limited community engagement—have exacerbated pollution, deforestation, and the depletion of public resources in numerous cities and resource-abundant areas. Delta State's struggles with resource management issues and Lagos's swift urban growth both demonstrate how governance failures lead to environmental hazards and missed development prospects.

The COVID-19 pandemic revealed and intensified these weaknesses in governance. Nigeria's inconsistent pandemic response (poor coordination, deficiencies in health infrastructure, and unequal distribution of resources) underscored the critical necessity for governance reforms that enhance resilience, accountability, and service delivery both during crises and in regular circumstances. Numerous recent Nigerian studies on the post-COVID period advocate for enhancing state capacity and improving public administration to ensure recovery and long-term sustainability. Even with this agreement, reforms have been inconsistent and frequently do not tackle local conditions. Researchers from Delta and various Nigerian settings have emphasized the necessity for context-aware approaches — such as enhanced internal regulations, better citizen involvement, and cooperation across institutions — to ensure governance fosters sustainable, fair development. This research addresses that necessity by analyzing governance approaches adapted to Nigeria's socio-political context, focusing specifically on Lagos and Delta states in the period following COVID

Research Objectives

6. To analyze ways to enhance accountability, transparency, and citizen involvement in Nigeria to better governance results for sustainable development (with a specific focus on Lagos and Delta states).
7. To assess the institutional capability and cooperative governance structures that can tackle socio-economic and environmental issues in the post-COVID environment.

Research Questions

12. To what extent can accountability, transparency, and citizen engagement be enhanced in Lagos and Delta states to promote sustainable development post-COVID-19?
13. What strategies for institutional capacity-building and collaborative governance are the most practical and impactful in addressing socio-economic and environmental challenges in the two states during the post-COVID period

Research Hypotheses

3. H_{01} (Null): There is no significant relationship between accountability, transparency, and citizens' participation and the promotion of sustainable development in Lagos and Delta States post-COVID.
 H_{11} (Alternative): There is a significant relationship between accountability, transparency, and citizens' participation and the promotion of sustainable development in Lagos and Delta States post-COVID.
4. H_{02} (Null): Institutional capacity and collaborative governance have no significant effect on addressing socio-economic and environmental challenges in Lagos and Delta States post-COVID.
 H_{12} (Alternative): Institutional capacity and collaborative governance have a significant effect on addressing socio-economic and environmental challenges in Lagos and Delta States post-COVID.

Scope and Limitations

The research centers on Lagos State (Nigeria's major city and economic center) and Delta State (a resource-abundant, ecologically delicate area). Post-COVID recovery and governance modifications (approximately 2020 to current). Effective governance practices (accountability, transparency, engagement), institutional capabilities, and collaborative governance in relation to sustainable development results

(economic, social, environmental). Results will be primarily relevant to Lagos and Delta situations and might not entirely apply to all Nigerian states with varying political economies. Post-COVID administrative data availability and quality may differ among agencies; primary data (interviews/surveys) could be influenced by response bias. Governance reforms and political developments could take place throughout the study period; the research will record existing conditions during data gathering and validate them with recent literature

Literature Review

Conceptual Framework

Good governance has become a vital factor for sustainable development, especially in nations such as Nigeria where obstacles in governance remain. It pertains to how power and resources are administered to realize development results, directed by principles like transparency, accountability, participation, rule of law, and responsiveness (Nag, 2018; Addink, 2018). In Nigeria, this idea extends past administrative efficacy to tackling systemic corruption, fragile institutions, and unequal resource allocation that obstruct progress (Agagu, 2010; Ezeani, 2006).

Good Governance and Sustainable Development

Sustainable development, according to the Brundtland Commission, refers to progress that satisfies current requirements while ensuring future generations are not jeopardized. To attain this, it is essential to implement governance frameworks that encourage fairness among generations, forward-looking strategies, and the prudent utilization of resources (Wardhani, Rossieta, & Martani, 2017). Effective governance establishes the institutional basis for this by promoting inclusive development, social equity, and environmental responsibility. In Nigeria, data indicates that ineffective governance frequently results in policy shortcomings, inadequate service delivery, and unfair resource allocation (Okeke, 2014).

Principles of Accountability and Transparency

Responsibility and openness are fundamental to efficient governance. Parkhurst (2016) emphasizes the significance of evidence-based policymaking for enhancing legitimacy and public trust. In Nigeria, where political patronage and corruption hinder development, incorporating evidence-based decision-making is essential for effective resource management and trustworthy policies (Arowolo, 2017)

Decentralization and Local Participation

Decentralization is broadly acknowledged as an approach to enhance governance. Makara (2018) suggests that decentralizing authority improves both responsiveness and accountability. Nigerian academics also highlight that decentralisation can enhance inclusiveness and tackle regional inequalities by adapting development to local requirements (Ezeani, 2006; Agagu, 2010). Nonetheless, achievement relies on organizational capability, political commitment, and changes that protect local independence while adhering to national objectives.

Governance for Environmental and Social Sustainability

Effective governance also encompasses environmental stewardship and social fairness. Aqorau, Bell, and Kittinger (2018) highlight the importance of inclusiveness, teamwork, and flexible governance in managing resources. In the context of Nigeria, this means incorporating environmental protection into development strategies, particularly due to the ecological challenges posed by oil exploration, deforestation, and climate change (Ikelegbe, 2005).

Conceptual Framework: Good Governance and Sustainable Development in Nigeria

Figure 1

Conceptual Framework linking Good Governance to Sustainable Development in Nigeria

Principles of Good Governance

Good governance is essential for sustainable development, especially in situations like Nigeria, where governance issues have traditionally hindered socio-economic advancement. Its principles are interconnected, offering a structure for careful resource management, social unity, and successful development results. Essential principles encompass transparency, accountability, participation, the rule of law, responsiveness,

Ethical Leadership and Institutional Reforms

Responsible and principled leadership is crucial for maintaining governance reforms. Merker and Peck (2019) underscore trustee governance, focusing on fiduciary duties, stakeholder involvement, and ongoing assessment. Nigerian academics similarly emphasize that reforms should focus on leadership integrity, strengthening institutions, and participatory systems to secure sustainable development (Arowolo, 2017; Okeke, 2014).

Synthesis

The framework for effective governance and sustainable development in Nigeria is founded on merging normative values—like transparency, accountability, inclusiveness, and rule of law—with practical approaches such as decentralisation, evidence-driven policymaking, environmental stewardship, and ethical leadership. In this context, governance is dynamic, necessitating ongoing adjustments to Nigeria's socio-political circumstances via institutional changes and inclusive processes (Addink, 2018; Agagu, 2010). If these principles are not integrated, sustainable development goals will stay beyond reach.

equity and inclusiveness, as well as effectiveness and efficiency.

Transparency

Transparency guarantees that choices are executed and followed based on established guidelines, with affected stakeholders having access to pertinent information (Said, Alam, & Khalid, 2016). In Nigeria, transparency reduces corruption, boosts public confidence, and fosters integrity in managing public sectors. Transparent governance

empowers citizens to hold leaders responsible, strengthening democratic systems and promoting sustainable development (Nasrallah & Khoury, 2021).

Accountability

Accountability indicates the responsibility of public officials and institutions to explain their actions and decisions to the populace (Khotami, 2017). In Nigeria, poor institutions and pervasive corruption frequently weaken accountability. Establishing accountability systems, backed by legal structures, promotes effective resource utilization and boosts public trust. Enhancing accountability promotes citizen participation and supports sustainable development efforts (Hopper, 2017).

Participation

Participation requires including all stakeholders, particularly marginalized groups, in the decision-making process. Inclusive governance guarantees that policies represent various societal requirements, minimizing the likelihood of marginalization and conflict (Stojanović, Ateljević, & Stević, 2016). Participatory strategies improve social fairness, economic growth, and community unity, essential for sustainable development (Cárcaba et al., 2017; Nasrallah & Khoury, 2021).

Rule of Law

The rule of law guarantees that legal systems are equitable, applied without bias, and that justice is available to all (Said et al., 2016). Enhancing the rule of law in Nigeria is essential for safeguarding human rights, reducing corruption, and fostering a stable climate for investment. Efficient legal frameworks support social stability, economic advancement, and sustainable progress (Phillips, Hailwood, & Brooks, 2016).

Responsiveness

Responsiveness denotes the ability of governance bodies to meet public demands promptly and adjust to evolving situations (Stojanović et al., 2016). Improving responsiveness in Nigeria necessitates institutional changes to enhance service delivery and enforce policies effectively. Responsive governance enhances social welfare and speeds up the advancement of sustainable development objectives (Cárcaba et al., 2017).

Equity and Inclusiveness

Equity and inclusivity guarantee that every individual in society can engage in development and obtain resources (Stojanović et al., 2016). Inclusive governance enhances social unity, reduces conflicts, and harnesses the capabilities of every citizen for enduring development (Phillips et al., 2016; Said et al., 2016).

Effectiveness and Efficiency

Effectiveness and efficiency denote the capacity of governance institutions to fulfill societal objectives while maximizing resource utilization (Khotami, 2017). In Nigeria, inefficiency is diminished by corruption, mismanagement, and neopatrimonial behaviors (Hopper, 2017). Enhancing institutional capabilities, simplifying procedures, and implementing performance evaluation systems improve governance results and guarantee that development efforts achieve optimal effects (Nasrallah & Khoury, 2021).

Overall, these principles—transparency, accountability, participation, rule of law, responsiveness, equity and inclusiveness, and effectiveness and efficiency—form a cohesive framework crucial for sustainable development in Nigeria. Focusing on and implementing these principles tackles structural governance issues and offers a guide for transforming public institutions to attain sustainable development results.

New Public Management Theory

The New Public Management (NPM) theory offers a structure for improving governance strategies essential for sustainable development in Nigeria. Focused on efficiency, responsibility, and market-driven reforms, NPM promotes changing public sector management to address modern governance issues (Mira & Hammadache, 2017; Maryam, 2017). It highlights decentralization, performance evaluation, and citizen-focused service provision to tackle inefficiencies and institutional flaws that have traditionally limited Nigeria's progress. A fundamental tenet of NPM is the transition from strict bureaucracies to adaptable, outcome-focused systems. In Nigeria, where public management frequently encounters inefficiency and corruption, methods like performance contracts, outsourcing, and public-private partnerships can improve transparency, maximize resources, and foster an environment conducive to sustainable economic and social growth (Maryam, 2017; Li, 2020). This strategy connects public institutions with the comprehensive requirements of sustainable development spanning various sectors.

NPM furthermore advocates for citizen-focused governance, enhancing service delivery, trust, and involvement, which are essential for inclusive progress (Maryam, 2017; Wang, Zhang & Li, 2024). Programs like e-governance and decentralized services can broaden access, lessen corruption, and improve social equity. Additionally, incorporating technological advancements such as artificial intelligence and digital frameworks enhances data-driven policies, city planning, and resource management, further promoting Nigeria's sustainable development objectives (Wang, Zhang & Li, 2024; Li, 2020). In areas like health, NPM's

focus on measuring performance and managing outcomes can boost service efficiency, rectify resource misallocation, and aid in meeting SDG targets, thereby improving human capital and economic productivity (de la Salud, 2018; Oniang'o, 2016). Nonetheless, NPM reforms should be tailored to Nigeria's socio-political landscape, enhancing efficiency through robust institutions, civic participation, and inclusive governance to guarantee social justice and sustainability (Desa, 2016; Maryam, 2017).

In conclusion, NPM provides a strong theoretical and practical basis for effective governance in Nigeria. Through promoting efficiency, responsibility, and services centered on citizens, it corresponds with the 2030 Sustainable Development Agenda. The successful execution necessitates the combination of technological advancements, enhancement of institutional capabilities, and inclusive governance to attain fair and sustainable development results (Wang, Zhang & Li, 2024; Mira & Hammadache, 2017).

NEW PUBLIC MANAGEMENT THEORY

Figure 2

New Public Management Theory and how it affects sustainable development. *Author's work.*

Empirical Studies on Governance in Nigeria

Empirical research highlights the crucial importance of governance in promoting sustainable development in Nigeria. Fragile governance frameworks—marked by corruption, organizational inefficiency, and restricted public involvement—continue to pose significant obstacles to reaching the Sustainable Development Goals (SDGs) (Mukoro, 2021; Oladipo, 2018; Erude, 2024). Studies show that governance structures that encourage transparency, accountability, participatory decision-making, and the involvement of multiple stakeholders are crucial for successful policy execution and climate initiatives (Ogunyemi, 2019; Mukoro, 2021). Nonetheless, issues like political instability, inconsistent policies, and insufficient institutional capacity persist in hindering governance results (Oladipo, 2018; Erude, 2024).

Studies highlights the incorporation of knowledge systems and organizational learning into governance structures. Mukoro (2021) and Oladipo (2018) contend that reforms in institutions, enhancing local governance, and ensuring policy coherence are essential for making decisions based

on evidence. Erude (2024) emphasizes the importance of civic participation in improving accountability, transparency, and responsiveness in Nigeria's public service sector. Research indicates that encouraging citizen involvement, fair resource allocation, and inclusive stakeholder engagement greatly enhances governance efficiency, thereby strengthening resilience in social, economic, and environmental domains (Ogunyemi, 2019; Erude, 2024; Mukoro, 2021).

In this regard, empirical research in Nigeria demonstrates that effective governance is essential for sustainable development. To achieve the SDGs, it is essential to implement thorough strategies that encompass institutional reform, civic involvement, knowledge assimilation, stakeholder engagement, and policy consistency. Customized governance strategies that align with Nigeria's local settings can guarantee that development benefits are inclusive, robust, and environmentally sustainable (Erude, 2024; Mukoro, 2021; Oladipo, 2018; Ogunyemi, 2019).

Research Method

The study employs a mixed-methods descriptive survey design to investigate governance and sustainable development in Lagos and Delta States post-COVID. The population covers public officials, civil society actors, and citizens, with a sample of about 300 survey respondents (150 per state) and 10–15 key informants per state, selected using purposive and stratified sampling. Data will be collected through structured questionnaires, key informant interviews, and document reviews. Quantitative data will be analyzed using descriptive and inferential statistics (e.g., chi-square, regression), while qualitative data will be examined through thematic content analysis.

Ethical considerations

Data used in this study were obtained by consent of the respondents. Voluntary participation, confidentiality of responses, and the exclusive use of data for academic purposes, was clearly stated before eliciting of data.

Data Analysis and Results

1. Descriptive Statistics

The study engaged 300 respondents (150 from Lagos State and 150 from Delta State). Responses were analyzed to capture perceptions of accountability, transparency, citizens' participation, institutional capacity, collaborative governance, and sustainable development.

Variable	Mean	Std. Dev.	Interpretation
Accountability	4.20	0.60	High perception
Transparency	3.80	0.70	Moderate perception
Citizens' Participation	3.90	0.80	Moderate participation
Sustainable Development Index	4.00	0.60	Positive perception

Figure 3

Mean Scores of Governance Variables

Note. Accountability (M = 4.2), Transparency (M = 3.8), Participation (M = 3.9), and Sustainable Development (M = 4.0). Scale ranged from 1 (strongly disagree) to 5 (strongly agree).

Test of Hypotheses

Hypothesis One

H₀₁: There is no significant relationship between accountability, transparency, and citizens'

participation and the promotion of sustainable development in Lagos and Delta States post-COVID.

H₁₁: There is a significant relationship between accountability, transparency, and citizens' participation and the promotion of sustainable development in Lagos and Delta States post-COVID.

Method: Pearson correlation and multiple regression were employed.

Predictor	Beta (β)	t-value	p-value
Accountability	0.35	3.52	0.001*
Transparency	0.28	2.94	0.004*
Participation	0.32	3.11	0.002*
Model R ²	0.56		

Figure 4

Regression Coefficients for Sustainable Development (H1)

Note. Accountability ($\beta = .35$, $p = .001$), Transparency ($\beta = .28$, $p = .004$), Participation ($\beta = .32$, $p = .002$). $p < .05$ indicates statistical significance.

Interpretation: Accountability, transparency, and citizens' participation each have a significant positive effect on sustainable development. The null hypothesis (H_{01}) is rejected, while the alternative hypothesis (H_{11}) is accepted.

Hypothesis Two

H_{02} : Institutional capacity and collaborative governance have no significant effect on addressing socio-economic and environmental challenges in Lagos and Delta States post-COVID.

H_{12} : Institutional capacity and collaborative governance have a significant effect on addressing socio-economic and environmental challenges in Lagos and Delta States post-COVID.

Method: Multiple regression and chi-square test were used.

Predictor	Beta (β)	t-value	p-value
Institutional Capacity	0.40	4.10	0.000*
Collaborative Governance	0.33	3.45	0.001*
Model R ²	0.62		

Regression Coefficients for Socio-Economic & Environmental Challenges

Figure 5

Regression Coefficients for Socio-Economic and Environmental Challenges (H2)

Note. Institutional Capacity ($\beta = .40$, $p < .001$), Collaborative Governance ($\beta = .33$, $p = .001$). $p < .05$ indicates statistical significance.

Interpretation: Institutional capacity and collaborative governance significantly influence the ability of Lagos and Delta States to address socio-economic and environmental challenges

State	Yes	No	Total
Lagos	120	30	150
Delta	110	40	150
Total	230	70	300

post-COVID. The null hypothesis (H_{02}) is rejected, while the alternative hypothesis (H_{12}) is accepted.

Chi-Square Test Example

A chi-square test was conducted to determine whether there is a difference between Lagos and Delta States regarding improvement in accountability post-COVID.

Figure 6

Accountability by State (Chi-Square Test)

Note. $\chi^2(1, N = 300) = 1.87, p = .17$, ns. ns = not significant.
 $\chi^2(1, N=300) = 1.87, p = 0.17$

Interpretation: There is no statistically significant difference between Lagos and Delta States in terms of accountability improvement ($p > 0.05$).

Qualitative Analysis

Qualitative data from key informant interviews and document reviews were analyzed thematically.

Theme

Accountability

Collaborative Governance

Institutional Capacity

Emerging themes included accountability mechanisms, transparency practices, citizen engagement strategies, institutional reforms, and collaborative governance efforts.

Sample Quote

“We now have more public reporting mechanisms post-COVID.”

“Agencies are working with NGOs to deliver social services.”

“Training programs have strengthened local government staff.”

Integration of Findings

The mixed-methods findings indicate that governance elements—especially accountability, transparency, citizen involvement, institutional capacity, and collaborative governance—are closely linked to sustainable development results in Lagos and Delta States after COVID. Statistical tests reveal significant relationships, while qualitative evidence provides contextual understanding, showcasing real-world examples of reforms and obstacles.

Conclusion

Based on empirical evidence from the study, the variables of accountability, transparency, citizens' participation, institutional capacity, and collaborative governance, directly affect sustainable development. In this regard, sustainable development will be based on the values of accountability, transparency, which will enhanced citizens participation, institutional capacity, as well as, collaborative governance.

Strategic Recommendations

Drawing from the results of this research on governance and sustainable development in Lagos and Delta States after COVID, the subsequent strategic and policy recommendations are suggested:

4. **Utilize Artificial Intelligence (AI) for Citizen Engagement:** Government officials and policymakers ought to implement AI-powered platforms (like chatbots, e-governance dashboards, and automated feedback systems) to enhance immediate citizen involvement, collect public opinions, and guarantee inclusivity in policy development.
5. **Enhance Digital Accountability Systems:** Utilizing blockchain-based solutions and open-data platforms can promote increased transparency in

budgeting, procurement, and project implementation, thus minimizing corruption and fostering citizens' confidence in governance.

6. Create Sustainable Development Monitoring Councils at the State Level:

Lagos and Delta States need to establish independent monitoring councils that include citizens and are tasked with overseeing sustainable development metrics. These councils ought to incorporate AI-powered data analytics for immediate oversight of socio-economic and environmental results.

Contribution to Knowledge

- d) This study has contributed to sustainable development in Nigeria by recommending pragmatic solutions to tackle the problem how lack of values can impede development.
- e) It will be a useful resource for future studies, as knowing is built on.

Abstract

The basic requirements of life, sound infrastructural development amongst other attributes of life of a decent society are the indices of good governance which unfortunately seems to be missing in the development of Nigeria. The paper attempted to examine the following as objectives of this paper; assess the relationship between good governance and development in Nigeria, identify the nature of good governance in Nigeria, etcetera. The study adopted the elite theory as theoretical framework and the qualitative research methods. The major findings include the following; absence of good governance in Nigeria, corrupt practices, lack of proper planning etc. The study concluded that corruption has destroyed development in Nigeria. It was recommended that strict policy measure should be adopted to revitalize the economy. There should also be limitations to the interference of the political class.

Key words; Governance, Good governance, strategies, Development, Sustainable development

Introduction

All over the world, good representation of governance, which manifest in quality living, infrastructural development, political stability etc, which makes up the component of good governance have always been the desire and expectations of every existing member of a society. So, when qualities of good governance for instance are mentioned with particular reference to the developed countries of the world such as better health care, good roads, employment opportunities etc, it is because governance is taken as a very seriously business there. When citizens queue up to cast their votes during elections, the striking thing in their minds is to ensure that there is good governance. Obviously because, when there is good governance, every other thing is guaranteed. Happiness, political stability, rule of law and other qualities of good governance are guaranteed. This has been Nigeria's fight or struggle from political independence, on 1st of October, 1960, coupled with series of military intervention starting from the 15th January coup, 1966, counter coup of 29th July 1966, 1975 coup amongst many. For instance, the first coup of 15th January 1966 by Major Patrick

Kaduna Nzeogwu cited in Chibuzor and Nwoke(2014), opined that 'our enemies are the political profiteers, swindlers, the men in high and low places who seek bribes and demand ten percent, those that seek to keep the country divided permanently so that they can remain in office as ministers and VIPs of waste, the tribalists, the nepotisms....'

However, as good as these expectations may seem, the absence of it in Nigeria has made life very unbearable and nauseating to many Nigerians. Many have paid the price of misgovernance over the years and even now. So, the quality of good governance needs not to be over emphasized because it is germane to growth, development and other sectors of human development. No doubt the quality of good governance in Nigeria has completely eroded many Nigerians. This is obviously because of bad leadership, terrorism, corruption, outright wickedness of man to man. 'The Nigerian problem' according to Achebe in Lale(2019), 'is the unwillingness or inability of its leaders to rise to the responsibility, to the challenge of personal examples which are the hall marks of true leadership'. Corroborating the above, the bible told us that' when

the righteous are in authority, the people rejoice but when the wicked beareth rule, the people mourn (Olukoya,2018). So, the onus is upon good leaders to govern well in order for the dividends of good governance which has been repeatedly mentioned above to be achieved. It is some of these issues such as bad leadership, desperation for power, lack of planning which have consistently hindered good governance and the strategies of having it, that the study intends to interrogate

Statement of the Problem

Over the years issues of good governance and strategies for achievements have always been a contending one. Scholars of different intellectual background have in the time past come up with different approaches to dealing with it in order to attain an equitable height of satisfaction. Some had viewed it from the stand point of political factor others have looked at it from economic perspective. Others with various factor like corruption, psychology. For instance, looking at it from the corruption perspective, Mordi(2024, p.185), opined that ‘in 2023 general elections, the influence of money was pervasive with many candidates relying on financial inducements to secure votes’. Nonetheless, despite the logicity and clear approaches by some of these scholars, this paper would be approached from the stand point of political perspective where the politicians with the connivance of the elite mortgage the system to suit personal interest. The actions of the politicians make the system epileptic, wobbling and above all unworkable (Efeurhobo, 2024, p.129).

Objectives of the Study

The aim of the study is to identify and address what has been stagnating good governance and sustainable development in Nigeria. However, the following are the specific objectives of the study;

1. Assess the relationship between good governance and development in Nigeria
2. Identify the nature of good governance in the political development of Nigeria
3. Consequences of lack of good governance

Conceptual Clarifications

Attempt was made to lucidly clarify some concepts of this study for better understanding of the paper in general. Below are some of them;

Governance; Governance implies the art of leading people with the avowed desire to meet an expected end. Expected end in this context requires achieving goals that will promote and enhance the happiness of the people. Thus, it is governance when employment opportunities are created. Good roads, provisions for health facilities and a lot of other indices of human

development. According to Ikelegbe(2016, p.202)’’ governance essentially refers to the mechanisms, processes and institutions for determining and managing public affairs and society’’.

Good governance; It means governance in its true and exact representation. Governance is good when the people for whom it is meant for are happy and satisfied. For instance, it is good governance when basic necessities of life such as health, good food, housing, are consistently put in place to enhance the quality of life. The concept of good governance describe how public institutions conduct public affairs and manage public resources in order to ensure the realization of human rights, transparency, accountability, and citizenship.(Ambily & Itu,2021,p.25).

Strategies; Strategies are means by which goal or the objective of a thing is achieved or realized. The government of the day for instance needs some strategies to fulfill its obligations to its citizenry. The provision of public transport vehicles by government to reduce the pains and troubles of commuters is a strategy to save members of the public from rigorous transport challenges.

Development; Development means changes in the quality of life of a people over a fairly long period of time. It is development when a people socio economic life transform from harsh, unstable condition to one of opulence and comfort. Development according to Ake(2001) cited in Obi(2006) is thus the process by which people create and recreate themselves and their life circumstances to realize higher levels of civilization in accordance with their own choices and value. Again, Rodney,(1972) sees development both from the level of the individuals and that of the society as a whole.

Theoretical Framework

Many theories ranging from Group theory, democratic theory etc may be suitable for this study. However, the elite theory is comparatively better, at least for the purpose of this study. The elite theory is a theory that is anchored on the opinion of a small group of persons with knowledge and idea about the decision to take on behalf of the generality of the people. Their decision is usually a decision reached to enhance the quality of leadership. According to Egonmwan(2000), ‘ the elite are made up largely of middle and upper class people in western societies who have more of the skills and qualities required for leadership and who tend to share certain values about politics, mobility and leadership requirements that make the difference between them and others. The hallmark of distinction between them and others in the community is their class status and leadership resources rather than their attitudinal differences’

Corroborating the above, Oronsaye(1996,p.69), asserted that 'the proposition of the elite theory is that it is not the masses through their demands and support who determine or decide public policies but the governing elite reflecting their values and interest'. It is only expected that these category of persons should in all fairness represent the interest of all, since everybody cannot participate in the decision making process. Its limitations however could be that, as humans, their personal interest may over ride the interest of the general public. This may just explain why good governance is epileptic in the Nigeria political system despite its many strategies.

Literature Review

Good Governance, Strategies for Development

Good governance is an antidote for peaceful coexistence as well as reliable strategy to promote sustainable development particularly in a country where issues of development have become topical. In Nigeria for instance, in an attempt to achieve sustainable development, different governments since independence till date have strategized in order to attain a meaningful height of economic development. All these have not given the country the anticipated realization of goals attainment. What then is good governance? Good governance implies the ability of existing government to meet up with certain expectations of hopes on the part of the citizenry. It could be provision for good health system, employment opportunities, and portable drinking water, stable electricity supply, amongst many, that serves as indices of good governance. Adeosun(2012, sees good governance as competent management of a country's resources or affairs in a manner that is open, transparent, accountable, equitable and responsive to the yearnings and aspirations of the people'. Still in line with the above, good governance relates to political and institutional processes and outcomes that are deemed necessary to achieve the goals of development (2015), cited in Onyesom et al(2015). According to World bank (1992), good governance encompasses the traditions and institutions by which authority in a country is exercise including the capacity of the government to effectively formulate and implement sound policies as well as the respect of the citizens and the state for the institutions that govern economic and social interaction.

So, it is good governance when institutions/ agencies of government such as the judiciary, presidency, existing ministries (civil service, police, etc) are used as strategies to carry out the expectations of members of the public. For instance, the availability of medical hospitals as institutions of government is charged with the responsibility to provide effective and efficient health care services to the citizens of the state, the

establishment of the court for the effective dispensation of justice, construction of good roads for ease of commercial activities amongst many are clear indicators of good governance in any country. Therefore, the ministries responsible for these aforementioned services are seen and regarded as institutions of good governance. Thus, good governance refers to as the processes and structure through which public institutions conduct public affairs, manage resources and guarantee the realization of human rights in a manner that is free from abuse and corruption, and with due regard to the rule of law(UNDP,1997)

The strategies of good governance therefore are accountability, rule of law, effective and efficient service delivery amongst others. Still in line with good governance, lets in the order with which the strategies of good governance have been listed discuss them briefly.

Accountability; this is one of the strategies of good governance. It is expected that those entrusted with the responsibility of governance must take responsibility for their actions and decisions as far as their services are concern. According to World Bank(2007), 'public official must be held responsible for their actions and decisions through effective oversight mechanisms, legal frameworks and active civil society engagements.

The next strategy in the order they were listed is rule of law. Here, all must be fairly and equally treated as far as the law and principles governing human affairs are concern. There must be no bias from any corner as far as the law is concerned. Such action will go a long way to promote and sustain national development. In the words of Kaufmann, Kraay,& Mastruzzi(2010),' a strong legal framework that is impartial, fair, and enforced without discrimination ensures justice and equality before the law''. In line with the last scholar, Bisi et al(1978), viewing the concept of rule of law from the perspective of professor A.V. Dicey, asserted that his doctrine stresses the fundamental idea that the law is all important and that while law can be invoked to maintain order and exercise of power must be in accordance with the law of the state''.

Again, effective and efficient service delivery is another strategy. The strategy of good governance is highly significant. People must as a matter of necessity feels the impact of government services. Grindle(2007), noted that 'public institutions should deliver services completely and associate resources responsibly to meet the needs of society'.

How has Good Governance Enhanced Sustainable Development in Nigeria

No doubt the objective of good governance is sustainable development. In other words, when there is good governance sustainable development is guaranteed. The desire of every citizen is to ensure that the government of the day provides strategies of good governance such as transparency, Anti corruption measures, decentralization and local governance and many more that will promote and sustain peaceful coexistence as well as sustainable development. Unfortunately, the absence of some of these strategies of governance has been the bane of the populace and existing governments. Many have actually yearned for the strategies of good governance. Regrettably, the absence of these has caused many Nigerians anguish, pains, and frustration and even death. Whereas good governance is germane to human development and more important is the fact that it is supposed to be the hallmark of any democratically elected government. When such government is unable to live up to such expectations, it is no longer good governance but bad and hopeless one. In the words of Ogundiya (2010), 'bad governance in Nigeria is the bane of sustainable development' as political elites divert public resources to personal gain rather than investing in infrastructure and welfare'. Corroborating the above, (Sala-I-Martin & Subramanian, 2013) pointed out that the Nigerian national petroleum corporation (NNPC) has often been cited for opaque financial practices, contributing to revenue leakages and underdevelopment''.

Corruption is another terrible factor that has hindered good governance in Nigeria. It has affected the development of Nigeria in virtually all ramifications of human endeavor. By implication, sustainable development has been weakened as existing sectors of the economy have all gone moribund as money meant for their developments went into the hands of the few in charge of management and administration. According to Ologbenla (2007), 'corruption is one of

the three monsters the country is grappling with. Others are bad leadership and governance'.

The bad leadership has resulted to political instability and insecurity. The point is corruption arising from weak governance has brought about bandits, kidnapping and other violent means of making Nigeria ungovernable. The Boko Haram insurgency in the North East is a product of poverty, unemployment and government neglect (Adebajo, 2020). Similarly, (Mgbenwelu, 2002, p. 75) noted that democracy has proven elusive if not chimerical, as cycles of civilian and military governments have been punctuated by false starts, failed transitions, and recurring challenges to stable rule.

Again, the politics of godfathers has become the norm in Nigeria politics. Existing governors and leaders pay homage to their predecessors rather than to the electorates who ordinarily should be the beneficiary of good governance. More often than not, honor and acknowledgments are accorded the man who installed them into power. Failure to comply will amount to removal or heating the polity for the 'stubborn' governor. The River State is a case study where governor Fubara has been at loggerhead with his predecessor, the FCT minister, Mr. Nyesom Wike. The battle was so tense that the federal government under the leadership of his Excellency, Bola Ahmed Tinubu had to declare a state of emergency in the state. Consequently, sustainable development is retrogressed as much may not be done in terms of development. So, the good governance that ought to be the reflection of the people's yearnings and aspirations has been hijacked by the oligarchs. As rightly observed by Ekpu (2009, p. 11), he identifies non legitimacy of government due to election malpractice, corruption, violence, tribalism, poverty, illiteracy, impunity and secret oath seeking. May be a pictorial representation and tabular form of bad governance in Nigeria will help to give a clearer picture of the analysis above.

Pictorial Representation of Bad Governance in Nigeria

Tabular Representation of Bad Governance in Nigeria, Shown Below;

Issue	Description	Source
Corruption	Widespread corruption in government and public offices, which hinders development and equitable resource distribution.	Transparency International (Corruption Perception Index, 2023)
Lack of Accountability	Poor transparency and accountability mechanisms in government actions, with little or no consequences for those involved in financial mismanagement or abuse of power.	Human Rights Watch (Nigeria 2023)
Weak Rule of Law	The legal system is often undermined by political interference, slow judicial processes, and failure to enforce laws impartially.	The World Bank (World Governance Indicators)
Insecurity	Increasing violence from groups like Boko Haram, Fulani herdsmen, and kidnappers, as well as neglect of adequate security measures by the government.	UNODC Report (2022), BBC News (Nigeria Security Crisis)
Poor Infrastructure	Lack of proper infrastructure, including roads, electricity, healthcare, and education systems, particularly in rural areas.	World Bank (Nigeria Infrastructure Report)
Unemployment & Poverty	High unemployment rates, especially among youths, leading to poverty and social unrest. The government has failed to provide sustainable job opportunities.	National Bureau of Statistics (NBS) (2023 Report)
Ethnic and Religious Tension	Persistent ethnic and religious conflicts, sometimes exacerbated by political leaders' divisive rhetoric and actions.	International Crisis Group (Nigeria Briefings)
Electoral Fraud & Rigging	Widespread electoral malpractices, including vote-buying, rigging, and lack of transparency, particularly during general elections.	INEC Reports, The Guardian (Nigeria 2023)
Human Rights Violations	State-sanctioned abuses, including extrajudicial killings by security forces, restriction of freedoms of expression and association.	Amnesty International (Nigeria 2023 Human Rights Report)
Economic Mismanagement	Mismanagement of the country's resources, resulting in a reliance on oil, misallocation of funds, and lack of economic diversification.	The Nigerian Economic Summit Group (NESG) 2022 Economic Report

Discussions of Findings.

The pictures/videos above explain the grotesque pictures arising from the protest and disillusionment of the Nigerian masses. It revealed nauseating and frustrating situations that they are tired of. Consequently, to this category of people, sustainable development which is the objective of good governance is epileptic and gradually going into extinction. All hopes seem lost. And the only way out of this economic doldrums is to protest against poor governance in order to have better strategies and sustainable development.

On the table analysis above, corruption has brazenly and without any form of decency done incalculable damages to the development of Nigeria political system. There is high level display of im unity among those entrusted the role of leadership. Regrettably, there is the gross abuse of the misuse of public office for personal aggrandizement. Beside this ugly development is the problem of lack of accountability in virtually all sectors of the national economy. There is secrecy of policy formulation arising from close decision process and poor audit reporting.

Weak rule of law. Here again, the persistent interference by the politicians has often time weaken the political institutions and consequently slow sustainable development. Undue influence on judges has questionably adversely affected the law making process and made some judges to be impartial in their lawful duties.

Insecurity is the aftermath of bad governance. The emergence of Boko Haram, bandits , kidnapping amongst many other social vices have stagnated sustainable development because of bad and poor governance. People can no longer assess their farms with ease. Citizens of different category can't go about their legitimate businesses without being hurt.

Poor infrastructure is another bane of bad governance in Nigeria. Consequently, sustainable development is at cross road. There is the dearth of bad roads all over the federation. With some parts as kidnappers den. Poor health care facility has worsen the situation as having assess to quality drugs become a mirage

Conclusion

In the light of the above discussions and analysis, good governance is the hallmark of every

democratically elected **government**. Ostensibly because, it brings about sustainable development ranging from stability of government, rule of law, employment opportunities and other indices of sustainable development. Unfortunately, the system has been hijacked by the greedy few who run the country as if it is a personal empire. The obvious reason why the country is revolving around in one spot with death rate increasing by the day is because of the absence of good governance that has manifested terribly in the actions of kidnappers and bandits. Good governance is guaranteed when those entrusted with the power of governance are ready to lead with the desire to implement policies and programmes that will enhance the living standard of the people. According to Chudi(2015,p.30), 'government in the contemporary world in Europe and America are more successful because they pursue good governance.' Supporting the above, Sheng(2001, p30-31) recognized that good governance entails the following characteristics' (1) participatory, (2) consensus oriented,(3) accountable, (4) transparent, (5) responsive,(6) effective and efficient,(7) even handed and inclusive, (8) the rule of law'. It is in the light of this it becomes logical to argue that there is good governance giving all the available conditions or emphasis above. It behooves leaders who have been legitimately entrusted the right to lead with the clear objective to achieve sustainable development.

Recommendations

The following recommendations are mentioned below arising from the discussion and analysis above. No doubt, some of these suggestions will go a long way to promote and enhance good governance and strategies of sustainable development.

1. Improvement on the electoral process that will enable the people's choice to emerge.
2. Strict punishment for manipulation of election results.
3. Strict adherence to the principle of rule of law, where everyone irrespective of your position must be equal before the law.
4. Consistent protest of bad governance by the electorates
5. Recall of bad leaders who are representatives of their various constituents.

Publication Date: 2025/11/28

Abstract

This study examines the role of green banking in promoting sustainable economy and corporate social responsibility (CSR) within Nigeria's banking sector, addressing four key objectives: the extent of green banking integration, its environmental impact, its role in CSR fulfillment, and its relationship with financial performance. Using a mixed-methods approach, the research collected quantitative data from 350 banking professionals through structured questionnaires, supplemented by secondary data from regulatory reports and sustainability disclosures. Findings reveal that Nigerian banks have achieved moderate-to-strong integration of green banking practices (mean score = 3.84/5), with energy-efficient technologies (4.05) and policy frameworks (4.12) showing the highest adoption. However, gaps persist in employee training (3.65) and paperless transaction systems (3.55), indicating uneven implementation. Environmental impact analysis demonstrates significant reductions in carbon emissions (4.12) and energy consumption (4.02), though tracking of financed emissions (Scope 3) remains limited to only 31% of banks. The study highlights how green banking has transformed CSR strategies, with development banks leading (4.21) due to policy mandates, while microfinance institutions lag (3.72) due to resource constraints. Financially, green banking enhances profitability ($R^2 = 0.57$), primarily through cost savings ($\beta = 0.42$) and customer retention ($\beta = 0.31$), though green loan portfolios (3.69) require further risk assessment frameworks. The study concludes that while green banking in Nigeria has evolved beyond regulatory compliance into a strategic business imperative, full sustainability integration requires addressing behavioral, operational, and reporting gaps. Recommendations include mandatory Scope 3 emissions disclosure, workforce capacity building, and targeted incentives for smaller banks. These findings contribute to the global discourse on sustainable finance in emerging markets, offering policymakers and bank executives actionable insights for aligning financial services with environmental and social goals.

Keywords: Green banking, sustainable economy, corporate social responsibility, financial performance, Nigeria, environmental, social and governmental impact.

Introduction

In recent years, innovative finance has emerged as a groundbreaking method of tackling world economic and environmental challenges. Differing from traditional financial instruments, innovative finance applies unorthodox methods such as impact investing, green bonds, and blended finance to fuel sustainable development (Lachkepani et al., 2021). As Meseguer-Sánchez et al. (2021) describe, this is a paradigm shift that combines financial returns and measurable social and environmental value, thereby tying capital flows to long-term sustainability goals. The concept has been

well-received by policymakers and financial institutions that want to reduce climate risks as well as promote inclusive growth. In line with this, Batrancea et al. (2020) posit that innovative finance bridges financing gaps in strategic sectors such as sustainable infrastructure and renewable energy, evidencing a revolution in economic systems.

Transcending general financial innovations, green banking is a niche application of sustainable finance to the banking sector. Green banking entails financial institutions embracing environmentally friendly

practices, such as green loans, carbon footprint reduction, and investment in clean projects (Chaudhry et al., 2021). Unlike conventional banking, where profit maximization is the key, green banking integrates ecological concerns into regular operations, striking a balance between profitability and planetary health. As Kolsi et al. (2022) also underscore, aside from lessening environmental degradation, this approach also mitigates climate risks to bank resilience. Furthermore, green banking supports global sustainability policies such as the Principles for Responsible Banking to anchor the industry's commitment to the environment (Barker, 2025).

Based on this, the role of green banking in promoting sustainability and corporate social responsibility (CSR) is increasingly viewed as pivotal in contemporary financial systems. By incorporating environmental, social, and governance (ESG) considerations into lending and investments, banks promote sustainable development together with their CSR responsibilities (Ogungbade, 2020). For instance, green finance initiatives, such as special interest rates for renewable energy projects, incentivize businesses to invest in cleaner technology and reduce carbon emissions. Furthermore, Steijn (2019) argues that green banking increases stakeholder trust through the exhibition of compliance with ethical business principles. This two-fold focus on sustainability and CSR shows the revolutionary potential of green banking to reorient corporate behavior.

Apart from environmental benefits, green banking also plays a significant role in enhancing the profitability of banks. Empirical studies show that green banks tend to have enhanced risk management, cost containment, and long-term profitability (Nwafor, 2018). For example, green-certified banks are likely to attract environmentally conscious investors and consumers, thereby enhancing brand image and market differentiation. Similarly, Meo and Karim (2021) set the foundations for banks with solid sustainability frameworks to have lower default rates as their portfolios are less exposed to carbon-emitting industries that are under the threat of regulatory penalties. This financial resilience also substantiates the strategic importance of green banking in contemporary finance.

In Nigeria, the adoption of green banking is gradually gaining momentum, though still in its early stages compared to its global peers. The Central Bank of Nigeria (CBN) issued guidelines for encouraging green banking, with a concentration on energy efficiency and lending under renewable energy (Kanu et al., 2020). Nigerian banks such as Access Bank and Zenith Bank have launched green bond initiatives and sustainability reports, which suggest a shift towards sustainable business (Nwagwu, 2020). However, the extent to

which these initiatives are adopted in operational strategies is a research area. In a bid to gain its Nationally Determined Contributions (NDCs) to the Paris Agreement, green banking can act as a catalyst for sustainable economic transformation.

Inclusion of green banking practices in the financial sector in Nigeria is still not consistent, even as the world focuses more on sustainable finance. Although certain Nigerian banks now have green lending strategies and reporting on sustainability, most focus on short-term profit rather than long-term environmental effect (Ibrahim & Syriac, 2018). The current situation finds a divided approach, where a few large banks actively seek green finance, while others lag behind due to weak regulatory incentives and ignorance (Nwagwu, 2020). All financial institutions and banks should ideally adopt environmental risk assessment, lending for renewable energy, and carbon-neutral operations in their basic strategy so that they become aligned with global sustainability standards like the Principles for Responsible Banking (Barker, 2025). However, the absence of a comprehensive structure and measurable standards, discourages large-scale uptake, leaving a gap between policy recommendation and real-world implementation.

Another deadly issue is a lack of empirical studies on the impact of green banking on environmental sustainability and CSR in Nigeria. While studies from developed economies indicate that green banking reduces carbon impressions and enhances CSR adherence (Steijn, 2019), evidence to this effect is scarce in Nigeria. Existing research mostly depends on hypothetical analysis and not quantifiable impacts, and policymakers and bankers find themselves without concrete data (Ogungbade, 2020). In an ideal situation, policymakers should have data-based analyses of the contribution green loans, eco-friendly banking operations, and green investments make towards Nigeria's climate goals. That is not the situation now, however. At this moment, knowledge is inadequate to gauge whether green banking operations are symbolic or actually transformative. This study intends to bridge this gap by providing empirical information on the environmental and CSR effects of green banking in Nigeria.

Further, the linkage between green banking and bottom-line performance is yet to be deeply researched, particularly in emerging countries like Nigeria. Although some are convinced that sustainability initiatives increase the operation cost, others are convinced that they make banks more profitable by attracting eco-friendly investors and reducing regulatory risk (Nwafor, 2018). In Nigeria, there is a divergence of opinion, with some banks seeing green banking as a regulatory imperative rather than a strategic one (Kanu et al., 2020). Ideally, banks would

recognize sustainability as a driver of long-term financial health, but the lack of localized research undermines efforts to appreciate this dynamic effectively. This research aims to fill this gap by investigating whether Nigerian banks adopting green practices have better financial performance, thereby making the case for wide-scale adoption through evidence.

The broad objective of this study is to evaluate the role of green banking in promoting sustainability and

corporate social responsibility within the Nigerian banking sector. Specifically, the study seeks:

- i. To determine the extent to which green banking practices are integrated into the operational strategies of banks in Nigeria.
- ii. To assess the impact of green banking on environmental sustainability of Banks in Nigeria.
- iii. To examine the role of green banking initiatives in fulfillment of banks' corporate social responsibility (CSR) obligations.

Literature Review

Conceptual Review

Concept of Green Banking

A green bank (sometimes referred to as a green investment bank, state investment bank, clean energy finance authority, or clean energy finance corporation) is a financial institution, typically public or quasi-public, that employs innovative financing techniques and market development tools in collaboration with the private sector to expedite the deployment of clean energy technologies (Ogunbade, 2020). Green banks use public funds to leverage private investment in clean energy technologies that, despite their commercial viability, have struggled to establish a widespread presence in consumer markets (Ibrahim & Syriac, 2018). Green banks aim to reduce energy costs for ratepayers, stimulate private sector investment and economic activity, and expedite the transition to a low-carbon economy (Kolsi, Al-Hiyari & Hussainey, 2022). In the United States, green banks have been established at the federal, state, and local levels. The United Kingdom, Australia, Japan, New Zealand, and Malaysia have all established national banks dedicated to leveraging private investment in clean energy technologies (Tasnia, Alhabshi & Rosman, 2020; Meo & Karim, 2021). Collectively, green banks around the world have facilitated approximately \$30 billion in clean energy investment (Nwagwu, 2020).

In the United States, the green bank concept was originally developed by Reed Hundt and Ken Berlin as part of the 2008 Obama-Biden Transition Team's efforts to facilitate clean energy development (Steijn, 2019). A similar concept was incorporated as an amendment to the federal cap and trade bill, known as the American Clean Energy and Security Act, introduced in May 2009 (Bace, 2020). A companion piece of federal green financing legislation was concurrently introduced in the Senate, where it received broad bipartisan support (Mogaji et al., 2021). When the 2009 cap and trade legislation ultimately failed to pass the Senate, green bank advocates in the US shifted their focus to the state level (Ashrafi et al., 2019). The nonprofit Solar and Energy Loan Fund of St.

Lucie County, Inc. (SELF) was the first local government green bank established in America in 2010. Connecticut established the first state green bank in 2011, followed by New York in 2013. By the end of fiscal year 2015, the Connecticut Green Bank had supported \$663 million in project investments (Barker, 2025).

In 2022, Congress passed the Inflation Reduction Act, which established a national green bank intended to fund the existing and future network of green banks in the United States (Birindelli et al., 2018; Arsalidou, 2018; Meseguer-Sánchez et al., 2021).

In the UK in 2009, two reports were published advocating the creation of a state-backed infrastructure bank to provide financing for green projects. The first report, titled "Accelerating Green Infrastructure Financing: Outline Proposals for UK Green Bonds and Infrastructure Bank," was published in March 2009 by Climate Change Capital and E3G (Nwafor, 2018). The second report, titled "Delivering a 21st Century Infrastructure for Britain," was published by Policy Exchange in September 2009 and was authored by Dieter Helm, James Wardlaw, and Ben Caldecott (Veleva, 2020).

Key Elements of Green Banking

Green infrastructure and clean energy projects are financed by numerous varied forms and types of institutions. However, there are several key features that distinguish green banks from other institutions of finance: focus on commercially viable technology, dedicated capital source, focus on leveraging private investment, and alignment with the government (Ibrahim & Devasia, 2018).

Green banks focus on commercially proven technologies rather than novel early-stage technologies. This is due to the established nature of such technologies, reduced "technology risk" involved, and their ability to produce predictable revenues for the project owners (Oluseyi-Sowunmi et al., 2019). Green banks are effectively public-purpose institutions with some form of governmental affiliation and are typically capitalized with the use of public funds. Similar to a commercial bank, green banks both lend capital and

hold debt, necessitating the presence of their own balance sheet. Green banks also concentrate on leveraging their capital to crowd in private entry into the clean energy sector, primarily by utilizing limited public funds to attract private investment in clean energy (Lee & Ha Brookshire, 2020).

Main functions of Green Banking

Green banks play a crucial role in providing finance for high-capital-cost projects. They assist in bridging investment gaps, particularly under conditions of economic downturn. The role is in agreement with the concept that public financing can effectively address structural bottlenecks with high capital expenditures (Paulraj et al., 2024; Ezenwakwelu et al., 2020; Chaudhry et al., 2024).

Risk reduction

Green banks play an important function in de-risking low-carbon projects so that they become interesting to private investors. Green banks utilize various de-risking tools, such as concessional finance or guarantees, to do so. Not only does de-risking reduce the cost of capital, but it also stimulates private investment into riskier projects (Lachkepani et al., 2021; Moufty et al., 2021).

Educational role

Green banks serve an educational role, both within and externally. They build in-house capabilities to effectively assess risk and align de-risking instruments. These capabilities are disseminated throughout the sector, assisting investors in risk assessment and assisting developers in performing due diligence, thereby making projects more attractive to potential investors (Batrancea et al., 2020; Kolsi et al., 2022).

Signaling role

Green banks invest in ventures and build a performance record of capability. Once they choose to invest in a venture, it serves as a signal of credibility for potential other investors. This signaling encourages mobilizing other resources from previously uninterested investors and can even result in oversubscription and crowding-out of the green bank itself (Ibrahim & Devasia, 2018).

First (or Early Mover) role

Green banks are apt to assume the risk of being the first investor in new or newfangled ventures. By doing this, they demonstrate that such ventures can succeed, establishing a track record that encourages private investment in analogous subsequent projects, thus fostering innovation (Nwagwu, 2020; Barker, 2025).

Green Banking Practices

- **Green Credit and Financing:** Green credit involves lending at concessional terms—e.g., reduced interest rates or extended repayment periods—to businesses engaging in eco-friendly activities. According to Ogungbade (2020), such financing includes solar equipment installations for renewable energy, organic farming, and energy-efficient property developments. For instance, banks can give concessional loan products for solar panel installations or the purchase of electric vehicles (Bace, 2020). Such initiatives complement global sustainability goals by promoting low-carbon investments. As opposed to conventional loans, green credit includes environment due diligence to certify that projects financed meet certain ecological standards (Steijn, 2019).
- d) **Paperless and Digital Banking:** Digital banking transformation reduces paper-based payments to a minimum, ending deforestation and waste. Mobile banking apps, e-statements, and web-based account management forego the use of hard copy documents (Ibrahim & Syriac, 2018). Banks like ING and DBS have led the way with zero-paper initiatives, replacing traditional processes with cloud technology (Lee & Ha Brookshire, 2020). Digital banking not only enhances efficiency but also aligns with the broader sustainability agenda in that it reduces carbon footprint from paper usage for production and transport (Meseguer-Sánchez et al., 2021). The practice is the evolution of the financial sector to meet technology advancement and environmental preservation.
- f) **Green Bonds and Investment Products:** Green bonds are fixed-income securities directly sold to fund sustainable projects such as wind power or green infrastructure. Banks serve as issuers or underwriters, directing funds to verified green projects (Mogaji et al., 2021). For example, Nigeria's Access Bank issued a \$41 million green bond in 2021 to fund renewable power and energy-efficient buildings (Batrancea et al., 2020). The Climate Bonds Standard certifies such products to maintain transparency and adherence to environmental standards (Lachkepani et al., 2021). Unlike conventional bonds, funds are only used for projects with measurable environmental impacts, creating a direct link between sustainability and finance.

5. **Environmental Risk Assessment in Lending:** Banks increasingly integrate environmental risk analyses (ERAs) into their credit processes. Banks study potential ecological risks associated with projects before granting loans, such as pollution or resource deterioration (Birindelli et al., 2018). Equator Principles—a risk management framework—enable banks to evaluate megaprojects against environmental and social risks (Oluseyi-Sowunmi et al., 2019). For instance, a bank can reject a loan to a heavily carbon-polluting factory or subject the factory to emission reduction requirements for obtaining the loan (Barker, 2025). The technique ensures that activities being financed are not furthering environmental degradation, and operations in banks align with global standards for sustainability.
14. **Internal Green Operations:** Banks adopt green strategies in their facilities to reduce operational environmental footprints. These include energy-efficient LED lighting fixtures, solar-powered facilities, low-water use fixtures, and intensive recycling programs (Arsalidou, 2018). For example, Standard Chartered Bank has launched carbon-neutral branches in several Asian nations with clean energy and eco-friendly materials (Tasnia et al., 2020). Such programs tend to extend to employee engagement programs favoring paperless operations and environmentally friendly commuting options (Ashrafi et al., 2019). By minimizing resource consumption and emissions, banks demonstrate corporate stewardship for sustainability as they reinforce their commitment to environmental stewardship.

Concept of Sustainability in Banking

Banking sustainability is increasingly viewed as a fundamental philosophy that informs the long-term direction and ethical standards of financial institutions. It stems from the recognition that banks' activities, decisions, and strategies must consider not only profitability but also the social and environmental implications of financial operations. Banking sustainability, as defined by Bace (2020), reflects the integration of environmental, social, and governance (ESG) considerations into the business model, a value-based banking paradigm departure from traditional profit maximization. Banks need to adopt this strategy where they align themselves with principles of sustainable development by integrating principles of responsibility and accountability into their lending, investments, and in-house operations. Moufty et al. (2021) agree with this position by stating that sustainable banking is not an attractive enhancement but a necessity in today's evolving financial environment. It increases resilience, ethical disclosure, and forward-looking operating models on the basis of long-term stewardship.

Informed by this perspective, banking sustainability also entails a strategic solution to incorporate resilience into the financial system. Banks that adopt this line of thinking proactively seek practices that ensure institutional longevity, reputation integrity, and conformance to global standards of sustainability. As noted by Kolsi et al. (2022), banking sustainability is best understood as a codified, institutionalized commitment to doing business in ways that ensure economic sustainability without risking the environmental and social environments on which banks depend. These organizations put sustainability at the forefront as not peripheral business but as a key axis of competitive differentiation, stakeholder trust, and

governance culture. Barker (2025) further establishes this viewpoint by stating that sustainable banking entails the reframing of success where value creation for all in the long term triumphs over profit in the short term. Therefore, bank sustainability is a philosophy and a business imperative that defines the work of modern banks, their engagement with world pressures, and how they reinterpret their institutional mission.

Green Banking and Sustainability

Green banking is an innovative approach in the banking industry that places banking operations in line with overall sustainability goals. Green banking integrates environmental, economic, and social considerations with financial choices, in contrast with traditional banking aimed at high profits (Paulraj et al., 2024). The shift reflects a greater level of consciousness regarding the role of financial institutions to help solve issues of sustainability across the globe, from climate change to disparity. In the practice of sustainable practices, banks contribute to the financing of the United Nations Sustainable Development Goals (SDGs), namely sustainable consumption, climate change action, and reduced inequalities (Ibrahim & Syriac, 2018). Green banking and the nexus of sustainability as conceptual by Nwagwu (2020) include:

Environmental Sustainability

Green banking encourages ecological sustainability through mobilization of capital towards eco-friendly projects and avoidance of financing ecologically degrading sectors. Banks invest money in renewable energy projects, energy-efficient facilities, and clean technology development through green loans and green bonds tied to sustainability (Lachkepiani et al., 2021). Such financial instruments enable firms to transition

towards low-carbon business practices, thereby lessening climate change impacts as well as greenhouse gas emissions. In addition, green banking also promotes biodiversity conservation by avoiding investments in deforestation or habitat destruction activities (Meo & Karim, 2021). Banks that are signatories to the Equator Principles, for instance, conduct rigorous environmental risk assessments before lending to large projects, thereby complying with environmental protection requirements (Arsalidou, 2018). Such an action is one of the ways through which green banking is aligning financial flows with planetary health goals.

Alongside financing options, green banking also fosters operational sustainability within financial institutions. Paperless transactions, energy-efficient facilities, and waste minimization programs are some of the initiatives being adopted by banks to lower their carbon footprint (Oluseyi-Sowunmi et al., 2019). These programs complement outside financing sources, offering a range of environmental stewardship. Green banking also encourages climate resilience through funding adaptation projects such as flood-resistant infrastructure and sustainable agriculture (Batrancea et al., 2020). By prioritizing environmental sustainability, banks not only comply with regulatory requirements but also assist global efforts to reverse ecological degradation. This twin push of financial and ecological performance demonstrates the transformative potential of green banking in the construction of a sustainable future.

Economic Sustainability

Green banking contributes to economic resilience by generating long-term financial stability and supporting sustainable business operations. Through funding green businesses, banks spur innovation in such industries as clean energy, circular economy projects, and eco-agriculture (Mazzucato & Semieniuk, 2020, as cited in Veleva, 2020). Green investments wean the economy from fossil fuel and other harmful polluting sectors, thereby alleviating systematic risks caused by climate change and resource degradation. Besides, green banking fosters economic diversification by strengthening small and medium-scale businesses (SMEs) that engage in sustainable practices (Kanu et al., 2020). Such inclusive practice makes economic growth resilient and fair in a manner that touches a larger segment of stakeholders.

Minimizing financial risks related to environmental degradation is another critical aspect of economic sustainability. Banks that include environmental, social, and governance (ESG) considerations in their risk management systems are better positioned to remain away from stranded assets and fines from regulators (Kolsi et al., 2022). An example is stepping away from

carbon-emitting sectors to avoid exposure to future carbon pricing mechanisms and damage to reputation. Green banking also enhances market competitiveness by attracting sustainable investor and customer bases favoring sustainability-strong institutions (Lee & Ha-Brookshire, 2020). This new customer and investor behavior is an affirmation of the economic viability of sustainable banking practices.

Social Sustainability

Green banking encourages social sustainability via financial inclusion and ethical banking. Banks extend low-cost financial products to excluded communities, enabling access to clean energy products such as solar home systems and energy-efficient appliances (Ibrahim & Devasia, 2018). Also, green banking fosters gender equality by extending credit facilities to women entrepreneurs for eco-friendly businesses, thereby correcting socio-economic disparities (Mogaji et al., 2021). Such steps align with the SDGs' emphasis on inclusive development and reducing inequalities.

Ethical banking activities, such as transparency lending and anti-corruption efforts, contribute to social sustainability. Ethical banks have a vision for the long term and establish trust for customers and society, and their social license to operate becomes more solid (Ezenwakwelu et al., 2020). Green banking also contributes to community development by investing in education, health, and low-income housing schemes for sustainability-related projects (Meseguer-Sánchez et al., 2021). These initiatives are an example of how banks can utilize their capability to implement good social change without sacrificing profit.

Impact of Corporate Social Responsibility (CSR)

The Corporate Social Responsibility (CSR) paradigm has significantly transformed in the last few decades, from a voluntary corporate philanthropic approach to a strategic organizational commitment inherent to business operations. CSR is essentially the moral obligation of a corporation to manage its operations in such a way that it adds value to society and the environment, more than regulators or environmental protection agencies demand. To Steijn (2019), CSR involves corporate actions to take responsibility for the social, economic, and environmental effects of business operations. In the contemporary globalized world, CSR is increasingly being defined as the corporate responsibility to perform well for society as well as maintaining ethical business practice. Ogunbade (2020) finds that CSR is a demonstration of a company's desire to conduct its business in an open way, promoting equitable labor relations, and being responsible to all the stakeholders. It is no longer an optional good deed but an element of sustainable business governance.

The operational dynamic of CSR in industries and nations is an indication of its situational relevance and adaptability. CSR, in the view of Tasnia et al. (2020), depends on cultural needs, regulatory frameworks, and stakeholder values, and therefore it is pluralistic and adaptive. In the banking sector, CSR entails the obligation of a bank to make its operations not only profit-driven but also based on ethical lending, social integration, and conservation. Besides, Nwafor (2018) points out that CSR is built on a corporate consciousness of the reliance of businesses on the society in which they are located. Such reliance causes companies to internalize CSR as a mindset and not merely as a marketing or compliance gimmick. Consequently, CSR reflects a paradigm shift in corporate culture—one that places responsible behavior not only as a social expectation but as a foundation for institutional credibility and trustworthiness in the long term.

Green Banking and Corporate Social Responsibility

2. **Enhancing Social Accountability:** Green banking practice literally transforms how financial institutions approach corporate social responsibility (CSR) by embedding social responsibility into their operational DNA. Banks that adopt green principles, as Steijn (2019) claim, demonstrate greater commitment to social justice in terms of transparent reporting of environmental impacts and ethical lending policies. This aligns with the stakeholder theory approach whereby financial institutions are obligated to balance profit goals with societal expectations (Ibrahim & Syriac, 2018). For instance, green banks typically disclose carbon footprint data and sustainable investment portfolios, thereby building customer and regulatory confidence (Barker, 2025). Such transparency not only satisfies CSR stipulations but also places banks at the forefront of ethical finance. Furthermore, by prioritizing loans to impoverished communities and environmental businesses, such institutions address socioeconomic disparities while supporting ecological protection (Mogaji et al., 2021). This twofold emphasis on financial inclusion and environmental responsibility illustrates how green banking translates CSR from simple compliance to actual social change.
5. **Community-Based Environmental Projects:** The intersection of CSR and green banking is strongly reflected in green community initiatives. Banks invest higher CSR amounts in tree plantation drives, climate change awareness programs, and green business grants for the creation of real-world ecological and social value

(Kolsi et al., 2022). Nigerian banks like First Bank and GTBank, for example, have partnered with NGOs to construct urban farms and renewable energy micro-projects in low-income neighborhoods (Kanu et al., 2020). These initiatives conform to Carroll's CSR pyramid, with philanthropy being the most visible corporate citizenship (Ogungbade, 2020). In addition, investing in green small and medium-sized enterprises (SMEs) under good terms of lending stimulates local economies alongside the development of sustainable consumption behavior (Veleva, 2020). These social interactions are tangible proof of banks' commitment to the United Nations Sustainable Development Goals (SDGs), namely SDG 11 (Sustainable Cities) and SDG 13 (Climate Action) (Meo & Karim, 2021). Through these initiatives, banks shift from being passive lenders to proactive guardians of society's environment.

- d) **Sustainable Supply Chain Management:** Green banking advances CSR obligations upstream by placing ecological expectations along supply chains. Banks currently evaluate suppliers' sustainability accreditation, waste management systems, and carbon footprint before procurement (Paulraj et al., 2024). The practice follows the triple bottom line model, where ecological responsibility permeates every business relationship (Ashrafi et al., 2019). For instance, Ecobank's vendor policy mandates ISO 14001 compliance of all service providers, creating ripples of sustainability throughout banking activities (Batrancea et al., 2020). Supply chain monitoring of this kind avoids dilution of CSR because of association with environmentally degrading partners, a process described as "CSR contagion" by scholars (Arsalidou, 2018). Besides, green procurement processes consistently involve social values such as equitable labor, new forms of evidence illustrating the overlap between environmental and social CSR aspects (Oluseyi-Sowunmi et al., 2019). By maintaining sustainable management of their ecosystems, banks reach further than immediate operations with CSR impacts to influence extended industry networks toward ethical and green best practice.

Green Banking and Financial Performance

Green banking, as a financial innovation, has increasingly become the focus of transforming the economic status of banks, especially through its role in cost saving and reducing operational expenses. Through the use of green initiatives like digitalization, energy-efficient buildings, and paperless banking,

banks achieve cost savings and streamlining internal processes. For instance, using digital banking channels which reduces the need for physical branches, saving utility and maintenance costs. As Nwafor (2018) assumes, banks adopting green operations have better internal resource utilization and operating flexibility. Likewise, Bace (2020) argues that the move towards low-carbon banking operations implies lower long-term costs and higher efficiency margins. Such operating benefits enhance financial performance over the long term, therefore making green banking not only an ethical choice but a viable business strategy.

Besides, green banking enhances a bank's reputation, thus enhancing customer loyalty and brand reputation in the competitive financial sector. Customers are becoming more environmentally aware, and most get drawn to institutions whose values align with sustainability. By making public commitments towards environmental stewardship, banks can attract and retain more environmentally aware customers. As Ezenwakwelu et al. (2020) have contended, a strong green image engenders emotional loyalty and trust, which are paramount in today's customer-focused banking sector. Ibrahim & Devasia (2018) also confirm that brand equity is highly enhanced where banks are seen to be contributing to people's well-being via sustainable finance and transparency in operations. Such positive brand connection strengthens market share and clientele, indirectly leading to greater profitability.

Besides, green banking activities serve as a buffer against environmental risks, regulatory risks, and reputational risks, enabling banks to attain sustainable long-run profitability. As regulatory pressures to conform to environmental standards grow, institutions with green systems are less likely to be penalized and get negative press. Moufity et al. (2021) posit that green financial practices guarantee stability in the event of climate change financial risks. In concurrence with this, Lee & Ha-Brookshire (2020) further contribute that green-asset investing and green portfolios by banks enjoy more stable returns, due to their alignment with long-term green goals and lower default hazards on green projects. Thus, with the incorporation of sustainability in their strategies, banks lay the foundation for strong financial growth and stabilization.

Theoretical Review

Stakeholder Theory

Stakeholder Theory is a foundational concept in business ethics and organizational management that argues that corporations should serve the interests of all stakeholders, not just shareholders. Developed primarily in opposition to the traditional shareholder-centric view of corporate responsibility, Stakeholder

Theory has become influential in shaping contemporary management practices and corporate governance frameworks. The theory advocates for a more inclusive model of corporate accountability that considers the rights, interests, and influences of various groups connected to the enterprise.

The most prominent proponent of Stakeholder Theory is R. Edward Freeman, who introduced the concept comprehensively in his 1984 book *Strategic Management: A Stakeholder Approach*. Freeman's theory emerged as a response to the perceived shortcomings of Milton Friedman's shareholder theory, which held that the sole social responsibility of business is to increase its profits for shareholders. Freeman, in contrast, argued that businesses have a moral obligation to consider the interests of a wider range of stakeholders including employees, customers, suppliers, communities, and governments (Freeman, 1984). He posited that these groups, being directly or indirectly affected by business activities, deserve consideration in managerial decision-making.

Bottom Line Theory

The Triple Bottom Line (TBL) theory, proposed by John Elkington in 1994, redefined the traditional notion of business success by arguing that companies should focus not only on profit but also on their social and environmental responsibilities. This theory posits that sustainable development requires balancing three interdependent dimensions: economic prosperity, environmental quality, and social equity—often referred to as the "three Ps": People, Planet, and Profit (Elkington, 1997). Rather than prioritizing shareholders alone, the TBL framework emphasizes the importance of considering all stakeholders, including employees, communities, and the natural environment.

Empirical Review

Empirical evidence from Nigerian banks demonstrates moderate-to-strong integration of green banking practices, though with significant implementation gaps. A 2023 study by Adegbite and Nakajima found that 78% of Nigerian commercial banks had formal green policies, but only 42% had fully operationalized them across all departments, revealing a "policy-practice decoupling." The Central Bank of Nigeria's (2022) Sustainable Banking Principles survey reported highest adoption in energy efficiency (84% of banks) and electronic transactions (76%), while green lending portfolios remained underdeveloped at just 19% of total assets. Ezeudu et al. (2021) identified three key barriers: inadequate technical expertise (particularly in renewable energy financing), legacy IT systems hindering paperless transitions, and misaligned performance metrics that prioritize short-term profits over sustainability. Their regression analysis showed

bank size ($\beta=0.32$, $p<0.01$) and regulatory pressure ($\beta=0.41$, $p<0.001$) as significant predictors of integration depth, suggesting smaller microfinance banks lag behind larger commercial institutions in adoption rates.

Quantitative analyses confirm green banking significantly reduces banks' ecological footprints in Nigeria. Nwankwo's (2023) longitudinal study of 25 banks found solar-powered branches decreased carbon emissions by 38-42% compared to conventional branches, while digital banking adoption correlated with 29% less paper waste ($r=0.67$, $p<0.001$). However, the Environmental Monitoring Committee's (2023) audit revealed only 31% of banks currently track Scope 3 emissions from financed projects, indicating incomplete sustainability measurement. Comparative research by Okafor (2022) demonstrated that banks with ISO 14001-certified environmental management systems achieved 2.3 times greater energy efficiency improvements than non-certified peers, highlighting the value of standardized frameworks. Notably, the Nigerian Bankers' Committee (2023) reported that aggregate banking sector emissions fell 18% since 2019, though this remains above global benchmarks for emerging markets.

Green banking has redefined CSR paradigms in Nigerian banking, transitioning from philanthropic activities to strategic sustainability investments. Ukwuoma and Adetunji's (2023) content analysis of CSR reports showed environmental initiatives grew from 12% of CSR budgets in 2015 to 34% in 2022, with greatest allocations to renewable energy projects (42%) and financial inclusion (29%). However, qualitative interviews by Mohammed (2022) revealed 67% of bank employees perceive CSR environmental programs as "public relations exercises" rather than core missions. The Global Reporting Initiative (2023) ranked Nigerian banks' sustainability disclosures at 58% compliance, excelling in governance indicators (72%) but underperforming in social impact metrics (41%). Crucially, Eze's (2023) stakeholder analysis found that customers prioritize ethical banking (mean=4.2/5) over green features (mean=3.7/5), suggesting CSR strategies must balance environmental and social priorities.

Meta-analyses establish compelling financial business cases for green banking in Nigeria. Olayiwola's (2023) study of 10-year financial data showed ESG-leading banks outperformed peers by 14% ROE and 23% customer retention rates. Regression models by Adeleke (2022) identified three profitability drivers: energy cost savings ($\beta=0.39$), green loan defaults 22% lower than conventional loans, and premium pricing power (1.4-2.6% interest rate advantages). However, the African Development Bank's (2023) stress tests revealed diminishing returns - banks allocating >15%

of assets to green projects faced 18% higher liquidity risks, underscoring need for balanced portfolios. Notably, stock performance analysis by Okonkwo (2023) found Nigerian banks with strong sustainability ratings had 30% lower volatility during economic shocks, validating green banking's risk mitigation value. Okereke (2019) conducted a study titled "Green Banking Practices and Sustainability Performance of Deposit Money Banks in Nigeria" to examine the impact of green banking initiatives on banks' environmental and social performance. The specific objectives were to assess how paperless banking, energy-efficient facilities, and green financing influenced sustainability metrics. The study adopted a descriptive survey design and targeted a population of 260 staff members from five selected commercial banks operating in Lagos. A structured questionnaire was used as the instrument for data collection. Data were analyzed using multiple regression and presented in tables and charts. The results showed a significant positive relationship between the adoption of green banking practices and improved environmental sustainability and CSR performance. The study concluded that green banking significantly contributes to sustainability by reducing operational carbon footprints and enhancing stakeholder trust. It recommended that Nigerian banks institutionalize green policies and provide incentives for clients engaging in environmentally responsible businesses.

Adewuyi & Ogunleye (2020) investigated "The Influence of Green Banking on Corporate Social Responsibility in the Nigerian Financial Sector" with the objective of exploring the extent to which eco-friendly banking services enhance CSR initiatives among banks. The research employed a mixed-methods approach, combining qualitative interviews and quantitative surveys. The population included 300 employees across 10 commercial banks headquartered in Abuja. Data were collected using structured questionnaires and in-depth interviews. Quantitative data were analyzed using SPSS to run correlation and regression tests, while qualitative data were subjected to thematic analysis. Findings revealed that banks practicing green banking—such as digital transaction platforms and green loans—demonstrated higher levels of CSR engagement, particularly in community development and environmental protection. The study concluded that green banking is a catalyst for improved CSR performance and urged financial institutions to integrate environmental concerns into their core CSR strategies.

Muhammad (2021) in his study titled "Green Financing and Environmental Sustainability among Commercial Banks in Northern Nigeria" set out to evaluate how green loan products contribute to environmental conservation efforts. The objective was to determine

the relationship between green financing and sustainability indicators such as carbon reduction and waste management. A correlational research design was adopted, with a population consisting of 150 bank managers and sustainability officers from 7 banks in Kano, Kaduna, and Jos. Data were gathered using a validated questionnaire and analyzed using Pearson correlation and regression analysis. The findings indicated a strong positive correlation between the volume of green loans issued and improvements in banks' sustainability records. The study concluded that increasing the availability of environmentally targeted financial products directly enhances a bank's environmental impact. It recommended policy reforms to incentivize green lending and government support through low-interest facilities for eco-friendly projects. Oluwatosin & Nnadi (2022) carried out a study titled "Evaluating the Impact of Green Banking on CSR and Customer Perception in Nigeria's Banking Industry" with the objective of analyzing how green banking practices influence public perception and CSR alignment in banks. The researchers used a cross-sectional survey design and targeted a population of 500 customers and 100 bank staff across three major urban centers—Lagos, Port Harcourt, and Abuja. The instrument for data collection was a self-designed questionnaire validated through expert review. Descriptive statistics and regression analysis were used to present and analyze data. Results showed that customers perceived banks that adopted green banking practices as more socially responsible and trustworthy, thereby enhancing brand loyalty and customer satisfaction. The study concluded that green banking enhances both CSR performance and customer perception positively. It recommended that banks increase public awareness of their green initiatives and integrate sustainability into branding strategies.

Research Gap

Despite the growing body of literature on green banking and its implications for sustainability and corporate social responsibility (CSR), significant research gaps remain. First, most existing studies in Nigeria have concentrated on the environmental aspects of green banking, with limited attention paid to its broader influence on CSR initiatives, particularly in terms of social investment, ethical governance, and stakeholder engagement. Additionally, many empirical studies have been descriptive in nature, lacking in-depth statistical analysis that could establish causal relationships between green banking practices and measurable CSR outcomes. Furthermore, there is a paucity of research that captures customer perceptions and how these perceptions influence banks' reputational capital in the context of green initiatives. This study seeks to bridge these gaps by exploring the

multifaceted role of green banking in promoting both environmental sustainability and socially responsible behavior within the Nigerian banking sector, using robust empirical methods and a stakeholder-inclusive approach.

Theoretical Framework

This study adopts Stakeholder theory, a prominent theory of business ethics and management. The theory was originally articulated by Edward Freeman in his seminal work *Strategic Management: A Stakeholder Approach* in 1984. Freeman challenged the conventional shareholder-centric view by positing that businesses have a responsibility not only to their owners but also to a broader set of stakeholders, including employees, customers, suppliers, governments, communities, and the natural environment.

Methodology

The research design for this study adopts a quantitative, non-experimental, cross-sectional survey approach, which is best suited for analyzing the role of green banking in promoting sustainability and corporate social responsibility (CSR) within Nigerian banks. Given that the study seeks to measure the extent of green banking adoption, assess its environmental and financial impacts, and evaluate its contribution to CSR, a descriptive-correlational design is most appropriate. The population of this study comprises all banking professionals working within the Nigerian financial sector, specifically targeting employees and management staff of commercial banks, microfinance institutions, and development banks that have adopted or are in the process of adopting green banking practices.

Reliability and Validity of the Instrument

The establishment of reliability and validity for the research instrument constitutes a critical component of this study's methodological rigor, ensuring that the collected data accurately measures the intended constructs of green banking practices, sustainability impact, CSR fulfillment, and financial performance. The questionnaire's reliability was assessed through a comprehensive pilot test involving 35 banking professionals (10% of the main sample size) from institutions not included in the final study. Cronbach's alpha coefficient served as the primary metric for evaluating internal consistency, with results demonstrating strong reliability across all sections of the instrument. The green banking practices section achieved an alpha of 0.82, the environmental sustainability impact section 0.79, the CSR fulfillment component 0.81, and the financial performance dimension 0.84, all exceeding the conventional

threshold of 0.70 for social science research. These results confirm that the items within each construct consistently measure the same underlying concept, providing confidence in the instrument's stability and coherence.

Model Specification

Multivariate Regression Model is a statistical technique used to examine the relationship between multiple independent variables and more than one dependent variable simultaneously (Moufity, Clark, & Al-Najjar, (2021). Unlike univariate regression, which analyzes one outcome at a time, the multivariate approach accounts for the interdependencies among the dependent variables, providing a more comprehensive understanding of how predictor variables influence various dimensions of organizational or financial performance. This method is particularly useful when studying complex systems, such as banks, where factors like green banking practices may concurrently impact operational strategies, environmental sustainability, CSR performance, and financial outcomes.

Model Type: Multivariate Regression Model or SEM

$$\begin{aligned} Y_{1i} &= \beta_0 + \beta_1 GBI_i + \beta_2 SIZE_i + \beta_3 AGE_i + \beta_4 RISK_i + \beta_5 CAP_i + \epsilon_{1i} \\ Y_{2i} &= \alpha_0 + \alpha_1 GBI_i + \alpha_2 SIZE_i + \alpha_3 AGE_i + \alpha_4 RISK_i + \alpha_5 CAP_i + \epsilon_{2i} \\ Y_{3i} &= \gamma_0 + \gamma_1 GBI_i + \gamma_2 SIZE_i + \gamma_3 AGE_i + \gamma_4 RISK_i + \gamma_5 CAP_i + \epsilon_{3i} \\ Y_{4i} &= \theta_0 + \theta_1 GBI_i + \theta_2 SIZE_i + \theta_3 AGE_i + \theta_4 RISK_i + \theta_5 CAP_i + \epsilon_{4i} \end{aligned}$$

Where:

GBI_i : **Green Banking Index** for bank i (constructed from a combination of green practices)

Y_{1i} : Score for **integration of green banking into operational strategy**

Y_{2i} : Score for **environmental sustainability performance**

Y_{3i} : Score for **CSR obligation performance**

Y_{4i} : **Financial performance** (e.g., Return on Assets or Return on Equity)

$SIZE_i$: Bank size (e.g., total assets)

AGE_i : Age of the bank

$RISK_i$: Risk exposure (e.g., non-performing loans)

CAP_i : Capital adequacy ratio

$\epsilon_{1i} \epsilon_{2i} \epsilon_{3i} \epsilon_{4i}$: Error terms

Methods of Data Analysis

The data analysis for this study employed a comprehensive, multi-stage analytical approach designed to thoroughly examine the relationships between green banking practices and their sustainability, CSR, and financial performance outcomes in Nigerian banks. The analytical process began with rigorous data cleaning and preparation procedures to ensure the quality and reliability of the dataset before proceeding to substantive analysis. Descriptive statistical analysis formed the foundational layer of the examination, providing crucial insights into the general characteristics of the sample and the distribution of key variables.

DATA ANALYSIS

This section presents the empirical results of the study through rigorous statistical analysis of green banking practices and their impacts on sustainable economy, corporate social responsibility (CSR), and financial performance in Nigerian banks. The analysis employs descriptive and inferential statistical methods, using ANOVA to evaluate: (1) the extent of green banking integration across Nigerian financial institutions, (2) its measurable effects on environmental sustainability, (3) its role in fulfilling CSR obligations, and (4) its relationship with banks' financial performance.

Analysis of Research Questions

Research Question 1: The extent to which Green Banking practices are integrated into the operational strategies of Banks in Nigeria

Table 4.6: Descriptive Analysis of Green Banking Practices

S/no	Indicator	Mean	Std. Dev.	Interpretation
1	Clear green banking policy	4.32	0.81	Strong institutional commitment
2	Regular employee training	3.65	1.08	Moderate implementation
3	Paperless transactions priority	3.41	1.24	Basic adoption with challenges
4	Energy-efficient technologies usage	4.05	0.92	Widespread adoption
5	Dedicated sustainability department	3.12	1.35	Limited organizational integration
6	Active promotion of green lending	3.78	1.05	Developing practice
7	Investment in eco-friendly infrastructure	3.91	0.97	Strong capital commitment
8	Internal awareness of green banking benefits	3.54	1.11	Moderate understanding

The analysis reveals Nigerian banks have made significant progress in establishing green banking policies, evidenced by the high mean score (4.12) for formal policy adoption. However, implementation varies substantially across different dimensions, as shown by the standard deviations ranging from 0.81 to 1.12. While energy-efficient technologies score well (3.91), paperless transactions lag behind (3.55), indicating particular challenges in digital transformation. The employee training mean of 3.78

suggests most banks have initiated sustainability education programs but likely need to enhance their comprehensiveness and frequency. The composite score of 3.80 on the 5-point Likert scale indicates that while green banking has gained traction, there remains considerable scope for more comprehensive and uniform adoption across all operational areas.

Research Question 2: The impact of green banking on environmental sustainability of Banks in Nigeria.

Table 4.7: Descriptive Statistics of Environmental Sustainability Indicators

S/no	Indicator	Mean	Std. Dev.	Interpretation Level
1	Carbon footprint reduction	4.12	0.85	High impact
2	Reforestation/waste programs	3.65	1.12	Moderate impact
3	Digital banking promotion	3.89	0.97	Strong adoption
4	Environmental impact reporting	4.21	0.79	Institutionalized practice
5	Sustainability reputation	4.05	0.88	Significant improvement
6	NGO partnerships	3.52	1.18	Developing practice
7	Reduced resource consumption	3.97	0.94	Strong operational impact
8	Regulatory compliance	4.35	0.72	Fully established

The environmental impact analysis presents a mixed picture of sustainability achievements in Nigerian banks. Energy conservation efforts lead with a mean score of 4.02, reflecting successful initiatives like solar power adoption and LED lighting retrofits. Regulatory compliance scores highest (4.15), indicating banks prioritize meeting environmental standards. However, the lower scores for waste management (3.45) and water conservation (3.21), coupled with their higher standard deviations, reveal inconsistent implementation of these aspects across institutions. The composite score of 3.74 suggests that while environmental benefits are being realized, they remain concentrated in certain areas rather than being comprehensive. The relatively high standard deviation (0.83) for the composite score further underscores the variability in environmental performance across different banks.

The analysis further demonstrates that green banking practices are generating measurable environmental benefits across Nigerian banks, with an overall composite mean score of 3.97. Regulatory compliance emerges as the strongest performing indicator (mean=4.35, SD=0.72), reflecting banks' adherence to both Central Bank of Nigeria's Sustainable Banking Principles and international standards like the UNEP FI. This is closely followed by systematic environmental reporting (mean=4.21) and carbon footprint reduction (mean=4.12), indicating that monitoring and disclosure mechanisms are well-established.

Research Question 3: The role of green banking initiatives in fulfillment of banks' corporate social responsibility (CSR) obligations

Table 4.8: Green Banking's Role in CSR Fulfillment

S/no	Description	Mean	Std. Dev.	Remark
1	CSR initiatives focus on environmental sustainability	3.85	0.93	Strong focus, but some banks lag behind (high SD)
2	Aligns with CSR goals	4.18	0.82	Excellent strategic integration (low SD shows consensus)
3	Sponsors community eco-projects	3.67	1.14	Moderate adoption with significant variation across banks
4	Employee participation in environmental CSR	3.32	1.21	Weakest area needing improvement (high SD indicates inconsistency)
5	CSR reports highlight green banking	4.08	0.89	Institutionalized practice with strong compliance
6	Customers perceive social responsibility	3.95	0.94	Successful external communication of CSR efforts
7	Educates customers on sustainable products	3.78	1.05	Developing practice with room for growth
8	Enhances stakeholder trust	4.05	0.87	Strong credibility builder for CSR programs

The CSR fulfillment analysis demonstrates that Nigerian banks have effectively incorporated green banking into their corporate social responsibility frameworks, as shown by the composite score of 3.78. Sustainability reporting stands out with a mean of 4.08, reflecting robust transparency practices likely driven by regulatory requirements and investor expectations. The strong showing in CSR-strategy alignment (3.95) indicates most banks have successfully embedded sustainability into their core missions. However, the

lower scores for employee volunteerism (3.32) and community projects (3.67), along with their higher standard deviations, suggest these more participatory aspects of CSR require further development. The overall pattern reveals that while institutional and strategic elements of green CSR are well-established, grassroots engagement and community-level impacts represent areas needing additional focus and resources. Research Question 4: The relationship between green banking and financial performance of Banks in Nigeria

Table 4.9: Green Banking's Impact on Financial Performance - Item Analysis

S/no	Description	Mean	Std. Dev.	Remark
1	Reduces operational costs	4.11	0.83	Strongest benefit (energy/paper savings clearly measurable)
2	Customers prefer eco-friendly banks	3.87	0.95	Growing market differentiation factor
3	Green loans are profitable	3.69	1.02	Developing area needing better risk models (highest SD)
4	Attracts new investors	3.95	0.91	ESG investing gaining traction in Nigeria
5	Improves overall financial performance	4.03	0.87	Clear correlation between green practices and profitability
6	Reduces long-term financial risks	4.05	0.89	Strategic benefit for regulatory compliance
7	Shareholders support sustainability	4.12	0.85	Strong investor confidence in green strategies
8	Competitors imitate our green practices	4.08	0.82	First-movers creating industry standards

The financial performance analysis presents compelling evidence for the business case of green banking in Nigeria. The composite score of 3.93 indicates that sustainability initiatives are delivering tangible financial value across multiple dimensions. Cost savings lead with a mean of 4.11, demonstrating that energy efficiency and paperless operations are generating measurable bottom-line benefits. The strong showing in risk mitigation (4.03) suggests banks recognize green practices as effective safeguards against environmental risks and regulatory penalties. While all financial metrics score above 3.5, the slightly lower score for loan performance (3.69) and its higher standard deviation (1.02) indicate that green lending portfolios may require more time to mature or need improved risk assessment frameworks. The overall financial performance results should reassure bank executives that sustainability investments can yield competitive returns while aligning with global best practices.

Discussion of Findings

The Extent of Green Banking Integration in Nigerian Banks

The integration of green banking practices into Nigerian banks' operational strategies has reached a moderate-to-advanced stage, though with notable disparities across different functional areas. Empirical analysis reveals a mean integration score of 3.84 (on a 5-point Likert scale), indicating that sustainability principles are now structurally embedded in banking operations. This finding aligns with Adegbite and Nakajima's (2023) study, which found that 78% of Nigerian commercial banks have formal green policies, though only 42% have fully operationalized them across all departments. The one-sample t-test ($t = 15.72$, $p < 0.001$) confirms that this adoption level is statistically significant, rejecting the null hypothesis that green banking integration is merely superficial. However, the standard deviation (0.76) highlights variability in implementation, suggesting that while some banks—particularly large commercial institutions—have achieved robust integration, others, especially smaller microfinance banks, lag behind. This disparity is further explained by Ezeudu et al. (2021), who identified three critical barriers: (1) inadequate

technical expertise in renewable energy financing, (2) legacy IT systems hindering paperless transitions, and (3) misaligned performance metrics that prioritize short-term profits over long-term sustainability. Regression analysis from their study found that bank size ($\beta = 0.32$, $p < 0.01$) and regulatory pressure ($\beta = 0.41$, $p < 0.001$) were the strongest predictors of integration depth.

A deeper breakdown of integration trends reveals that energy-efficient technologies (mean = 4.05) and formal policy frameworks (mean = 4.12) score highest, reflecting their alignment with cost-saving and compliance motivations. Conversely, employee training (mean = 3.65) and paperless transaction adoption (mean = 3.55) remain weaker, indicating that behavioral and cultural transformation lags behind infrastructural changes. This supports the Central Bank of Nigeria's (2022) Sustainable Banking Principles Survey, which reported that while 84% of banks have adopted energy-saving measures, only 62% have comprehensive staff sustainability training programs.

The Impact of Green Banking on Environmental Sustainability

The empirical evidence overwhelmingly supports the positive environmental impact of green banking in Nigeria. Carbon footprint reduction (mean = 4.12) and energy conservation (mean = 4.02) emerge as the most significant outcomes, reinforcing Nwankwo's (2023) longitudinal study, which found that solar-powered bank branches reduced emissions by 38-42% compared to conventional branches. The strong correlation ($r = 0.72$, $p < 0.001$) between energy-efficient technologies and reduced consumption validates the hypothesis (H_2) that green banking enhances environmental sustainability.

However, the Environmental Monitoring Committee's (2023) audit uncovered a critical gap: only 31% of Nigerian banks track Scope 3 emissions (indirect emissions from financed projects). This suggests that while banks are improving their operational sustainability, their financed emissions—often the largest component of their carbon footprint—remain underreported. This aligns with Okafor's (2022) comparative study, which found that ISO 14001-certified banks achieved 2.3 times greater energy efficiency improvements than non-certified peers, emphasizing the need for standardized environmental management systems.

Customer-facing green initiatives, such as digital banking promotion (mean = 3.89), have also contributed to sustainability, reducing paper waste by 29% ($r = 0.67$, $p < 0.001$). However, the Nigerian Bankers' Committee (2023) reported that aggregate banking sector emissions remain 18% above global

emerging market benchmarks, indicating room for improvement.

Role of Green Banking in CSR Fulfillment

Green banking has fundamentally reshaped corporate social responsibility (CSR) in Nigeria's financial sector, transitioning from philanthropy-driven initiatives to strategic sustainability investments. The ANOVA results ($F = 6.34$, $p = 0.002$) confirm that CSR performance varies significantly by bank type, with development banks (mean = 4.21) outperforming commercial (mean = 4.05) and microfinance banks (mean = 3.72). This stratification aligns with Ukwuoma and Adetunji's (2023) finding that environmental initiatives now comprise 34% of CSR budgets, up from just 12% in 2015.

However, employee engagement remains a weak point (mean = 3.32), with Mohammed's (2022) qualitative interviews revealing that 67% of bank staff perceive CSR environmental programs as "PR exercises" rather than mission-critical activities. This perception gap is further evidenced by the Global Reporting Initiative's (2023) assessment, which ranked Nigerian banks' sustainability disclosures at 58% compliance—excelling in governance (72%) but underperforming in social impact (41%).

Relationship Between Green Banking and Financial Performance

The financial viability of green banking is strongly supported by empirical data. Regression analysis ($R^2 = 0.57$) confirms that sustainability practices enhance profitability, with cost savings ($\beta = 0.42$, $p < 0.001$) and customer retention ($\beta = 0.31$, $p = 0.001$) as key drivers. These findings mirror Olayiwola's (2023) study, which found that ESG-leading banks outperformed peers by 14% in ROE.

However, green loan profitability (mean = 3.69) shows room for growth, aligning with the African Development Bank's (2023) warning that excessive green financing (>15% of assets) may increase liquidity risks.

Summary, Conclusion and Recommendation

This study examined the role of green banking in promoting sustainability and corporate social responsibility (CSR) within Nigerian banks, addressing four key objectives. The findings reveal that while green banking has gained significant traction, its integration and impact vary across different dimensions of banking operations.

This study conclusively demonstrates that green banking has evolved from a peripheral corporate responsibility initiative to a strategic imperative within Nigeria's banking sector, significantly contributing to environmental sustainability, CSR fulfilment, and

financial performance. The findings collectively affirm that Nigerian banks have made substantial progress in adopting green practices, though critical gaps persist in implementation depth and sector-wide uniformity.

This study recommends the following:

- Implementation of comprehensive sustainability training programs for all banking staff.
- Investment in digital infrastructure to promote paperless banking.
- There should be mandate emissions reporting, including Scope 3 financed emissions, for transparency and accountability.
- There should be support mechanisms for smaller financial institutions to promote equitable participation.

Abstract

This study investigated the effect of green knowledge management strategies on employees' green performance of selected Small and Medium Enterprises (SMEs) in Anambra State, Nigeria. The study is grounded in the knowledge-based view theory, which emphasizes the generation of knowledge within the organization for gaining a competitive advantage. The research design method adopted was descriptive survey design. With a total population of 1,200 staff of 10 selected SMEs, the sample size of 291 was drawn applying the Krejcie and Morgan (1970) table of sample size determination. The research instrument applied was a structured questionnaire, and a simple random sampling technique was adopted in the administration of the questionnaire. The instrument's reliability was confirmed with a Cronbach Alpha (α) index. Data analysis was conducted using Pearson correlation and Ordinary Least Squares (OLS) multiple regression via SPSS version 22. Findings revealed strong, positive, and statistically significant relationships between all green knowledge management components and employees' green performance. Notably, green knowledge acquisition had the most substantial effect ($\beta = 0.592$), followed by knowledge sharing ($\beta = 0.226$) and knowledge creation ($\beta = 0.138$). The study concludes that green knowledge management significantly enhances employees' green performance in SMEs and recommends policies that will encourage green knowledge management practices among SMEs in Anambra State.

Keywords: *Green Knowledge Management, Green Knowledge Creation, Green Knowledge Acquisition, Green Knowledge Sharing, Employee Green Performance. Small and Medium Enterprises (SMEs)*

Introduction

Recently, employee green performance has become a burning issue in environmental management and sustainable economic development (Hien, 2025). As the world struggles to combat the challenges posed by environmental degradation, organizations are desirous, including individuals making frantic efforts to improve their green knowledge and skills and to come up with innovative ideas to solve the myriads of environmental issues and implement eco-friendly initiatives for business continuity. This requires creativity and collaborative efforts, as technological development has

evolved to aid or complement human efforts (De Barros et al., 2025).

Employee performance is a multifaceted concept that has no clear-cut definition (Ghalem et al., 2016). It refers to the effective and efficient use of experiences, knowledge, skills, and talents to carry out specified tasks and to achieve organizational objectives (Alghamdi, 2021). Performance is perceived in terms of commitment to achieving eco-friendly objectives and sustainable development (Gomes et al., 2024). An employee's performance cannot be evaluated unless there is a standard of measurement. This standard is

usually set by the organization to enable it to appraise the workers. This becomes very important since employee performance to a great extent determines organizational performance (Yang & Li, 2023). Employee job performance is mainly measured by quantity (amount of work) and quality (how well they do compared to peers), using self-reported performance data (Arulrajah et al., 2016). The quantity and quality of work done to preserve the environment for sustainable development is referred to as employees' green performance.

In today's fast-changing world, knowledge is the key driver of organizational operations, ensuring a firm's survival and profitability (Wyszkowska-Kuna, 2020) and promoting innovation, productivity, sustainability, and overall organizational success (Ngoc Huynh et al., 2024). To achieve success and guarantee sustainability, organizations are expected to focus on improving the performance of employees, as it determines the overall success of the organization (Alghamdi, 2021). This requires effective knowledge management practices such as knowledge creation, acquisition, and sharing. Green knowledge management (GKM) has become crucial for gaining a competitive edge, as it impacts employees' environmentally friendly performance (Khan et al., 2024). According to El-Kassar and Singh (2019), as referenced by Polas et al. (2021), the key knowledge management factors influencing SMEs' adoption of green innovations are knowledge acquisition, sharing, and responsiveness. Al-Faouri (2023) identified five dimensions of the green knowledge management process, which include knowledge acquisition, storage, dissemination, utilization, and creation. A situation whereby tacit knowledge, which is a personalized and undocumented knowledge (Gamble, 2020), is formalized, communicated, and made understandable through some form of documentation or explanation, creates knowledge (Corcione et al., 2024). To achieve organizational objectives, knowledge needs to be acquired by individuals and groups within the organization. Knowledge acquisition is the process of acquiring and disseminating information on environmentally sustainable methods, concepts, and technologies (Baquero, 2024). Its sources could be internal or external (Wyszkowska-Kuna, 2020). The knowledge acquired is expected to be disseminated among critical stakeholders in the organization for the implementation of environmental protection objectives. Sharing knowledge is all about putting into practice the knowledge about environmental protection (Widyanti et al., 2024). This knowledge must be nurtured, properly organized, and preserved for ease of retrieval. This, according to Abu Rumman and Hiasat (2023), is referred to as knowledge storage. According to Al-Faouri (2023), ecological information and technologies

have to be utilized for the purpose of protecting the ecosystem.

Despite the role of SMEs in driving the economy (Gherghina et al., 2020), many now struggle to enshrine green practices into their operations, perhaps due to a dearth of green knowledge management strategies. This makes it difficult for employees to practice eco-friendly behavior, thereby affecting organizational sustainability and competitiveness. Against this backdrop, this study examines the relationship between green knowledge management strategies and employees' green performance in selected SMEs in Anambra State, Nigeria.

Review of Related Literature

Theoretical Underpinning- Knowledge Based-View (KBV) Theory

The theory of knowledge-based view (KBV) of the firm was rooted in the stakeholder theory, resource-based view (RBV) of the firm, and organizational theory (Parekh & Wright, 2024). Leveraging the RBV theory, KBV proposed that knowledge generated within the organization is a veritable asset that can be used as a source of competition within the industry (Khan et al., 2024) since knowledge, particularly tacit knowledge, can't be easily imitated or copied by the competitors (Gamble, 2020). Furthermore, knowledge resources in SMEs are built over the years, thereby enhancing their performances, sustainability, and maintenance of competitive advantage (Olubiyi et al., 2024). The knowledge held in an organization is an important resource that influences organizational success—performance, competitive advantage, and sustainability (Igbakoyi et al., 2024). This presupposes a nexus between organizational capacity to retain competitive advantage and effective resource (knowledge) management. According to KBV, enterprises are structures that synthesize knowledge resources and coordinating mechanisms into profitable tasks of the firm's core abilities (Parekh & Wright, 2024). The deployment of information technologies and its linkage with knowledge management practices have been found to improve knowledge creation, acquisition, and sharing, thus improving their performances (Alemu, 2025).

Conceptual Review of Literature & Hypotheses Formulation

Green Knowledge Management

An organization's capacity to learn, retain, and apply knowledge is crucial for its growth, innovation, and sustainability (Widyanti et al., 2024). In literature, organizations leverage Knowledge Management (KM) to enhance customers' satisfaction and gain a competitive advantage in the market (Khan et al., 2024). Knowledge management (KM) plays a vital role in

enhancing organizational success (Al-Faouri, 2023). In this context, Green Knowledge Management (GKM) is the deliberate effort to tap into and utilize the valuable knowledge embedded within an organization's social framework, promoting eco-friendly practices and sustainability (Sahoo et al., 2024). Moreover, the focus of GKM is to integrate environmental awareness into knowledge management practices, thereby promoting sustainability and green initiatives (Ghorbani, 2023). It is imperative to note that GKM goes beyond just environmental information, encompassing a wide range of strategies and practices that promote sustainable development across ecological, social, and economic dimensions (Yu et al., 2022). In the opinion of Iliescu (2024), GKM evolves from researchers' endeavors to expand the knowledge management discipline by incorporating environmental sustainability goals, thereby broadening its scope and impact.

Meanwhile, GKM facilitates decision-making by providing useful environmental information (Al-Husain, 2025). Detailed information about the environment, such as pollution, waste, etc., and their impact on society tends to empower the management in decision-making. Knowledge management supports innovation, resulting in sustainable development (Qadeer & Rafi, 2024). The study of Abdelwahed et al. (2025) revealed that GKM constructs, including green knowledge acquisition, green knowledge dissemination, and green knowledge responsiveness, are positively and significantly correlated with green innovation. Furthermore, it was found that knowledge management influences green innovation and corporate sustainable development (Abbas & Sagsan, 2019). Effective knowledge management boosts green innovation, leading to sustainable performances (Cong, 2024). The study conducted by Weina and Yanling (2022) showed that knowledge management practices are closely linked to environmental sustainability, environmental awareness, and green technology adoption. This implies that knowledge management is crucial in supporting eco-friendly initiatives.

Employee Green Performance

Employee performance has grown in importance in modern organizations, especially where knowledge-based work is key (Berisha et al., 2025). Performance is a multidimensional concept that is often used without a clear definition (Ghalem et al., 2016). It refers to achieving specific tasks like accuracy, completeness, cost, and speed (Soressa & Zewdie, 2021). Therefore, employee green performance measures the level of involvement and commitment of employees in achieving cleaner production and environmental protection within an organization (Arulrajah et al., 2016). According to Hoang et al. (2025), it is referred to as the extent to which employees achieve their

assigned environmental task. The commitment of organizational members toward environmental protection and sustainability is referred to as green employee performance (Gomes et al., 2024). Encouraging green creativity is important in the evaluation of employees' green performance and organizational competitiveness (Saleem et al., 2024). The factors identified as affecting employees' green performance include organizational citizenship behavior for the environment (OCBE), green performance appraisal, and green compensation and rewards (Ardiza et al., 2021). Other factors include green training and development (Olaiya & Olaosebikan, 2022) and knowledge sharing and green organizational commitment (Yang & Li, 2023). This suggests that employee performance measures the behaviors or actions relevant to the attainment of an organization's green initiatives. Doing what an employee is paid for in an organization at the right time suggests performance (Ranta & Ylinen, 2024).

Green Knowledge Creation and Employee Green Performance

Knowledge has been recognized as an intangible asset that can be used as a source of competition in the market (Corcione et al., 2024; Ramirez et al., 2011). The success and/or the failure of any organization depends on the kind of knowledge created and shared within the organization (Abbas & Khan, 2023). Knowledge is a complex idea with different meanings (Agrifogli et al., 2021). Knowledge, or information that has been processed (Bratianu, 2015), can be classified into two types: explicit and tacit knowledge (Ibojo & Mobolade, 2023). Tacit knowledge is personal and held in individual minds, not documented or formalized (Gamble, 2020). It is the knowledge that exists but is not formalized or written down (Corcione et al., 2024). On the other hand, explicit knowledge is the type of knowledge that is codified and can be found in documents, manuals, or databases (Abbari et al., 2019). This kind of knowledge has been formalized, communicated, and made understandable through some form of documentation or explanation (Corcione et al., 2024). However, it is believed that the knowledge possessed by individuals in the organization, both explicit and tacit, serves as a source of creating knowledge if shared. Transforming an individual's tacit knowledge into explicit knowledge at a group or organizational level leads to knowledge creation. Hence, green knowledge creation involves coming up with a fresh idea, thought, or information on environmental protection (Cong, 2024). Developing new ideas, discovering trends that were originally unidentified, combining different fields, and creating new processes are all examples of knowledge creation (Olubiya et al., 2024). According to Lyles (2014), cited

in Nonaka et al. (2014), businesses can create knowledge internally through research and development or by coming up with novel approaches to problems. Three essential components of the knowledge management cycle are the generation of knowledge, transmission, and application (Adewuyi, 2021). The empirical study carried out by Ngoc Huynh et al. (2024) revealed that green knowledge management has a positive and significant effect on green innovation. Green knowledge sharing improves organizational performance (Khan et al., 2023).

H01: There is no significant positive relationship between knowledge creation and employees' green performance.

Green Knowledge Acquisition and Employee Green Performance

Knowledge acquisition is an important aspect of knowledge management (Brewster, Ciravegna & Wilks, 2001). This is because of its role in promoting innovation (Ngoc Thang & Anh Tuan, 2020) and green performance in the organization (Baquero, 2025). Information is a key; its proper management can enhance innovative ideas and a firm's sustainable competitive advantage (Nyuga & Tanova, 2024). SMEs require useful environmental information that aids strategic decision-making (Krakauer, 2016). These can be obtained from different sources: internal and external (Indris & Primiana, 2015). The capacity of a company to tap into different information sources to create green business insights that employees can use for strategic decision-making is referred to as green knowledge acquisition (Sahoo et al., 2022). It involves gaining and distributing knowledge focused on eco-friendly practices, principles, and technologies (Baquero, 2024). It is a process of obtaining knowledge from sources, organizing it, and disseminating it to a knowledge base and maybe into a system that uses it for reasoning (Aronson, 2003).

According to Gamble (2020), tacit knowledge helps organizations maintain a sustainable competitive edge since competitors can't easily duplicate it in their own context. Green knowledge acquisition has a positive impact on green knowledge management and technological innovation (Sahoo et al., 2022). There is a positive and significant effect of green acquisition on organizational performance (Ibojo & Mobolade, 2023). Acquiring technical knowledge from outside and gaining market knowledge both positively impact corporate green innovation (Guo, 2023). The study of Abu Rumman and Hiasat (2023) revealed that there is no positive significant influence of knowledge acquisition on green performance in private hospitals in Amman. Conversely, Ibojo and Mobolade (2023) posited that knowledge acquisition positively and significantly influences the organizational performance

of selected manufacturing firms in Oyo State, Nigeria. Knowledge management dimensions such as knowledge acquisition, dissemination, and application were found to positively influence sustainability development practices (Shahzad et al., 2021; Al-Faouri, 2023).

H02: There is no significant positive relationship between knowledge acquisition and employees' green performance.

Green Knowledge Sharing and Employees' Green Performance

The goal of many businesses is the promotion of eco-friendly practices for organizational sustainability (Ansong et al., 2024). This requires dissemination of green knowledge. Green knowledge sharing is akin to knowledge application that enables employees to apply what they have been taught (Yu et al., 2022). In a green context, knowledge sharing means exchanging ideas, experiences, and best practices related to sustainability and protecting the environment among people in an organization (Ansong et al., 2024). Cross-sector partnerships and collaborative platforms play a big role in sharing knowledge, which is crucial for innovation in things like renewable energy and reducing waste (Saleem et al., 2024). Sharing knowledge entails individuals and groups exchanging knowledge and skills, which promotes a cooperative and learning-focused culture that is essential for creativity and problem-solving (Nazim & Mukherjee, 2016). Green knowledge sharing represents the extent to which eco-friendly information is being propagated (Khawaja & Janjua, 2025). The process of exchanging knowledge results in mutually dependent outcomes for both parties (Bratianu, 2015). By sharing knowledge about sustainable practices, organizations can innovate more efficiently, cutting down on time and resources needed for new green technologies or processes (Saleem et al., 2024). The result of the study carried out by Agrifogli et al. (2020) revealed that the implementation of green human resource management practices produces a positive effect on eco-friendly behavior and green performance with commitment mediating their relationships. Green performance is positively and significantly influenced by knowledge sharing with green creativity mediating (Saleem et al., 2024).

H03: There is no significant positive relationship between knowledge sharing and employees' green performance.

Conceptual Framework of Variables

Conceptual Framework: Figure 1 shows the link between green knowledge management strategies and employees' green performance.

This study adopted the descriptive survey design method. As Siedecki (2020) notes, descriptive surveys aim to accurately capture the characteristics of specific individuals, situations, or groups.

The population of this study is drawn from ten (10) selected SMEs in Anambra State. The total population of the employees in the firms was 1200. Applying the Krejcie and Morgan table (1970), 291 employees were selected from sampled SMEs in Anambra State. To collect primary data from the respondents, structured questionnaires made up of sections A and B were administered. Section A captured information relating to the respondent's biographical data, while Section B captured questions relating to the research hypotheses. Cronbach's alpha analysis was administered to obtain the reliability of the study instrument. Inferential analysis assists in understanding relationships between the study variables. In order to meet the research objectives of the study, all valid responses were assessed using Ordinary Least Square (OLS) multiple regression via the use of Statistical Package of Social Sciences (SPSS) version 22. OLS multiple regressions were used to predict whether there is any significant effect of the independent variables (knowledge creation, knowledge acquisition, and knowledge sharing) on the dependent variable (employee's green performance).

Model Specification and Estimation Strategy

This study is concerned with Green Knowledge Management Strategies (GKMS) and Employees' Green Performance (EGP).

$$EGP = f(GKMS) \text{-----(1)}$$

Green knowledge management strategies (GKMS) include; Green Knowledge Creation (GKC), Green Knowledge Acquisition (GKA) and Green Knowledge Sharing (GKS).

$$EGP = f(GKC, GKA, GKS) \text{----- (2)}$$

The multiple variate equation model is specified as;

$$EGP = \beta_0 + \beta_1 X_1 + \beta_2 X_2 + \beta_3 X_3 + \beta_n X_n + \mu \text{----- (3)}$$

The regression form of the models is stated as;

$$EGP = \beta_0 + \beta_1 GKC + \beta_2 GKA + \beta_3 GKS + \mu \text{----- (4)}$$

Result and Analysis

A total number of 291 questionnaires were distributed. Out of which, 230 was fully completed and retrieved accounting for 79% return rate

Table 1:

Socio-Economic Attributes of Participating Employees

Participants' Bio-Data	Responses	Rate (%)
Sex:		
Male:	144	63
Female:	86	37
Total:	230	100
Marital Status:		
Single:	115	50
Married:	110	48
Others:	5	2
Total	230	100
Qualifications:		
O'Level	34	15
ND/Equivalent:	65	28
B.Sc./Equivalent	120	52
Post Graduate	11	5
Total	230	100

Source: Field Survey, 2025

The data in table 1 above revealed that the number of males was 144, which accounted for 63%, while the number of females was 86, representing 37%. Their marital status showed that 115, which is 50%, were single; 110 were married, which is 48%; and 5 were either divorced or widowed, which represents 2%. On

qualifications, 34 were O'Level certificate holders, which is 15%; 65 were ND or its equivalent holders, representing 28%; 120 held a B.Sc. degree, which is 52%; and the number of postgraduate certificates was 11, which represents 5%.

Table 2: Multiple Regression Table

Coefficients ^a					
Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
1 (Constant)	.846	.125		6.740	.000
Green Knowledge Creation	.138	.036	.153	3.820	.000
Green Knowledge Acquisition	.592	.055	.611	10.719	.000
Green Knowledge Sharing	.226	.060	.234	3.736	.000

a. Dependent Variable: Employee Green Performance

Table 2 shows the multiple regression analysis results of the coefficient for the components of the effect of Green Knowledge Management Strategies on Employees' Green Performance of Small and Medium Enterprises (SMEs) in Anambra State. The results showed that green knowledge creation ($\beta = 0.138$, $t = 3.820$, and $p\text{-value} = 0.000 < 0.05$), green knowledge acquisition ($\beta = 0.592$, $t = 10.719$, and $p\text{-value} = 0.000 < 0.05$), and green knowledge sharing ($\beta = 0.226$, $t = 3.736$, and $p\text{-value} = 0.000 < 0.05$) all have a positive and significant effect on employees' green performance of small and medium enterprises (SMEs) in Anambra State.

Discussion of Findings

This study's objectives, as well as the hypotheses, have been tested using the appropriate statistical tools, and the findings are discussed below.

Hypothesis One

In line with the study's objective, which is to investigate the relationship between green knowledge creation and employees' green performance, a null hypothesis stating that there is no significant positive relationship between green knowledge creation and employees' green performance of selected SMEs in Anambra State was formulated. However, the result of the regression analysis ($\beta = 0.138$, $t = 3.820$, and $p\text{-value} = 0.000 < 0.05$) showed that there exists a positive and significant relationship between green knowledge creation and employees' green performance of SMEs in Anambra State. This invalidates the null hypothesis, thereby accepting the alternative hypothesis. By implication, the more green knowledge is being created, the more employees' green performance is being enhanced by 1.4%, since the beta value is $\beta = 0.138$. The reverse is the case of not creating green knowledge in the system. Therefore, an increase in the creation of green knowledge correlates with improved employees' knowledge, capacity to make informed decisions, problem-solving, and most importantly, innovation. This study conforms to the empirical study of Ngoc Huynh et al. (2024), who posited that knowledge management has a positive significant effect on green innovation. By creating knowledge, SMEs are equipped with the capacity to gain competitive advantage, creative and innovative ideas, and adaptation to changing business environments.

Hypothesis Two

The second objective examined the relationship between knowledge acquisition and employees' green performance, accompanied by the null hypothesis stating that there is no significant positive relationship between knowledge acquisition and employees' green

performance of selected SMEs in Anambra State. However, the regression result ($\beta = 0.592$, $t = 10.719$, and $p\text{-value} = 0.000 < 0.05$) revealed that there is a positive and significant relationship between green knowledge acquisition and employees' green performance of selected SMEs in Anambra State. This led to the decision of rejecting the null hypothesis and the acceptance of the alternative hypothesis, which states that there is a positive and significant relationship between green knowledge acquisition and employee green performance. This indicates that an increase in green knowledge acquisition in the organization correlates with improved employee green performance output, suggesting that extra green knowledge acquired by employees will lead to improvement in their green performance by 5.92% since the beta value is $\beta = 0.592$, and vice versa. This aligns with the study carried out by Ibojo and Mobolade (2023), who posited that knowledge acquisition positively and significantly influences the organizational performance of selected manufacturing firms in Oyo State, Nigeria. Similarly, knowledge management dimensions such as knowledge acquisition, dissemination, and application were found to positively influence sustainability development practices (Shahzad et al., 2021; Al-Faouri, 2023).

Hypothesis Three

Objective three evaluated the relationship between green knowledge sharing and employees' green performance. This was followed by the null hypothesis stating that there is no significant positive relationship between green knowledge sharing and employees' green performance in selected SMEs in Anambra State. Meanwhile, the regression result ($\beta = 0.226$, $t = 3.736$, and $p\text{-value} = 0.000 < 0.05$) revealed that there exists a positive and significant relationship between green knowledge sharing and employees' green performance. This led to a decision to reject the null hypothesis and accept the alternative hypothesis, which states that a significant positive relationship exists between green knowledge sharing and employees' green performance. By implication, an increase in green knowledge sharing within the organization correlates with improved employees' green performance output, suggesting that extra green knowledge shared within the organization will lead to a 2.3% improvement in employees' green performance and vice versa. This study is in agreement with the study carried out by Agrifogli et al. (2020), who opined that the implementation of green human resource management practices will produce a positive effect on eco-friendly behavior and green performance. Green performance is positively and significantly influenced by knowledge

sharing with green creativity mediating (Saleem et al., 2024).

Summary of findings

1. Green knowledge creation has a significant influence on employees' green performance of SMEs in Anambra State. The result of green knowledge creation ($\beta = 0.138$, $t = 3.820$, and $p\text{-value} = 0.000 < 0.05$) showed that for each unit increase in green knowledge creation, employees' green performance is estimated to increase by 0.138 units.
2. Green knowledge acquisition has a significant impact on employees' green performance at SMEs in Anambra State. The result of green knowledge acquisition ($\beta = 0.592$, $t = 10.719$, and $p\text{-value} = 0.000 < 0.05$) showed that for each unit decrease in green knowledge acquisition, employees' green performance is estimated to decrease by 0.592 units.
3. There is a significant relationship between green knowledge sharing and employees' green performance of SMEs in Anambra State. The result of green knowledge sharing ($\beta = 0.226$, $t = 3.736$, and $p\text{-value} = 0.000 < 0.05$) showed that for each unit increase in green knowledge sharing, employees' green performance is estimated to increase by 0.592 units.

Conclusion

Knowledge is a resource within the organization that can be used to gain a competitive advantage. This is because of its inability to be imitated. As environmental challenges persist, green knowledge management is required of organizations, particularly SMEs in Anambra State, to enhance their employees' green performance for sustainable economic development.

Based on the findings of this study, green knowledge management strategies, such as green knowledge creation, green knowledge acquisition, and green knowledge sharing, all have a positive significant effect on employees' green performance at SMEs in Anambra State. Therefore, the government should formulate policies that will encourage SMEs to create, acquire, and share green knowledge. This will lead to employees' innovation, which results in eco-friendly practices and sustainability of the business and its environment.

Green Management Practices and Environmental Sustainability in Selected Universities in South-East Nigeria

OGBETA-OGWU, E. Mercy

Department of Business Administration,
Faculty of Management Sciences
Delta State University, Abraka, Nigeria
mercyogbes27@gmail.com

Publication Date: 2025/11/28

Abstract

This study examined the impact of green management practices on environmental sustainability in selected universities in South-East Nigeria. The study was guided by three key dimensions of green management: recycling and waste reduction, green knowledge acquisition, and green solutions. The research adopted a descriptive survey design, with data collected from 370 respondents comprising staff and students across five selected universities in the south south region of Nigeria. A structured questionnaire was employed, and data were analyzed using descriptive statistics, Pearson correlation, and multiple regression analysis. The findings revealed that all three green management practices significantly influenced environmental sustainability, with green solutions and green knowledge acquisition showing the strongest effects. Although some practices were inconsistently implemented across institutions, the overall model showed that green management practices accounted for 62% of the variation in sustainability outcomes. These results align with Institutional Theory and Systems Theory, highlighting that external pressures and system-wide coordination are crucial to institutional sustainability. The study concludes that effective implementation of green policies, investment in eco-technology, and environmental education are vital strategies for promoting sustainability in higher education. Recommendations include policy reforms, stakeholder training, investment in green infrastructure, and performance monitoring. This research contributes to existing body of knowledge on environmental management within Nigerian tertiary institutions and provides a framework for integrating sustainable practices into campus operations.

Keywords: : recycling and waste reduction, green knowledge acquisition, and green solutions, investment in green infrastructure, renewable energy use, eco-friendly infrastructure, and sustainable water systems).

Introduction

The global shift toward sustainable development has increasingly placed pressure on institutions, including universities, to implement environmentally responsible practices. Higher education institutions are not only centers of learning and innovation but also powerful agents for promoting ecological consciousness and long-term environmental sustainability (Adeniran et al., 2023). In response to global climate challenges and the United Nations Sustainable Development Goals (SDGs), especially Goal 13 (Climate Action) and Goal 4 (Quality Education), universities worldwide are adopting green management practices to minimize their ecological footprint and lead by example.

In Nigeria, the integration of sustainability principles into university operations is gradually gaining momentum, though progress remains uneven across regions. Green management involves the implementation of policies and actions such as energy conservation, waste reduction, eco-friendly infrastructure, renewable energy use, and environmental education to promote sustainability

(Okorie & Akpan, 2024). While some universities in Nigeria's urban centers have made commendable strides in this area, those in the South-East region are still grappling with several institutional, infrastructural, and financial barriers that hinder full implementation (Ezeokoli et al., 2022).

The South-East region of Nigeria, comprising states such as Enugu, Anambra, Imo, Ebonyi, and Abia, hosts several prominent universities—including the University of Nigeria, Nsukka (UNN); Nnamdi Azikiwe University (UNIZIK); Federal University of Technology, Owerri (FUTO); and Ebonyi State University (EBSU). These institutions have demonstrated varying levels of commitment to green campus development through initiatives such as solar-powered lighting, student-led recycling projects, and research in environmental science (Ilo et al., 2023). However, these efforts often remain fragmented and unsystematic due to the absence of formal environmental management frameworks and a lack of government policy enforcement (Nnaji & Ibe, 2025).

Post-COVID-19 realities have further emphasized the importance of sustainability in university systems, as institutions now face increased energy demands for hybrid learning environments, rising utility costs, and health-driven requirements for better campus sanitation and waste disposal (Obi et al., 2023). This emerging context necessitates a comprehensive exploration of how universities in South-East Nigeria are managing environmental sustainability and what challenges and opportunities lie ahead.

Given the strategic role of higher education in shaping environmentally literate graduates and future leaders, a thorough assessment of green management practices in South-East Nigerian universities is timely and essential. It is expected that strengthening green management in these institutions will not only reduce their environmental impact but also serve as a catalyst for regional and national sustainable development.

Statement of Problem

Despite the increasing global emphasis on environmental sustainability and the growing recognition of universities as key drivers of sustainable development, many higher institutions in South-East Nigeria continue to struggle with the implementation of effective green management practices. While some universities in the region have initiated solar lighting projects, waste recycling programs, and sustainability-themed research, these efforts are often fragmented, underfunded, and lacking institutional coordination.

Universities in the region still largely depend on diesel-powered generators, lack formalized environmental policies, and operate in environments

are valuable to multiple stakeholders within and outside the academic community. It will provide a region-specific understanding of how universities can adopt and scale up green initiatives, thereby contributing to academic discourse on environmental sustainability and institutional reform. Universities in South-East Nigeria can use the findings to benchmark their sustainability performance, identify weaknesses in their green management systems, and implement more effective practices. This can lead to cost savings, improved energy efficiency, enhanced reputation, and compliance with global environmental standards. By focusing on green knowledge acquisition, the study will help in shaping eco-conscious behaviours among students and staff. It will advocate for the integration of sustainability into curricula and campus life, helping universities to produce graduates who are environmentally literate and solutions-oriented.

REVIEW OF RELATED LITERATURE

Conceptual Review

Concept of Green Management

Green management refers to the deliberate incorporation of environmentally responsible

where waste is poorly managed, green buildings are rare, and awareness of sustainability issues remains low among staff and students. Moreover, infrastructural limitations, inadequate budgetary allocations, and the absence of government-mandated sustainability frameworks continue to hinder the integration of green practices into university operations and curricula.

In the post-COVID-19 era, the need for sustainable infrastructure has become even more critical, with increased pressure on universities to provide clean energy, improve campus hygiene, and support hybrid learning systems. However, without strategic green management approaches, universities in the South-East may fall behind in contributing to the United Nations Sustainable Development Goals (SDGs), with particular reference to Quality Education, Affordable and Clean Energy, and Climate resilience. This study would be guided by the following specific objectives:

1. To evaluate the contribution of recycling and waste reduction efforts to sustainable campus operations.
2. To assess the level of green knowledge acquisition among students and staff and its influence on environmental sustainability.
3. To identify the types of green solutions adopted by universities and analyze

This study is significant for several reasons, particularly in the context of growing environmental concerns and the global drive toward sustainable development. By examining green management practices in South-East Nigerian universities, the study will generate insights that

practices into organizational policies, operations, and culture with the aim of reducing negative environmental impacts and promoting sustainability. It involves initiatives such as energy conservation, waste reduction, pollution control, and the use of renewable resources to ensure that an institution's activities align with the principles of environmental stewardship (Okoye & Nwankwo, 2024).

In the context of higher education institutions, green management emphasizes the integration of sustainability into academic operations, campus planning, resource utilization, and student engagement. Universities that adopt green management strive to minimize their ecological footprint through practices such as proper e-waste disposal, paperless administration, water conservation, and the development of eco-friendly infrastructure (Eze, Ogbu & Anene, 2025). These efforts not only improve institutional sustainability performance but also instill environmental consciousness in students and staff.

Adebayo and Ijeoma (2024), stated that green management is multi-dimensional, comprising strategic policies, behavioural change, and

technological innovation aimed at fostering long-term ecological balance. Its successful implementation often requires top-level commitment, cross-departmental collaboration, adequate funding, and continuous awareness campaigns. It also aligns with global initiatives such as the United Nations Sustainable Development Goals (SDGs), particularly Goal 13 (Climate Action) and Goal 12 (Responsible Consumption and Production).

Furthermore, green management in universities serves as a model for wider societal transformation, as tertiary institutions are centers for knowledge generation and dissemination. If properly implemented, it has the potential to influence public policy, promote environmental literacy, and drive innovations in sustainable technologies (Onyema & Egbule, 2025).

In recent years, universities are increasingly recognizing their responsibility not only to educate about sustainability but also to embody it in practice. As highlighted by Chukwu and Obasi (2025), institutions that adopt green management practices often experience improved resource efficiency, enhanced institutional reputation, and greater stakeholder engagement. These practices range from simple behaviour changes, such as switching off unused electrical appliances, to more complex interventions like integrating sustainability into curriculum and research agendas.

Moreover, the success of green management in universities hinges on the extent to which environmental values are institutionalized. Umeh and Okafor (2024), posited that embedding sustainability into an institution's mission, governance structures, and performance metrics ensures that green practices are not treated as isolated projects but as integral to the university's operation. This requires proactive leadership, participatory decision-making, and continuous monitoring. In this light, green management becomes not just a technical initiative but a cultural transformation that aligns academic goals with ecological responsibility, positioning the university as a change agent in addressing environmental challenges at the local and global levels.

Recycling and Waste Reduction

Recycling and waste reduction are essential components of green management practices aimed at minimizing the volume of waste sent to landfills, conserving natural resources, and reducing environmental pollution. In university environments, these practices encompass the collection, sorting, processing, and reusing of materials such as paper, plastic, glass, and food waste. They also involve strategies to reduce waste at the source, such as digitalization of administrative tasks, the use of refillable containers, and sustainable procurement policies (Okafor & Ezenwa, 2025). Through effective recycling and waste reduction, institutions can

significantly lower their ecological footprint and contribute to a culture of environmental responsibility.

Many Nigerian universities are increasingly adopting campus-wide recycling initiatives, waste segregation programs, and awareness campaigns to instill sustainable habits among students and staff. For instance, Nnaji and Edeh (2024) report that some universities in South-East Nigeria have implemented "Green Campus" programs that include waste separation bins, composting units, and recycling partnerships with local firms. These initiatives have led to measurable reductions in campus waste volume and improved waste handling efficiency. However, the effectiveness of such programs often depends on stakeholder participation, institutional commitment, and regular monitoring. Without these, recycling systems risk becoming dormant or symbolic rather than impactful.

Moreover, waste reduction practices are not limited to physical waste. The digital transformation of academic and administrative services — such as online exams, paperless communication, and e-library systems — significantly contributes to reducing paper waste and carbon emissions. As observed by Ibrahim and Okon (2025), universities that prioritize digitization not only reduce operational costs but also enhance environmental sustainability. Waste audits, environmental clubs, and sustainability committees also play critical roles in monitoring progress and driving continuous improvement in waste reduction efforts.

Despite the growing emphasis on recycling in universities, many institutions in South-East Nigeria still face operational challenges such as inadequate waste sorting facilities, lack of clear recycling policies, and poor behavioral compliance among students and staff. As noted by Chinedu and Afolabi (2025), improper waste segregation is a major barrier that reduces the efficiency of recycling programs and increases contamination, thereby making recyclable materials unsuitable for reuse. Additionally, limited institutional investment in waste infrastructure often hampers the long-term success of recycling initiatives. To overcome these challenges, it is essential for universities to integrate recycling goals into their broader sustainability plans and to provide training and incentives that encourage community participation.

Furthermore, successful waste reduction goes beyond infrastructure—it requires a shift in institutional culture. Educational campaigns, student-led sustainability clubs, and reward systems for sustainable practices have proven effective in promoting behavioral change (Ekene & Uche, 2024). By involving students and staff in environmental audits and sustainability decision-making, universities can foster a sense of ownership and accountability. For example, Ebonyi State University has reported a 30% reduction in total campus waste

through a combination of composting, material reuse programs, and digital migration of records (Ifeanyi & Musa, 2025). These outcomes highlight the potential for well-structured recycling and waste reduction systems to transform campuses into models of environmental stewardship.

Green Knowledge Acquisition

Green knowledge acquisition refers to the process by which individuals and institutions gain awareness, understanding, and practical competencies related to environmental sustainability. In the context of universities, this includes formal learning through environmental science courses, seminars, and research, as well as informal learning from campus sustainability practices and peer engagement. According to Nwafor and Egwuatu (2024), the minimalism. Additionally, university faculty and staff who are equipped with green knowledge are more likely to support the implementation of green management initiatives and influence institutional policy. Therefore, fostering a knowledgeable academic community is essential for embedding sustainability into university culture.

Moreover, green knowledge acquisition is enhanced through interdisciplinary learning and experiential approaches such as field projects, sustainability audits, and green innovation contests. As highlighted by Bello and Ogu (2024), practical exposure to real-life environmental issues enhances critical thinking and problem-solving, enabling students to apply theoretical knowledge to complex sustainability challenges. When universities invest in green capacity-building programs, they not only increase internal awareness but also produce environmentally conscious graduates who serve as change agents in society.

Despite the growing recognition of its importance, green knowledge acquisition in many Nigerian universities remains insufficiently institutionalized. A study by Chukwu and Ajani (2025) revealed that while some universities offer sustainability-related courses, they are often elective rather than core components of the general curriculum. This limits exposure for students outside environmental disciplines. Furthermore, there is often a disconnect between academic knowledge and practical sustainability efforts on campus, which reduces opportunities for experiential learning. To close this gap, institutions must integrate green education across disciplines and develop campus-wide programs that promote hands-on sustainability practices.

Digital platforms and e-learning tools have also emerged as effective channels for promoting environmental awareness and knowledge acquisition. Online sustainability modules, webinars, and virtual campaigns provide flexible and scalable means of educating students and staff about climate action, resource conservation, and sustainable lifestyles

effectiveness of sustainability programs in higher education is strongly linked to the extent of environmental knowledge imparted to students and staff. Green knowledge empowers individuals to adopt sustainable behaviors, make informed decisions, and contribute to institutional and societal environmental goals.

Universities play a crucial role as incubators of environmental literacy by integrating sustainability into curricula, extracurricular activities, and community engagement programs. A study by Okenwa and Ihedioha (2025) found that students who participated in campus-led sustainability workshops and environmental clubs demonstrated a higher likelihood of engaging in eco-friendly behaviors such as recycling, energy conservation, and digital

(Ogundipe & Nwachukwu, 2024). These approaches not only support knowledge dissemination but also foster continuous engagement beyond the classroom. For green knowledge to translate into behavioral change and policy support, it must be reinforced by practical examples, visible leadership, and institutional commitment. According to Adegoke and Nnadi (2024), when students see universities modeling sustainable practices — such as solar power usage, eco-friendly procurement, and waste segregation — it reinforces the lessons learned and encourages long-term sustainable attitudes.

Solutions

Green solutions refer to environmentally friendly strategies, technologies, and practices that aim to mitigate negative environmental impacts and promote sustainable development. In university settings, green solutions are increasingly being adopted to enhance sustainability performance through energy efficiency, eco-friendly construction, sustainable transport systems, water conservation, and renewable energy deployment. According to Eze and Chukwuemeka (2024), green solutions in Nigerian universities are being implemented gradually, often driven by environmental policies, donor-funded projects, or proactive institutional leadership. These initiatives are intended to reduce carbon emissions, minimize waste, and foster a culture of environmental responsibility among students and staff.

One prominent green solution is the use of renewable energy technologies such as solar panels and inverters to power classrooms, administrative buildings, and streetlights. This has become especially relevant in the South-East region, where irregular power supply disrupts academic activities. Okorie and Nwosu (2025) found that universities that adopted solar power systems reported lower energy costs and reduced dependency on diesel-powered generators, thereby cutting greenhouse gas emissions. Other effective green solutions include the integration of rainwater harvesting systems, the

development of green buildings, and the creation of green spaces that contribute to biodiversity conservation and improved campus aesthetics.

Moreover, ICT-based solutions such as cloud computing, digital classrooms, and e-administration significantly reduce paper usage and streamline processes. As highlighted by Abiola and Emeh (2024), the digitalization of administrative functions and learning environments in some Nigerian universities has contributed to notable reductions in resource consumption and environmental degradation. However, the successful adoption of green solutions depends on institutional commitment, adequate funding, stakeholder engagement, and technical capacity. Therefore, universities need to develop strategic sustainability plans that incorporate both short-term and long-term green interventions to enhance environmental performance and institutional resilience.

In addition to energy and water-focused initiatives, some universities in South-East Nigeria are embracing sustainable architectural designs and green building standards to improve energy efficiency and reduce resource wastage. Green buildings incorporate features such as natural ventilation, energy-efficient lighting, recycled materials, and smart water usage systems. As noted by Ibeh and Uzo (2025), campuses that have adopted eco-architecture not only reduce operational costs but also create healthier learning environments that enhance productivity and wellbeing. These physical infrastructures serve as visible commitments to sustainability, reinforcing institutional values and encouraging behavioral alignment among the university community.

Furthermore, collaborative innovation and research in green technology have emerged as powerful tools for advancing campus sustainability. Partnerships between university departments, local industries, and government agencies have led to the development of context-specific green solutions such as biodegradable packaging, climate-smart agriculture projects, and low-cost energy-saving devices. According to Nwoke and Adeyemi (2024), these initiatives enable universities to act as living laboratories for sustainable innovation, fostering hands-on learning while addressing environmental challenges in their immediate environments. When these green solutions are embedded within institutional strategy and supported by continuous capacity-building, they significantly contribute to long-term environmental performance and societal impact.

Environmental Sustainability

Environmental sustainability refers to the responsible interaction with the environment to avoid depletion of natural resources, ensuring that the ecological balance is maintained for present and future generations. It involves practices and policies that

reduce environmental degradation, promote conservation, and support the regeneration of natural ecosystems. In the context of higher education, environmental sustainability encompasses how universities manage energy consumption, waste generation, water use, green spaces, and transportation in ways that align with global sustainability goals such as the United Nations' Sustainable Development Goals (SDGs) (Ogbonna & Ezeani, 2024).

Universities have a unique dual role in promoting environmental sustainability: they are both significant consumers of resources and influential centers for education, innovation, and behavioral change. As highlighted by Dike and Aluko (2025), higher institutions that embed sustainability into their operations, curriculum, and community outreach efforts contribute significantly to climate action, resource efficiency, and environmental awareness. Environmental sustainability initiatives in universities may include renewable energy adoption, tree planting campaigns, e-waste recycling, water harvesting systems, and integration of sustainability topics across academic disciplines.

However, the extent of sustainability adoption varies widely among institutions, often influenced by funding availability, leadership commitment, staff capacity, and stakeholder awareness. As supported by Ezenagu and Okoro (2025), while some Nigerian universities have made significant progress in implementing sustainability programs, others lag due to policy inconsistency, lack of data, and poor institutional engagement. Moreover, long-term sustainability outcomes are often achievable only when environmental values are embedded in the institutional culture through continuous education, transparent governance, and proactive student involvement.

Environmental sustainability is not only a moral and ecological imperative but also a strategic necessity. Universities that prioritize sustainability are more resilient, adaptable to climate risks, and capable of attracting international funding and partnerships. As Umeh and Adebisi (2024) assert, environmentally sustainable universities serve as living laboratories for innovation and as role models for the wider society, reinforcing the need to institutionalize green thinking and practice across all levels of academic operations.

While environmental sustainability initiatives have gained traction globally, many universities in developing countries, including those in South-East Nigeria, still struggle with implementation due to financial limitations and low institutional priority. According to Chukwuma and Ibrahim (2025), although sustainability policies exist on paper in many Nigerian universities, practical enforcement is weak, and environmental management is often fragmented across departments. This results in inefficiencies and missed opportunities for integrated

sustainability outcomes. To address these issues, institutions need to adopt a systems-thinking approach, where sustainability goals are mainstreamed into all aspects of governance, curriculum development, campus operations, and community engagement.

Technological innovation also plays a pivotal role in driving environmental sustainability in higher institutions. Smart metering systems, energy-efficient appliances, digital waste tracking platforms, and automated irrigation for green spaces are increasingly being piloted across campuses to reduce resource

wastage and carbon emissions. As documented by Opara and Nwankwo (2024), universities that invest in such innovations not only achieve cost savings but also become more attractive to environmentally conscious students and partners. Additionally, sustainability reporting and environmental audits are essential tools for tracking progress and ensuring accountability. Through consistent monitoring, universities can identify gaps, measure their environmental impact, and make data-driven improvements toward achieving long-term sustainability goals.

Conceptual Framework/Model

Source: Researcher's Model, 2025

Theoretical Framework

Systems Theory

(departments, faculties, student bodies, administration) interact with one another and with the external environment. Each unit of the institution contributes to or detracts from sustainability goals depending on its practices. When green management is implemented systemically, it enhances institutional efficiency and ecological performance (Ibrahim & Nwachukwu, 2024). The theory highlights that sustainability outcomes depend not on isolated interventions but on integrated, cross-functional efforts within the institution. For example, digital transformation for waste reduction only becomes effective when supported by infrastructure, training, and policy.

Systems Theory underscores the importance of interconnectedness and feedback loops within the university ecosystem. For instance, when a sustainability policy is introduced by the administrative unit, its success largely depends on how well it is understood, accepted, and implemented by academic departments, facility managers, and student associations. As noted by Okafor and Obi (2024), many sustainability efforts fail not due to poor intent, but due to fragmented

Systems Theory views the university as a complex, interrelated system where various components execution across units that function in silos. Effective green management therefore requires collaborative planning, communication structures, and monitoring mechanisms that ensure each subsystem aligns with the overarching environmental goals of the university. Moreover, the theory emphasizes adaptability and dynamic response to environmental changes. In the face of climate-related risks, rising utility costs, and increasing regulatory demands, a university must continually evolve its sustainability strategies. According to Edeh and Uchenna (2025), universities in South-East Nigeria that adopt flexible, data-driven approaches—such as using campus-wide energy monitoring systems and adaptive waste separation practices—are better positioned to achieve meaningful environmental outcomes. This adaptability aligns with Systems Theory's proposition that sustainable performance is achieved through continuous learning and institutional evolution.

Finally, Systems Theory supports the integration of sustainability into the core mission of the university—teaching, research, and community service. A systemically sustainable university not

only runs a green campus but also educates students on sustainability, conducts applied environmental research, and partners with local communities for outreach. As shown in the work of Nwosu and Chijioke (2024), when green knowledge is embedded in curricula and cross-departmental sustainability committees are formed, it leads to holistic improvements in environmental performance and a stronger institutional identity around sustainability. Therefore, Systems Theory not only promotes operational efficiency but also encourages cultural transformation within the institution.

Empirical Review

Nwankwo & Ogunlade (2024) found that student-led recycling initiatives led to 30% reduction in landfill waste when backed by university policy. Obi & Ubah (2023) studied solid waste segregation in South-East universities and observed that waste reduction was 45% higher in institutions with on-campus waste sorting centers. Adebayo & Okafor (2023) highlighted that structured recycling programs with departmental green officers increased participation and waste diversion rates. Ede & Ibrahim (2020) emphasized the importance of inclusive recycling committees in promoting long-term behavioral change among staff and students. Udo & Emeka (2016) found poor signage and lack of bins were key reasons for ineffective waste sorting on campuses. Chinedu & Hassan (2013) showed that awareness campaigns alone were insufficient without enforcement mechanisms to boost recycling. Ike & Ezeani (2024) showed that green curriculum integration led to a measurable increase in pro-environmental behavior among undergraduates. Obinna & Chika (2024) assessed knowledge levels among university staff and discovered a knowledge gap between teaching and non-teaching employees in green practices. Nnadi & Etim (2018) demonstrated that staff with high environmental awareness more actively promoted green policies and contributed to eco-friendly campus practices. Umeh & Yusuf (2014) noted that universities with sustainability embedded in general education courses had significantly better staff and student engagement in green activities. Musa & Ijeoma (2023) reported that solar panels and smart metering reduced campus energy bills and emissions by up to 35%. Chukwu & Okorie (2022) found that green roofs, motion-sensitive lighting, and rainwater systems were key sustainability investments on successful campuses. Bamidele & Chidiebere (2021) examined the impact of paperless operations and discovered 60% savings on paper use with corresponding carbon footprint reductions. Okeke & Lawal (2018) found composting and use of bio-digesters in university cafeterias significantly contributed to eco-friendly waste reuse. Iwu & Nkemdilim (2013) identified lack of stakeholder buy-in as a barrier to implementation of green solutions in several public institutions.

Summary of Related Literature

The reviewed literature has provided rich insights into the various components of green management and their role in promoting environmental sustainability in universities. The conceptual review established that green management practices—including e-waste handling, recycling, green knowledge acquisition, and green solutions—are critical for reducing the ecological footprint of educational institutions. These practices are increasingly necessary in the face of climate change, rising waste levels, and resource depletion. Regarding green knowledge acquisition, several empirical studies confirm that sustainability education embedded within the curriculum enhances pro-environmental attitudes among students and staff (Ike & Ezeani, 2024; Umeh & Yusuf, 2014). The role of awareness, training, and communication was shown to be indispensable for cultivating a campus culture of sustainability. Additionally, green solutions such as solar energy, smart metering, and water harvesting were found to significantly reduce energy costs and environmental degradation when properly implemented (Musa & Ijeoma, 2023; Chukwu & Okorie, 2022).

The theoretical review anchored the study on Institutional Theory and Systems Theory. Institutional Theory explains how universities respond to external environmental expectations, such as governmental policies and accreditation standards, by adopting sustainable practices. Systems Theory complements this by framing the university as an interconnected structure in which all departments and stakeholders must collaborate for sustainability efforts to be effective. Finally, the empirical review, arranged in descending order (2025–2013), affirms that Nigerian universities have made progress in adopting green practices but are still challenged by weak institutional frameworks, limited funding, and low levels of internal motivation. Most studies recommend integrated approaches, policy support, infrastructural investment, and education as drivers of environmental sustainability in higher institutions.

Research Gap

Although substantial literature exists on green management practices and their relevance to environmental sustainability, significant gaps remain—particularly in the context of Nigerian universities, and more specifically within the South-East geopolitical zone. Most previous studies (e.g., Ogunyemi & Ahmed, 2020; Ezeaku & Obioma, 2017) have focused on broader institutional or urban sustainability without isolating higher education institutions as unique ecosystems. This limits the applicability of findings to the university context, where knowledge generation, youth engagement, and infrastructural limitations present distinctive opportunities and challenges. Another critical gap is

the limited attention to green knowledge acquisition among staff and students. Although education is central to sustainability, few empirical studies have examined how environmental awareness, green curriculum integration, and behavioral change programs influence actual sustainability outcomes on campuses (Ike & Ezeani, 2024). The role of staff engagement and institutional training mechanisms remains underexplored.

Furthermore, existing studies that discuss green solutions like solar panels, digitalization, or smart waste management tend to focus on technical feasibility rather than their measurable environmental outcomes or long-term institutional impact. Very few studies integrate the four variables—e-waste management, recycling/waste reduction, green knowledge acquisition, and green solutions—into a unified framework for evaluating environmental sustainability performance. Finally, the majority of available studies are descriptive or qualitative in nature and do not adopt a comprehensive, data-driven, and comparative approach across multiple universities. This study addresses that gap by examining selected universities in South-East Nigeria using quantitative analysis to assess the extent, impact, and interplay of various green management practices on environmental sustainability.

Research Methods

The study adopted a descriptive survey research design. The population of the study comprises all staff and students of selected public and private universities in South-East Nigeria. The universities include:

University of Nigeria, Nsukka (UNN)
Nnamdi Azikiwe University, Awka (UNIZIK)
Federal University of Technology, Owerri (FUTO)
Ebonyi State University (EBSU)
Godfrey Okoye University, Enugu

These institutions were selected due to their size, accessibility, and growing involvement in sustainability programs. Within each university, stratified random sampling was used to select participants from both academic staff, non-academic staff, and students. Using the Taro Yamane formula at a 5% level of significance, a total sample size of 400 respondents was determined. **Primary data** was obtained through a structured questionnaire distributed to staff and students of the selected universities. **Secondary data** was gathered from institutional sustainability reports, policy documents, and scholarly articles relevant to green management. Data collected were analyzed using the Statistical Package for the Social Sciences (SPSS) version 25.

Data Presentation, Analyses, and Discussion Of Findings

Recycling and Waste Reduction

Recycling practices were less prevalent. Waste separation bins were available in 45% of sampled

departments. The mean score was 3.42 (SD = 0.76), showing low to moderate implementation levels.

Green Knowledge Acquisition

Participants agreed that sustainability topics were incorporated into general studies or special seminars. The mean score was 3.74 (SD = 0.69), reflecting moderate to high awareness levels.

Green Solutions

Solar panels, LED lighting, and digital workflows were mentioned in most institutions. The mean score was 3.89 (SD = 0.74), indicating relatively strong adoption of green technologies.

Environmental Sustainability

Overall sustainability performance based on perceptions (e.g., waste volume reduction, energy efficiency) had a mean score of 3.72 (SD = 0.71).

Test of Hypotheses

Hypothesis One (H₀₁):

Recycling and waste reduction do not significantly contribute to environmental sustainability.

Pearson correlation (r) = 0.472

p-value = 0.001

Interpretation: Recycling and waste reduction significantly contribute to sustainability.

Hypothesis Two (H₀₂):

Green knowledge acquisition has no significant influence on environmental sustainability.

Pearson correlation (r) = 0.586

p-value = 0.000

Decision: Reject H₀₃.

Interpretation: Green knowledge acquisition significantly influences sustainability outcomes.

Hypothesis three (H₀₃):

Green solutions do not have a significant effect on sustainability performance.

Pearson correlation (r) = 0.603

p-value = 0.000

Decision: Reject H₀₄.

Interpretation: Green solutions have a significant positive effect on sustainability.

Regression Analysis Summary

A multiple regression analysis was conducted to predict environmental sustainability based on the four predictor variables.

Model Variable	Beta (β)	t-value	Sig. (p-value)
Recycling & Waste Reduction	0.187	3.422	0.001
Green Knowledge Acquisition	0.264	4.551	0.000
Green Solutions	0.289	4.801	0.000

R² = 0.62

Adjusted R² = 0.60

- $F(4, 365) = 37.59, p < 0.001$

Interpretation: The model explains 62% of the variance in environmental sustainability. All four predictors contribute significantly.

Discussion of Findings

The findings affirm that green management practices—particularly green solutions and knowledge acquisition—have significant impacts on environmental sustainability in universities. This aligns with the findings of Ike & Ezeani (2024), who argued that awareness and innovation are pivotal to sustainable campus culture. Furthermore, the importance of e-waste management echoes Uzor & Nwachukwu (2025), who observed that unmanaged e-waste contributes heavily to pollution and resource waste in Nigerian universities. Although some institutions have initiated sustainability programs, the inconsistency in implementation, lack of infrastructure, and weak policy enforcement hamper effectiveness. These findings confirm the need for integrated green strategies across all university departments, supporting the systems theory framework.

Summary of Findings, Conclusion And Recommendations

Summary of Findings

This study investigated the impact of green management practices on environmental sustainability in selected universities in South-East Nigeria. It focused on four main variables: e-waste management, recycling and waste reduction, green knowledge acquisition, and green solutions. The key findings from the study are as follows:

1. Recycling and waste reduction efforts were less systematically implemented, but still showed a significant contribution to campus sustainability performance.
2. Green knowledge acquisition, such as student and staff awareness, curriculum integration, and participation in eco-programs, had a strong and positive influence on environmental sustainability outcomes.
3. Green solutions, including digital systems, solar energy, LED lighting, and smart waste practices, had the highest individual impact among the predictors.
4. The regression analysis indicated that all four variables jointly accounted for 62% of the variance in environmental sustainability, proving that green management is a critical strategy for ecological performance in universities.

Conclusion

The findings of this study establish that green management practices are essential drivers of environmental sustainability within the university system in South-East Nigeria. The institutionalization

of practices such as structured recycling efforts, targeted environmental education, and technological innovations are pivotal to fostering a sustainable learning environment. Green knowledge acquisition, in particular, emerged as a cornerstone for behavioral change and environmental consciousness. Meanwhile, the adoption of green solutions highlighted the universities' growing commitment to operational efficiency and ecological responsibility. However, disparities in practice and policy implementation point to the need for greater institutional alignment, funding support, and enforcement mechanisms.

In conclusion, sustainability in universities must be approached as a coordinated, system-wide initiative. This aligns with the theoretical underpinnings of systems and institutional theory, which advocate for holistic and norm-driven reforms to achieve measurable environmental outcomes.

Recommendations

Based on the research findings, the following recommendations are offered:

1. University management should develop and enforce clear policies that integrate all components of green management into strategic planning.
2. Separate waste bins, compost systems, and regular training sessions should be institutionalized to improve waste segregation and reduction.
3. Environmental sustainability should be embedded into course syllabi, student orientation, and staff development programs.
4. Universities should prioritize investment in energy-efficient technologies such as solar power, smart buildings, and digital workflow systems to reduce carbon footprints.
5. Regular green audits and sustainability reporting should be adopted to evaluate green practices and ensure continuous improvement.

Contribution to Knowledge

This study contributes to the growing body of literature on sustainability in higher education by:

1. Providing a validated empirical model linking green management practices to sustainability performance in Nigerian universities.
2. Highlighting the role of green knowledge acquisition as a mediating factor in behavioral change and institutional sustainability.
3. Offering new insights on the relative importance of green solutions compared to traditional environmental strategies within the university setting.
4. Filling a geographical and institutional research gap by focusing on South-East Nigeria—a region previously underrepresented in sustainability studies.

Green Environmental Knowledge Utilization and Organizational Resilience of Upstream Oil and Gas Companies in Nigeria

AMIEIBI-IBAMA, Harry, Harcourt¹, TAMUNOIPRIS, Hart Emilia² & GEORGE, Gibson³

Department of Marketing, Faculty of Management Sciences,
Ignatius Ajuru University of Education, Port Harcourt

Publication Date: 2025/11/28

Abstract

This study investigated the impact of green environmental knowledge utilization on organizational resilience of upstream oil and gas companies in Nigeria, with organizational resilience examined through adaptability, production efficiency, and agility. Guided by dynamic capabilities theory, the research employed a quantitative approach using semi-structured questionnaire administered to key respondents across five (5) upstream oil and gas companies in Nigeria from which 40 respondents provided data for the study. The study employed regression model to analyze the data by testing three null hypotheses. Results of the analysis revealed that green environmental knowledge utilization has a very strong positive and significant effect on adaptability, a strong positive and significant impact on production efficiency, and a strong positive and significant impact on agility. Based on the findings of this study, it was concluded that green environmental knowledge utilization has a positive and significant impact on organizational resilience of upstream oil and gas companies in Nigeria. Therefore, the study recommended that upstream oil and gas companies in Nigeria strategically integrate green environmental knowledge into their operations and decision-making processes to strengthen adaptability, enhance production efficiency, and improve organizational agility for long-term resilience.

Keywords: green environmental knowledge utilization, organizational resilience, adaptability, production efficiency, agility.

Introduction

The global energy landscape is undergoing a paradigm shift towards sustainability, driven by increasing environmental concerns, regulatory pressures, and the urgency to combat climate change (Yusliza et al., 2020). Within this transition, the upstream oil and gas sector faces critical challenges in balancing operational efficiency with environmental responsibility. In Nigeria, a country highly dependent on oil revenues, the sustainability of upstream oil and gas companies is imperative for economic stability. However, these companies are susceptible to environmental risks, regulatory uncertainties, and global market fluctuations, necessitating resilient strategies for long-term viability (Akinwale & Osabuohien, 2021).

One emerging factor influencing resilience in the sector is the utilization of green environmental knowledge (GEK). Green environmental knowledge refers to the acquisition, dissemination, and application of ecological and sustainability-oriented information in business processes (Dangelico, 2016). By integrating GEK into corporate strategies, upstream oil and gas companies can enhance their adaptive capacity,

mitigate environmental risks, and foster innovation for sustainable growth. Empirical evidence suggests that firms leveraging environmental knowledge demonstrate higher resilience, improved stakeholder confidence, and regulatory compliance, which are crucial for survival in volatile markets (Zailani et al., 2019).

The Nigerian upstream oil and gas industry operates in a highly dynamic environment characterized by stringent environmental regulations, community-related conflicts, and fluctuating global oil prices. The industry's ability to withstand and recover from environmental and economic shocks depends on the extent to which firms integrate green knowledge into their operations. Companies that proactively invest in environmental management practices, carbon reduction technologies, and sustainable resource utilization exhibit greater resilience against external shocks (Ebohon et al., 2022). Moreover, leveraging green knowledge enhances corporate reputation, facilitates access to green financing, and fosters innovation, further strengthening resilience (Famiyeh et al., 2021).

Despite the potential benefits, the extent to which Nigerian upstream oil and gas companies utilize green environmental knowledge to enhance resilience remains underexplored. This study examines the impact of green environmental knowledge utilization on the resilience of upstream oil and gas firms in Nigeria. It explores the impacts of green environmental knowledge utilization on key resilience determinants such as adaptability, production efficiency, and organizational agility, contributing to a broader

discourse on corporate environmental responsibility in the petroleum industry.

Conceptual Framework

The conceptual framework positions green environmental knowledge utilization as a predictor variable impacting resilience – the criterion variable, assessed through adaptability, production efficiency, and organizational agility. Literature is reviewed on all the variables in the conceptual framework.

Figure 1: Conceptual framework of the Impact of Green Environmental Knowledge Utilization on Organizational Resilience of Upstream Oil and Gas Companies in Nigeria.

Source: Adapted from Taha and Abdel-Aal (2021); Adams and Turner (2022).

Purpose of the Study

The purpose of this study was to investigate the impact of green environmental knowledge utilization on organizational resilience of upstream oil and gas companies in Nigeria. The specific objectives were to:

- i. explore the impact of green environmental knowledge utilization on adaptability of upstream oil and gas companies in Nigeria.
- ii. explore the impact of green environmental knowledge utilization on production efficiency of upstream oil and gas companies in Nigeria.
- iii. explore the impact of green environmental knowledge utilization on agility of upstream oil and gas companies in Nigeria.

Research Hypotheses

In order to achieve the purpose and objectives of this study, the following null hypotheses were tested:

H₀₁: Green environmental knowledge utilization does not have a significant impact on adaptability of upstream oil and gas companies in Nigeria.

H₀₂: Green environmental knowledge utilization does not have a significant impact on production efficiency of upstream oil and gas companies in Nigeria.

H₀₃: Green environmental knowledge utilization does not have a significant impact on agility of upstream oil and gas companies in Nigeria.

Theoretical Framework: Dynamic Capabilities Theory

Dynamic Capabilities Theory (DCT) is a strategic management framework that explains how firms can achieve and sustain competitive advantage in rapidly changing environments (Teece, 2007). It posits that organizations can develop, adapt, and reconfigure their internal and external competencies to address evolving challenges and opportunities (Eisenhardt & Martin, 2000). Unlike traditional resource-based views that focus on static resources, DCT emphasizes a firm's ability to continuously renew its capabilities to respond to technological, environmental, and market shifts (Teece et al., 1997).

One of the core tenets of DCT is that firms must possess three fundamental capabilities: sensing, seizing,

and transforming (Teece, 2018). Sensing refers to the ability to identify emerging opportunities and threats in the business environment. Seizing involves mobilizing resources to capitalize on those opportunities. Transforming refers to the continuous renewal and reconfiguration of business processes and structures to maintain long-term viability. These capabilities enable firms to remain agile and resilient amidst uncertainties (Augier & Teece, 2009).

The relevance of DCT in studying the impact of green environmental knowledge utilization on the resilience of upstream oil and gas companies lies in the sector's exposure to environmental regulations, technological disruptions, and market volatility (Linnenluecke, 2017). Green environmental knowledge utilization—defined as the ability of firms to acquire, assimilate, and apply sustainability-related knowledge—aligns with the three dimensions of DCT. Companies in the upstream oil and gas industry must **sense** emerging environmental policies and technological advancements, seize opportunities through investments in cleaner technologies and sustainable practices, and transform their business models to align with the global energy transition (Hart & Dowell, 2011).

Empirical evidence suggests that firms leveraging environmental knowledge can enhance their resilience by reducing regulatory risks, improving operational efficiencies, and gaining stakeholder trust (Ambrosini & Bowman, 2009). For instance, companies that integrate green knowledge into their strategies are better positioned to mitigate environmental liabilities, adapt to fluctuating oil prices, and diversify into renewable energy sectors (Teece, 2014). Thus, applying DCT to green environmental knowledge utilization provides a robust analytical lens for understanding how upstream oil and gas firms can enhance resilience amid sustainability challenges.

Conceptual Review

This literature review examines existing research on the interplay between green environmental knowledge utilization, organizational resilience, adaptability, production efficiency, and agility. By analyzing these interconnected concepts, the review highlights the strategic importance of green technological knowledge utilization, in achieving organizational resilience.

Green Environmental Knowledge Utilization

Green environmental knowledge utilization refers to the process by which firms acquire, assimilate, and apply sustainability-related knowledge to improve environmental performance and achieve competitive advantage (Chen et al., 2015). This concept is increasingly recognized as a critical factor in corporate sustainability, particularly in industries that are highly resource-intensive and subject to environmental

regulations (Jabbour et al., 2020). By integrating green knowledge into their operations, firms can reduce waste, improve energy efficiency, and comply with environmental policies, thereby enhancing both economic and environmental outcomes (Zhang et al., 2019).

The utilization of green environmental knowledge is rooted in the absorptive capacity framework, which emphasizes a firm's ability to recognize, assimilate, and apply external knowledge for strategic benefits (Cohen & Levinthal, 1990). This capacity enables firms to leverage technological advancements and regulatory insights to develop eco-friendly products and sustainable operational practices (Weng & Lin, 2011). Companies that actively invest in green knowledge utilization can mitigate environmental risks, reduce costs through resource efficiency, and improve brand reputation among stakeholders (González-Benito & González-Benito, 2006).

In the context of industries such as oil and gas, where environmental concerns are paramount, green environmental knowledge utilization plays a pivotal role in enhancing resilience and long-term sustainability (Linnenluecke & Griffiths, 2010). Firms that effectively integrate environmental knowledge can respond more proactively to climate change regulations, transition towards renewable energy solutions, and adopt cleaner production technologies (Aragón-Correa & Sharma, 2003). This strategic approach not only ensures compliance with evolving environmental policies but also fosters innovation and competitiveness in a rapidly shifting global market (Hart & Dowell, 2011).

Empirical studies suggest that firms that leverage green knowledge perform better in terms of environmental and financial performance (Russo & Fouts, 1997). For example, companies that invest in green research and development (R&D) are more likely to develop innovative solutions that enhance operational efficiency and sustainability (Porter & Van der Linde, 1995). Additionally, firms with strong environmental knowledge capabilities can establish industry leadership by setting sustainability benchmarks and influencing regulatory frameworks (Bansal & Roth, 2000).

Organizational Resilience

Resilience in the upstream oil and gas sector refers to the capacity of firms to adapt, recover, and thrive in the face of market fluctuations, geopolitical uncertainties, and regulatory pressures (Gupta & Hall, 2023). Given the industry's exposure to volatile oil prices, environmental risks, and shifting energy policies, resilience is crucial for ensuring long-term sustainability and competitive advantage (Liu et al., 2020).

Key resilience strategies in this sector include diversification, technological innovation, and strategic agility. Companies that invest in renewable energy integration, digital transformation, and sustainability-driven operational improvements are better positioned to withstand external shocks (Xie et al., 2022). Furthermore, firms that cultivate strong stakeholder relationships, including government agencies and environmental organizations, can more effectively navigate regulatory changes and industry disruptions (Chen et al., 2021).

Despite these advantages, challenges such as capital-intensive investments and market uncertainties continue to pose barriers to resilience-building efforts. Overcoming these hurdles requires proactive policy engagement, investment in dynamic capabilities, and a long-term commitment to sustainability and innovation (Wang et al., 2022).

Measures of Organizational Resilience

Several measures have been put forward as measures of resilience in the oil and gas sector. For instance, Adams and Turner (2022) identify financial strength and stability, operational efficiency, technological innovation, environmental and regulatory compliance, diversification of energy portfolio, stakeholder engagement and transparency, workforce adaptability and safety, and market and strategic agility. Similarly, Taha et al. (2021) outline risk management, operational efficiency, regulatory compliance and competitive advantage, technological adaptation and innovation, financial stability, strengthened stakeholder trust and corporate reputation, and adaptation to market changes. In this study however, adaptability, production efficiency, and agility are examined.

Adaptability

Adaptability refers to the ability of individuals and organizations to respond effectively to changing environments, challenges, and uncertainties (Pulakos et al., 2000). It is a crucial determinant of success in dynamic and competitive landscapes, allowing entities to modify their behaviors, strategies, and operations to remain relevant and resilient (Chan, 2014). Adaptability is particularly important in times of crisis, technological disruption, and market volatility, where rigid structures and outdated processes can hinder performance and innovation (Walker et al., 2004).

From an organizational perspective, adaptability is linked to agility, resilience, and dynamic capabilities. Firms that demonstrate high adaptability are more likely to anticipate changes, embrace innovation, and seize emerging opportunities (Teece et al., 2016). Organizations with strong adaptability can restructure operations, implement new technologies, and realign

workforce capabilities to address external and internal challenges (Gibson & Birkinshaw, 2004). Companies such as Amazon and Google exemplify adaptability by continuously evolving their business models in response to technological advancements and customer preferences (Dyer & Ericksen, 2009).

At the individual level, adaptability involves cognitive, emotional, and behavioral flexibility, enabling people to navigate changing job roles, industries, and societal expectations (Martin et al., 2013). Employees who demonstrate adaptability tend to exhibit higher problem-solving skills, openness to learning, and resilience under pressure (O'Connell et al., 2008). Organizations increasingly value adaptable employees, as they can drive innovation, foster collaboration, and sustain performance in uncertain work environments (Griffin et al., 2007).

Adaptability is closely related to learning and development. Individuals and firms that invest in continuous learning and knowledge acquisition are better equipped to handle disruptions and take advantage of emerging trends (Kolb, 1984). This learning mindset is essential for fostering a culture of adaptability, where employees are encouraged to experiment, take calculated risks, and develop new skills (Van Velsor & McCauley, 2004).

Adaptability is a fundamental attribute for both individuals and organizations striving to succeed in rapidly changing environments. It enhances resilience, fosters innovation, and ensures long-term sustainability. Developing adaptability through continuous learning, strategic foresight, and proactive decision-making is essential for thriving in the modern world.

Production Efficiency

Production efficiency refers to the ability of a firm to maximize output while minimizing waste, costs, and resource utilization (Farrell, 1957). It is a key determinant of competitiveness and profitability in both manufacturing and service industries. A firm achieves production efficiency when it operates at the lowest possible cost without compromising quality, meaning that no additional output can be produced without increasing input consumption (Battese & Coelli, 1995). Production efficiency is commonly analyzed through two perspectives: technical efficiency and allocative efficiency. Technical efficiency refers to the optimal use of resources in the production process, ensuring that maximum output is achieved from given inputs (Kumbhakar & Lovell, 2000). Allocative efficiency, on the other hand, involves the optimal distribution of resources to produce goods and services that align with market demand at the lowest cost (Coelli et al., 2005). Firms that achieve both technical and allocative efficiency operate at an optimal level, known as economic efficiency (Lovell, 1993).

Several factors influence production efficiency, including technology adoption, workforce skills, and process optimization. The implementation of advanced technologies such as automation, artificial intelligence, and lean manufacturing can significantly enhance efficiency by reducing waste and improving precision (Schmenner & Swink, 1998). Additionally, continuous employee training and skill development ensure that human resources are effectively utilized, thereby reducing errors and inefficiencies (Beamon, 1999). Moreover, effective supply chain management and just-in-time (JIT) production methods help firms minimize inventory costs and streamline production flows (Womack & Jones, 1996).

In highly competitive markets, firms that prioritize production efficiency can achieve cost leadership, allowing them to offer lower prices while maintaining profit margins (Porter, 1985). Efficiency also contributes to sustainability by reducing energy consumption, material waste, and environmental impact, aligning with modern corporate social responsibility (CSR) initiatives (Hart & Dowell, 2011). Furthermore, production efficiency enhances a company's ability to respond swiftly to market fluctuations and customer demands, improving overall operational resilience (Simchi-Levi et al., 2008).

Production efficiency is a crucial aspect of modern business strategy. By optimizing resource use, adopting advanced technologies, and focusing on continuous improvement, firms can enhance competitiveness, reduce costs, and contribute to sustainable economic growth.

Agility

Agility refers to a company's ability to rapidly sense and respond to changes in its environment with flexibility, speed, and efficiency (Teece et al., 2016). It is increasingly recognized as a critical factor in sustaining competitiveness, especially in fast-changing industries such as technology, healthcare, and finance (Doz & Kosonen, 2010). Agility enables organizations to adapt to market shifts, technological advancements, and evolving consumer preferences, ensuring long-term resilience and success (Sambamurthy et al., 2003).

The concept of organizational agility is grounded in three main dimensions: strategic agility, operational agility, and leadership agility (Doz & Kosonen, 2010). Strategic agility involves the ability to anticipate and respond to market disruptions, reconfigure business models, and seize new opportunities before competitors (Weber & Tarba, 2014). Operational agility refers to the capability of optimizing processes, leveraging technology, and enhancing supply chain responsiveness to meet customer demands efficiently (Braunscheidel & Suresh, 2009). Leadership agility, on the other hand, focuses on fostering a culture of innovation,

adaptability, and continuous learning within the organization (Joiner & Josephs, 2007).

Organizations that successfully implement agility practices often experience improved performance, innovation, and customer satisfaction (Overby et al., 2006). For instance, companies like Amazon and Tesla exemplify organizational agility by continuously adjusting their strategies, developing cutting-edge technologies, and rapidly responding to market trends (Teece, 2007). Agile firms leverage digital transformation, data analytics, and artificial intelligence to enhance decision-making, streamline operations, and improve responsiveness (Bharadwaj et al., 2013).

Agility is closely linked to dynamic capabilities, as both emphasize the importance of sensing, seizing, and transforming resources to maintain a competitive edge (Eisenhardt & Martin, 2000). Firms that cultivate an agile mindset prioritize collaboration, decentralized decision-making, and cross-functional teams to foster innovation and responsiveness (Felipe et al., 2017). Additionally, agile organizations embrace experimentation, fail-fast approaches, and iterative development, as seen in methodologies like Agile and Scrum in software development (Highsmith, 2009). Organizational agility is a vital capability that enables firms to thrive in volatile and uncertain environments. By fostering strategic foresight, operational flexibility, and adaptive leadership, businesses can maintain a competitive advantage and drive long-term success.

Green Environmental Knowledge Utilization And Organizational Resilience of Upstream Oil and Gas Companies

Several scholars and researchers have conducted studies similar to the study on the impact of green environmental knowledge utilization on organizational resilience of upstream oil and gas companies. Some of these studies are examined in this study. For example, Abdulameer and Ibrahim (2024) investigated the effect of green training on individual environmental performance: evidence from oil and gas industry in Iraq. The purpose of the study was to investigate the relationship between green training (GT) and individual environmental performance (IEP) among employees in the Iraqi oil and gas industry. Quantitative analysis using Partial Least Square-Structural Equation Modeling (PLS-SEM) was employed with data collected from 170 employees. Findings indicated that a strong positive and significant relationship was found between green training and individual environmental performance, indicating that green training enhances employees' environmental performance. It was concluded that implementing green training programs is crucial for improving environmental performance in the oil and gas industry.

Akande (2025) investigated the impact of ESG practices on the risk portfolio of listed oil and gas firms in Nigeria using a multilayered criterion. The purpose of the study was to examine the impact of Environmental, Social, and Governance (ESG) factors on the risk-adjusted returns of Nigerian oil and gas firms over an 11-year period (2012–2022). Correlational research design with Ordinary Least Squares (OLS) and Two-Stage Least Squares (2SLS) regression techniques, were adopted in analyzing data from eight firms. Findings indicated that significant positive relationships were found between ESG factors and risk-adjusted returns, emphasizing the financial viability of sustainable practices in the oil and gas sector. It was concluded that prioritizing robust environmental practices, including emission reduction and waste management, enhances financial and operational resilience in the oil and gas industry.

Olajide et al. (2023) investigated the impact of strategic environmental management capabilities on the competitiveness of oil and gas industry's supply chain in Nigeria. The purpose of the study was to assess how strategic environmental management capabilities (SEMC), such as pollution prevention, product stewardship, and clean technology, impact the economic and environmental competitiveness of firms in the Nigerian oil and gas supply chain. Multiple regression analysis was conducted on responses from 214 managers across the oil and gas supply chain. Findings revealed that all three SEMCs positively impacted environmental competitiveness. Pollution prevention and product stewardship were positively related to economic competitiveness, while clean technology had no statistically significant impact on economic competitiveness. It was concluded that developing SEMCs is essential for enhancing both economic and environmental competitiveness in the oil and gas industry.

Sarwar and Mustafa (2023) carried out a study, analyzing the impact of green intellectual capital on environmental performance, as well as the mediating role of green training and development. The purpose of the study was to analyze the effect of green intellectual capital on environmental performance and examine the mediating role of green training and development in Pakistani industrial firms in Pakistan. Partial Least Squares (PLS) method was used in analyzing cross-sectional data from 194 workers. Findings indicated that green human capital and green structural capital positively relate to environmental performance. Green training and development significantly mediate this relationship. The study concluded that green human and structural capital are critical for achieving environmental sustainability, with green training and development playing a significant mediating role.

Munodawafa and Johl (2022) carried out a study on the "measurement development for eco-innovation capabilities of Malaysian oil and gas firms". The purpose of the study was to develop and validate a scale measuring eco-innovation capabilities in Malaysian oil and gas firms, focusing on product service stewardship, environmental pollution prevention, and sustainable development commitment. Exploratory and confirmatory factor analysis was conducted on data collected from managers of Malaysian Oil and Gas Services and Equipment (OGSE) companies. The analysis revealed that a three-dimensional structure of eco-innovation capabilities with nine items, confirming the reliability and validity of the scale. It concluded that the developed scale is useful for researchers and practitioners in measuring and implementing eco-innovation capabilities in the oil and gas sector. These studies collectively emphasize the impact of green environmental knowledge utilization on organizational resilience in upstream oil and gas firms.

Methodology

The methodology of this study is founded on the positivist research paradigm. Thus, a causal research design was employed by the researcher to establish the impact of green environmental knowledge utilization on organizational resilience of upstream oil and gas companies in Nigeria. The population of this study comprised five (5) International Oil Companies (IOCs) with upstream operations in the South-South (Niger Delta) region of Nigeria.

The key IOCs that constituted the population are Shell, Chevron, TotalEnergies, ExxonMobil (limited), and Eni/Agip. However, due to divestments and Nigerian government policies encouraging local participation, many of their onshore/shallow water assets are being transferred to indigenous companies like Seplat, Oando, Aradel, and others.

No sampling technique was employed to determine sample size, as all the companies were studied because the population is small. However, 40 respondents comprising; Environmental Managers, HSE Advisors, Corporate Social Responsibility Managers, Sustainability Managers, HSE Superintendents, Environmental Compliance Officers, Environmental Coordinators, and Biodiversity Specialists, provided primary provided data for the study through a semi-structured questionnaire consisting of 16 measurement items. The instrument was designed in Likert 5-point scale of very high extent to very low extent. That is, (very high extent = 5; high extent = 4; moderate extent = 3; low extent = 2; very low extent = 1). In establishing the impact of the predictor variable on the criterion variables, Regression Analysis was conducted and 3 hypotheses were tested whose probability values

were subject to a critical value of 0.05. The analysis was done with the aid of Statistical Package for Social Sciences (SPSS) version 25.

Test of Hypotheses One: Green environmental knowledge utilization does not have a significant

impact on adaptability of upstream oil and gas companies in Nigeria.

Table 1: Coefficients^a of the impact of Green Environmental Knowledge Utilization on Adaptability of Upstream Oil and Gas Companies in Nigeria

Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
1 (Constant)	2.368	1.460		2.678	.001
Green Environmental Knowledge Utilization	.242	.027	.828	9.105	.000

a. Dependent Variable: Adaptability

Source: SPSS Output

Results of the analysis in Table 1 revealed that green environmental knowledge utilization has a very strong impact on adaptability of upstream oil and gas companies in Nigeria. As shown in the unstandardized coefficients indicate that 1% increase in green environmental knowledge utilization will bring about approximately 0.24% increase in adaptability. Additionally, the Beta value of 0.828 indicates that green environmental knowledge utilization has a very strong and positive impact on adaptability. Furthermore, the impact is significant as shown in the probability

value $0.000 < 0.05$. Based on this result the researchers reject the null hypothesis which states that; green environmental knowledge utilization does not have a significant impact on adaptability of upstream oil and gas companies in Nigeria.

Test of Hypotheses Two: Green environmental knowledge utilization does not have a significant impact on production efficiency of upstream oil and gas companies in Nigeria.

Table 2: Coefficients^a of the impact of Green Environmental Knowledge Utilization on Production Efficiency of Upstream Oil and Gas Companies in Nigeria

Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
1 (Constant)	5.803	1.970		3.888	.006
Green Environmental Knowledge Utilization	.183	.048	.733	11.999	.000

a. Dependent Variable: Production Efficiency

Source: SPSS Output

Results of the analysis in Table 2 revealed that green environmental knowledge utilization has a strong impact on production efficiency of upstream oil and gas companies in Nigeria. As shown in the unstandardized coefficients indicate that 1% increase in green environmental knowledge utilization will bring about approximately 0.18% increase in production efficiency. Additionally, the Beta value of 0.733 indicates that green environmental knowledge

utilization has a strong and positive impact on production efficiency. Furthermore, the impact is significant as shown in the probability value $0.000 < 0.05$. Based on this result the researchers reject the null hypothesis which states that; green environmental knowledge utilization does not have a significant impact on production efficiency of upstream oil and gas companies in Nigeria.

Test of Hypotheses Three: Green environmental knowledge utilization does not have a significant

impact on agility of upstream oil and gas companies in Nigeria.

Table 3: Coefficients^a of the impact of Green Environmental Knowledge Utilization on Agility of Upstream Oil and Gas Companies in Nigeria

Model		Unstandardized Coefficients		Standardized Coefficients	t	Sig.
		B	Std. Error	Beta		
1	(Constant)	1.778	2.080		5.709	.096
	Green Environmental Knowledge Utilization	.109	.067	.632	7.798	.000

a. Dependent Variable: Agility

Source: SPSS Output

Results of the analysis in Table 3 revealed that green environmental knowledge utilization has a strong impact on agility of upstream oil and gas companies in Nigeria. As shown in the unstandardized coefficients indicate that 1% increase in green environmental knowledge utilization will bring about approximately 0.11% increase in agility. Additionally, the Beta value of 0.632 indicates that green environmental knowledge utilization has a strong and positive impact on agility. Furthermore, the impact is significant as shown in the probability value $0.000 < 0.05$. Based on this result the researchers reject the null hypothesis which states that; green environmental knowledge utilization does not have a significant impact on agility of upstream oil and gas companies in Nigeria.

Discussion of Findings

Results of the analysis revealed that green environmental knowledge utilization has a very strong, positive and significant impact on adaptability of upstream oil and gas companies in Nigeria. The result also indicated that, 1% increase in green environmental knowledge utilization will bring approximately 0.24% increase in adaptability. Based on this result the researchers rejected the null hypothesis which states that; green environmental knowledge utilization does not have a significant impact on adaptability of upstream oil and gas companies in Nigeria.

Similarly, the analysis revealed that green environmental knowledge utilization has a strong, positive and significant impact on production efficiency of upstream oil and gas companies in Nigeria. The result also showed that 1% increase in green environmental knowledge utilization will bring about approximately 0.18% increase in production efficiency. Based on this result the researchers reject the null hypothesis which states that; green environmental knowledge utilization does not have a significant impact on production efficiency of upstream oil and gas companies in Nigeria.

More also, the analysis revealed that green environmental knowledge utilization has a strong,

positive and significant impact on organizational agility of upstream oil and gas companies in Nigeria. It is further indicated that 1% increase in green environmental knowledge utilization will bring about approximately 0.11% increase in organizational agility. Based on this result the researchers reject the null hypothesis which states that; green environmental knowledge utilization does not have a significant impact on organizational agility of upstream oil and gas companies in Nigeria.

Conclusion and Recommendations

Based on the findings of this study, it is concluded that green environmental knowledge utilization has a positive and significant impact on organizational resilience of upstream oil and gas companies in Nigeria. The evidence demonstrates that green environmental knowledge utilization has a very strong influence on adaptability, equipping companies with the capacity to adjust effectively to environmental regulations, technological transitions, and stakeholder expectations. This adaptability ensures that firms remain operationally viable within a challenging ecological and economic landscape.

The study further reveals that green environmental knowledge utilization exerts a strong positive impact on production efficiency, as the adoption of environmentally sound practices reduces waste, optimizes energy use, and promotes cleaner production processes. These outcomes enhance cost-effectiveness while aligning operations with sustainability imperatives. In addition, green environmental knowledge utilization shows a strong positive impact on organizational agility, enabling firms to respond rapidly to environmental disruptions and market fluctuations. By integrating green knowledge into their strategies and operations, companies strengthen their ability to innovate and maintain competitiveness.

Thus, this study establishes that the effective utilization of green environmental knowledge significantly enhances adaptability, production efficiency, and agility, thereby reinforcing the resilience and long-term sustainability of upstream oil and gas companies in

Nigeria. Therefore, it is recommended that upstream oil and gas companies in Nigeria strategically integrate green environmental knowledge into their operations

and decision-making processes to strengthen adaptability, enhance production efficiency, and improve organizational agility for long-term resilience.

The Impact of Agile Methodologies on the Organizational Performance of Selected Aluminum Manufacturing Firms in Delta State, Nigeria

EJINDU, Iwelu Macdonald Morah

York St John University, London

e.morah@yorks.j.ac.uk; ejinduiwelu@gmail.com

Publication Date: 2025/11/28

Abstract

This study investigates the impact of Agile methodologies on the organizational performance of selected aluminum manufacturing firms in Delta State, Nigeria, focusing on four core Agile dimensions: Agile Iterative Development (AID), Agile Collaboration and Communication (ACC), Agile Adaptive Planning (AAP), and Agile Continuous Integration and Testing (ACIT). A quantitative research design was adopted, using structured questionnaires administered to a sample of 300 respondents drawn from management and technical staff across selected firms. Data were analyzed using descriptive statistics, Pearson correlation, and multiple regression techniques. The findings revealed that Agile Iterative Development (AID) has a significant positive impact on organizational performance, indicating that continuous product refinement and feedback cycles enhance process efficiency and product quality. Agile Collaboration and Communication (ACC) also demonstrated a strong positive relationship with performance, highlighting that teamwork, transparency, and knowledge sharing drive innovation and operational alignment. Similarly, Agile Adaptive Planning (AAP) was found to significantly influence organizational agility and responsiveness to market and production dynamics. Furthermore, Agile Continuous Integration and Testing (ACIT) contributed notably to improved production consistency, reduced defects, and higher customer satisfaction. The study concludes that the integration of Agile principles fosters adaptability, efficiency, and overall organizational competitiveness in the aluminum manufacturing sector. It recommends that firms institutionalize Agile frameworks across production and management functions, train employees in Agile practices, and adopt flexible performance monitoring systems to sustain continuous improvement. The study contributes to knowledge by extending Agile theory into the manufacturing context of developing economies, demonstrating that Agile methodologies—originally rooted in software engineering—can enhance industrial productivity and organizational performance in process-driven environments.

Keywords: Agile Methodologies, Organizational Performance, Iterative Development, Collaboration, Adaptive Planning, Continuous Integration, Aluminum Manufacturing, Delta State, Nigeria.

Introduction

The increasing complexity of business environments, driven by technological advancements, customer demands, and global competition, has prompted organizations to continuously evolve their operational strategies. Among the various strategies that organizations have embraced in recent years, Agile methodologies have emerged as one of the most effective approaches to enhance organizational performance. Agile methodologies, characterized by iterative development, flexibility, and adaptability, are particularly valuable in industries where rapid change is a constant, such as manufacturing. In the context of aluminum manufacturing firms in Delta State, Nigeria,

the adoption of Agile Iterative Development (AID), Agile Collaboration and Communication (ACC), Agile Adaptive Planning (AAP), and Agile Continuous Integration and Testing (ACIT) holds potential for improving organizational performance (ORGP).

The use of Agile methodologies, particularly AID, is critical in the context of the aluminum manufacturing industry, where organizations are required to respond quickly to changes in customer needs, market conditions, and technological innovations. AID focuses on breaking down large projects into smaller, manageable iterations, allowing for continuous assessment and improvement. This iterative approach provides manufacturing firms with the flexibility to

adjust project deliverables, timelines, and resource allocations based on feedback and changing circumstances. By adopting AID, aluminum manufacturing firms in Delta State can improve their ability to respond to customer demands, reduce lead times, and optimize resource usage, which collectively contributes to improved organizational performance (Highsmith, 2020; Conforto et al., 2021).

Moreover, Agile Collaboration and Communication (ACC) plays a significant role in fostering a culture of teamwork and knowledge sharing within organizations. ACC encourages cross-functional collaboration among teams, enabling them to work together towards common goals while maintaining open channels of communication. In the manufacturing sector, where diverse teams such as engineering, production, quality control, and logistics need to collaborate closely, ACC facilitates seamless communication, reduces misunderstandings, and enhances decision-making. By promoting transparency and frequent communication among team members, ACC ensures that everyone is aligned with the organization's objectives and that potential issues are identified and addressed promptly. In turn, this enhances the efficiency and effectiveness of operations, ultimately leading to improved organizational performance (Vaidya et al., 2020; Ambrosio et al., 2022).

Agile Adaptive Planning (AAP) is another critical aspect of Agile methodologies that can significantly impact organizational performance. AAP emphasizes the importance of flexibility and adaptability in planning processes, enabling organizations to adjust their strategies and plans in response to changing circumstances. In the aluminum manufacturing industry, where external factors such as fluctuations in raw material prices, changes in regulatory requirements, and shifts in consumer preferences can significantly impact operations, AAP allows firms to remain resilient and proactive in the face of uncertainty. By continuously refining and updating plans based on real-time data and feedback, organizations can optimize resource allocation, minimize risks, and capitalize on emerging opportunities. As such, AAP fosters a culture of continuous improvement and supports the long-term sustainability of manufacturing firms (Dingsøyr et al., 2020; Munteanu et al., 2021).

Furthermore, Agile Continuous Integration and Testing (ACIT) is crucial in ensuring the quality and reliability of products in aluminum manufacturing firms. ACIT focuses on the continuous integration of new code or product features into existing systems, followed by rigorous testing to identify and resolve issues early in the development process. In the context of manufacturing, where product quality is paramount, ACIT enables firms to maintain high standards while ensuring that products meet customer expectations. By

integrating continuous testing and quality assurance practices into the production process, aluminum manufacturing firms can reduce defects, minimize rework, and improve overall product quality. This not only enhances customer satisfaction but also leads to cost savings and greater operational efficiency, which directly contribute to organizational performance (Humble et al., 2021; Bhardwaj et al., 2022).

The implementation of Agile methodologies in the aluminum manufacturing sector in Delta State, Nigeria, is not without challenges. Organizational culture, resistance to change, and a lack of skilled personnel are some of the barriers that may hinder the successful adoption of Agile practices. However, research has shown that organizations that effectively manage these challenges and create a supportive environment for Agile adoption can experience significant improvements in performance. For instance, studies by Kanban et al. (2021) and Sharma et al. (2022) have highlighted the importance of leadership support, training, and organizational alignment in ensuring the successful implementation of Agile methodologies. In addition, the availability of advanced digital tools and technologies, such as cloud-based project management platforms and automated testing frameworks, can facilitate the smooth adoption of Agile practices and enhance their effectiveness in manufacturing settings (Beck et al., 2020; Soto et al., 2023).

Empirical studies on the impact of Agile methodologies on organizational performance have yielded promising results across various industries. In the manufacturing sector, several studies have highlighted the positive effects of Agile practices on product quality, customer satisfaction, and operational efficiency. For instance, a study by Li et al. (2020) found that Agile practices such as AID and AAP were positively correlated with improved lead times, reduced waste, and enhanced product quality in the automotive manufacturing sector. Similarly, studies by Fernandes et al. (2021) and Rehman et al. (2022) have reported similar findings in the context of electronic and textile manufacturing. While there is limited research specifically focusing on the aluminum manufacturing industry in Nigeria, the positive outcomes observed in other manufacturing sectors suggest that the adoption of Agile methodologies could yield similar benefits in the region.

The aluminum manufacturing industry in Delta State, Nigeria, plays a critical role in the local economy, contributing to job creation, industrial growth, and economic development. As such, improving the performance of aluminum manufacturing firms is essential for driving economic progress in the region. By adopting Agile methodologies, aluminum manufacturing firms in Delta State can improve their operational efficiency, enhance product quality, and

foster innovation, all of which contribute to long-term sustainability and competitiveness. Additionally, the adoption of Agile practices aligns with the broader goals of industrialization and digital transformation in Nigeria, as outlined in the country's National Industrial Revolution Plan (NIRP) and Vision 2020 objectives (Adebayo et al., 2020; Obi & Njoku, 2021).

Hence, Agile methodologies, including AID, ACC, AAP, and ACIT, have the potential to significantly improve organizational performance in the aluminum manufacturing industry in Delta State, Nigeria. By enabling organizations to be more flexible, collaborative, and adaptive, Agile practices can help firms respond to market changes, improve product quality, and optimize resource utilization. While challenges exist, the benefits of Agile adoption, as demonstrated by empirical research in other industries, suggest that it is a worthwhile strategy for improving the performance and competitiveness of aluminum manufacturing firms in the region. As the industry continues to evolve, the adoption of Agile methodologies will be crucial in ensuring that firms are able to meet the demands of an increasingly dynamic and competitive market.

Statement of the Problem

The aluminum manufacturing industry in Delta State, Nigeria, faces several challenges that hinder its competitiveness and overall performance. These challenges include fluctuating market conditions, fluctuating prices of raw materials, inefficiencies in production processes, and a lack of flexibility in responding to changing customer demands. While many manufacturing sectors have begun adopting Agile methodologies to address such challenges, there is limited research exploring the specific impact of Agile practices such as Agile Iterative Development (AID), Agile Collaboration and Communication (ACC), Agile Adaptive Planning (AAP), and Agile Continuous Integration and Testing (ACIT) on organizational performance (ORGP) within the aluminum manufacturing industry in Nigeria, especially in Delta State. Existing literature predominantly focuses on Agile's application in sectors like software development and automotive manufacturing, where the nature of operations and challenges significantly differ (Conforto et al., 2021; Highsmith, 2020).

Despite the growing popularity of Agile practices globally, there is a noticeable gap in empirical studies that specifically address the adoption and impact of Agile methodologies in the Nigerian manufacturing sector, particularly in aluminum production. Research by Fernandes et al. (2021) and Li et al. (2020) highlights the positive effects of Agile on product quality and operational efficiency in other industries, but these findings have not been contextualized for

aluminum manufacturing in Nigeria. Furthermore, while studies have suggested that Agile methodologies contribute to improvements in lead times, product quality, and customer satisfaction (Bhardwaj et al., 2022; Humble et al., 2021), there is insufficient evidence to determine whether these benefits hold true in the context of aluminum manufacturing firms in Delta State, Nigeria. The existing literature also highlights that manufacturing firms often face significant barriers to implementing Agile methodologies, including organizational culture, resistance to change, and a lack of skilled personnel (Vaidya et al., 2020; Sharma et al., 2022). These challenges have not been sufficiently explored within the specific context of the Nigerian aluminum manufacturing industry. Moreover, studies such as those by Munteanu et al. (2021) and Dingsøyr et al. (2020) emphasize the need for further research on how Agile's key components—such as AID, ACC, AAP, and ACIT—can be tailored and effectively implemented in manufacturing sectors outside of software and electronics industries.

Therefore, there is a critical research gap in understanding the role and impact of Agile methodologies on the organizational performance of aluminum manufacturing firms in Delta State, Nigeria. This study aims to fill this gap by exploring how the application of Agile Iterative Development, Agile Collaboration and Communication, Agile Adaptive Planning, and Agile Continuous Integration and Testing can enhance organizational performance in this specific manufacturing context.

Research Questions

- i. What is the impact of Agile Iterative Development (AID) on the organizational performance (ORGP) of aluminum manufacturing firms in Delta State, Nigeria?
- ii. How does Agile Collaboration and Communication (ACC) influence the organizational performance (ORGP) of aluminum manufacturing firms in Delta State, Nigeria?
